
Classy stitchdown Oxford for women. Uppers of Brown or Patent leather. Smooth leather insoles. Flexible stitched-down oak outsoles. Low rubber heels Sizes 2½ to 8. Wide widths. **Order by** widths. **Order by No. 96A268. Pay only $1.98 and postage on arrival.**

$1.98

Order similar style Patent leather by No. 96A264. Pay $2.48 and postage on arrival.

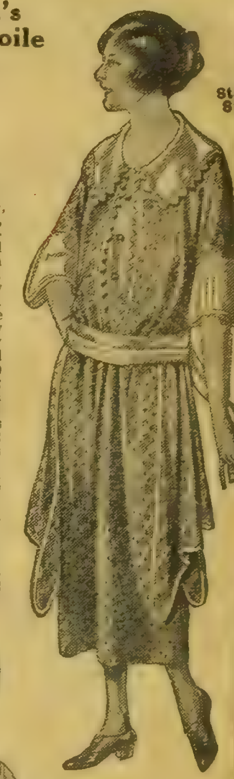
Biggest Bargains in U. S. A.

Absolutely the greatest bargains in America today! In smashing all records for price reduction Sharood has made it possible for you to do your Spring buying at the most remarkable savings. Don't wait a day. For rarely will you have a chance to match these supreme values. Order now for the whole family. The more you buy the more you'll save.

Send No Money—Pay on Arrival

DON'T SEND ONE CENT. JUST LETTER OR POSTCARD brings any of these smashed price bargains. Absolutely no obligation or risk. Merely give name and number of each article you want. Also state size and write your full name and address plainly to avoid delay. Pay nothing till goods arrive—then only the amazing bargain price and postage. Then if you are not delighted with your bargain your money will be cheerfully refunded. ORDER NOW!

Women's Pretty Voile Dress

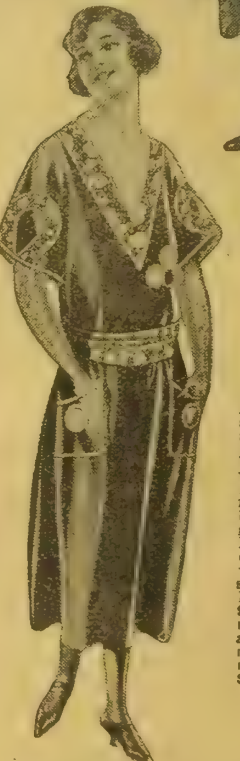


State Size

$1.98

Very attractive, dainty voile dress, with organdy trimming. Beautiful figured voile with new side panels. Youthful organdy collars and cuffs. Also pretty vestee insert of organdy and neat organdy sash. This model has all the lines of fashions selling at much more than Sharood's sale price. Misses sizes 14 to 20 years, 32 to 38 bust. Women's sizes 34 to 46 bust. Be sure to state size wanted. Choice of colors. **No. 96E6712, Navy; 96E6713, Copenhagen; 96E6714, Rose; 96E6715, Lavender. Send no money. Pay $1.98 and postage on arrival.**

Pretty Sateen Dress Apron



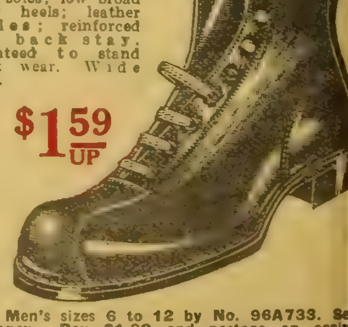
$1.69

Another shining ex ample of Sharoo super-bargain Splendid qualit black twill sate which wears wonde fully. Graceful V neck, sleeves an belt trimmed wit gay colored cretonne Pockets finished wit crepe applique edge with piping. Size small, medium an large. **Order No 96E6001. Send money. Pay $1.6 and postage on ar rival. Money back not satisfied. Stat Size.**

Men's, Boys' and Little Boys' Scout Shoes

Fine scout shoe of soft pliable brown leather. Absolutely guaranteed barnyard proof; reliable sturdy soles; low broad leather heels; leather insoles; reinforced leather back stay. Guaranteed to stand hardest wear. Wide widths.

$1.59 UP



Order Men's sizes 6 to 12 by No. 96A733. Sen no money. Pay $1.98 and postage on arrival Order little boys' sizes, 9 to 13½, by No. 96A-565. Price $1.59. Order big boys' sizes 1 to by No. 96A564. Price $1.79. Pay bargain pric and postage on arrival.

Lower Shoe Prices to You!

—because our shoe factories are located so close together

All the E-J tanneries and factories are located within a circle whose radius is only 6 miles. This eliminates all expensive transfer costs, (from tannery to factory, from factory to train), so that we can supply your shoe dealer with good shoes at minimum prices.

If you are buying shoes for boys this should be especially interesting to you. It allows you to get high quality shoes at prices you would think impossible.

Remember this "six mile circle." It cuts down your shoe bills.

The E-J Workers

At any dealer's with an E-J sign in the window. Boys shoes at economy prices

Current Agricultural News

SOIL SURVEY IN STATE TO BE CONTINUED

THREE or four government soil experts and five or six representatives of the Michigan Agricultural College will collaborate this year in continuing the soil testing work in which the soils department of the college and bureau of soils of the United States Department of Agriculture have co-operated for the last three years. A contract for the continuation of the work has just been completed between Dr. M. M. McCool of the college and a federal representative.

Presque Isle county will be the first to be considered in the work this year, the work in that county, started last year, being completed. The four or five counties to be entered in the work this year have not been selected, but one of the counties will be not far distant from the point of beginning.

In the three years the work has been in progress in the state nine counties have been covered, each year showing an increase over the amount of work done since Allegan county was entered three years ago. This year, according to the contract between Professor McCool and the government, the largest force ever working in Michigan will be in the field.

SUMMER TERM DATES AT M. A. C.

SUMMER session at M. A. C. will start June 19, the day after commencement and continue until July 27, according to the announcement made at the office of Prof. E. H. Ryder, director of the summer school. The courses available for students are outlined in the summer session bulletin which has just been issued. The popularity of the summer courses has grown since they were first instituted and it is expected by the college authorities that the enrollment this summer will surpass that of last year.

EXPECT 100,000 ACRES LAND CERTIFIED IN SIX MONTHS

THE certification of 100,000 acres of wild land in Michigan within the next six months is predicted by officials of the state department of agriculture. Since the passage of the Meggison certification bill, requests have been made for the examination of over 10,000 acres of wild land with additional applications for information as to the certification of several thousand acres in scattered tracts.

It is predicted that practically all the land to be certified will be uncultivated tracts. Nearly all the operating farms, which have been purchased during the last few years, have been bought by practical farmers from the middle states after a personal examination, and it is believed, by dealers, that such being the case, it will be unnecessary to go to the expense of certification.

EIGHT MICHIGAN MEN TO ATTEND HOLSTEIN CONVENTION

MICHIGAN Holstein breeders will be represented by eight delgates at the thirty-eighth annual convention of The Holstein-Friestian Association of America to be held in Cleveland, Ohio, June 6th. The delegates elected are: D. D. Atken of Flint; Dedley E. Waters of Grand Rapids; E. L. Smith of Adrian; H. W. Norton, Jr., Lansing; H. E. Rising of Woodland; James G. Hayes of Howell; Wm. E. Fellows, of Flint and Wm. R. Harper of Middleville.

Each state is entitled to one delegate and one additional delegate for each 200 members or major fraction thereof. The association has a total of 23,000 members. Michigan is represented on the Board of sixteen directors by H. W. Norton Jr. of Lansing.

GOVERNMENT BULLETINS OF INTEREST IN JUNE

A SMALL list of Farmers' Bulletins and Circulars of general interest during June is believed to be of value to our readers. Copies may be obtained free by addressing the Division of Publications, United States Department of Agriculture, Washington, D. C, Specify number and name and whether Farmers' Bulletin or Department Circular.

Farmers' Bulletin 838, Harvesting Hay with the Sweep Rake; 842, Methods of Protection Against Lightning; 863, Irrigation of Grain; 871, Fresh Fruits and Vegetables as Conservers of Other Staple Foods; 872; The Bollworm or Corn Earworm; 876, Making Butter on the Farm; 943, Haymaking; 956, Curing Hay on Trucks; 959, The Spotted Garden Slug; 975, The Control of European Foulbrood; 977, Hay Caps; 984, Farm and Home Drying of Fruits and Vegetables; 1120, Control of Apple Powdery Mildew; 1198, Swarm Control; 1217, The Green Bug or Spring Grain Aphis; 1225, The Potato Leafhopper and Its Control; 1290, The Bulk Handling of Grain.

S. Grades for Potatoes Recommended by the Uniter States Department of Agriculture.

FROM HERE AND THERE IN MICHIGAN

Petoskey—Contracts awarded for 15 miles highway to cost $90,000, New Masonic temple purchased at cost of $25,000.

Lansing—Estimated number cattle on feed in state 12% increase over last year. Farmers increase this year acreage in corn, oats and barley. State supply of farm labor not equal to demand.

Charlotte—Site for armory chosen and $25,000 appropriation sought for building. Bids called for building new cross-state highway. Radio club organized at Olivet college.

Cedar Lake—Plans completed for Cedar Lake academy to cost $20,000.

Allegan—City Council accepts site for new community building.

Ann Arbor—New unit of nurses' home at state university to cost $650,000.

Fremont—Paving operations to be resumed.

Holland—New paving contract awarded involving $202,708. Plans being completed for six-story hotel at cost of $250,000.

Standish—First cow testing station organized in Aranac county.

Caro—Tuscola road commissioners plan new highways. Shorthorn breeders of Tuscola county organize.

Flint—Pere Marquette Railroad to build new belt line track. Business interests want extension Michigan Central Railroad.

Saginaw—Official of Pere Marquette Railroad declares traffic increasing. Work begun on new Prescott Street sewer. Pere Marquette Railroad gets permit to build new bridge over Saginaw river.

Grand Rapids—City's valuation for assessment purposes increased $11,000,000 over last year. Plans made for Apple and Potato Snow here next fall. Two new buildings to be erected on Valley City Milling Company site. New park improvement program outlined by city. Michigan fruit growers predicting tremendous crop this year.

Traverse City—Better Back-yard drive carried on here.

Lawton—New $100,000 church and tool factory to be established.

Cadillac—Greatest building boom in history under way.

Benton Harbor—New $250,000 water plant formally completed.

Munising—Local game association to feed wild deer, ducks and geese.

Manistee—City platting new residental district.

Adrian—New water power factory to be erected by Ford Motor Company.

Bay City—St. James school will build new $50,000 gymnasium.

Big Rapids—Four new lumber dry-kilns to be built by Ward Company.

Battle Creek—Work commenced on new $150,000 Masonic temple.

Detroit—Port of Detroit eighth in United States in volume of foreign trade.

Ravenna—Has light and power plant by harnessing Crockery creek.

Orderly Marketing to End Peak Load Problem

O. F. Bradfute, President of American Farm Bureau Federation, Speaking to Chamber of Commerce of U. S. Tells Farmers' Plan

OSCAR EDWIN BRADFUTE, president of the American Farm Bureau Federation, is one of America's best-known and most progressive farmers. He lives on the old home farm near Xenia, Ohio, in Greene County, where his grandfather was one of the early settlers.

Mr. Bradfute has served his second term as vice-president of the American Farm Bureau Federation. He is also president of the Ohio Farm Bureau Federation and one of the trustees of the Ohio State University. Mr. Bradfute is a stockman and farmer and has specialized in pure bred beef cattle.

THE new system of co-operative marketing will go far towards solving the railroad problem in America.

Speaking before the eleventh annual meeting of the Chamber of Commerce of the United States in New York on May 10, O. E. Bradfute, President of the American Farm Bureau Federation, declared that the farmer had found his own solution to the peak load question in transportation.

According to President Bradfute the farmers' new system of co-operative marketing whereby the products of the farm are moved into points of consumption in an orderly manner will give the railroads an opportunity to move the great staple farm crops gradually from the farms to the distribution centers and thus avoid the peak loads and the attendant car shortage problem which break the railroads' back.

Mr. Bradfute challenged the business men and railroad executives to join hands with the farmer in helping him perfect a co-operative marketing system providing for the storage and financing of farm products on the farms. About one-twelfth of these farm products properly stored and adequately financed on the farms can be moved into points of consumption each month.

Mr. Bradfute made it plain that organized agriculture would continue to demand early and substantial reductions in railroad freight rates "as an absolute necessity to the comeback of agriculture and the ultimate prosperity of both city and country."

President Bradfute's address is as follows:

"What do all these people do for a living? I come out of the Grand Central station or walk down LaSalle Street in Chicago. I see the throngs of folks racing hither and yon, all intent on something or other. Perhaps it is natural for a plain farmer from the open country to wonder when set down in the midst of a great city: 'What do all these people do for a living?' I have never ceased to marvel at this. A careful analysis of his problem leads one to observe that all these folks in the crowded metropolitan centers are engaged in getting three things: food, clothing and pleasure. In the third category, pleasure, I classify the creature comforts of home, luxury, amusement, etc. Now Solomon, the wisest man of all time, abjured us, with all our getting to get understanding, and I am not so sure that the denizens of the crowded market place always follow that advice.

All Are Interested

"I would have this great body which springs directly from the cities and town of America to understand, however, that two of these three driving incentives of metropolitan effort originate on the farm. Food and clothing in the raw state rank among the staple products of our farms. Happily, then, we are all city men and country men concerned about the same thing basically. Your city man is working with what the farm man originated.

"In order to get into the channel of profitable use it is, of course, necessary to focus the products of the farm in the metropolitan centers of distribution. Out of this great function arises the huge problem of transportation now confronting us as the biggest question mark in our national economy. The farmer's transportation problem begins in his field and at his barnyard gate. In our rural minds to speak of transportation brings to us thoughts of wagons, bob sleds, wheelbarrows, tractors, trucks, automobiles—devices both simple and complex which we use to carry our products from the place of their youth toward the place of their use. The farmer's interest in transportation does not stop until his products have been landed safely at the point of ultimate consumption. Therefore, our philosophy of transportation includes careful thinking about the cow path, the field road, the highway, the railroad, rivers, lakes, canals and the ocean paths. The American farmer has a transcending interest in the whole transport problem. Let us see if we can picture it in a few simple but comparative figures:

The Transportation Problem

"An immense new volume of wealth is created on the farms of America every year, running into a gigantic business total of from 12 to 14 billions of dollars. Of our farm products about 10 billion dollars worth are transported off our farms each year. This is our direct transportation problem.

"Consider railroad transportation alone: The gross freight bill of the nation is around four billion dollars per year. Of this freight bill the farmers pay one-half directly. Add to this the farmer's freight bill for horse, and wagon, and harness, highway costs, motor transport, carriage by water, etc., and agriculture pays more than four billion dollars every year to get the products of this basic industry moved into centers of consumption.

"It may surprise you to know that the cost of transportation is one-third of the farmer's production bill. The farmer comprises less than forty per cent of the population but pays more than fifty per cent of the nation's transportation costs.

"It must not be forgotten also that the farmer pays freight both ways. On the things which he sells a freight rate is deducted from the price which it brings. On the things which he buys a freight rate is added to the cost f. o. b. cars. All this is part of the farmer's direct interest in transportation.

London Fixes Wheat Price

"The man on land has another primary interest in the transportation problem which is not given the attention which it deserves by our statesmen and economists. The price of wheat in Kansas is fixed by the price of wheat in Liverpool. Under our present marketing system a demand for surplus farm products determines the price of the whole crop. Not only is that Kansas wheat farmer forced to take a world price for the small portion of his crop which goes to Liverpool, but that selfsame Liverpool price determines the returns from his entire wheat field, even though the grain is all milled in Kansas.

"The same thing is true of livestock. When I sell a fat Aberdeen-Angus bullock to be killed by the local butcher in Xenia, Ohio, he pays me the prices ruling at Pittsburgh, or Buffalo, or Baltimore, or New York City minus the freight rates from those cities to my home town. Why is the farmer so anxious for reduction in freight rates? Because the transportation bill effects the returns from his whole crop, not only his surplus.

"I have talked to many railroad experts and economists and statisticians who deal with the overwhelming problems of national transportation. They talk always in terms of bottle necks and peak loads. I think it is fair to say that they really have no solution: I think it is fair to say that they have no formula for widening the neck of the bottle or for reducing the peak loads at harvest time. To these vexing technical problems I believe that the American farmer himself has found the answer.

Orderly Marketing the Answer

The answer lies in orderly marketing of our farm products rather than in the usual seasonal glutting of the distribution centers. Since the farmer has found his voice and has learned how to use it in a national way our agricultural industry has been the recipient of some very progressive and helpful legislation. We now have on the statute books a law permitting the farmer to unite to market his product collectively for the best interest fo both producer and consumer. Some twenty states within the last two years have likewise assessed laws permitting us to undertake a certain definite type of cooperative merchandising which the American farmer has worked out to meet his own needs. In the closing days of the last Congress organized agriculture secured an approved warehousing act as well as legislation providing for a new type of credit for the farmer. When this is finally worked out the farmer will be able to store his crops in his own cribs, and bins, and root cellars, and hay mows which will be designated as approved warehouses. It is not at all beyond the range of possibility that the products of the farm stored in these approved warehouses on the farm may become the basis of sound commodity financing. Surely there is no better security for a loan than the food of the nation. We are not very wise if we cannot perfect a system whereby the farmer may hold in the storehouse of his own farm the crops which he raises and move them into channels of consumption in an orderly and regular manner. Under some such a system as this I can vision that one-twelfth of our farm product might move off the farms into the conduits of transportation each month rather than pouring the whole thing onto the market within a few days or a few weeks after harvest time. I would have you realize that these great staple food roducts are stored now in a manner acceptable to the financial system of the country. The trouble is they are stored in cities instead of on the farms where they originated.

"Eventually the adoption of a farmer's co-operative marketing program by America will do away with the peak load in farm products. We shall substitute for dumping all the products of our fields and pastures onto the market at one fell swoop when we have to have the money, a new and improved system of gradual orderly merchandising.

"I challenge here and now the business men of America, and particularly the leaders in the transportation world, to join hands with the American farmer in helping him work out his co-operative marketing program for the good and selfish reason that this will do a great deal towards solving the transportation problem.

"I cannot close this discussion and feel that I had performed my whole duty unless I state frankly to you that the American farmer regards an early and substantial reduction in railroad freight rates as an absolute necessity to the comeback of agriculture and the ultimate prosperity of both city and country."

DR. DAVID FRIDAY, VICTIM OF UNWARRANTED POLITICAL ATTACK, SAYS PRESENT TURMOIL WILL CLARIFY AGRICULTURAL ATMOSPHERE IN MICHIGAN

DURING the past week, Michigan Agricultural College, through its president, David Friday, was subjected to one of the most disgraceful and unwarranted attacks ever staged in Michigan. During the absence of Dr. Friday on a speaking tour of the east, statements were made to the daily press which not only sought to discredit his ability and loyalty, but to besmirch his character.

The attack was so underhanded and indefensible that the Governor has taken a hand in the matter and has promised to fittingly punish the politicians who were guilty of perpetrating the slander and gossiping it to the always-ready-for-sensation daily press.

In reply to a request for a statement to his 70,000 real farmer friends, who read The Business Farmer, Dr. Friday telegraphs as follows:

Because of the wise and courageous stand taken by Governor Groesbeck, the Michigan Agricultural College will shortly be in a position to serve the farmers of Michigan as never before. The present turmoil is long overdue and will do much to clarify the agricultural atmosphere of the state.—David Friday, President, Michigan Agricultural College.

Our comment on the subject will be found in the Editorial, on page twelve of this issue.

Farmers' Market in Small City an Example

A New Solution to the Producer to Consumer Problem that is Based on the Oldest Form of Commerce; the Barter and Exchange Plan Practiced in Bible Days

BLOOMINGTON, Illinois, is a city of 28,725 inhabitants. In Michigan there are 14 cities the size of Bloomington or larger. Every year Michigan becomes more of on industrial state, which means that the proportion of people who live in cities is increasing while the population on our farms is decreasing. The Business Farmer agrees with Dr. Friday, that this is nothing for the farmers of Michigan and the nearby states to cry about. It must mean higher prices and more profit for the men who stay on farms.

The farms adjacent to the growing cities and large towns in Michigan must supply a larger proportion of the food which these cities consume. The farmer within a fifty mile radius of any given market can, with good roads and modern motor truck, deliver the products of his farm direct to the consumer at a real profit.

TOO MUCH FOOD IS BEING SHIPPED INTO MICHIGAN

which ought to be supplied from the farms of this state. Our farmers must awaken to the new conditions which the past decade has brought. They are fools who raise wheat in competition with the wheat-growers of Argentine and the Ukraine. Less staples and more specialties will be grown in Michigan by the business farmers.

Here then is the story of a well run farmers' market in a city of 28,725 population. It solves the producer to consumer problem in the oldest and yet the most successful way yet discovered. City people like to buy direct from the farmer. Bloomington and other cities have proven that a lower price is less of a consideration, than that the produce be sold clean, fresh and attractive.

The Business Farmer stands ready to back the efforts to build a Farmers' Market in any town or city in Michigan or the nearby states, which has a population of two thousand or more. In villages of lesser size, we advise house to house selling or a Saturday morning market in a given location direct from the wagon.

If you know of a city which should have, but does not have a Farmer Market tell us about it and we will try to secure the cooperation of the local newspaper to encourage such a project.—The Editor.

SELLING directly from the producer to the consumer, with the elimination of all middlemen and middlemen's profits, the McLean county producer's market, Bloomington, Illinois, recently opened, is steadily growing in popularity and patronage.

On the big days the sales aggregate as high as $1,500, and rarely drop below $1,200. The farmer brings in his produce and places it in one of the 45 stalls, which rented to him for the nominal rate of $1 per day. Many sell out in a few hours, but they have the use of the stall and market building for the entire day if they desire it.

Practically everything raised upon the farm is sold. Pork in its various forms, including pork cuts and sausages; eggs, poultry, butter, cottage cheese, milk, cream, all kinds of vegetables, grain, and fruits in season, together with pastry, bread, preserves, jellies, canned fruit and, in fact, an endless variety of good things having a strong appeal to the urban shopper.

The market is opened at 9:30 a. m. and no trading is permitted prior to that time. There are usually from 100 to 200 patrons in waiting each morning for the doors to open.

No objection to the market has been filed by the city merchants. Every booth rented usually reports receipts ranging from $15 to $100. A large proportion of this money is taken over to the dry goods, clothing, millinery and shoe stores and expended for needed articles.

The business men have found that a goodly proportion of the money that is taken in at the farmers' markets soon afterwards is expended with the established firms. The market has had the result of getting the country and city people better acquainted.

Every booth renter signs an agreement to be responsible for the purity and cleanliness of the produce he markets.

Supervised by County Agent

He must also deposit the sum of $5 to the farm adviser. Should there be any complaint from a patron and the booth renter fails to settle, the farm adviser conducts an investigation. If the latter is satisfied that the customer has a legitimate complaint, he is reimbursed out of the deposit fund for the sum he claims.

So far there has not been a single case where such action was necessary, a remarkable testimonial to the harmonious trading and the good feeling that exists between the farmers and their customers. In fact, the farm bureau seeks to instill into the producer an element of pride in the market which will have a tendency to make it a place where the buyers will become permanent customers.

It has developed that many of the farmers who sold directly to the city residents at the latters' homes now go to the market and their old patrons come to them. The prices at the market compare favorably with those at the established stores, but the patrons of the farmers know that the stock is brought directly from the farm the day that it is offered for sale and there are never any stale articles on hand.

That the market has been a success to the farmer as well as the consumer is shown in the fact that practically every producer who rented the stall on the opening day has been a permanent renter.

The farmers' market seems to be filling a business niche that has long been empty and which is badly needed. Every booth renter is required to subscribe to a code of rules that promotes neatness and cleanliness and which are publicly posted so that customers can persue them. They have an excellent effect.

Here Are the Rules

"It is hard to keep hands clean, but it will help.

"Also the finger nails.

"Wash basin in the basement.

"Sweep our your booth when through.

"We don't believe that you will have time to chew or smoke.

"Don't wear your whiskers too long or your hat at all.

"A white apron, coat or cap makes a wonderful improvement.

"The state pure food inspector requests that you do not keep blankets or wearing apparel in your booth. Plenty of hooks in the basement.

"Gummed labels must be placed upon all dairy products and covered containers.

"All eggs must be candled before placed upon the market. Candle them at home. It will save time.

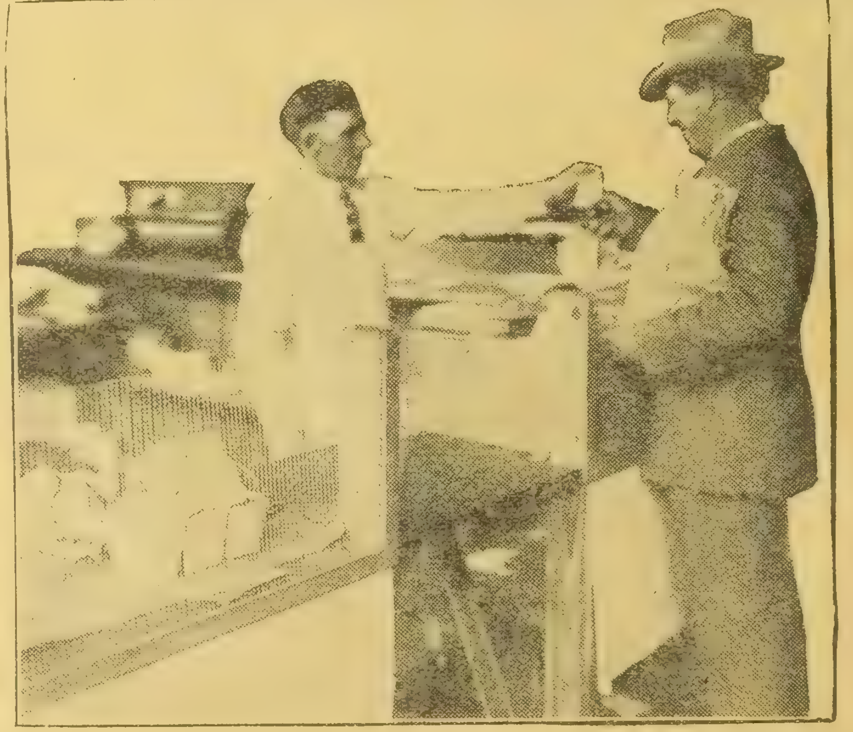
"A garbage can will be found upon the floor in which to place all waste."

Claimed a Model Enterprise

Since the market was started its fame has spread and the farm adviser is in receipt of frequent requests for information in order that arrangements can be made to take similar action. One request came from Phoenix, Ariz., and another from Fitchburg, Mass., indicating how much attention has been attracted to it.

The managers of the McLean county market believe that they have a model and one of the finest of the kind in the United States. The ground floor of the market building is utilized for the booths, while the upper floor contains the farm bureau offices and an assembly room for committee or public meetings. It is essentially a farmers' proposition.

(Editors Note—This article and picture illustrating it are used through the courtesy of the Chicago Daily Drovers' Journal.)



Although you might not suspect it, this is a farmers stall in the Farmers Market at Bloomington, Illinois, where the farmers from many miles around bring their produce and sell direct to consumer. This stall rents for $1 per day.

Farmer and Labor Mix Like Oil and Water, Says Roger W. Babson

ROGER W. BABSON, as you know, is one of America's greatest economists. His article, a part of which is reprinted here, by special permission of the "Saturday Evening Post," in which it appeared, is especially interesting to the farmers of Michigan, because of the repeated attempts to mix Labor and Farmer in a political movement. It may also confirm your suspicions regarding a certain type of so-called "friends of the farmer," who shout loud in political halls what they are doing for the farmer. Mr. Babson says the farmers are just getting over another "economic disease," which comes regularly every thirty years and takes about four years to run its course.

THE farmers are the backbone of our prosperity. This does not mean that the farmer makes prosperity any more than that a backbone makes a human being. There must be arms and legs that manufacture; there must be arteries, and a circulatory system that transports and distributes; and most of all there must be a brain that directs all parts of the body and causes each to help and supplement the others. It is the same with our nation. Statistics clearly show that to have a healthy country we must develop all sections, classes and industries together. It does not do a man any good to have merely a fine big backbone if his arteries are hardening or if his arms and legs are becoming paralized. Anything that develops one part of the body at the expense of any other is detrimental rather than helpful. One bad tooth may ruin a man's health, happiness and efficiency; and a little gallstone has sent many a man to his grave. Good health is the result of building up all parts of the body simultaneously. On the other hand, a good backbone is necessary for a healthy man and a healthy nation, and the farmers are the backbone of America.

Oil and Water in Politics

Therefore I repeat my first statement: The farmers are the backbone of our prosperity. They keep it erect. The farms are the backlogs of our fires. They keep them from going out. The farms are the backstops of our great national game of business. They prevent us from going to pieces when threatened with defeat. The safety of our democracy is absolutely proportional to the number of prosperous farmers that we have. No man was ever known to hang the red flag of anarchy over his own hearthstone. History shows that the decline of nations has begun when the number of its landowners began to decrease. The best insurance against Bolshevism is more successful farm owners and home owners. Such owners, however, must be successful. It does no good to have a man a landowner if he is heavily mortgaged and in constant fear of being wiped out. There must be contentment and a feeling of security. Hence the safety of the nation is not proportional to the number of farmers, but rather to the number of successful farmers, It may be as dangerous to have too many farmers as to have too few—if the country now has all it can profitably support.

The farmer is the backbone of the nation because he is naturally a conservative. Of course he goes off at a tangent once in thirty years. Every new generation of farmers has to have the economic diseases, the same as most children have measles, chickenpox and mumps. The last generation had its dose in 1893 to 1897; the present generation is having its now. Just about thirty years apart, are they not? Whether or not it will take this generation about four years to get the poison out of its system only the future can tell. Yet, I repeat, the farmer is by nature a conservative. He is a property owner and must stand for the protection of property rights. He is an employer and must ultimately see

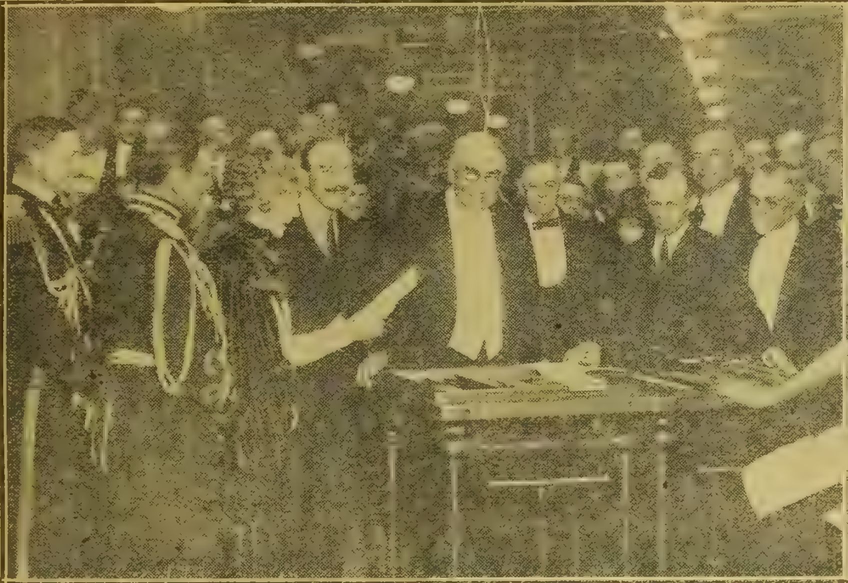
PICTURES FROM FAR AND NEAR



EDITOR HARDING MAKES UP EDITORIAL PAGE.—With a background of printers, President Harding is shown making up the editorial page of the New York Tribune in the composing room. Left to right: Capt. Adolphus Anderson, naval aide; Col. Clarence Sherrill, military aide; Mrs. Harding, who is much amused at one of the cartoons; Ogden Reid; Pres. Harding; Postmaster General New; Mrs. Ogden Reid; H. F. Dana of the editorial staff; Chairman A. D. Lasker of the Shipping Board; Brig. Gen. Sawyer, the president's physician; George J. Christian, private secretary to the president.

LOOKS LIKE A "CIRCUS COME TO TOWN".—A herd of zebras, photographed in their native haunts, in the heart of Africa by the famous explorers, Mr. and Mrs. Martin Johnson whose experiences are now being shown on the screen. In the back can be seen some specimens of the gnu, an animal that looks as though it had been assembled from spare parts. It took weeks of watchful waiting in carefully built blinds to get the intimate pictures of wild animal life. While it was not their intention to kill any of the animals they were obliged to kill several in protecting their own lives.

COLUMBUS OHIO
TO FRISCO

HIKING TO FRISCO, PENNILESS.—Left to right: Esther Williams and Bernice Kerns, both 25 years old, and students of the Ohio State University, at Columbus, who are hiking to California. The trip is the outcome of a dare that they could travel to the Pacific Coast without a penny and work their way. They had covered 120 miles when this picture was snapped in Cincinnati.

EVERY STREET CORNER A CHURCH.—The portable pulpit has been invented by no one less well known than Dr. Roach Stratton who plans to hold open-air meetings in front of the Cavalry Baptist Church, New York City. The pulpit is built over the engine of the automobile and is removed or adjusted to suit the speaker. Photo shows Dr. Stratton speaking from his new pulpit.

RACING THE WAVES AT SANTA MONICA.—Marie Prevost and Phyllis Haver, two beautiful maidens from movieland, are enjoying a motorcycle ride along the beach at Santa Monica, California. It is claimed that they are racing the waves but what wave could be cruel enough to try to win from such fair maidens? We wonder what the wild waves are saying.

HORSE DOCTORS TAKE NOTE.—The term of "horse doctor" is not generally used as a compliment, but science has invaded that field, and at the veterinary hospital at the University of Pennsylvania the most modern and up-to-date methods are in use for operating upon horses. Some of the most valuable horses in the East have been taken here to be fixed up. It is impossible to use ether on horses—so chloroform is the anesthetic employed. Photo shows the veterinary administering the anesthetic before operating.

MARATHON CRAZE HITS THE WORLD.—Paris started it with the dance marathon and within a few days America broke out with the dance marathon like a small boy with the measles. It even got as far as Washington, D. C. where the above was taken. Then somebody started a piano playing endurance test. This was followed by a knitting marathon in Georgia. Now a lady in Pennsylvania claims the marathon dish washing record of the world, while in Paris they are holding a drum beating contest. What next?

(Copyright Keystone View Company)

Own This Modern Light-Draft Spreader

IF THE MAN without a spreader knew how he could increase the crop returns from every ton of manure by using a McCormick-Deering Manure Spreader, he would change his method mighty soon. It isn't a matter of what the other fellow is doing—it is a plain dollars and cents proposition. If you waste your time at uneven spreading you lose profits that should belong to you.

The McCormick-Deering spreader performs two important operations. First, it shreds the manure—tears it to pieces as it passes through the two steel beaters and the spiral wide-spread device; second, it spreads evenly and uniformly, in any quantity desired.

Among the features of the McCormick-Deering spreader are: An auto-steer which permits the spreader to be turned in close quarters, and which eliminates neck weight; adjustment for six feed speeds; and the all-steel frame with all appliances bolted to it direct.

Ask the McCormick-Deering Dealer to point out these features.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

ENTITLED TO THREE MONTHS NOTICE

Would like to know if I rent a farm for money rent of a widow who has a life lease can I hold my crops or could the husband's relatives take possession of them or how should contract be worded?—C. J. E., Jackson, Michigan.

—Upon the death of the widow, the lessee of the farm would become a tenant by sufferance of the reminderman and would be entitled to three months notice to surrender possession. He would be entitled to his crops and if not harvested at the end of the three month period, would have a right to re-enter for the purpose of cultivating and harvesting his crops.—Asst. Legal Editor.

WHO PAYS TAXES

Would like your advice concerning this case: On July 17, 1922, A traded a store to B for a farm. The farm and store to be free from all encumbrances. The farm is assessed to B and the store to A. Will A have to pay the taxes on the farm? —Miss R., Delton, Michigan.

—In the presence of an agreement to the contrary, the purchaser of real property pays the taxes falling due Dec. 1st, if he purchases before that date. If the purchase is made after Dec. 1st, the seller pays the taxes. Under this rule, A would have to pay the taxes on the farm, and B, the taxes on the store.—Asst. Legal Editor.

CAN BE EXEMPT FOR FIRST FIVE YEARS

Can I be exempt from paying tax on wild 40 acres of land if I go to improve it? Is there any law about it?—F. J., Marion, Michigan.

—Act 208, P. A. 1913, governs the case in point. The substance of the act is that if a man buys wild land, forty acres or more, and lives on same and subdues and places under cultivation two or more acres a year, he can be exempted from taxation for the first five years on the property. A reference to the act will give you more details about it.—Chas. J. DeLand, Secretary of State.

WHO OWNS TIMBER?

A and B own farm adjoining with highway between. A claims highway is all on his land, B's deed calls for all land to center of highway. There is timber on B's side of roadway. Said roadway has been used by the public for over sixty years. Who owns timber?—R. L., Saranac, Michigan.

—The owner of land adjoining the highway owns to the center of the highway, unless his deed and abstract of title provide otherwise. If B's deed calls for all the land to the center of the highway, he would be the owner of the land and timber. —Asst. Legal Editor.

SECURING PATENT

Will you please inform me where and how to get an article which I have invented, patented?—R. B., Perrington, Michigan.

—Write to the Patent Office, Washington, D. C. for "Statutes and Rules of Practice" relating to application for patent. These are distributed gratuitously by the patent office and contain forms, etc., to be used in making application for patent.—Assistant Legal Editor.

ESTATE HELD JOINTLY

If man and wife owns a farm jointly and either of them leave can the one leaving receive their share of the property? What share would the wife get if she was the one to leave? If they each inherited money from home and the wife received, say $9,000 and the husband $3,000 can the wife get the amount she inherited over and above her share of the property if the money is tied up in the property?—T. B., Charlotte, Mich.

—Under an estate held jointly by husband and wife, each is owner of an undivided one-half interest in the whole estate. If one party leaves, or is divorced from the other, this alone does not terminate the estate, but one party may release his or her share to the other, under some mutual agreement. Whatever part of the $9,000 is invested in the farm, held jointly, would be included in the wife's undivided one-half interest. The balance of the $9,000, which she inherited would be her sole property.—Asst. Legal Editor.

CAN HE LEVY AGAINST PERSONAL PROPERTY?

I shall appreciate your advice on the following: A sells farm to B. B fails to pay full amount of interest in any of the years he has had the farm; sold on contract. The contract simply states that in case B fails to perform the ordinary duties as owner A shall declare B as his tenant holding over without permission and remove then from premises retaining all that B may have paid or done. Now my question is: Can A in any way secure himself with B's personal property for the back interest? Of course the back interest does not amount to but about one-half the amount B paid as first payment. Farm is assessed to A but B has paid taxes in full.—W. V., Climax, Mich.

—If A does not wish to exercise his right of foreclosure and to lispossess B he may maintain an action at law to recover overdue interest, and could levy upon B's personal property to satisfy his judgment, in the absence of anything in the contract requiring conveyance by vendor before bringing such action.—Asst. Legal Editor.

MISREPRESENTS COW

I am a subscriber to your paper and have been for years. Will you please answer this through your columns? I bought a cow the first of last November at an auction sale, costing $52.50. The man saying she was due to freshen February 12th. I dried her up a month before time to freshen. She isn't fresh yet and won't be for some time. I understand that property must be what it is sold for. Do you think I have a case against this man?—W. H., Central Lake, Mich.

—It is difficult to tell just when a cow will become fresh. Altho the owner should be able to determine within a month's time of the actual date, yet, unless you can show the seller deliberate misinformed you as to the date, knowing that it would be several months later than represented, it would be difficult to establish a cause of action against him.—Asst. Legal Editor.

CONSULT SUPERVISOR

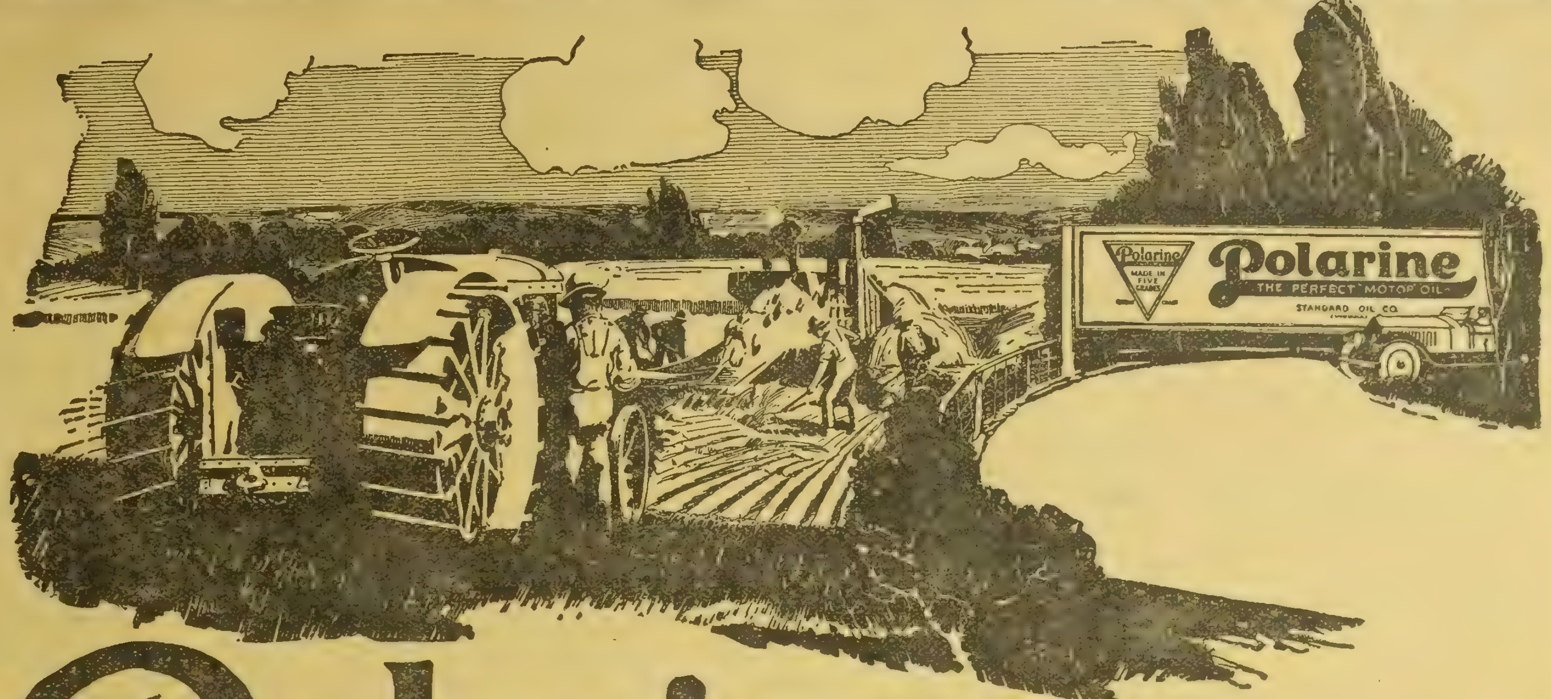
I would like to know thru the M. B. F. if Sec. 26, Art. 8 of our constitution as amended in 1916, does not say that the tax for highway purposes shall not exceed $5 per 1,000 in any one year according to previous valuation. If so, by what authority have they got to assess us over $13.00 per 1,000 for this purpose?—C. B., Allenton, Mich.

—The statutes provide for the building of certain roads, upon the application of persons to be benefitted by such roads, in which case those benefitted are subject to special assessment. Statutes also provide for state and federal reward roads, and special assessments therefor. I advise you to consult your supervisor to ascertain to what different purposes your road taxes are applied. —Assistant Legal Editor.

TEAM AND COWS EXEMPT

I own 40 acres of land, a team of horses, two cows, and have wife and family. Now can a concern seize and take any of those chattels or land or can they garnishee my wages?—A. C., Hellman, Michigan.

—If the 40 acres of land is owned and occupied as a homestead, it would be exempt, to the extent of $1500.00 of its value, from levy on execution to recover for a debt. Your team of horses and two cows would be exempt. 60% of your wages would be exempt from garnishment, provided that not more than $30.00 would be exempt and not less than $8.00.—Assistant Legal Editor.



Polarine Means Sharp Economy

THE PERFECT MOTOR OIL

MANY farmers do not realize the tremendous *waste* due to wrong lubrication. They no not charge against the motor oil such matters as scored cylinders — overheating — too much carbon — too much exhaust smoke—too high consumption of gas.

Yet the right grade of Polarine—indicated in the chart frequently corrects all these troubles. Polarine means *economy* in operation, as well as added flexibility and power.

The reason why Polarine is good, begins with fundamentals. Polarine is made from selected crudes—high in lubricating value. Polarine is manufactured in modern refineries. It is made according to the findings of the world's leading petroleum chemists in co-operation with the designers of the very tractors for which the oil is intended.

Use Polarine

THE PERFECT MOTOR OIL

Made In Five Grades

It is tested, scientifically, in hundreds of tests— in all kinds of engines—under all field conditions.

Polarine is dependable at all motor speeds—at all temperatures—because it holds together. It maintains its body, does not disintegrate under pressure, will correctly lubricate your tractor at all times, provided the grade indicated in the Chart is used.

Polarine is elastic. It forms a perfect cushion, an unbroken film between the moving metal parts. Yet it offers minimum resistance to motion and maximum flexibility. Change your motor oil very frequently and use Polarine.

A Farmer's Engine

The Farmer with a good big job wants a good engine just as much as he wants a good separator.

Good, strong, steady power is just as necessary as a good separator. A lack of steady power means poor threshing, poor separation and poor cleaning.

You do not want a threshing outfit that breaks down or has to stop and wait for steam, letting hands stand idle at your expense.

You work hard to plant, grow and harvest a crop and you do not want it wasted. Hire a

Red River Special

outfit with a Nichols-Shepard Steam or Oil-Gas Tractor and

Save Your Thresh Bill

The reason is that it is correctly designed and strongly made.

Get the right outfit to do your threshing and put the money in your pocket that other kinds waste.

MICHIGAN CROPS

SEED TO ALFALFA AND BARLEY

I have a lot I wish to seed to alfalfa. Soil is light. Have grown corn and cowpeas on it the last two years. Land is in fair condition. I think of liming this spring, planting early to beans, then work well and seed to alfalfa after beans are harvested, sowing a few oats for cover. Would you advise this course?—L. H., Augusta, Michigan.

—I am of the opinion that you will get much better results by seeding alfalfa this spring or early next spring, using one bushel of barley as a companion crop. There is considerable risk in seeding in late August or September after beans. Should we have as favorable a fall season as during the past year, you would get a stand but should frost come early or should the September season prove very dry, it is not likely that alfalfa would catch well.

On land such as you describe, lime should be used at the rate of two tons per acre of finely ground limestone. It is important that northern grown or Michigan alfalfa seed, preferably the Grimm be planted.—J. F. Cox, Professor of Farm Crops, M. A. C.

CHANGING TIMES

By JOHN T. BARTLETT

A MILK FOOD DRINK

AT one time in our national existance, the village milk man drove his cow to the centre of the town, beneath a friendly tree, and there served his customers, who came to him with buckets. They saw him milk and knew just what they got. It was milk distribution made as simple as the times knew how to make it. In some foreign countries today, goat milkmen drive their nannies from door to door.

The milk distribution system has been a long time changing—and the end is not yet. Recently, a Denver milk distributing organization has established a service for customers which should increase the consumption of milk in a strategic direction.

Of late years, the soda fountain has consumed greatly increasing quantities of dairy products. The soda fountain is a habit, a passion, or a necessity to millions. One of the soda fountain drinks just introduced in the west makes a delectable concoction in combination with milk. A little of the new preparation, and quite a little milk, and the consumer gets something pretty fine.

What the enterprising milk distributors did was to make an arrangement with the manufacturers of the preparation whereby the distributor could bottle it with milk, and sell it to customers along with milk. The bottled product costs only about two cents a quart more than ordinary whole milk. The dairy organization spent large sums telling Denver consumers what they could now obtain, and introducted the new service. Great quantities of the bottled milk drink are being sold in this manner.

Families drink it ice cold, or steaming hot, as they prefer. Children like it, and it has proved the solution of the milk problem in the case of many a child who refused whole milk. The child likes the rosey color of the new drink, and its distinctive flavor.

This means one more good way for increasing milk consumption.

By the way, did you know that milk is transported these days in great tank auto trucks?

A HIGHER RETAIL PRICE LEVEL

ALL the elements entering into distribution cost soared during the World War period.

Cost of container.

Freight rates.

Wages of city workers engaged in physical distribution.

And since all businesses make gross profit a percentage of cost price, all margins increased. A 50 per cent mark up on $1 is 50c—one $1.50 is 75c. Unit profits went up.

Some of these things came down in the deflation period, but they together only eased off a little, and the future is likely to see them advancing again. Distribution costs have become one of the great problems of the times. They have submerged many farmers the past two years. So great have they become that, did a sack of potatoes cost nothing as it was loaded on a Minnesota car, or a box of apples nothing as it left a Michigan siding, the cost delivered to the consumer would be considerable. It would have to be considerable. Just freight cost, handling costs, middlemen's gross profits would make it a substantial figure.

How is his going to end? From the economis standpoint, the practical solution—with a general advance in labor costs already under way—seems clearly indicated. It is a much higher level of consumer food prices. In old price levels, there is not room for modern distribution costs, and a profit to the farmer. There is room, if the consumer will pay the farmer more, as it now pays transportation companies, the middlemen, more.

A campaign for higher retail price levels is in order. The consumer is reconsiled to paying a ney high level for building materials and many other things. When he accepts a similiar high level for farm products taking it as a matter of course, distribution costs will not obtrude as a crucial problem, for there will be room for them. There is not this room, with pre-war, or near pre-war levels.

FARMER AND LABOR MIX LIKE OIL AND WATER

(Continued from Page 4)

things from an employer's point of view. It is well enough for pink professors to write about Farmer-Labor parties; but it would just as practical to expect an Oil-and-Water party. A man will love a life-preserver when he is in distress overboard; but he quickly loses his interest in the thing after he gets back on dry land. He does not think enough of it to carry it home as a souvenir, even though it saved his life. The farmers are glad to use labor to help them put through some pet scheme; but if labor thinks it can depend upon the farmers' vote to help increase wages and reduce working hours, labor will be most terribly mistaken.

During the war I assisted Secretary of Labor Wilson in the important work of increasing prodution. With wheat pegged at $2.50 a bushel the farmers were, of course, tremendously interested in our efforts. The farmers then through the Department of Labor was doing a fine work and they were very sympathetic with our efforts. Some even suggested that we should take over the Department of Agriculture because labor and agriculture were working for the same end. After the war was over, however, and the price of wheat went down with a bang, they quickly forgot the Department of Labor. Although during the war hardly a week went by when we were not visited by a complimentary farmer delegation, I doubt if one such farmer delegation has been near the department since the Armistice was signed. They were then no longer interested in increasing production. Reduced wages was what the farmers wanted in 1919 and 1920. Now, of course, it was not the function of the Department of Labor to work for reduced wages.

"The department was established for improving the welfare of the wage earners," we told the Grange officials, "hence we do not feel justified in inaugurating any campaign to lower wages, even for farm labor. Let wages take their natural course. They will anyway."

"Very well," replied the farmers. "We thought you were our friends, but we see you are not. Guess we had better stick to the Department of Agriculture, for when we farmers flirt with labor we are playing with fire and are likely to get out fingers burned."

A QUEEN'S ENGLISH

Mrs. Stevens had offered liberal wages and privileges, but still the general house-worker seemed a little undecided about coming. 'Do you do your own stretchin'?" she asked suddenly.

"Do we do our own what?" Mrs. Stevens asked, puzzled.

"Stretchin'," repeated the woman. "Do you put all the food on the table and stretch for it yourself, or do I have to shuffle it around for you?"—Successful Farming.

PORK BARREL POLITICS

"Mrs. Jones, kin Johnny go with us to see Elihu root?"

"Why, I didn't know he was to be in town."

"Whatcha mean, in town! Elihu's our big red hawg!"—Orchard and Farm.

HIS BUSY DAY

He—You know I love you; will you marry me?

She—But my dear boy, I refused you only a week ago.

He—Oh, was that you?—Orchard and Farm.

"BECAUSE OF YOUR LITTLE FAITH"

A SERMON BY REV. DAVID F. WARNER

TEXT: Matt. 17:19, 20a. "Then came the disciples to Jesus apart, and said: 'Why could not we cast it out?" And he saith unto them: 'Because of your little faith.' "

HERE we look in on the same disciples that were given "power over unclean spirits to cast them out." Similarly, other seventy were given this power and returned one day to say, "Lord, even the devils are subject unto us thru thy name." But here, how changed! We hear them saying, "Lord, why could not we cast it out?" Has the Lord changed? No, but the disciples have and therefore suffered defeat .

There the boy stands in the very presence of the multitude challenging the reputed power of Christ thru the disciples. There is the father, pleading and importuning, but his expectancy gives way to hopelessness and disappointment in not seeing the demon cast out. The scribes and Pharisees standing by said, "I told you so." How like those formal and superficial religionists today who shriek, "Didn't I tell you so" when the on-going movements of the church apparently fail—But may I parenthesize that all Godly enterprises go forward. Growth and progress is the norm of life. And I'd rather be an enthusiast in the van than a sullen follower in the rear.—But O, how those baffled disciples, in the midst of that on looking multitude, longed for the Master to come down from the mountain! And he came , he spoke, and the demon went out and the boy was cured from that very hour. The religion of faith triumphed.

Faith is the source of sin-repelling power. There are those who say we need not expect such fullness of power today. They idealize the early church with her phenominal growth and her apostolic teachers who were direct acquaintances of Christ in the flesh. But let us see what we have to keep this faith alive.

We have the same sin-cleansing Gospel. Man's physical needs are supplied thru the same physical laws as then; and so his spiritual needs. Human spirits abide and they must be fed upon the love of God no matter what may be the superficial life of man; his race, occupation, education, or position. The atoning Gospel yet addresses itself to the needs of the heart and cures. You must believe this or you are but a stumbling-block in the on-going of the Kingdom.

We have the same spirit abiding, wooing, and comforting. He came that the greater works might be done. The same spirit that tore away a Saul from the legalism of the Pharisees and sent him out a pulsating apostle to the gentiles, is the spirit of the Wesleys, the Moodys and the Judsons. This is the same spirit that prompts the hard-working farmer to go about his labor in the enthusiasm of Christian purpose. Perspiring and blackened by the dirt of his shop, Elihu Burrit, the learned blacksmith, sang away with the music of hammer and anvil. Said one to him, "Why are you so happy?" "Oh, said he, "I am sending the Gospel to the heathen." Yes, the same spirit as of old. My friend, get out from under the "juniper tree." There are millions living who have not and will not bow the knee to Baal. And you must believe it.

We have the same Lord, yesterday, today, and forever. We saw him in his marvelous works; followed him to the tomb and ascension; only to go away vitalized with the spirit of triumph in his promise to be with us unto the end. And my personal faith is, that the masses are more sensible today of his presence and power than ever before. And you, too, must believe it, else we are in for defeat.

Even so, to find the source of our failure. we are thrown back upon ourselves. We have lacked in a profound, spiritual devotion to Christ. Give us a man of faith and we have a man tenacious in purpose, supreme in power, and married to the accomplishment of one, great dominant thing in life. It was in June in the state of Iowa. I stood looking at two of the finest corn fields I had ever seen. Each had fifty acres or more. And the entire farm was a model of neatness and prosperity. I said to a friend and ex-senator of the state, "Tell me about that farmer." "He is one of our own boys," said he, "and had only such schooling as our own country school provided. But the other day I received a letter from an agricultural college asking me to secure him for their experiment farm." "But why was he such a success?" "Well, he had faith in his job and he mixed plenty of hard work with it," said he. Verily, faith chloroforms all fear in the soul, gives it courage and daring, and fits it for great and loving deeds.

So, it is not a new church, nor a new system of government or church policy, nor organization as helpful as this is, but an implicit faith in a conquering Christ and an unwearied confidence in the power of the Gospel to regenerate that guarantees victory. And here some of us will have to seek our prayer closets and have it out with the devil before we can feel this healing power.

But what will no little faith do? It will regenerate the churches. And they need it. It will set the altar fires going in their sanctuaries. My and your church owes to the community th most helpful kind of spiritual worship. Every devotional period should be warmed with the fire and radiation of Pentecostal hearts; hearts so wrought up in faith as to convince every saint and sinner of the Bethel nature of the place. But many of us are spiritual illusions. We present to others a deceptive appearance.

And why isn't the average church a flattering success? Because the average chuch member is not such a success. He has rejected the new vision and has not allowed the spirit of Christ and the apostles to set the pace for him. He is too smugly content with his own church and society; his own gains and comforts. He is busy satisfying the personal equation while vast surges of lost men go sweeping by him. We sing, "Make me a blessing today," with not enough intelligent faith to know what that means. May I suggest it is the way of the bleeding heart, for only so did our Lord qualify to bless us. "When Zion travaileth she shall bring forth."

No, the Lord has not changed. But many modern disciples have. Why should we pride ourselves in a Gospel faith when our neighbor does not know of it? Why, he scarcely got settled before the grocer, butcher, and politician found him, and you have not found him in these years. Everywhere on the farms and streets, in the stores and markets, are people famishing for the bread of life. Though you have but a few loaves and fishes, give and the Master will bless wonderously.

But how shall vital faith be sustained? By constancy in prayer and devotion. "This kind goeth not out but by prayer and fasting." The disciples, in their busy rounds failed to keep up the devotional life and consequently lost confidence and power. Has not the same spiritual paralysis come over us? In the outwardness and activities of the Christian life, the frictions and distractions of the world are so liable to tear us loose from the fellowship of Christ and power. A good, grandfather Martin oft retired to a secluded spot on the rear of his little farm for trysting with God. He actually believed that one had to go out into the mountains and deserts with his Lord in prayer if one would work for him. "The effectual, fervent prayer of a righteous man availeth much."

And fasting. The purpose of self-denial must be strongly set in our lives. We qualify to enter the Kingdom through cutting off hand and foot, said Jesus. But in likemanner, we qualify for service and power in the Kingdom through continued self-denial. Mark those who are given over to self indulgence and there follows moral weakness and inefficiency. We must enter the gymnasium of self-control and self limitition to have our lives disciplined for strength and power.

Vital, growing faith will give us power. After the San Francisco earth-quake disaster, a Chicago daily came out with a cartoon on its front page, in which lay a powerful suggestion. The center of the picture showed a devastated city filled with grief-stricken, hungry people, sheltered in tents and being fed on charity. At one side, standing on an eminence which overlooked this ruin, stood a man. He was dressed in the clothes of the laborer. His line of vision is centered in a great cloud of smoke which overhung the ruins. In the center of this cloud he sees the restored San Francisco, beautiful and prosperous. And with the tools for the task, he descends in faith and courage to reconstruct the city of his vision.

If we stand with Christ on the Transfiguration mount, become steeped in that holy communion, and get the Master's vision of a sin-cursed humanity, it is then that we catch his spirit and descend with him in power to bless the world through a working, challenging faith.

CHEAP FEED
from your own land

THE most economical cattle feed is that raised on your farm providing you get good yields per acre. One ton of alfalfa or clover is worth two tons of common hay as a milk producer. When preparing fields for grain, harrow in one to two tons per acre of SOLVAY and sow alfalfa or clover. The feed bills you save will pay for the SOLVAY many times over.

IT Is THE BEST

THE PRICE IS RIGHT

Are you remembering in purchasing your binder twine that you have a factory of your own at Jackson?

It is making the best twine that can be placed on the market and has a mixture of fiber this year. Manila is added to the sisal to give extra strength.

The State Farm Bureau and other organizations and dealers of the state are in position to handle your twine. If they do not, write direct for prices as we want you to use your own twine as we make 14,000,000 lbs. more than Michigan can use.

(Continued from May 12th issue)

THEIR eyes met steadily.

"If you are, Johnny," went on MacDonald in a low voice, "I'd take her with me. An' if you ain't, I'd leave these mount'ins to-night an' never look in her sweet face again as long as I lived."

"You'd take her along?" demanded Aldous eagerly.

"I would. I've been thinkin' it over to-night. An' something seemed to tell me we mustn't dare leave her here alone. There's just two things to do, Johnny. You've got to stay with her an' let me go on alone or—you've got to take her."

Slowly Aldous shook his head. He looked at his watch. It was a little after ten.

"If I could make myself believe that she would not be safe here—I would take her," he said. "But I can't quite make up my mind to that, Mac. She will be in good hands with the Blacktons. I will warn Paul. Joanne is determined to go, and I know she will think it pretty indecent to be told emphotically that she can't go. But I've got to do it. I can't see——"

A break in the stillness of the night stopped him with the suddenness of a bullet in his brain. It was a scream—a woman's scream, and there followed it shriek after shriek, until the black forest trembled with fear and agony of the cries, and John Aldous stood as if strippe of power to move or act. Donald MacDonald roused him into life. With a roar in his beard, he sprang forth into the darkness. And John Aldous followed, a hot sweat of fear in his blood where a moment before had been only a chill of wonder and horror. For in Donald's savage beastlike cry he had caught Joanne's name, and an answering cry broke from his own lips as he followed the great gaunt form that was tearing with the madness of a wounded bear ahead of him through the night.

CHAPTER XXII

NOT until they had rushed up out of the coulee and had reached the pathlike trail did the screaming cease. For barely an instant MacDonald paused, and then ran on with a speed that taxed Aldous to keep up. When they came to the little open amphitheatre in the forest MacDonald haulted again. Their hearts were thumping like hammers, and the old mountaineer's voice came huskey and choking when he spoke.

"It wasn't far—from here!" he panted.

Scarcely had he uttered the words when he sped on again. Three minutes later they came to where the trail crossed the edge of a small rock-cluttered meadow, and with a sudden spurt Aldous darted ahead of MacDonald into this opening, where he saw two figures in the moonlight. Half a dozen feet from them he stopped with a cry of horror. They were Paul and Peggy Blackton! Peggy was disleveled and sobbing, and frantically clutching at her husband. It was Paul Blackton who dragged the cry from his lips. The contractor was swaying. He was hatless; his face was covered with blood, and his eyes were only half open, as if he were fighting to pull himself back to consciousness after a terrible blow. Peggy's hair was down, her dress was torn at the throat, and she was panting so that for a moment she could not speak.

"They've got—Joanne!" she cried then. "They went—there!"

She pointed, and Aldous ran where she pointed—into the timber on the far side of the little meadow. MacDonald caught his arm as they ran.

"You go straight in," he commanded. "I'll swing—to right—toward river——"

For two minutes after that Aldous tore straight ahead. Then for barely a moment he stopped. He had not paused to question Peggy Blackton. His own fears told him who Joanne's abductors were. They were men working under instructions from Quade. And they could not be far away, for scarcely ten minutes had passed since the first scream. He listened, and held his breath so that the terrific beating of his heart would not drown the sound of crackling brush. All at once the blood in him was frozen by a fierce yell. It was MacDonald, a couple of hundred yards to his right, and after that yell came the bellowing shout of his name.

"Johnny! Johnny! Oh, Johnny!"

He dashed in MacDonald's direction, and a few moments later heard the crash of bodies in the undergrowth. Fifty seconds more and he was in the arena. MacDonald was fighting three men in a space over which the sprucetops grew thinly. The moon shone upon them as they swayed in a struggling mass, and as Aldous sprang to the combat one of the three reeled backward and fell as if struck by a battering-ram. In that same moment MacDonald went down, and Aldous struck a terrific blow with the but of his heavy Savage. He missed, and the momentum of his blow carried him over MacDonald. He tripped and fell. By the time he had regained his feet the two men had disappeared into the thick shadows of the forest. Aldous whirled toward the third man, whom he had seen fall. He, too, had disappeared. A little lamely old Donald brought himself to his feet. He was smiling.

"Now, what do 'ee think, Johnny?"

"Where is she? Where is Joanne?" demanded Aldous.

"Twenty feet behind you, Johnny, gagged an' trussed up nice as a whistle! If they hadn't stopped to do that work you wouldn't ha' seen her ag'in, Johnny—s'elp me, God, you wouldn't; They was hikin' for the river. Once they reached the Frazer, and a boat——"

He broke off to lead Aldous to a clump of dwarf spruce. Behind this, white and still in the moonlight, but with eyes wide open and filled with horror, lay Joanne. Hands and feet were bound, and a big handkerchief was tied over her mouth. Twenty seconds later Aldous held her shivering and sobbing and laughing hysterically by turns in his arms, while MacDonald's voice brought Paul and Peggy Blackton to them. Blackton had recovered from the blow that had dazed him. Over Joanne's head he stared at Aldous. And MacDonald was staring at Blackton. His eyes were burning a little darkly.

"It's all come out all right," he said, "but it ain't a special nice time o' night to be taking a' evening walk in this locality with a couple o' ladies!"

Blackton was still staring at Aldous, with Peggy clutching his arm as if afraid of losing him.

It was Peggy who answered MacDonald.

"And it was a nice time of night for you to send a message asking us to bring Joanne down the trail!" she cried, her voice trembling.

"We——" began Aldous, when he saw a sudden warning movement on MacDonald's part, and stopped. "Let us take the ladies home," he said.

With Joanne clinging to him, he led the way. Behind them all MacDonald growled loudly:

"There's got t' be something done with these damned beasts of burriners. It's gettin' so no woman ain't safe at night!"

Twenty minutes later they reached the bungalow. Leaving Joanne and Peggy inside, now as busily excited as two phoebe birds, and after Joanne had insisted upon Aldous sleeping at the Blacktons' that night, the two men accompanied MacDonald a few steps on his way back to camp.

As soon as they were out of earshot Blackton began cursing softly under his breath.

"So you didn't send that damned note?" he asked. "You haven't said so, but I've guessed you didn't send it!"

"No, we didn't send a note."

"And you had a reason—you and MacDonald—for not wanting the girls to know the truth?"

"A mighty good reason,' 'said Aldous. "I've got to thank MacDonald for closing my mouth at the right moment. I was about to give it away. And now, Blackton, I've got to confide in you. But before I do that I want your word that you will repeat nothing of what I say to another person—even your wife."

Blackton nodded.

"Go on," he said. "I've suspected athing or two, Aldous. I'll give you my word. Go on."

As briefly as possible, and without going deeply into detail, Aldous told of Quade and his plot to secure possession of Joanne.

"And this is his work," he finished. "I've told you this, Paul, so that you won't worry about Peggy. You can see from to-night's events that they were not after her, but wanted Joanne. Joanne must not learn the truth. And your wife must not know. I am going to settle with Quade. Just how and where and when I'm going to settle with him I don't care to say now. But he's going to answer to me. And he's going to answer soon."

Blackton whistled softly.

"A boy brought the note," he said. "He stood in the dark when he handed it to me. And I didn't recognize any one of the three men who jumped out on us. I didn't have much chance to fight, but if there's any one on the face of the earth who has got it over Peggy when it comes to screaming, I'd like to know her name! Joanne didn't have time to make a sound. But they didn't touch Peggy until she began screaming, and then one of the men began choking her. They laid me out with a club, so I was helpless. Good God——"

He shuddered.

"They were river men," said MacDonald. "Probably some of Tomman's scow-men. They were making for the river."

A few minutes later, when Aldous was saying good-night to MacDonald, the old hunter said again, in a whisper:

"Now what do 'ee think, Johnny?"

"That you are right, Mac," replied Aldous in a low voice. "There is no longer a choice. Joanne must go with us. You will come early?"

"At dawn, Johnny."

He returned to the bungalow with Blackton, and until midnight the lights there burned brightly while the two men answered a thousand questions about the night's adventure, and Aldous told of his and Joanne's plans for the next day.

It was half-past twelve when he locked the door of his room and sat down to think.

CHAPTER XXIII

THERE was no longer doubt in the mind of John Aldous now. The attempt upon Joanne had left him but one course to pursue: he must take her with him, in spite of the monumental objections which he had seen a few hours before. He realized what a fight this would mean for him, and with what cleverness and resource he must play his part. Joanne had not given herself to him as she had once given herself to Mortimer FitzHugh. In the "coyote," when they had faced death, she had told him that were there to be a to-morrow in life for them she would have given herself to him utterly and without reservation. And that to-morrow had dawned. It was present. She was his wife. And she had come to him as she had promised. In her eyes he had seen love and trust and faith—and a glorious happiness. She had made no effort to hide that happiness from him. Consciousness of it filled him with his own great happiness, and yet it made him realize even more deeply how hard his fight was to be. She was his wife. In a hundred little ways she had shown him that she was proud of her wifehood. And again he told himself that she had come to him as she had promised, that she had given into his keeping all that she had to give. And yet—she was not his wife !

He groaned aloud, and his fingers dug into the flesh of his knees as he thought of that. Could he keep that terrible truth from her? If she went with him into the North, would she not guess? And, even though he kept the truth from her until Mortimer FitzHugh was dead, would he be playing fair with her? Again he went over all that he had gone over before. He knew that Joanne would leave him tomorrow, and probably forever, if he told her that FitzHugh was alive. The law could not help him, for only death—and never divorce—would free her. Within himself he decided for the last time. He was about to do the one thing left for him to do. And it was the honorable thing, for it meant freedom for her and happiness for them both. To him, Donald MacDonald had become a man who lived very close to the heart and the right of things, and Donald had said that he should take her. This was the greatest proof that he was right.

But could he keep Joanne from guessing? Could he keep her from discovering the truth until it was time for her to know the truth? In this necessity of keeping her from suspecting that something was wrong he saw his greatest fight. Compared with it, the final settlement with Quade and Mortimer FitzHugh sank into a second importance. He knew what would happen then. But Joanne—Joanne on the trail, as his wife——

(Continued June 9th Issue)

Uncle Rube Spinach Says:

IS SUGAR SCARCE?

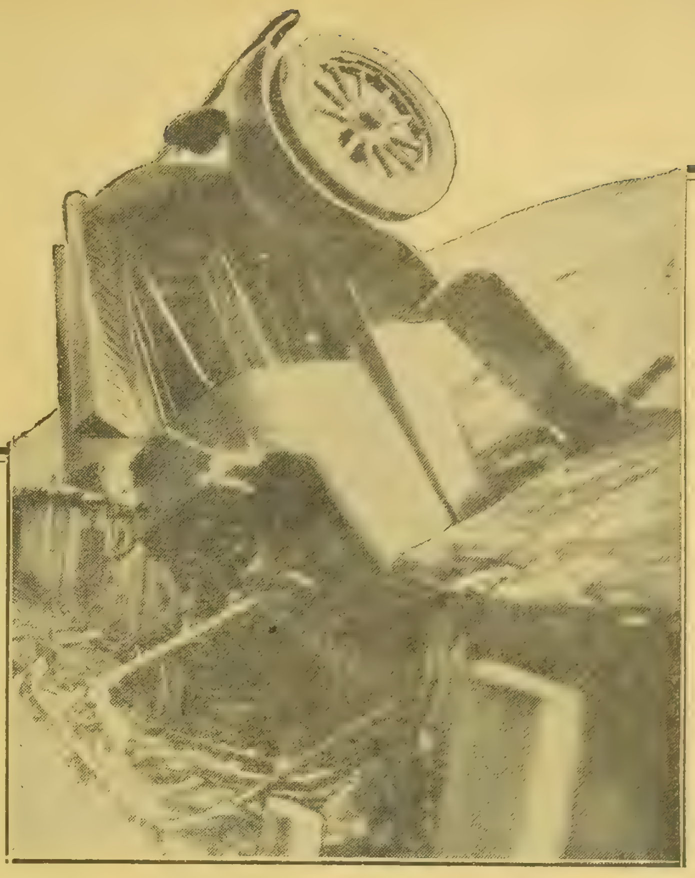
FOLKS'S, we've been told fer a long time there wuz a scars'ty of sugar, 'at the sugar crop wuz short of what it ort to be an' the price has been mountin' higher'n higher for a long time an' we've been payin' the higher prices 'thout sayin' a word, ain't we? In some places they've only let us have two or three pounds at a time; jest like war times, you know.

Well today, bein' sort o' out o' order, mentally and physically, I went snoopin' 'round as I sometimes snoop an' I found two places, retail groceries, an' I wuz lookin' into their warehouses. Well, in one, where there's been a shortage of sugar for some time, sacks of sugar piled twelve high in tiers ten wide an' extendin' back in a room I'd say, wuz 30 or 40 feet long met my gaze. In another, just a little farther down the street, I saw sugar piled eight high an' seven wide an' I couldn't see how far back it wuz. You know they don't 'low visitors in their back rooms an' only fer my snoopin' habits I wouldn't have known anything 'bout this. But folks, what I did see is enough to convince me, if it don't you, that we are bein' held up by somebody. I'm not sayin' who—mebbe I think I know—I do know this, the sugar I saw wasn't put in there yesterday nor the day before—Somebody told 'em to buy an' they bought. You are payin' for the investment, ain't you?

An' it's that way with almost everything. Apples that the farmers wuz glad to get fifty cents fer last fall have sold fer ten cents per pound all winter. Potatoes that had no market on the farm, sold fer fifty cents a peck. Even cabbages that were so plentiful an' the farmers had to almost give 'em away sold fer three an' five cents a pound.

Dear farmer friends, can't you see there's got to be a different way of sellin' your stuff? It's not a fair deal to you fer the middleman to get sixty-five cents out of every dollar's worth of stuff you sell. An' yet that's jest what they're doin'—milk, eggs, butter—everything you sell. Figure what you get an' then ask any consumer in the city what he pays.

There is no sugar shortage. If there wuz no merchant could pile up fifty or a hundred tons of it. There is no shortage of anything jest now except farm help—there is a shortage of that 'cause the city offers better wages 'an the farmer can pay. But wait a little while, jest stay where you are. Soon the tide will change, somebody'll want something to eat an' it wont be before him. Farm prices must go higher or somebody must go hungry. Jest stick to her boys fer a little while—somebody will be sick or whistle—just to keep his spirits up. Say, join some good farm organization like the Farm Bureau or somethin' an' sell your stuff in a business way. I guess it's jest 'bout all I can say. Cordially yours. UNCLE RUBE.



Accidents Like the Above May Happen

With the large number of heavy trucks and automobile busses running on the highways your car may be run into and shoved off the highway into the ditch, making a complete wreck. The driver of the other car may be worthless and you will need automobile insurance to take care of your loss. On the other hand, in case of a collision in which the automobile is damaged and people injured, there is the usual argument as to who is at fault.

Mr. FARMER, if you have invested from $500 to $3,000 in an automobile, can you afford to take the risk with the increasing danger upon all highways and city streets of the state? Why not insure in the pioneer mutual that is now starting its ninth season of success and therefore is organized to give you service and to protect your rights? Every regular policy carries liability to $5,000 and fire and theft not exceeding $1,000. Collision and additional fire and theft can be had at reasonable rates.

On May 1st the total cash assets of the company were $225,412.20 which, with office building and other assets amounting to $49,690.49, makes total assets of $275,102.69.

Remember, on a Dodge car the cost is only $10.50 for fire and theft to the value of the car and $5,000 liability. Insure today; tomorrow may be too late.

"The Farm Paper of Service"

DIRTY POLITICS

IT is to be hoped that few farmers were actually gullible enough to wallow in the slime of dirty gossip which was given to the city newspapers last week from Lansing, regarding the honor and character of David Friday, president of the Michigan Agricultural College.

As Governor Groesbeck said, "No more direct stab-in-the-back was ever aimed at a Michigan institution" and the pity is that it was made serious only by the amount of space, always willingly devoted to any scandal, no matter how frail its foundation, by the daily newspapers.

We believe in a free and untrammeled press, but we believe first in the foundation of all American law and order, which is, that a man is innocent, until he has been proven guilty.

By "aver" and "it is alleged" and "we understand", the daily press can print any amount of gossip or propaganda, attacking the honor and character of any citizen, no matter what his position or his past reputation, and be "within the law."

At the time the first reports from Lansing were strung across the head lines of the newspapers, Dr. Friday, was in Connecticut addressing large meetings in the indirect, if not the direct interests of Michigan agriculture.

From the point of any one familiar with the present and past history of the Michigan Agricultural College it is the most natural thing in the world that this present eruption should have happened; the regret is that it could not have been a clean, above-board, open fight. That was hardly to be expected, however, with Dr. Friday, aligned against a peanut-brained group of garden-variety politicians.

Something Wrong at East Lansing

The farmers of Michigan have known for a good many years that there was something rotten at the core of their Agricultural College. They were pacified only, when the announcement was made that a man of Dr. Fridays reputation was to be put at the head and given full authority to bring the college back to a standing, second to none, which it once boasted.

We have been no less aware of the fact that all was not right at East Lansing, even since Dr. Friday took over the reins and we began to see his fundamental policies of business farming percolating into the working of the various divisions of the college activities.

As recently as February of this year we asked Dr. Friday, privately and from this very page to use The Business Farmer as his spokesman to the real farmers of Michigan. We promised him a willing audience and a most interested one in anything he might have to say. We felt perhaps he had a load on his mind which he ought to divulge to the men and women of the farms in Michigan, to whom he was, when all is said and done, alone responsible. It is therefore to be regretted, at this time, that he did not accept this invitation and lay down before the farmers of Michigan the difficulties under which he was laboring to improve their own institution of learning.

"Hands Off—Dr. Friday!"

If the farmers of Michigan will think for a minute, they will quickly discern that Dr. Friday, has since he took over the college, in a practical way begun the investigation of several "sacred" institutions. Dr. Friday should have known that to question the price paid for milk in the Detroit area was flirting with death. Any milk producer could have told Dr. Friday that he would be safer in a den of rattlers or looking into the business end of a loaded shot gun!

The newspapers say "state agricultural leaders are not satisfied with Dr. Friday!" Who are these "leaders" and what do they lead? Are they the disgruntled bolsheviks, who find with the wave of prosperity turning towards the farmer, as Dr. Friday predicted, that their job of "organizing" and "howling" is over? Or are they the impractical theorists who have tried to make us believe that the union laborer of the city who owns nothing, except his right to strike, is entitled to the friendship and support of the farmer, who has an average investment of thousands of dollars and yet who has not been able to afford the luxuries which the dollar-an-hour city laborer has boasted these past several years.

Let's get these so-called "state-agricultural-leaders" out from under cover.

Let's find out who these men are who speak authoratively for the actual working farmers of the state of Michigan.

Let them show us their record, not of words, but of deeds!

If there is in Michigan a man who has accomplished more for the farmers business in our state, who has pointed out a saner course, or helped to stabilize farm and crop prices or helped show the boys and girls on our farms a future on the farms, or who has more diligently sought to disclose, to tired and tear-dimmed eyes of men and women after devoting the best years of their lives to farming, a silver-lining to the dark clouds that seemed almost to engulf them, than Dr. Friday, we want someone to point him out to us.

High Time for Action!

We believe the farmers of Michigan will agree that The Business Farmer has as much right to express their sentiments as any other source. We have a record for being absolutely independent and we shall continue to be, but we say, here and now, that the farmers of our home state are tired and nauseated with the cheap politician, the man who is striving to get political position by capitalizing their friendship. We have tolerated several in Michigan that ought to have been exposed years ago, but when these same individuals launch an attack on a man who has the confidence, gained by actual accomplishment against great odds, such as Dr. David Friday enjoys with the farmers of Michigan, they can get ready for our "big bertha", because it is aimed their way.

We believe that Dr. Friday will stand by the fight, now that the gauntlet has been thrown down by his opposition. We do not size him up as a "quitter". The fact that he hurried back to Lansing when the news of the attack reached him would indicate that he does not fear a fight in the open, as those who attacked him from ambush did. We know he will stick if he feels that he has the confidence and the support of the real farmers of Michigan behind him and we want him to know that he has.

MEMORIAL DAY

FORTY states in the Union now celebrate May thirtieth as a legal holiday. It is a day set aside primarily for remembering those who have given the greatest gift within their power for the honor and defence of their flag and their country. It is no less a day set aside to the memory of all whom we loved, but who have preceded us in the "great adventure."

On this day as an emblem of our love and devotion we place flowers on the graves of those who have departed as an expression of their memory which we cherish, yet Decoration Day was only an idea in the head of a young newspaperman fifty-eight years ago.

The origin of Memorial Day is an interesting one although known to few. The man to whom the idea came was John Redpath, a young newspaper reporter who had been assigned to accompany General Sherman on his march to the sea. John Redpath wrote the first news of the fall of Charleston, South Carolina, and when the troops entered that city, Colonel Woodford, who was the millitary head of the city, invited Mr. Redpath, in addition to his newspaper duties, to become the temporary Superintendent of Schools. This work was not difficult, for the people of the city were anxious to resume their lives on a peace basis. What John Redpath had to do, however, was to work on the first public schools opened in Charleston for negro children. One of these schools was just outside the town, and the road that led there passed, what had once been, the race-track of the city, but which had been used after the fighting around Charleston as a general burying-ground for the men of both the Union and Confederate forces who had fallen in battle. To make this unhappy spot more sad, the graves were sadly neglected.

One day, it was during April, which is late spring in the southern states, Mr. Redpath passed a group of children near the race-track burying-ground, and they had been picking great bunches of flowers. The idea suddenly came to him that if someone would only put a few of those flowers on the graves they would not look so forlorn. When he reached the negro school toward which he had been walking, he made a short address to the pupils, suggesting that it would be splendid if every scholar would pick a bunch of flowers whenever they could, putting the flowers on a grave.

As one little negro girl said, "Why, we all jest git armfuls of posies and smother them graves from sight!"

As he went about his work in the days that followed, John Redpath spoke of the idea of decorating the graves to a great many people. To every one with whom he talked the plan proved popular. A committee was arranged and it was finally decided that May first would be a good day for the decoration celebration. So that May first eighteen sixty-five, over ten thousand men, women and children met at a central spot, all carrying flowers, and after singing hymns marched to the race track cemetery, where the ugly mounds of sacred earth were literly covered with blossoms.

Thus came Memorial Day, one of the most cherished of American institutions.

A FARMER'S MARKET PLACE

WHAT Bloomington, Illinois, has done in creating a market place for the farmers of the adjacent country is a lesson to be taken to heart by every town and city of considerable population in the state of Michigan. There has been any number of plans suggested for the shortening of the gap between the producer and the consumer, and yet none has the practical element which makes for success as does the open market provided in cities where farmers from a distance can come and dispose of their products. The market place at Bloomington is an example, and The Business Farmer is presenting this story to our readers with the idea of encouraging the establishment of more markets in the cities of this state.

True it is that many of the large cities have so-called markets, but most of those who sell on these markets are buyers who go through the country and buy from the farmer. The markets which already exist in Michigan do not represent ten percent of the number which should be operated and operated to the profit not only of the surrounding country but to the municipalities which would provide such an establishment.

We are informed that the sale of bonds to provide for a suitable market place by any town or city in the state of Michigan is permissible and The Business Farmer would like to do all in its power to encourage during the present year as rapidly as possible the building of farmers' markets in every town and city in our state.

PAYING UP

A MAN connected with several farmers' banks in the central portion of Michigan tells us that farmers are rapidly paying up the obligations they contracted during the past few years.

It seems a little odd perhaps that debts should actually be paid up during times of depression, while debts are contracted during times of easy money, and yet it is a human trait. We are all optimists. If things are good today we believe they are going to be good tomorrow, and so we borrow for our needs today in the expectancy of tomorrow.

We have all been pressed hard during the past two years of agricultural depression, so we have adjusted our lives to using less money, we have worked harder to make more money, and with our surplus, we have been paying up the obligations which we contracted during much better days.

Nothing better could be said of the farmer than that as a class he is most anxious and will sacrifice most to rid himself of the burden of debt.

THE MAY SNOW

WHEN we awoke the other morning and found the thermometer outside registering twenty-two degrees above zero our hearts sank within us, but a statement from the Crop Survey Department says that little damage was done in Michigan and for this fact we have to thank the heavy snowfall, which protected the buds and dropped several million tons of "poor man's fertilizer" over the state.

One scientist has pointed out that because of sun spots this will be a cold summer, and so far at least we can take him seriously.

Another argues that the sun is slowly cooling off and that the world may expect lower mean average temperature as the years pass.

We know very little about astronomy and less about geology but we do know that in the history of the universe "A thousand years is but a day" so we are not getting excited over what the weather prophets tell us.

PUBLISHER'S DESK

RAISING RABBITS AND COVIES.

Dear Mr. Slocum—I have read in your paper lots of things of benefit to all, also that Mrs. E. W. B. wanted to know about selling rabbits, etc., back to companies in New York and Kansas City.

We bought two pairs of rabbits of a Food and Fur Association in New York, a few years ago and they were $7 a piece. They promised to buy back all we raised so we raised some, and after a while they bought one pair, $7 per pair they were to pay as per contract, and said they would buy the rest, if I let them know how many I had. So I did, but they weren't ready and I wrote different times, and only received $6 for the pair sent them, and they were better stock than we received but they claimed they were underweight and I had a time getting this money for them.

They are just frauds in our opinion. They figure on selling stock to you for a big price and get out of buying, and I have been going to advertise them. Anyone that buys from them will get fooled."

THIS letter gets first place at the head of the Publisher's Desk this week because I hope it will help to answer one on two inquiries that are bound to come to me every week from well meaning readers who have not noted in this column my comments on the growing of rabbits, guinea pigs, white mice, and covies for the so-called Food and Fur Associations who sell the original breeding pair at a high price with the understanding that they will buy the offspring at correspondingly high prices from the grower.

Ellis Parker Butler once wrote a book called "Pigs is Pigs." If you have not read it, go to your nearest library and borrow it if you want an evenings good enjoyment and many a hearty laugh. You can read it in an hour or two.

The foundation of the story is the rapid breeding propensities of a pair if guinea pigs, which were shipped to a small express office presided over by an Irish express clerk. As the package was not picked up by the rightful owner the pigs started to multiply so rapidly that they soon crowded the expressman out of his office and threatened to engulf the town.

I am wondering what would happen if the same thing should happen to a shipment sent out by the Fur Association. In that case, according to the alluring circulars, the expressman would find himself possessed of a growing fortune which would soon rival that of Mr. Ford.

A GOLD BRICK

AN eastern farm paper with a national circulation, which is old enough to know better, is sending crews into Michigan and nearby states, the men in which are armed with a lead pipe in the shape of a petition.

Some of these agents travel in overalls, sometimes with a retired farmer, or someone known in the community, who lends a degree of respectability to the proposal. The unsuspecting farmer is asked to sign a petition to "lower taxes, prevent labor strikes, lessen commission, men, and reduce freight rates." Naturally every farmer who sees this wants these four things to happen and is willing to sign anything that may aid in bringing them about.

The hitch comes when the agent asks for two dollars to pay for a ten years subscription to this paper so that the farmer may keep posted on just what this paper is doing in Washington to bring about the ideal conditions their petition seeks.

The scheme sounds so simple that you may consider our warning readers of The Business Farmer, as questioning their intelligence. The scheme is, however, being presented in so many different forms and so often with the apparent good faith of a neighbor accompanying the agent that we cannot help but use this space in the Publisher's Desk, with the hope that some reader with a little red in his hair will kick the agent and his friend who presents such a "gold-brick" clear out into the dust of the state highway.

What the Neighbors Say

BELIEVES HIGHWAY FUNDS ARE WASTED

I READ your statement regarding the veto of the gasoline bill by the Governor. Was surprised at your approval of it. It seems to me while it would be a little unjust to the stationary engine owners of which I have two, yet it woud be doing more justly than it is at present. Regarding the misuse of state highway money it seems to me from what little I have seen it is about as free as radio, just get your station (and there are lots of them) and take in all the time. Last summer in Farwell there was a little job of about 1 mile, yet there were two young men, I should think about 20 or 21 years old, who carried a surveyor's equipment with them in a Ford car who surveyed and resurveyed, I don't know how many times. They had the contractor take dirt out of out of one place, move it to another then put it back several times. Of course the contractor did not care, it was excess work, he got paid for moving it. And those two surveyors were here at least 2 or 3 times a week during the time that job was being done. One day I was in town last fall on my way to the board of supervisors meeting. There were 8 state men that day on that little job at Farwell. Anoter job just east of Farwell where they were putting in a bridge, there was another young man about 22 who was supposed to be inspector. He boarded in Farwell at least one month before they even started the bridge that he was supposed to inspect the work on and made his boast he was drawing his pay just the same. I was to a county fair last fall and was talking to a man who had a road job in another county. While we were talking he was looking at a bunch of people and he said, "Hello, there is my gravel inspector over there. That man is supposed to be on my job inspecting the gravel my men are putting on the road." So here are a few incidents as to some of the ways the money is being spent for nothing.—Louis Finch, Clare County.

—Editor's Note: We did not approve of the governors veto of the gasoline tax, as our reader suggests. The Business Farmer believes in presenting both sides of a serious question and letting its readers do their thinking for themselves. We printed page after page of material from the advocates and opponents of the gasoline tax. Our columns were open to all and we urged our readers to express themselves to their legislators. They evidently did, for the house passed it by a record vote and the rural vote of the senate was unaminously for it. Events have now proven, in our opinion that the Governor should NOT have vetoed the gasoline tax.

TOO MANY FARMERS FOLLOWING RADICAL LEADERS

THE great question of unemployment and poverty seems at the present time to be solved. There is work at good wages for every man and woman and when everybody can get work there is practically no poverty.

Now there is a clamor arising for more immigration. I was surprised to see a communication in the Business Farmer by a self-styled farmer for immigration as a panacea for the ills of the farmer. Now, a nurseryman may be a farmer but he is in a different class from the great majority of farmers, and I think the everage farmer will hesitate a long while before he supports a policy of more immigration. Of course there are some men who are so anxious to have people at there beck and call that they would be willing to bring on unemployment and poverty to attain that end.

To my mind the present shortage

4 TIMES Around the World with ONE OILING

100,000 Miles Without Stopping for Oil

An inventor who could develop an automobile, a railroad car or any other conveyance on wheels which would perform such a feat would be considered a wonder. But such is the record of regular accomplishment by the Auto-oiled Aermotor during the past eight years in pumping water.

Did you ever stop to think how many revolutions the wheel of a windmill makes? If the wheel of an Aermotor should roll along the surface of the ground at the same speed that it makes when pumping water it would encircle the world in 90 days, or would go four times around in a year. It would travel on an average 275 miles per day or about 30 miles per hour for 9 hours each day. An automobile which keeps up that pace day after day needs a thorough oiling at least once a week. Isn't it marvelous, then, that a windmill has been made which will go 50 times as long as the best automobile with one oiling?

The **Auto-oiled Aermotor** after 8 full years of service in every part of the world has proven its ability to run and give the most reliable service with one oiling a year. The double gears, and all moving parts, are entirely enclosed and flooded with oil all the time. It gives more service with less attention than any other piece of machinery on the farm. To get everlasting wind-mill satisfaction buy the Auto-oiled Aermotor, the most efficient windmill that has ever been made.

A Better Way of Building

Learn how "The Kalamazoo Way" is revolutionizing building methods. House your cattle, hogs and equipment under conditions that increase production, reduce expense and earn more profits. Learn about our complete building plan service.

Kalamazoo Glazed Tile Buildings and Silos

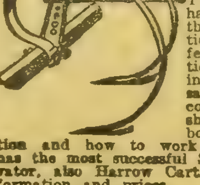
Tile Buildings are beautiful, economical, practical, everlasting. Save repair and paint bills; warm in winter, cool in summer; decay, storm and vermin-proof; will not burn. Three dead air spaces make perfect insulation. Kalamazoo Tile is made from selected quality fire clay in our own plant located in the center of the finest fire clay districts.

Let our Building Plan Department help you. Write for descriptive literature. Free estimates on receipt of your rough plans.

Kalamazoo Silos

—choice of Wood Stave or Glazed Tile. Product of thirty years' silo building experience. Give you greater production, more profit at less cost. Yield a handsome dividend on the investment year after year, Write for Free Silo Book

Kalamazoo Tank & Silo Co.; Dept. 444 Kalamazoo, Mich.



ALL AROUND SATISFACTION FOR ANY CULTIVATION PURPOSE

It's through the right kind of cultivation that foul growths are kept down and can be eradicated. THE KOVAR DIGGER has opened the field for the right kind of cultivation and having exclusive features, will give satisfaction which no other machine will produce. Thousands of farmers have been convinced and we want to show you. Write for free booklet on land cultivation and how to work foul growths. KOVAR has the most successful Spring Tooth Corn Cultivator, also Harrow Cart. Write for further information and prices.

Keep The Business Farmer Coming—See page 2.

The Farm Home

A Department for the Women

Edited by MRS. ANNIE TAYLOR

THE MAKING OF OUR COOK BOOK

THIS cook-book made up of our own recipes will have a place in every reader's home, and I want you all to feel the book is a part of your own work. We will make it attractive enough so that every farm woman reader will feel she cannot run her house without one. I want your favorite cooking, canning, and household recipes. I will treasure every one of them, including the recipes I have received in the last few months. To me a good practical cook-book is the most highly prized article in my home. Why burden our minds with remembering a recipe when all you have to do is just open to the page. Remember, simple, every day, as well as fancy cooking, recipes are what I want.

Kindly write on one side of paper, placing your full name and address at top of each sheet. I plan to use the name and county of each sender with their recipe, unless you ask me not to.

MEMORIAL Day is here and lest we forget, this reminder is just to refresh our memories for those who fought and died that we might enjoy the blessings of this beautiful country. We all must admit it is a wonderful nation altho there are times when the struggle is hard. We in this land do not know what hardships are and I hope we will all stop and pause on May 30th and give a prayer even a silent one for those who are with us no more.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

OLD SOLDIERS

Old soldiers, dressed in blue—
Here's a wreath of love for you,
As you slowly walk today
Where your comrades, sleeping, lay.

Old soldiers, dressed in blue—
Gray and stooped and limping, too;
Slow and slower, day by day,
Old age draws your strength away.

I remember, long ago,
When you went with eyes aglow—
Brave young men—brave, soldier
men—
And you knew Abe Lincoln then.

Grand Army of the Republic—how
few remain
Of your loyal, noble train!
Who kept our states in golden band,
And gave to us our happy land.

LEPHIA BRYANT LARSON,
Aberdeen, Wash., April 6, 1922.

SMART BRIDAL ACCESSORIES

THERE no longer seems to be any question of the propriety of adding a touch of color to the conventional veiled bridal gown. The predominating tone of course is white but dressmakers in this country are copying some of the French dressmakers and putting a little bit of soft green or even the palest shade of pink under the bridal dress.

The head-dress that has a diadem is the smartest of all for this spring and can be made at home very easily. Sometimes they are fashioned of artificial orange blossoms, in fact any dainty white flower would be appropriate.

If it is possible to have a home wedding, have one by all means. I do not know of any sweeter memories than an old-fashioned home wedding. Rich or poor can afford this and with the abundance of spring flowers that can be had in our own woods, our homes can be made a bower.

The white prayer-book is taking the place of the bridal boquet in a great many weddings and it makes a lovely keep-sake.

LINEN SHOWER FOR THE JUNE BRIDE

IF a girl has a few friends in her neighborhood, it is a lovely thing for one of her most intimate friends to give a linen or even miscellaneous shower. These shower affairs are very inexpensive for the giver and brings so much joy and real good to the future bride.

All our girls love to make pretty things and a towel with a few stitches of embroidery makes a very acceptable gift. Each girl making some little hand worked article—face cloths with a little crocheting around the edge, two or three kitchen towels with neat hand hemming. The handkerchief carried by the bride on her wedding day is a lovely gift.

A simple luncheon can be served so that a great deal of work does not make our hostess tired. Why not have our girls arrive around two o'clock and either sew or play cards or just chat for an hour or two and then serve a simple tea menu. The following is very good and not a great deal of labor:

Tea Menu for a June Shower

Egg Sandwitches;
Cheese Straws;
Hot Gingerbread with whipped cream;
Tea;
Raisin Opera Caramels.

Egg Sandwiches—Chop finely the whites of "hard-boiled" eggs; force the yolks through a strainer or potato ricer. Mix yolks and whites, season with salt and pepper, and moisten with mayonnaise or cream salad dressing. Spread mixture between thin slices of buttered bread. Cut crust off both sides and cut in two diagonally.

Cheese Straws—Roll, puff or plain paste one-fourth inch thick, sprinkle one-half with grated cheese to which has been added few grains of salt and cayanne. Fold, press edges firmly together, fold again, pat, and roll out one-fourth inch thick. Sprinkle with cheese and proceed as before; repeat twice. Cut in strips five inches long and one-fourth inch wide. Bake eight minutes in hot oven. Cheese straws are piled log fashion and served.

Hot Gingerbread—Two eggs, one cup sugar, one and one-third cups flour, three teaspoon baking powder, half teaspoon salt, one and one-half teaspoon ginger and two-thirds cup thin cream. Beat eggs until light, and add sugar gradually. Mix and sift dry ingredients, and add alternately with cream to first mixture. Turn into buttered cake pan, and bake thirty minutes in a moderate oven. Serve in squares on pie size plates and put whipping cream on top after it has been seasoned with sugar to taste and a drop or two of vanilla flavoring.

Raisin Opera Carmels—Two cups light brown sugar, seven-eights cup thin cream, one-half cup raisins. Put sugar and cream in saucepan, bring to the boiling point and let boil until a soft ball may be formed when mixture is tried in cold water. Turn into a large platter, cool slightly and work with a large wooden spoon until creamy. Add raisins, seeded and cut in pieces and spread evenly in a buttered pan, using hands, having mixture three-fourths inch in depth. Cool and cut in cubes. These may be passed the early part of the afternoon.

Tea should be served with sugar and cream or a dish of cloves and those who care for it this way use two or three cloves in cups and it gives a peculiar but delightful taste. Slices of lemon are also served for the tea.

The table can be made so attractive with a large fancy doily that does not quite cover the whole table or with small doilies. At a tea the custom is to either seat your guests around the room and serve them or else stand. There are so many beautiful wild flowers now that one need not be without a prétty center piece.

The shower gifts can be a surprise and just before serving a box covered with colored crepe paper can be used to hold the gifts and give them to the bride-to-be and she should open each package so that all might share in the happiness.

EMBROIDERY RINGS MADE OF METAL

FOR the women who are handy with their needle the new embroidery rings made of metal are splendid for working on heavy material, like bed spreads. They can be adjusted to the thinner materials as well and are much stronger. I just purchased one for my Mother and she is delighted with it. They cost twenty-five cents in our stores and would be pleased to send you one upon receiving this amount.

A DAISY AND BUTTERCUP WEDDING

DAISES or elderberry blossoms make as pretty decorations for a June wedding as do roses. Laurel also makes a charming ornamentation and keeps fresh, which is a decided advantage. In all decorating, avoid mixing flowers. Make it a rose wedding, a laurel wedding, a dogwood or a daisy wedding, but do not mix these all up in one. You could make your dining room one kind and another room different. An exception to this, however, is in the mixing of flowers which nature herself has a fancy for combinning, such as the early wild flowers or buttercups and daisies. These are beautiful in combination, giving the effect of cheer and sunshine.

Make garlands for the bride's and groom's chairs. If you have a special for the young folks make a center-piece for the table sticking the flowers in a bed of moss. From this center-piece let a chain of daises extend in every direction.

If you use a long table, such as a buffet, and serve your guests standing or at small tables, have a low mound of flowers in the center of the buffet with vines or feathery foliage leading from it. On either side place candles if possible with shades to match the color scheme.

These can be found in a ten-cent store and are very attractive. On each end have plates piled with napkins between. Have two or three varieties of sandwitches with plates of each kind on either end of long table, and plenty more to serve.

The bride's cake should be white and a dark brown cake with white frosting for the groom. These should be on large table with garlands of flowers around them and cut by the bride and groom so all might have a piece.

THE TWELVE GREATEST WOMEN

MRS. Maud Wood Park, president of the National League of Women Voters in the U. S., formed a committee to decide upon the twelve greatest women and after pouring over thousands of letters decided the following were the greatest living. I am giving them to you and any one of these women's lives would be worth reading.

Jane Adams—philanthropy.
Cecelia Beaux—painting.
Annie Jump Cannon—astronomy.
Carrie Chapman Catt—politics.
Anna Botsford Comstock—natural history.
Minnie Maddern Fiske—stage.
Louise Homer—music.
Julia Lathrop—child welfare.
Florence Rena Sabin—anatomy.
M. Carrie Thomas—education.
Martha Van Reusseleau—home economics.
Edith Wharton—literature.

HANDY RAINY DAY DEVICES

SOME handy things to have about for rainy days are: a clothesline that stretches across the porch with clothes-pins handy; a wire circle such as some salt barrels have about them suspended above the stove with spring pins kept on it to dry mittens, socks and other small articles; a few screweyes in the ceiling above the stove on which to hang a coat hanger and dry wet coats.

Mothers Problems

THE AFTERNOON NAP

THERE is no set limit to the age at which a child shall cease taking his afternoon nap. The time varies with different children. Sometimes a child with an exceptionally strong nervous system, can well dispense with the afternoon nap by the time he is in his third year; again, a nervous, high-strung type of child must rest and sleep a bit during the day if possible, until five years old or more. It is for every mother to decide when her child is too old for the nap.

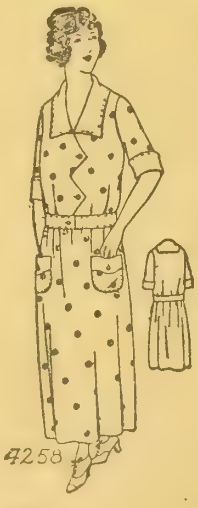
Most mothers stop the daily nap too soon. As the child gets into his second year and play becomes an all-important consideration more and more firmness and persistence are necessary to get him to "go off" each day at the regular time. If Mother is busy, and the child shows no signs of being sleepy, the temptation becomes too great to let the nap go "just for to-day." Perhaps later on the child will fall asleep on the couch or on the floor, and will be put to bed to complete his rest; but the habit of being put to bed at the regular time each day will have been weakened. It will grow easier and easier for the child to remain awake past nap-time, until soon he is going all day long without a break in his day of play.

If the child goes to bed very early, no ill effects may follow, but likely as not, bed-time will not be placed an hour ahead of its former time, and the child will merely be cheated out of an hour's needed rest.

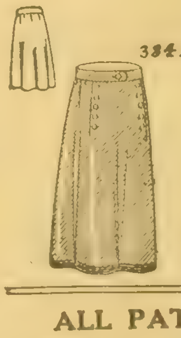
The nervous child can never grow too old for a daily nap, or at least a daily rest. Even after school-age has been reached, it may be necessary to insist upon a few moments of quiet, lying down, each day.

Rest can never harm a child. So, be very, very careful when you say: "Oh, he's too old to take a nap!"

AIDS TO GOOD DRESSING



4258



3841

3993. A Jaunty Cape—This is a splendid model to go with a one-piece dress, or with a separate blouse and skirt. It may be made of broad cloth, jersey, tweed, or taffeta. As here shown, tweed was used. One could have the scarf of brushed wool or other contrasting material.

The Pattern is cut in 4 Sizes: Medium, 38-40, and Large, 42-44 inches bust measure for Ladies, and 14 and 16 years for Misses. A Medium size will require 2¾ yards of 54 inch material.

4258. A Pretty House or Porch Frock—Figured percale and pique are here combined. Gingham, linen, lawn and crepe are also attractive for this style.

This Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size requires 5 yards of 32 inch material. The width at the foot is 2½ yards. To trim as illustrated requires 1 yard 36 inches wide.

3841. A Popular Skirt Model—Here is just the right style for a utility skirt; one that has comfortable lines and very practical pockets. It is good for serge or twill, and also for velveteen, corduroy, and heather mixtures. Braid would form an attractive trimming.

The Pattern is cut in 7 Sizes: 26, 28, 30, 32, 34, 36 and 38 inches waist measure. A 30 inch size requires 2¾ yards of 38 inch material. The width at the foot is 2 yards.

4218. A Splendid "Work" Costume in Romper Style With or Without Skirt—This design fills a long felt want—combining utility, neatness and comfore, with good style lines. The "Romper" may be worn without the skirt, which can be readily fastened if desired. Serge, linen, gingham, khaki, and crepe are good materials for this model.

The Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. A 38 inch size requires 6½ yards of 36 inch material. Without the skirt 4 yards will be required.

If graduation looms ahead, crepe de chine would be charming trimmed with valenciennes lace and also dotted swiss. These make a dress that can be worn all summer. The stores are full of beautiful narrow picot-edge ribbons of two-toned and single coloring. This is truly a summer of ribbons and laces. Smocking is used a great deal on the smaller childrens clothes.

All Husband Does is Play Cards

Dear Mrs. Taylor: I have been reading your paper for some time and watching to see if other women have the same trouble and heartaches as I have. If some of you women have a man that likes to play cards as well as mine does, God pity you. Mine could play night and day, all the time. There he is in his glory. His home and family doesn't worry him any, even if we are all sick. He can go away and stay all night and come home at 6:30 in the morning.

It is all the same to him. Many a time I have gotten supper ready and he has not come home until eight and ten o'clock. What do you think my feelings are? I have put up with this for many winters. It seems as if I can't stand it much longer. Some one write me the remedy for I have tried everything I could think of. If their is any of you women that has a man that stays at home nights as a companion, appreciate him.—A Subscriber.

—We can feel very sorry for this reader and she has our most sincere sympathy. The only remedy that I can see is to play your part and play it well. Maybe he will relent and see the wrong he is doing.

The Runner's Bible

God—there is none else. (Deut. 4:39.)

Be not discouraged because you cannot fully understand God. For mortal minds this is impossible. But as there is no good apart from Him, you can begin your spiritual life by training yourself to see Him in all good. As He is the only power, the one creator, and His work is perfect, so everything must be good, and in everything you will ultimately learn to find Him.

Personal Column

OF course no little modern bride is superstitious. Certainly not. But all the same brides of today like to know the superstitions that long have applied to brides. There are certain omens that they feel better if they know about, for some are good and some are bad, and all are quaint. Here are some rhymes you may cut out and paste under the cover of your hope chest, just to laugh about, or to show to some of your bride friends who may be a bit superstitious.

Marry when the year is new—
Always loving, kind and true.
When February birds do mate
You may wed, nor dread your fate.
If you wed when March winds blow
Joy and sorrow both you'll know.
Marry in April when you can—
Joy for maiden and for man.
Marry in the month of May,
You will surely rue the day.
Marry when June roses glow,
Over land and sea you'll go.
They who in July do wed.
Must labor always for their bread.
Whoever wed in August be
Many a change are sure to see.
Marry in September's shrine,
Your living will be rich and fine.
If in October you will marry,
Love will come, but riches tarry.
If you wed in bleak November,
Only joy will come, remember.

* * *

Another interpretation is:

Marry in January's hoar and rhyme,
Widowed you'll be before your prime.
Married in February's sleety weather
Life you'll tread in tune together.
Marry when March winds shreik and roar,
Your home will lie on a foreign shore.
Married 'neath April's changeful skies,
A checkered path before you lies.
Married when bees o'er May blossoms flit;
Strangers around your board will sit.
Married in month of roses—June;
Life will be one long honeymoon.
Married in July with flowers ablaze,
Bitterest memories in after days.
Married in August's heat and drowse,
Lover and friend in your chosen spouse.
Married in golden September's glow,
Smooth and serene your life will go.
Married when leaves in October thin,
Toil and hardships for you begin.
Married in veils of November mist,
Fortune you wedding ring has kissed.
Married in days of December cheer,
Love's star shines brighter from year to year.

* * *

Married in white, you have chosen all right;
Married in gray, you will go far away;
Married in black, you will wish yourself back;
Married in red, you will wish yourself dead;
Married in green, ashamed to be seen;
Married in blue, he will always be true;
Married in pearl, you will live in a whirl;
Married in yellow, ashamed of your fellow;
Married in brown, you will live out of town;
Married in pink, your spirits will sink.

* * *

And to guide you to the right day of the week:

Monday for health,
Tuesday for wealth,
Wednesday the best day of all,
Thursday for losses,
Friday for crosses,
Saturday no luck at all.

Or this:

Wed on Monday, always poor.
Wed on Tuesday, wed once more.
Wed on Wednesday, happy match.
Wed on Thursday, splendid catch.
Wed on Friday, poorly mated.
Wed on Saturday, better waited.
Wed in the morning, quick undoing.

I would be pleased to hear from some of the readers on opinions of "bobbed hair" for women. —A reader of the M. B. F.

Textile Leather Work—One of your readers has asked if the company selling textile leather work to be done at home was a reliable firm. I am looking this matter up, but am wondering if any reader has any experience with these companies.

MAPLE DESSERTS FOR SPRING

This is the time of year when so many lovely things can be made of maple syrup and everyone enjoys it. I might say that nothing equals hot biscuits and hot syrup for a supper. This is my favorite biscuit recipe and it has never failed me.

Baking Powder Biscuits—Two cups bread flour, five teaspoons baking powder, one-half teaspoon salt, two tablespoons butter and one cup sweet milk. Mix dry ingredients and work in butter with tips of fingers; add gradually the liquid, mixing until a soft dough. It is impossible to determine the exact amount of liquid, owing to difference in flour. Toss on a floured board, pat and roll lightly to one-half inch in thickness. Shape with a biscuit cutter or top of baking powder tin. Place on buttered pan and bake in hot oven twelve or fifteen minutes. Serve with hot maple syrup.

Maple Sauce for Ice Cream—For plain ice cream use this sauce served hot. One tablespoon flour mixed with one-eighth teaspoon salt, one cup milk. Make same as custard, adding one tablespoon butter, and one-half cup maple syrup.

RECIPES

PEANUT COOKIES

Sift one cup of sugar five times to one and one-half cups of cake flour and add two level teaspoons of baking powder, sift five times. Beat the yolks of six eggs with a pinch of salt to a cream, add the sugar gradually beating continually, then add a teaspoon of vanilla, one-half cup of hot water, and the flour gradually, beat for fifteen minutes, pour into a greased and floured dripping pan and bake in a very slow oven. When cool cut in squares, frost all sides and roll in ground peanuts being careful not to crush the squares. These keep nicely in a closed container and are delicious picnic lunches.

FROSTING

Mix two tablespoons of melted butter, four tablespoons milk, one teaspoon vanilla and enough powdered sugar to thicken, then a tablespoon of marshmallow cream. The latter may be omitted, but I do it to all fostings as it keeps them creamy and from becoming dry or hard.

PEANUT BUTTER COOKIES

Cream two level tablespoons of butter then add one-half cup of peanut butter and mix the two thoroughly. Gradually add one cup of sugar and one egg lightly then one-half cup of milk. Take one cup of sifted flour and sift again with four teaspoons of baking powder and a pinch of salt. Add the cookie mixture and when well mixed stir in flour to roll probably three and one-half cups in all. Roll out cut and bake in a hot oven. Sprinkle with sugar before baking if liked.

PEANUT COOKIES

Two tablespoon shortening, one-fourth cup of sugar, one egg, one-half cup flour, one-half teaspoon salt, two and one-half tablespoon milk, three-fourths cup chopped nuts, one tablespoon baking powdered and one-half teaspoon lemon juice. Mix as butter cakes. Drop from spoon on an unbuttered baking sheet two inches apart. Bake twelve or fifteen minutes in moderate oven. Makes about two dozen cookies.

CASTOR OIL COOKIES

Wish we'd known about them years ago.

One cup each of sugar molasses and milk, one-half cup of castor oil, one-half teaspoon salt, one teaspoon soda, two teaspoons ginger and enough sifted flour to make a dough that can be rolled. Roll out and shape, bake in quick oven. Two of these cookies are equal to one dose of castor oil. Children are fond of them. —Miss Alma Becker, Augusta, Michigan, R. 1.

PANCAKES

One quart of sour milk, a pinch of salt, one egg, one teaspoon soda and flour to make of right thickness. I use this same recipe for the Buckwheat cakes. I don't put in the egg and I use only one tablespoon of flour (wheat) and put the rest in of Buckwheat.—

GINGER DROP CAKES

One cup molasses, one-half cup melted butter, one-half cup warm water, three cups flour, one teaspoon soda, two teaspoons ginger. Stir all well together, line a dripping pan with buttered paper, drop in small spoonfulls and bake in a quick oven.—Mrs. Lesley L. Ames, Saranac, Mich.

RHUBARB PIE

Wash rhubarb and cut in pieces to make three cups. Scald and drain. Mix one cup of sugar, one-half cup of fine stale bread crumbs or four tablespoons of flour and a few grains of salt. Add the rhubarb; mix thoroughly. Line a pie plate with pastry, fill with the prepared rhubarb and cover top with strips of pastry. Bake in a hot oven—400 degrees—for half hour.

THE GROUCH

There was a man, at least he claimed that name,
  But he growled and groaned all the same.
When the weather was warm and started the sweat
  He'd hump up his back and say he was "het".
But when the wintry winds blew cold and it snowed
  He'd look from the window and say "Worst weather ever known".
And thus he complained from morning 'till night
  And the darkness alone could shut his mouth tight.
He became such a nuisance to all of his friends
  That, of plans to cure him there were no ends.
His family and his neighbors of patience were bereft
  And wished earnestly that his neighborhood he had left.
But no such good fortune was theirs to enjoy
  For this "excuse for a man" still raised the old boy"
But finally their patience being entirely exhausted,
  Onto the waiting junk heap this grouch they tosted.
And his place on Earth being thereby vacated
  And the harm he had done being justly rated,
It was found on inspection that nothing of worth
  Had resulted from this being having come from to this earth
And now that this lesson to all is apparant
  That to some mortals a sour disposition is inherent,
Let us all have charity that thinketh no ill
  And have patience to let the grouch his sour garden till.

If Ruptured
Try This Free

Apply it to Any Rupture, Old or Recent, Large or Small and You are on the Road That Has Convinced Thousands

Sent Free to Prove This

Anyone ruptured, man, woman or child, should write at once to W. S. Rice, 408B Main St., Adams, N. Y., for a free trial of his wonderful stimulating application. Just put it on the rupture and the muscles begin to tighten; they begin to bind together so that the opening closes naturally and the need of a support or truss or appliance is then done away with. Don't neglect to send for this free trial. Even if your rupture doesn't bother you what is the use of wearing supports all your life? Why suffer this nuisance? Why run the risk of gangrene and such dangers from a small and innocent little rupture, the kind that has thrown thousands on the operating table? A host of men and women are daily running such risks just because their ruptures do not hurt nor prevent them from getting around. Write at once for this free trial, as it is certainly a wonderful thing and has aided in the cure of ruptures that were as big as a man's two fists. Try and write at once, using the coupon below.

Rheumatism
A Remarkable Home Treatment Given by One Who Had It

In the year 1893 I was attacked by Muscular and Sub-Acute Rheumatism. I suffered as only those who are thus afflicted know for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatism to try the great value of my improved "Home Treatment" for its remarkable healing power. Don't send a cent; simply mail your name and address, and I will send it free to try. After you have used it, and it has proven itself to be that long-looked for means of getting rid of such forms of rheumatism, you may send the price of it, One Dollar, but understand I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer, when relief is thus offered you free. Don't delay. Write today.

The Children's Hour

Hello Uncle Ned—This is the second time I have written, lets hope its the last. I am to be 16 years old the 18th of October. Have I a twin brother or sister? If so, please write. I am 5 feet 4 inches tall and weigh 125 pounds, have dark bobbed hair and gray eyes.

My dad takes the M. B. F. and we all like it real well, as there are so many interesting articles in it. My dad owns a grocery and dry goods store, even so he used to be a farmer. Must make room for some of the other cousins, so all please write, twins or not. I will answer all letters I receive. With love, your niece. Isabelle Papineau, Box 8, St. Jacques, Mich.

—Let us hope it is NOT the last time you write. I hope every member of the Children's Hour feel free to write whenever they want to. The more often you write the better we get acquainted, and you stand the same chance of having your letter in print, whether you have written once or one hundred times. By all means come again, Isabell.

Dear Uncle Ned—I love everything on the farm. We will not disturbe a bird nest of any kind as we love all birds. We have little wren houses up on a post in front of our house. The birds built a nest in our mail box last summer and we took them out and put them up in a box and they stayed there all summer. We hope to see them again this summer. We like your paper.—Hattie Rusing, R. 5, Allegan, Mich.

—One should always be a friend to the birds. Many of them appear to do considerable damage but in most cases the good they do outweighs by a large margin the damage. People who like animals and are kind to them always have plenty of friends.

Dear Uncle Ned—It has been such a long time since I have written to the M. B. F., I suppose you have forgotten me. I have been so busy since I started to high school in Mt. Clemens that I could not write. The school work has been much easier for me this semester. I'm now 16 years old and in the A 9th grade. Will the girls and boys please write to me? Those of my age or older. My sister, Eunice, said she would like to join the M. B. F. but is too old. She is 18 years old and would like to have the girls and boys of her age and older write to her. I think there isn't anything nicer than to receive a letter from someone. Its also a great pastime to write letters. About two weeks ago my sisters and I went to the woods to get flowers. The mayflowers were the only ones out, now the bleeding hearts, adders tongues and violets are out. I just love to go to the woods don't you? My sister, Rose, has eighteen correspondents and I don't really see how she can keep track of all of them. I have only one. Will close with lots of love to Uncle Ned.—Iris Arnold, Box 474, R4, Mt. Clemens, Mich.

—I should say I have not forgotten you although it has been a long time since you wrote to me. Don't wait so long between letters, Iris. And tell your sister, Eunice, that she can write if she wishes. Some of the members of our merry circle are two or three years older than she is. Yes, it is great fun to gather flowers in the woods.

Dear Uncle Ned—This is the second time I have written, but I did not see my first letter in print. I think it went in the waste paper basket. The weather is nice now but the water has been high and all the ditches were full and overflowing but it went down Monday, April 16. We did not have any school for one week for the water went over the roads and the children could not come to school. I am 13 years old and in the seventh grade at school. My teacher's name is J. J. Donnelly. I wish you could see the water now and come and take a boat ride like some people are taking, for beside our house is a big ditch about twelve feet deep. We have 5 rabbits but only one is quite tame. Every time I feed the chickens he'll be right there to get his ear of corn. If you chase him away he'll get mad and take the corn away from the chickens. I think the answer to Hazel Baker's riddle is a candle. If I have guessed it right don't forget your letter, Hazel. I am going to write a few riddles. Eyes like a cannon ball, ears like a mule, tail like a cotton ball and runs like a fool. I will not tell the answer to this but I will let all of you guess it. A dish full of dainties, a dish full of flowers. Answer: Honey. What has three feet but cannot walk? Answer: A yard stick. Up and down, up and down, never touching sky or ground. Answer: A pump handle. I think that is enough for this time. The one that guesses my middle name I will write a letter to. Good-bye from Esther E. Thaut, Turner, Michigan, R2.

—"If at first you don't succeed try, try again" must be your motto. It is a good one. The waste paper basket is taking a vacation.

Dear Uncle Ned—I would like to join your merry circle. I like to read the Children's Hour. When I was reading it last week I saw a girl with same name as mine. I was going to write to her but can not find her address just now. I am 16 years old, and in the 9th grade. We live on a farm of 240 acres. We have fifteen cows to milk and I have to help. Our farm is three miles from town but my two sisters and I live in town so as to be near school. My one sister teaches the grammar room. I have another sister married. I only live about eighteen miles from Lake Huron. I have my hair bobbed, had it cut about three weeks ago. I like it much better. We don't live far from the dam that gives the power for lights in the city. The towers run by our place. I have been all through the power house. We go up there fishing real often in the spring.—Bernice Graves, R2, Hale, Michigan.

—All right, you are now a member of the Children's Hour and in order to continue to be one you must read the department and write a letter to me once in awhile.

Dear Uncle Ned—We all enjoy reading the M. B. F., but I believe I enjoy it more than the rest and look for it more eagerly because of "The Children's Hour." I like to read of what the other boys and girls are doing. We are having very stormy weather here. I live 7 miles from the "Soo" and have about a mile to walk to school. I will be twelve years old on the 19th of March. I have one sister and three brothers, we are all going to school. Your niece, Mina Miller, Sault Ste. Marie, Mich.

Dear Uncle Ned—How are you this fine spring weather? I am just fine. Well, I guess I will describe myself: I am four feet ten, so I am just two inches of having five feet I weigh seventy-five pounds, have light hair, dark complexion and dark brown eyes. I am in the sixth grade at school. I go to the Wermuth school and like my teacher very much. My favorite studies are language and arithmetic. May I join your circle please? We all like the M. B. F. Write to Irene Terpening, R1, Ithaca, Mich.

—I am just fine, thank you; or as the fellow said, "If I felt any better I would have to call a doctor." I suppose your school will soon be out. Will you be glad or sorry?

Dear Uncle Ned—I have been a silent reader of the M. B. F., for some time and am very much interested in the Children's Hour. I thought I'd write for the first time. I am a girl of 13 years of age, and a blond. I am in the eighth grade, and I like to go to school. There are 19 children going to our school. I have one brother and one sister older than I. I wish some of the readers would write to me.—Alberta Brandenburg, R1, Pratt, Michigan.

—Always room for one more, so write often.

DAIRY and LIVESTOCK

CORN SILAGE CHEAP FEED

THE cost of feed is the biggest expense item in stock farming. To produce a cheap ration is therefore one of the most important factors in the business, and the stock farmer who wishes to be successful must learn how to reduce his feed bill.

The Missouri Experiment Station recently issued a bulletin on the cost of crop production, showing the cost of putting up hay to be $3.38 per ton. They did not say whether this hay was put in stack or mow, but the figures indicate that modern labor-saving tools were used and that the hay was well housed either in stack or shed. It costs from 85c to $1.25 per ton to put corn in the silo; thus we find that silage can be put up at from one-third to one-quarter the cost of hay. The quality of silage can be contralled, while the quality of the hay depends upon the weather.

Over a half million silos are now used in this country by our stock farmers, and we find them in every state of the Union. Surely there must be a reason for this silo movement, and we should give it serious thought at this time when economy is so important.

Many farmers have put off the building of a silo on account of the work of filling. The writer believes that this hard task is mostly imagination, for no stock feed can be harvested and put up more cheaply or rapidly than corn silage. For example: alfalfa must be cut from three to four times a year and is a more laborious and expensive piece of work than the harvesting of silage. If the weather is unfavorable the cost of putting up hay often exceeds the cost of putting up silage four or five times. From this comparison I do not wish it understood that I recommend corn silage in place of alfalfa. Alfalfa should be fed with corn silage whenever it is possible. I wish simply to compare the costs of harvesting the two crops.

Where it is difficult to get labor and exchange work it is advisable to use a small filling outfit and fill the silo gradually with help found on the farm. Instead of taking one day take three or four or even a week. The rushing in of silage at the expense of many teams and men multiplies the cost and labor, and where break-downs occur the expense and annoyance are not soon forgotten. In communities where silos are numerous the filling is not dreaded but counted a farm task as haying or harvesting.

It is difficult for a stock-keeper not having a silo to compete with one who is using silage. The stock and stock products is materially lessened by silage, and since this is true the silo is not only an economic institution but a necessity for success. Corn silage is a cheap succulent ration; the crops for filling should be grown close to the silo, and silage can be stored in liberal quantities. There is little danger of getting too much on hand, for it will keep for several years. It can be used as a forage bank and drawn upon at any time when needed. The cost of producing silage is so low and it is such a good feed that it should form the bulk of the ration; and if any feed must be purchased it should be concentrates such as grains and mill feeds.—A. L. Haecker.

SHUTTLEWORTH BROS.' AYRSHIRE CAPTURES CLASS CHAMPIONSHIP

BLUEBELL 3rd 73354 in the new senior two year old champion Ayrshire of Michigan. This good Ayrshire heifer completed her Advanced Registry record with 10,361 pounds of milk, 399.45 pounds of butter-fat. She is owned by Shuttleworth Bros., Ypsilanti, Mich.

TWO NEW HOLSTEIN CHAMPIONS IN JUNIOR CLASS

FAYNE Aggie Hengerveld Pontiac is new Michigan Holstein champion in the junior four-year-old class for production in one year. Her record is 28944 pounds of milk and 907.88 pounds of fat or 1134.85 pounds of butter. She is owned by W. W. Mountain, Flint.

In ten months division and junior four-year-old class Silver Belmer Clare, owned by W. C. Cornwell of Saginaw, takes first place with a production of 19328.6 pounds of milk and 627.90 pounds of fat or 784.87 pounds of butter.

NOT ENOUGH ROUGHAGE IN FEED

Will you please tell me what to do for my cows. They eat bones, stones, old shoes or almost anything. They will get it in their mouth and stand and chew on it for an hour at a time. They did this a year ago and are now starting again.

The past winter I have fed corn silage night and morning, sweet clover hay once and shredded corn stalks once through the day. The shredded stalks were some moldy, the ensilage and sweet clover were nice. For grain I have fed ground oats, corn meal, wheat bran and oil meal, mixed as follows: 100 lbs. oats, 50 lbs. corn meal, 50 lbs. bran, 50 lbs. oat meal. They have had Salt before them all the time I have fed liberal with the roughage but not with the grain—about 1 lb. to 5 of milk.

Three cows are fresh, two will be soon. They all are in fair flesh, and feel good. There is no clover in the pasture and a year ago I had none for them through the winter. I will appreciate it very much if you can give me a remedy.—R. D., Petoskey, Mich.

—You do not state just what you are feeding these cows at the present time. You only stated what you had fed them during the past winter. I take it that you are a little short on roughage and if this is the case your cows may lack roughage. I am inclined to think this is what they lack more than anything else although cows sometimes lack mineral matter when they are fed a sufficant quantity of roughage even, and they will behave in the same manner as your cows are doing at the present time. As a remedy for this I would suggest that you add some mineral matter to the ration. —O. E. Reed, Professor of Dairy Husbandry, M. A. C.

FEEDING POTATOES TO MILCH COWS

Will you answer in regards to potatoes to milch cows? A neighbor says they are harmful and reduce the amount of milk, also hurt test of cream.—L. C., Sand Lake, Mich.

—Potatoes make a good feed for milch cows if they are not fed too many at a time. They are just about as valuable as corn silage. Twenty pounds per day make a good feed for the average cow and I would not advise giving more than that amount. If a cow is fed all the potatoes she wants, she will naturally eat less of other foods and her ration then will consist of more water than usual and she will naturally not get as much dry matter in her food and the milk flow may shrink some. But when fed in the same way as silage along with other roughage and grain you will not notice any reduction in the amount of milk. Often times the milk and butter will show the effect of overfeeding on potatoes. The butter is often salvy. As far as the test of the cream is concerned, they will not affect the test of cream.—O. E. Reed, Professor of Dairy Husbandry, M. A. C.

COTTON SEED MEAL ALONE WILL NOT EFFECT COW

I understand by some that if you feed a cow cotton seed meal that she will not come in heat. Is this true? I am feeding less than a pint to a meal twice a day.—L. D., Pentwater, Michigan.

—Cotton seed meal of itself will not cause cows to come in heat, but it is a well known fact that cows that are fed a good ration, and such ration may contain cotton seed meal, will come in heat more regularly and will be in better condition than cows that are not fed cotton seed meal. Cotton seed meal is a good feed for dairy cattle and is particularly valuable because of its high protein content and is ordinarily used to supply protein in balancing up a ration, but results, such as mentioned, cannot be attributed to the use of cottonseed meal alone.—O. E. Reed, Prof. of Dairy Husbandry, M. A. C.

Oldest DE LAVAL SEPARATORS

Average 24 Years of Use

The most remarkable evidence, giving additional proof of the exceptional quality and durability of De Laval Cream Separators, was disclosed by the "Oldest Users Contest" which closed on April 7th. Thousands of old De Laval Separators from all parts of the North American continent were entered. We wish to thank all who participated in this contest for their splendid co-operation in securing the data, which gives an accurate idea of just how long a De Laval will last when properly cared for.

The average life of the "Oldest De Lavals," all of which are still being used, was a little over 24 years. The oldest De Laval entered is 32 years old and is owned by Joseph Larocque of Lancaster, Ont., Canada.

In view of the fact that the average life of cream separators other than De Lavals is about five years, it can readily be seen from such unquestionable proof that the De Laval is not only the best but four to five times cheaper than other cream separators—and, remember, the 1923 De Laval is better than ever, has over four times the capacity of these old machines, is greatly improved, costs less, and will last even longer.

The Prize Winners

States are first listed in alphabetical order, followed by the name of the winner, each of whom has received the prize of $25, their address, and the age of the De Laval which won first place in that state:

Ala., R. M. Davis, Talladega, 24 yrs.; Ariz., L. L. Prouty, Casa Grande, 19 yrs.; Ark., Medlock Dairy Farm, Arkadelphia, 29 yrs.; Cal., B. M. Martin, Newark, 18 yrs.; Colo., M. Miller, Westcliffe, 24 yrs.; Conn., Mrs. E. Lanz, Rockville, 31 yrs.; Del., C. D. Lamborn, Newark, 28 yrs.; Fla., Mrs. S. R. Pyles, Ocala, 12 yrs.; Ga., C. L. Foster, Dalton, 23 yrs.; Ida., P. G. Fairman, Jerome, 20 yrs.; Ill., F. G. Palmer, Yorkville, 28 yrs.; Ind., F. Molter, Lawrenceburg, 28 yrs.; Ia., M. Wollreb, Kalona, 31 yrs.; Kans., D. W. Morrow, Blue Rapids, 30 yrs.; Ky., H. M. O'Nan, Springfield, 27 yrs.; La., P. H. Sitger, New Orleans, 12 yrs.; Me., R. C. Briggs, Freedom, 24 yrs.; Md., Mrs. E. Holbrook, Owings Mills, 24 yrs.; Mass., W. D. Smith, Buckland, 27 yrs.; Mich., F. Downs, Nashville, 24 yrs.; Minn., C. H. Brueshoff, Norwood, 29 yrs.; Miss., W. H. Reese, Sessums, 18 yrs.; Mo., L. M. Lortz, Carl Junction, 23 yrs.; Mont., M. E. Nelson, Flatwillow, 24 yrs.; Neb., L. C. Nichols, Miller, 22 yrs.; Nev., J. Huttman, Fallon, 17 yrs.; N. H., E. L. Jewett, Sullivan, 25 yrs.; N. J., M. H. Astle, Vineland, 30 yrs.; N. M., C. W. Jackard, Hayden, 20 yrs.; N. Y., Mrs. J. P. Morris, Olean, 30 yrs.; N. C., A. B. McAulay, Huntersville, 24 yrs.; N. D., Fred Jenson, Norma, 25 yrs.; Ohio, Lee Nash, Xenia, 29 yrs.; Okla., Lee Armstrong, Seiling, 20 yrs.; Ore., Clinkinheard Bros., Marshfield, 28 yrs.; Pa., M. Lazar, Sharpsville, 29 yrs.; R. I., A. F. Clark, Westerly, 28 yrs.; S. C., Mrs. J. E. McIver, Darlington, 18 yrs.; S. D., H. Moseman, White Lake, 27 yrs.; Tenn., D. B. Hancock, E. Chattanooga, 24 yrs.; Tex., Mrs. F. P. McClure, San Antonio, 22 yrs.; Utah, F. W. Cowley, Venice, 21 yrs.; Vt., Ashton Soule, St. Albans, 31 yrs.; Va., Mrs. G. Hylton, Floyd, 22 yrs.; Wash., M. Kintschi, Edwall, 23 yrs.; W. Va., J. W. Walker, Wellsburg, 27 yrs.; Wis., H. Petersen, Oconomowoc, 30 yrs.; Wyo., P. Catlin, Wheatland, 20 yrs.; Hawaii, H. Iten, Mt. View, 12 yrs.

The 1923 De Laval is better than ever

As good as these old De Laval Separators are, the 1923 De Laval is still better. Naturally much has been learned in the design and manufacture of cream separators during the past 40 years, and purchasers of present-day machines reap the benefit of such experience.

Twenty-five years ago a De Laval Separator of 250 lbs. capacity per hour cost $125—today one of the largest sized De Lavals with 1000 lbs. or four times the capacity per hour, can be bought for approximately the same amount of money, and one of about the same capacity can be bought for approximately half. In addition it has many improvements in design and construction, is made of better materials, does better work, is easier to handle and care for, and will last even longer. This applies to all sizes of present-day De Lavals.

If you are using an inferior or worn-out separator, you may be wasting enough butter-fat to pay for a new De Laval and not get it. You can buy a De Laval on such easy terms that it will pay for itself. See your De Laval Agent now or write us about getting a new one.

ITSAMERE---CEDAR BEND DISPERSAL SALE OF ACCREDITED HOLSTEIN-FRIESIANS

At Cedar Bend Farm, on M-16, 10 mi. East of Lansing—Okemos, Mich.

MONDAY, JUNE 4, 1923

All consignments, except those from fully accredited herds are sold subject to 60-90 day retest.

The accredited herd of E. P. Kinney consists of 23 head and is headed by a son of Carnation King Sylvia, whose dam has 24 lbs. and carries about 90% of the same blood of the world's milk producer Segis Pictertje Prospect. This bull togather with sons and daughters of his will be sold.

Itsamere herd fully accredited consists of 21 head including a 19 lb. Jr. 2-yr.-old, daughter of a 30 lb. cow, and most of the herd are sired by 30 lb. bulls.

Supplementing this sale are consignments from the following herds: H. D. Box & Sons, who enter 11 head including 24 lb. daughter of a 83 lb. cow with 772 lbs. milk, she having 3 records averaging over 39 lbs. in 7 days.

A. R. Black & Sons, of Lansing, sell a 26 lb. cow and two sons of their Grand Champion Show Bull of the Michigan State Fair 1922, and one is by a 3-yr.-old that led her class in the 305 day division last year in Michigan.

F. E. Fogld, of Okemos, will sell a well bred 3-yr.-old heifer.

H. E. Rising, of Woodland, a son of a 29 lb. cow, she a daughter of a 32 lb. cow.

Harry Schultz, of Lansing, sell a proven son of Dutchland Creanelle Korndyke Lad.

Sale will start promptly at 10 o'clock, central standard time.

GUERNSEYS—Registered Bull Calves, Cheap, also grades. Best of breeding for production and size. George Damken, North Manchester, Indiana.

VETERINARY DEPARTMENT

TROUBLE MAY BE DUE TO TWO CAUSES

I wish to know what is the matter with my hogs. They are not feeling right. I have twenty-six hogs shut up in my hog house and they are getting poor instead of fat. I have them divided in two bunches. The hogs weigh 165 pounds apiece. They have been shut up for four weeks on corn and alfalfa and a warm drink twice a day, half milk and water mixed. In my hog house I have cement feeding floors and sleeping pen separate from feeding room and plank floor. They don't have any appetite, they don't seem to be sick or dumpish, they seem to breath like a heaving horse, their sides seem to thump in and out much harder than common. They seem to have a slight cough, but don't seem to strangle or choke. The twenty-six hogs now are eating seven bushels of corn and a small feed of alfalfa and drink 25 gallons of milk and water daily, but fail to fatten.—R. F. D., Leslie, Mich.

—It is rather difficult to tell just what ails your pigs. Your trouble is due to either one of two causes. Either these hogs are severely infected with intestinal parasites, or your quarters have not been properly ventilated, causing them to steam during the night and they have caught cold.

If the latter cause was the trouble, it would be best to open the quarters and give them air enough so that they will remain dry when piled up in the nest, and give them a laxative ration for a few days in order to assist them in getting over their present colds. This could be done by giving some bran in the milk and water which you are feeding, and adding to it one teaspoonful of epsom salts per hog.

If worms are the cause of your trouble, it would be best to buy some capsules or tablets for the purpose of eliminating the worms. These can be obtained from any reliable drug house, or perhaps thru your local drug houses. It would be best to purchase a capsule or tablet upon either santonin or oil of chenopodium.—Geo. A. Brown, Prof. of Animal Husbandry, M. A. C.

HAVE VETERINARIAN EXAMINE SOW

I have a fat sow that has been paralyzed for three months in hind parts. Does not stand on hind legs at all. One veterinary took her temperature and said it was normal and said it would be all right to butcher her. Would you please let me know whether this would be all right to market? Hog eats well and seems all right otherwise.—D. J. T., Moline, Michigan.

—It would very likely be very difficult to get any hog buyer to buy your sow in a parlyzed condition. Her carcass may perhaps be all right for humane consumption after she has been killed and dressed. I would prefer however to have the carcass inspected by a competent veterinarian after she has been killed and dressed to make sure that it is all right. It may be perfectly all right but it will depend somewhat upon what the cause of the paralysis is. —John P. Hutton, Professor of Surgery and Medicine, M. A. C.

IT BELONGED TO KITTY

"Oh, mother!" cried youthful Mildred. "I found a little flea on kitty and I caught it!"

"What did you do with it?" asked mother.

"Why, I put it back on kitty again, of course. It was her flea."

CLAIM YOUR SALE DATE

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 680, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shennandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for a box of Walko, or $1.00 for extra large box—give it in all drinking water for the first two weeks and watch results. You'll find you won't lose one chick where you lost hundreds before. It's a postive fact. We guarantee it. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of this guarantee. You run no risk. If you don't find it the greatest little chick saver you ever used, your money will be instantly refunded.

Walker Remedy Co., Dept. 680, Waterloo, Iowa

BRAND NEW CORD TIRES

Thousands of our customers are getting 12,000 miles out of these tires, you too can get this mileage. These tires are firsts.

POULTRY

NOT ENOUGH OUTDOOR EXERCISE

On March 15th, I had 200 baby chicks shipped from Grand Rapids, and they arrived here in a blizzard and of course they were badly chilled, and died by tens until all were gone except forty. They did very well until about three weeks old. They were in a small compartment in large brooder house run by hard coal heaters. This compartment had a board floor but I had put sand and fine gravel on the floor but their legs and feet got all crippled up, and when they got about it was by flying and fluttering of wings. Leading out of these compartments are large runways with cement floor. I took sand and covered the cement floor about an inch and a half and dampened it, and shut chicks out there in day time, and nearly all got well and over the lameness and started growing again. And now again I have four or five that can hardly get around they are so badly crippled. They do not have acess to outside ground as the snow has been deep until the last two days. They are fed with the following: Commercial chick feed, cracked corn and some wheat, have bran, ground green alfalfa, charcoal and shell, buttermilk or thick sour milk and water in front of them at all times. Can you tell me what is wrong? Some tell me the damp sand will cause rheumatism, but I read an article a few weeks ago similar to this and the woman said she saved a flock by putting them out to paddle in the mud.—W. A. R., Petoskey, Mich.

—Your experience is typical of many others who hatched chicks early this season. Unfortunately, the spring has been cold and damp with the result that many chicks did not get sufficient outdoor exercise early in life, and leg weakness in nearly every case occurred.

Chicks cannot be confined longer than two or three weeks without developing signs of leg weakness. It is a good practice to encourage the chicks to take out door exercise when they are from ten days to two weeks of age; however, we have been able to reduce and practically eliminate this trouble by careful feeding.

Green food in some form or another such as sprouted oats, chopped cabbage, etc., furnishes dietary essentials in preventing leg weakness due to faulty nutrition. Ordinarily it is a good practice to feed green food after the fourth day and if out door exercise is furnished in addition to a diet containing leaf greens very seldom any trouble from leg weakness will develop.

We have had exceptionally satisfactory results in feeding lime water to correct excessive acidity, and supplying a mash containing equal parts by weight of bran and rolled oats moistened with tomato juice plus about one per cent cod liver oil. Chicks will usually yield to this treatment showing a marked improvement within twenty-four hours. —E. C. Forman, Associate Professor of Poultry Husbandry, M. A. C.

A NEW CORN CHAMPION

According to the Agricultural Extension Department of the Ohio State University, a farmer of Licking County, Ohio, William H. Gilmore, raised more corn last year, on ten acres of land than has ever been raised before. The record is official, having been made in connection with the annual 10-acre corn contest conducted by the university. Mr. Gilmore produced 1,343.1 bushels of air-dried shelled corn on his 10 acres, an average of 134.3 bushels per acre, 93.3 bushels greater than Ohio's average yield.

"Mr. Gilmore," said one of the university officials, "has averaged over 100 bushels per acre for three years, but this year made very special efforts to break all existing records. He plowed down a clover sod, half of which had been manured, and applied 18 per cent acid phosphate at the rate of 500 pounds per acre. The five acres without manure had an extra 2,500 pounds of an 0-10-10 fertilizer. The seed was sown three feet apart each way and thinned to three stalks to a hill."

THIS CAR FREE

Nearly everyone else owns a car! Why not you? It is not a question of money. Your spare time for a few weeks, mixed with preseverance and "gumption," is all that is necessary to win this latest model Chevrolet Touring Car.

Or, if you already own a car, get a radio set, baby chicks, pure-bred fowls, poultry books, etc.

It is the official organ of the Michigan State Poultry Association that makes this offer and our reliability is unquestioned. Someone is bound to win the car—why not you. Send post card for details.

$10.00 PER DAY CASH

If you prefer cash, drop us a post card at once, and we will send you details of our new method that enables any honest energetic person to make $10 per day, or more.

This is our own method, which we have tested for the past 6 months, and we know it gives an agent 50 to 500% better chance to earn real money, than any other ever tried.

Free Pamphlet

"VITAMINES AND CHICKS"

by

Prof. E. C. Foreman, Head of the Poultry Dept. at Michigan Agricultural College.

The big feature of our May number is Prof. Foreman's "Vitamine" article, which announces the wonderful effect of Vitamine foods on Baby Chicks. He gives actual facts and illustrations of results almost miraculous when Vitamines were supplied. Luckily, these Vitamine foods are common to every household, and Prof. Foreman explains which ones to use.

Already the demand for this article has almost exhausted our May edition, so we reprinted it in pamphlet form which we will give free to readers of the "Business Farmer" who subscribe direct from this ad., at our special trial price of 50c per year. ORDER TODAY, before the pamphlets are exhausted.

Cured Her Rheumatism

Knowing from terrible experience the suffering caused by rheumatism, Mrs. J. E. Hurst, who lives at 608 E. Douglas Street, C-439, Bloomington, Ill., is so thankful at having cured herself that out of pure gratitude she is anxious to tell all other sufferers just how to get rid of their torture by a simple way at home.

Mrs. Hurst has nothing to sell. Merely mail your own name and address, and she will gladly send you this valuable information entirely free. Write her at once before you forget.

New Way to Rid Poultry of Lice

Rev. G. R. Mente Tells of Amazing Discoverv Which Keeps Hens and Chicks Free From Vermin

Few Drops of Liquid in Drinking Water Does it—No More Dusting, Spraying or Greasing

"I have used your remarkable Lice and Mite Remedy with fine results," writes Rev. G. R. Mente, Methodist Parsonage, New Washington, Ohio. "Mentioned this at a Farmer's Institute a few weeks ago. Consequently, farmers by the dozen have been after me every since to find out where and how they could get it. It has put a stop to the poultry losses in this community. You are a great benefactor to poultry raisers."

Lice and Mites Go Like Magic

No Wonder She Doesn't Lay or Set

This remarkable new discovery which Rev. G. R. Mente, used is Imperial Lice and Mite Remedy. Just a few drops occasionally in the fowls drinking water makes Lice, Mites, Ticks and all vermin go like magic. No more disagreeable and unsanitary dusting, spraying, greasing or dipping. Equally good for Chickens, Turkeys, Ducks, Geese and Pigeons Fine for baby chicks and makes them healthier, sturdier and grow faster. All poultry raisers know that sickly, lice-infected hens cannot lay or have good hatches. Vermin sap the very life and strength of hens and baby chicks. Stop these losses now. Guaranteed not to affect eggs or flesh of fowls in any way. Also a spleidid egg tonic and blood purifier. Costs but a trifle, on money-back guarantee of satisfaction.

White Diarrhea Remedy Free

(Regular $1.00 Size Package)

At last a sure treatment for this dread disease. No muss. No fuss. Comes in condensed tablet form to be dropped occasionally in chicks' drinking water. Raise every chick hatched. Economical to use. Be prepared. These remedies should always be on hand.

SEND NO MONEY. Just your name and address to Imperial Laboratories, Dept. 6399, Kansas City, Mo., for one regular, full size $1.00 bottle of Imperial Lice and Mite Remedy (double strength), and they will include free of cost, a regular $1.00 box of Imperial White Diarrhea Remedy. Pay postman only $1.00 and few cents postage on arrival. Or, a large size Trial Package of either one of these remedies for 50c.

If you have a large flock, this Special Introductory Offer also applies on a double quantity of both remedies—two regular $1.00 bottles of Lice and Mite Remedy, and two regular $1.00 packages of White Diarrhea Remedy at an additional saving—all for $1.75. Simply specify that you be sent this regular $4.00 value for only $1.75. Readers risk no money, as Imperial Laboratories are fully responsible and will refund the cost on request any time within 30 days.

Holland Hatchery, R. 7, Holland, Mich.

TRANSFER CHICKS FROM INCUBATORS TO HENS

I wish to tell you about two queer hens I have in my flock. One Rhode Island Red and one little Bantam hen. Easter Sunday the Rhode Island Red hatched three goslings and one chick. A week later a White Rock hen hatched three goslings and two chicks and she would not have these queer looking baby goslings and pecked them until I took them to the Rhode Island Red, and she took them without a murmur, but when I gave her the extra chicks she wouldn't have them. Then the little Bantam came off with baby chicks a week later, and I gave her the two chicks and she took them. She went on the nest for a week to start with, never laid an egg and then went to setting and hatched out baby chicks. This morning I had two goslings hatch and gave them to the Rhode Island Red. I guess she would take all the goslings one would give her. But it still being too cold to keep the three little ones out of doors I brought them in and gave them to the Bantam, and she squawked about such looking babies and when I put them under her and told her she had to keep them. I guess she understood for she made no more fuss and they eat and sleep all together now and all are happy. —Mrs. T. R., Allegan, Michigan.

—It is a common practice for poultrymen to incubate eggs artificially and then induce a foster mother to raise the chicks. It is probably a more common practice to set the incubator and the hens at the same time and when the entire hatch is completed to transfer the chicks from the machines to the hens. In making this transfer, one should be very careful not to add chicks of different color to those hatched by the hen, because she will immediately detect that they do not belong to her own brood and is very liable to peck and abuse the chicks to such an extent that high mortality results altho you do not mention the color or the breed of the chicks produced.

I would surmise the reason why these hens did not adopt the chicks more gracefully was due to the variety of color. It is not a good practice to rear goslings and chicks together as their habits are so entirely different. Little difficulty is experienced in giving each hen chicks of the same color and if different breeds are being raised together, each hen should be given a few eggs from the different breeds so that she will have a variety of colors among the chicks she hatches.—E. C. Foreman, Associate Professor of Poultry Husbandry, M. A. C.

COMBINATION OF DISEASES

We are troubled with a disease among our hens. First it causes their heads to swell around the eyes, then they become lame, they get very thin and die. Could you please tell us what this disease is called and also what to do for it?—Mrs. J. S., Brown City, Michigan.

—From the symptoms described, the trouble could be diagnosed as a combination of either Chicken Pox or Roup, and Tuberculosis or some nutritional disturbance.

Ordinarily in the case of Roup a discharge is usually apparent in the nostrils and a swelling in front of the eye altho the entire eye may become affected in severe cases. In the case of Chicken Pox, brownish or blackish scabs appear on the comb and wattles and in real severe cases cankerous growths develop in the throat and mouth causing a high mortality due to difficult breathing. In the case of nutritional disturbances a puffiness usually occurs around the eye without an accumulation of puss. The birds in such cases generally possess good appetites but are usually weak and low in fertility.

Lameness is sometimes one of the external symptoms of Tuberculosis, especially when it occurs in the left leg and is accompanied by an emaciated condition. Some forms of leg weakness, however, may be due to Rheumatism caused by faulty housing conditions. It may also be due ot "spring complaint" or "Layers' cramps" both of which have their origin in faulty nutrition.—E. C. Foreman, Associate Professor of Poultry Husbandry, M. A. C.

MARKET FLASHES

MARKET SUMMARY

Wheat market easy. Other grains quiet. Beans steady after recent advances. Old potatoes dull. Butter and eggs are in demand and firm. Poultry in fair supply and demand good. Dressed calves wanted. Hogs steady. Cattle quiet.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

A Word to Our Readers

FARMERS and stockmen who read The Business Farmer are cordially invited to write whenever they desire any information about the markets, or when they have information to offer regarding farm matters in their neighborhood. Predictions as to the future are obviously more or less uncertain, but advice is always cheerfully given when requested. In a general way, it may be said that until farm workers become plentier and their wages are considerably reduced it seems to be advisable for farmers to avoid branching out too much, and fewer acres well cultivated and diversified farming should bring in larger profits than the old methods of a large acreage devoted to grains. Many farmers are endeavoring to grow as much food for their families as they can, instead of spending comparatively large amounts of money. Every farm should have an orchard of fruit trees, as well as grape vines, berry bushes and vegetable garden, besides plenty of hens, some cows, hogs and sheep. Fortunately, many of our Michigan farmers are already pursuing this course, with the best of results. In parts of the country where the land is level numerous farmers who were unable to hire helpers have been buying tractors. The former ambition of owning large tracts of farm lands has largely died down, and the inflated war time prices are no longer paid, except in rare instances. Many farmers are wondering how the movement started by the federal government recently to prevent wild speculation in grain on the produce exchanges of the United States is going to effect the market. Statements of purchases and sales of grain futures since May 1 are called for.

Rallies in Grain Prices

Wheat prices for several weeks followed a downward course, and corn and oats sold lower, but they declined less than wheat, while the fall in prices for oats was still less. Part of the fall in wheat was brought about at the beginning of May by extensive sales of speculators, who were taking their profits. Since then some good advances have taken place, with active speculative and export buying, and smaller advances in corn and oats. Crop reports are potential in making prices, and this is especially true of wheat. Much importance is attached to the fairly large exports of flour and wheat from the United States and Canada, and a few days ago a sale of a cargo of new crop hard wheat, the first such sale of the season, was made at the Atlantic seaboard for shipment to Germany. All along Germany has been a large buyer of rye in this country, yet our rye stocks in sight are reported as aggregating 17,370,000 bushels, comparing with only 6,208,000 bushels a year ago. Of late our exports of corn and oats have been much less than a year ago, but visible supplies of both grains are much smaller than at that time. Corn planting is late because of the cold, wet spring, and much uncertainty is felt regarding the next crop. Wheat continues to sell at much below prices paid one and two years ago; but corn is still selling much higher than last year, and oats prices are greatly lower. The sentiment in the wheat market is that prices in the coming crop year will be higher, but this is looking considerably ahead. The trouble with corn is that it is selling out of line with hogs at the present time, and many farmers talk of reducing their spring breeding. Recent sales were made on the Chicago Board of Trade of May wheat at $1.18, comparing with $1.40 a year ago, May corn at 81¾ cents, comparing with 61 cents last year; May oats at 43 cents, comparing with 37½ cents last year; and May rye at 78¼ cents, comparing with $1.08 a year ago.

Increased Consumption of Beef

During recent weeks there has been a marked increase in the consumption of beef in this country, and this has made a better outlet for beef steers, cows and heifers; so that it was possible to sell much increased supplies of cattle in the Chicago market at firm, and even higher prices, subject to temporary reactions at times. Recent sales of steers have been largely at $8.50 to $10.25, with more sales at $10 to $10.40 than at any previous time since January. The best class of steers brought $9.50 to $10.50, the best yearlings selling at $9.25 to $10.25, while common light weight steers brought $7.15 to 7.75. Butchering cows and heifers sold at $4.50 to $9.50, bulls at $4.50 to $8 and calves at $5 to $11.50. Only a moderate business was transacted in stockers and feeders, but prices were higher because of a very limited supply, sales being made at $6 to $8.75. Quality was demanded, and good lots sold at $7.75 to $8.50 mainly. A year ago common to prime steers sold at $7 to $9.25. Prospects for the future look promising.

Hogs Marketed Rapidly

There is a large demand in the Chicago market for hogs on local and shipping account, and despite continued heavy receipts, the decline in prices has been checked, late sales being as high as a week earlier, buyers paying $6.25 to $7.85, mainly $7.30 to $7.80. Prime light hogs topped the market, selling 15 cents above the best heavy butchers. A year ago hogs sold at $9.50 to $11, supplies at that time far exceeding those at this time. Hogs reaching the Chicago market are mostly good, and their average weight is 243 pounds. Combined receipts in seven western markets for the year to late date amount to 12,463,000 hogs, comparing with 8,953,000 a year ago, 9,608,000 two years ago and 10,354,000 three years ago. Further declines in prices are expected. Advices from the country show plenty of hogs left and anxiety on the part of many stockmen to get their holdings shipped to market. The domestic consumption of lard, fresh and cured hog meats continues extremely large, and exports of provisions loom up big, especially of lard, these far exceeding those of a year ago. Still, the cold storage stocks of provisions in this country are growing rapidly, and are far greater than a year ago.

Active Demand for Horses

Not enough of the higher grade horses are coming on the Chicago market to meet the present increasing demand, and suitable drafters and chunks are bringing $175 to $225, with occasional sales at $250 to $275, and once in a while a sale around $300. The heavier the better the buyer is suited, the demand being for horses weighing from 1400 to 2,000 pounds. Inferior horses are poor sellers around $25 to $50. In the east many big trucks are being replaced with horses, and recent sales have been made of matched teams at $400 to $500. A large part of the horses offered sell singly for $100 to $150. To a very large extent farmers have ceased to raise even for their own use.

Great Boom in Lambs

Insignificant Chicago receipts of spring lambs, clipped lambs and Colorado wool lambs have brought about sensational advances in prices for everything that is fat, the offerings falling greatly below the demand. The spring is late. and there is a great gap between the close of the season for marketing Colorado lambs and the delayed marketing of southern spring lambs. Farmers who are in the sheep industry these times are extremely fortunate. Recent receipts were much the smaller of the year, and prime Colorado wooled lambs advanced to $17, while the best clipped lambs brought $15.60, and California spring lambs went to $17.50.

WHEAT

Trading was lifeless last week in wheat and any attempt by bulls to cause the market to become active and prices advance was met with a flood of wheat that left dealers with more grain than they knew what to do with. However, the market declined only slightly as crop news was of a bullish nature. The reports from the majority of the winter wheat producing states were that the yield per acre will be under that of last year by quite a bit, because of poor stooling and thin fields and these reports were on the increase as the week drew to a close. But in spite of these reports the market did not strengthen as the bulls expected, giving the impression that the backward condition of winter wheat had been discounted. Dealers believe the short promise will attract the attention of the investor who will buy and hold, compared with the present purchaser who buys and then sells as soon as he sees an opportunity to make a small profit. The price of wheat is low, compared with other products, and must go up or other commodities decline. During last week the Detroit market advanced 3c and declined 1c leaving it 2c higher than on the close of the previous week.

Prices

Detroit —Cash No. 2 red, $1.34; No. 2 white, $1.34; No. 2 mixed, $1.34.

Chicago—No. 2 mixed, $1.22.

Prices one year ago—Detroit, No. 2 red, $1.37; No. 2 white, $1.35; No. 2 mixed, $1.35.

CORN

The corn market traveled much the same route as wheat during the past couple of weeks. Sales of corn to arrive showed some increase but domestic demand was slow and export trading quiet. Receipts were small. Corn planting is well under way, and while the soil in some sections is too wet to work, in general the ground is in good condition and planting is going along rapidly. The Detroit market shows a gain of 1c over a week ago.

Prices

Detroit—Cash No. 2 yellow, 87c; No. 3, 86c; No. 4, 84c.

Chicago—No. 2 yellow, 86c; No. 8 yellow, 84c.

Prices one year ago—Detroit, No. 3 yellow, 65½c.

OATS

The oat market showed a loss for the week. This was due to local and commission house selling, based on the easiness in other grains. Oats finished last week 1c lower compared to the week before, thus being the only grain showing no advance.

Prices

Detroit—Cash No. 2 white, 50c; No. 3, 48½c; No. 4, 47c.

Chicago—Cash No. 2 white, 46c; No. 3, 44c.

Prices one year ago—Detroit, No. 2 white, 45c.

RYE

The Detroit market for rye shows an advance in price of 1c over a week ago. The demand is fair but quiet with the market easy in tone.

Prices

Detroit—Cash No. 2, 81c.

Prices one year ago—Detroit, Cash No. 2, $1.09.

BEANS

The bean market developed strength the forepart of last week and prices made advances. At Detroit the total gain amounted to 45c during the past fortnight. The market is in a fairly strong position at the present time and prices are expected to go higher in the near future. However, there will undoubtedly be slight declines in the meantime. Dealers all declare they can see no reason why prices should not go still higher as the demand is good. One of the main troubles with the market for Michigan beans is that the price fluctuates within such a wide range. If a dealer or wholesale grocer goes out to buy a carload on an advancing market the price will be boosted every few minutes by some rabid speculator, and for that reason much buying is done on the "hand to mouth" basis. If the national advertising campaign now under consideration is put on it will tend to stabilize prices so that the wholesale grocer can buy a carload of beans without fear of a sudden change in price that will mean a great loss to him. The Michigan bean is rapidly approaching the place where good demand is constant, or as near as possible, becoming the favorite of the canners throughout the country and several large dealers report many of their customers buy strictly C. H. P. Michigan beans only. Indications are that a large acreage will be planted this year.

Prices

Detroit—C. H. P. $7.25 per cwt.

Chicago—C. H. P. $7.25 per cwt.

Prices one year ago—Detroit, C. H. P. $8.50 per cwt.

POTATOES

If the old potato market is going much lower it has shown no indication during the past week or so. The bottom may have been reached as the shipments of old stock are practically at a standstill. Few potatoes are left at Northern Michigan points and there is no indication that the market will soften much until the end.

Prices

Detroit — Michigan, $1.33@150 per cwt.

Chicago—Wisconsin and Round whites, $1@1.15 per cwt.

Prices one year ago—Detroit—Michigan, $1.92 per cwt.

HAY

A firm tone has prevailed in the market during the last couple of weeks, owing to light receipts. While shipments received on the markets at some points are larger than they were a week ago in general they are not sufficient to take care of the demand. Spring work is holding up country loadings.

Prices

Detroit—No. 1 timothy, $17.50@18; standard, $16.50@17; light mixed, $16.50@17; No. 2 timothy, $15.50@16.50; No. 1 clover mixed, $14@15; No. 1 clover, $13@14.

Chicago—No. 1 timothy, $22@23; light mixed, $19@21; No. 2 timothy, $18@21; No. 1 clover, $15@16; No. 2 clover, $13@14.

New York—No. 1 timothy, $25@26; No. 2 timothy, $22@25; No. 1 clover mixed, $25.

Prices one year ago—Detroit, Standard timothy, $21@22; light mixed, $21@22; No. 2 timothy, $20@21; No. 1 clover, $16@17.

WOOL PRICES MAINTAIN STEADY LEVEL

Activity in wool marketing in some sections of the range states and very little movement in other sections during the past week is reported to the United States Department of Agriculture by its field representatives. A considerable portion of the wool is reported as having been contracted for and a fair quantity pledged for sale through the various pools. Prices paid range from 30c for fall wool in california to 53½s for twelve-months' wool in other states. In some sections shearing has just commenced.

WEEKLY MARKETGRAM
U. S. Bureau of Agricultural Economics

Washington, D. C, for the week ending May 19, 1923.

FEED—Markets dull and declining. Demand very moderate. Linseed meal heavy, offerings good, demand light. Cottonseed meal easier, stocks fair, demand light. Season shipments bran and middlings offered in easter markets around $27. Production most feeds good. Stocks and interior supplies slightly in excess of present requirements. Quoted May 18; bran $26, middlings $28; flour middlings $30; Minneapolis 1; gluten feed $37.15 Chicago.

PRITCHARD'S WEATHER FORECAST
INTERPRETED BY THE STARS

Week of May 27

The first half of the week of May 27th is expected to be fair and generally warm in Michigan.

About the middle part of the week, however, skies will cloud over and general showers with some scattered rains and thunder storms are to be expected in various counties of this state. These conditions with high winds will continue over Thursday but during this day temperatures will fall lower.

There are indications that the sky will clear off about Thursday but about Friday will again become overcast, threatening and precipitating general showers during last two days of week.

Week of June 3

About Wednesday or Thursday begins a period of general showers, electrical storms and high winds that will continue throughout the balance of the week. Locally these storm conditions will be severe with very heavy rains doing considerable damage.

Better Returns from your Produce---

YOU can market your produce more profitably through the *Farm Bureau Produce Exchange.*

Much Cooler About June 23

Notwithstanding the fact that we recently stated in these columns the three weeks centering on the summer solstice would be warm, we wish to emphasize that the few days either side of June 23rd will be quiet cool for the season and tender growth should be protected accordingly. This does not contradict our previous forecast of warm weather on the average for the three weeks. To the contrary this should serve as a warning, as a cool spell during an average warm period is more dangerous to growing crops than a long series of cool weather weeks.

WARMER WEATHER COMING

As this is a nice cool morning and this snow storm has got us beat on the bean proposition, we would like to know whether the weather man could help us out on what we could plant to avoid the cold weather and escape the hot, dry weather at blossoming time. The blight or hot, dry weather stopped us raising beans four or five years ago. Any information would be thankful to get. There are about three inches of snow on the level this morning and still snowing.—A. J. Rumbaugh, Van Buren County, Mich.

—We look for a change in temperature conditions beginning about the second or third week in June. For the balance of that month and running into July we look for warmer weather than usual for this time of year.

The rainfall will be heavier than usual or, at least, plenty of it, according to our figures. For this reason your bean crop should be planted on well drained land and we believe your crop will get a fair start.

Late plantings will probably be best this year as we figure the average temperature during blossoming time (latter part of July) will be normal to below. Therefore, blossoms will set and rapidly develop into healthy bean pods.

Temperatures during the week from June 20 to 27 will average cool and while we do not believe it will develop into frost in your section, we advise that you keep close watch of your thermometer, the sky and the wind.

TOO MANY FARMERS FOLLOWING RADICAL LEADERS

(Continued from Page 13)

of labor is only temporary and to bring in foreign labor would not only hasten unemployment but accentuate the condition when it does come.

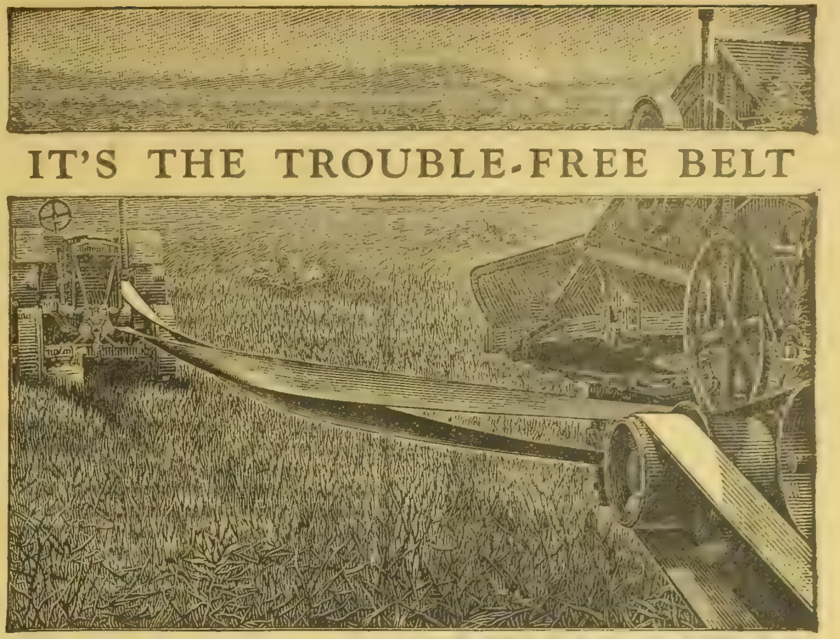
We are too familiar with the evils of emigration to reverse our present policy of restriction. We already have an immense population in this country, a large part of it congested in cities ranking among the largest in the world. Our population is increasing at a rapid rate and we know too well the conditions of the people in over-populated countries like India, China and Japan.

Times are very trying for the farmer but we must remember we are paying for the costliest war in history and it's not going to be easy. The just complaint of the farmer is that he is bearing much more than his share of the burden.

Labor unions by their powerful organizations have been able to prevent readjustment or any considerable reduction in wages. A large proportion of the farmers have backed up the unions in their attitude to their own direct detriment.

The farmers have always been noted at the great conservative class—too many of them now are following radical leaders that will get them nowhere but lead them into further difficulties. The farmers to a large extent are buncoed by their own self-styled leaders. I would ask the average farmer what benefit he has received from all the legislation supposedly passed for his especial benefit since the war.

The great problems that confront him—inadequate and excessively high transportation, high cost of manufactured articles, unequal after-war readjustments, and exorbitant taxation, have received very little practical attention.—K. S. Wood, Charlevoix County, Mich.



IT'S THE TROUBLE-FREE BELT

Copyright 1923, by The Goodyear Tire & Rubber Co., Inc.

"In 1921, I threshed 7,000 bushels without a bit of belt trouble. In 1922, I turned out 9,000 bushels with the same satisfaction and saving of time. My belt is a Goodyear Klingtite Belt."
—ALBERT CASLEY, Cheney, Kansas.

NO engine re-setting when you use a Goodyear Klingtite Belt, because Goodyear Klingtite Belts do not shrink. No jumping the pulleys, because Goodyear Klingtite Belts hold with a slipless grip. No overheating, because Goodyear Klingtite Belts run loosely. No messing with dressing; no breaking in.

Goodyear Klingtite Belts are made in endless type for heavy duty and in cut lengths for lighter drives. They are sold by Goodyear Mechanical Goods Service Station Dealers and by many hardware dealers

In the Public Service

THE first link in the New York Central Lines was the sixteen-mile pioneer road from Albany to Schenectady, opened in 1831.

The New York Central system now comprises 12,000 miles of lines serving eleven of the leading industrial and agricultural states of the Union.

These lines carry one-ninth of the rail-borne commerce of the country, including more than a million carloads a year of agricultural products.

They pay $30,000,000 a year in taxes—four dollars in taxes for every three in dividends.

They are owned by 120,000 investors.

They are operated by 162,000 men and women, of whom 12,000 have been in the service more than 30 years.

New York Central Lines maintain high standards of public service, and are constantly striving to make this service the best in American railroading.

BALD HEADS. DID YOU EVER TRY THE Mascot Scalp Ointment? If you have not order a box to-day and watch your hair grow. The Mascot Ointment is one of the most powerful stimulants for the scalp. There is no excuse for baldness or falling hair. The Mascot will relieve you of an itching scalp and dandruff. Manufactured by MRS. W. LARIVEE, 1200 Pine St., Detroit, Mich. Price $1.00 remit by money order or express.

Sir Walter and the Spud

IN IRELAND, they still point to the place where Sir Walter Raleigh planted the potatoes he brought with him from America. The venturous knight was much impressed with the edible qualities of potatoes and touted them highly to his friends. But in spite of his efforts to popularize the spud, it was half a century or more before it became an article of general consumption abroad.

Today, a new food product becomes nationally known almost overnight. Modern methods of distribution quickly place it in thousands of stores. Advertising tells the public about it. People try it, like it, and shortly it is in general use throughout the country.

By the same means American manufacturers— through advertising—are putting within your reach many of the boons of modern life. Without advertising, we would lack many of the comforts and conveniences that go to make life what it is in this year of grace.

Advertising keeps your information up-to-snuff on every article of human need, whether it be food, clothing, articles of household utility, necessities or luxuries.

Advertisers deserve your support.

SUPPORT THEM.

Lightest running ensilage cutter

Dick's principle of "Knives and elevating fans on fly wheel, makes Blizzards lighest running. Had power to spare" writes C. O. Ogle. "We doubted if our . . . . . . Tractor would pull the Blizzard, but it did —to full capacity, without using all the power."

Prices Down—Big Improvements

All Blizzard models now self-feeding. A new attachment to regulate feeding. Blizzards do most work per H.P. Many in use after 15 and 20 years. Parts of wear all replacgable at small expense. OTTAWA COUNTY'S POULTRY TOUR TO BE ON JUNE 14

THE second annual poultry tour of Ottawa County will be held on June 14th, starting from Central Park, Holland, at 9 a. m. fast time and going through the thickly populated poultry centers of Holland, Zeeland, Vriesland, Drenthe, Forest Grove, Jamestown, Hudsonville, Borculo and ending at Coopersville. Mr. Foreman, Mr. Ferguson and Dr. Stafseth from the poultry department at M. A. C. will be the main speakers and demonstrators. The tourists will study poultry house construction, equipment, feeding, care, management and selection of breeding stock, culling chicks and hens, diseases and marketing. Basket dinner will be held at the Jamestown Grove.

The tour is put on by the poultry association of Ottawa county, the Ottawa County Farm Bureau and the agricultural agent. Poultry men from all over the state are expected to be present. Last year the tour consisted of over 500 poultrymen and this year should be even better. As Ottawa county poultry industry has a total value of over three million dollars it is an industry that can well be recommended with a tour.—C. P. Milham, County Agr'l. Agent.

QUARANTINE AGAINST RASPBERRY SHIPMENTS

MICHIGAN is one of the leading states in the Union when it comes to producing raspberries, over 10,000 acres being devoted to the crop, with an annual value of around $2,000,000. To keep this industry from having any set-back through disease the State Department of Agriculture has placed a quarantine on shipments of the plants and have also put into effect rules and regulations regarding raspberry inspection and certification. Both went into effect May 31st.

Under the quarantine only raspberry plants that have been inspected and certified in compliance with rules and regulations issued by the State Department of Agriculture can be shipped into the state. Plants being shipped out of this state must be accompanied by an authorized certificate of inspection issued by the State Department of Agriculture. Any person or persons desiring to propogate raspberry plants for sale or shipment must apply for inspection and certification prior to June 15th, 1923, and not later that June 1st, in years thereafter, as long as the quarantine is in force.

The rules and regulations specify that all plantitations from which plants are to be sold, exchanged, transported or shipped must be inspected twice during the summer months. Diseased plants shall be removed at once by the owner in a manner approved by the inspector; each block of plants will be considered separately, and certificate of inspection and permits to ship shall be granted after second inspection, based upon conditions as found at both inspections. These rules and regulations apply to Michigan plantations and to plantations in other states from which shipments are to be made to Michigan.

GOING ON THE SHORTHORN BREEDERS' TOUR?

THE Michigan Shorthorn Breedars' Ass'n. is going to make a three-day tour through Eaton, Branch, Hillsdale and Washtenaw counties, starting June 11 and ending June 13. The members and friends will leave the M. A. C. at 1:30 p. m., central time, and the tour will end up with a visit to Henry Ford's farm at Dearborn on Wednesday. This tour is arranged that Shorthorn Breeders and all others interested in the advancement of agriculture may have an opportunity of visiting many of the best Shorthorn herds in Michigan. It will also afford the pleasure of getting acquainted with a large number of breeders as well as conditions throughout one of the best sections of the state. Accompanying the tour will be J. L. Tormey, American Shorthorn Breeders' Assocation, Chicago; W. E. J. Edwards, Secretary, Michigan Shorthorn Breeders' Ass'n., East Lansing; V. A. Freeman, Live stock Extension specialist, M. A. C.; S. H. Pangborn, President, Michigan Shorthorn Breeders' Association, Bad Axe, and many others. A cordial invitation is extended to all interested. For further partculars, write W. E. J. Edwards, Cecretary, East Lansing, Michigan.

FOURTH ANNUAL U. P. ROUND-UP AUGUST 6 TO 11

PLANS for the fourth annual farmers' Round-Up of the Upper Penninsula of Michigan, to be held at the Chatham Experiment Station, August 6 to 11, are already in progress, and there is every indication that the program this year will be more extensive and more interesting than ever before.

FROM HERE AND THERE IN MICHIGAN

Houghton—500,000 lbs. copper leaving Lake Superior daily by rail. Use of electric power in mines is reducing costs to a minimum. Planning a new post office building. Law Institute gets $1,075,000 Carnegie funds.

Iron Mountain—Contract awarded for construction of 10,000 h. p. hydro-electric plant.

Detroit—Pennsylvania system conpletes new rail line from Toledo. 205,000 workers out of 320,000 are employed in auto plants here. Erection of big traffic tower in Highland Park planned. $40,000 site purchased for big filtration plant. To construct 13 new schools costing $4,382,217. Organization under way for new joint stock land bank. Detroit industries add 1,302 men to payrolls during past week.

Belding—Modern tourist camp being built.

Kalamazoo—Campaign started for $60,000 home for aged.

Holland—Work on $350,000 junior high school well under way. Ottawa Beach-Lake Michigan road contract let.

Saginaw—Board of commerce authorizes $120.000 bonds for new building. Excavation for $35,000 school in Buena Vista township started.

Luther—Exchange Bank installs fire and burglar alarm system.

Grand Haven—Grand Trunk railway will erect 150-ton coal dock. Local light and power plant will spend $75,000 in betterments.

Fremont—Wall-eyed pike being planted in Newago county lakes.

Muskegon—Fifth street paving contract awarded to cost $10,256.

Grand Rapids—Work starts on $300,000 Stuyvesant apartment house.

Chelsea—Heating plant to be installed in Masonic building.

Flint—Flint Weekly Review turns out remarkable tenth anniversary number. Two large new industries to erect plants in local field. To hold $1,735,000 bond election for municipal improvements.

Lansing—House passes bill against taxless bonds. Legislature cuts state building budget $13,000,000; only $5,796,637 allowed.

Windsor—$60,000 issued in building permits establishes new one day record.

Adrian—Ford Motor Co. starts construction of branch factory.

Red Jacket—Village to vote on street light.

Bessemer—11,000 employes of Oliver Iron Mining Company get 10% wage boost. Lake Superior and Van Buskirk road contracts awarded for $68,060.98. Townspeople vote $80,000 bond issue for new city hall.

St. Louis—Board of trade completes plans for town band.

St. Clair—St. Clair County farmers organize cow testing club.

Hancock—Copper Journal reports increasing demand for red metal.

Lowell—New baby cab industry of Ypsilanti Reed Company well under way.

Iron River—Work started on annex to Iron Inn, to cost $17,536.

Monroe—Dansard State Bank moves to handsome new quarters.

Albion—Plans completed to erect 12 buildings at New Starr Commonwealth for Girls at Cedar Lake.

Not More Farmers But-More Business Farmers

Changing Agricultural Conditions Bring New Problems to American Farmers which Can Be Answered only by Improved Business Methods

By WILLIAM D. HURD

THERE is considerable alarm expressed in several quarters because, according to statistics, something like two million people left the farms of the country last year to take up other more gainful occupations. Surprise is expressed that this should be so, and fears for the future of our food supply are evidenced.

Many people in this country have not been aware that this tendency has been constant and in existance for years in a pronounced way. If census statistics are analyzed and proper deductions are made for those living in villages who are not actually engaged in farming, it is probable that not over thirty millions of people live or work on farms, while approximately eighty millions support or try to support themselves in other occupations. This, however, is only the beginning of the story.

In those States usually considered most prosperous, agriculturally, the rural exodus has been very pronounced. During the past decade, farms in Illinois fell off by 14,365, with a decrease in rural population of 3 per cent; in Iowa there are 3604 less farms and 1 per cent less rural population than in 1910, and in Missouri during the same period there was a reduction of 14,200 farms and a consequent lessening of rural population by 5.9 per cent. The size of farms, however, in these States slightly increased.

The situation existing in farming today reflects these conditions. The future of farming in this country is purely an economic question. Young people, better educated than formerly for this vocation, will naturally drift into paying occupations. Farming, generally speaking, is not paying. A recent report of the United States Department of Agriculture shows that in a survey of 6,000 representative farms these farmers received an average return of $917 for the use of an average of $16,400 worth of capital and the labor of themselves and their families in 1922. They received less than 6 per cent on their investment and worked for nothing. Similar or even more discouraging records have been found in thousands of farm-management surveys made by individual States. Compare this with the wages of from $12 to $20 a day, with no investment of capital, being paid to laborers in the building trades and other occupations all over the northern part of the country.

It makes little difference whether the farmer's purchasing power, in terms of his products, is 69 per cent or 102 per cent as compared with 1913, as given by two different government agencies. This is purely a matter of statistical method. The important fundamental thing is the relative deflation of agriculture as compared to other industries. Farm products are being sold below the cost of production, and farmers cannot afford hired labor even though it can be secured. Many farmers have been unable to pay their taxes out of a year's production. Thousands have lost their farms.. The rural exodus will probably continue until a better balance is established.

Business Farming the Answer

There is but one answer and only one way to correct these tendencies. There must be developed a more efficient agriculture. We must get on to a basis of business farming. Secretary Hoover recently stated that many farmers individually, are more efficient than formerly. More of them must become so. There is little in the world agricultural situation which would go to show that prices for staple products will be much in excess of those now being received. Most of the attempts at "quick cures," "short-cut" methods, "artificial temporary relief measures" are proving to be failures. These are now costing the country at large millions of dollars annually. Legislation, laws, and more credit for those who are already producing at a loss are not permanent solutions. Farmers' organizations will help some, but after all each farm must be made into a self-sustaining unit and each farmer a self-supporting, self-respecting individual.

There is no new formula to suggest—just plain "horse sense" applied as never before to practical farm-management problems. Crops must be adapted to soil conditions and available markets; lands unfit for profitable production must either be turned to pastures, or other purposes, improved, or given up; soil acidity and toxic conditions must be corrected. All good and approved farming methods must be applied. Adequate equipment must be provided, but this does not mean on all farms, more expensive machinery. High priced gasoline on average farms may not be more economical than cheap feeds for farm power. Losses each year, amounting to more than 25 per cent of the total farm production, due to preventable insect pests and diseases and other leaks, must be stopped. Unprofitable animals and acres must be discarded. Improved strains of seeds of high producing power, certified when practicable, should be used. Land and labor must be used for the largest production per unit.

Producing Power Must Be Increased

But more than all of these things, the producing power of the soil, (farmer's plant or factory) must not only be maintained but increased. Production costs are first looked to by the successful business man in other lines. Low costs per bushel or per animal, with high yields and high quality, afford the opportunity to sell in competitive markets. The margin above costs of production, which farmers measure as profits (since they do not usually market their own products) along with those other things already mentioned, is to be obtained by the adequate feeding of crops. At least as much plant food must be put back by some method as has been taken out. Land has been the cheapest thing we have had in the past, and soil fertility has been wasted and exloited.

We are rapidly growing away from an agricultural nation toward one leading in industry. An adequate food supply must be produced by fewer people and perhaps on fewer farms and fewer acres. The farmer who neglects to inject into his business and adopt the same principles which those in other lines have long recognized as being necessary to success, is doomed to failure.

The Passing of Dr. Friday, How and Why It Happened

By STANLEY M. POWELL
Lansing Correspondent

"MEN may come and men may, go, but let us hope that M. A. C. will go on forever as the first and best agricultural college in America." Such we believe are the sentiments today of all former students of M. A. C. and the hosts of friends of that splendid institution, as they contemplate the acceptance by the State Board of Agriculture of the resignation of President David Friday.

Shrouded in mystery to a large extent, there appears to be much to excite the curiosity and stimulate comment on the part of the Michigan press and public. While the announcement has been made that Dr. Friday resigned voluntarily, it is generally understood that if he had not done so his resignation would have been requested (or should we say demanded) by the State Board of Agriculture, the governing body of that institution.

A conspiracy of silence seems to prevail as to just what it is all about. One thing seems certain, though, and that is that where there is so much smoke there must be some fire. The State Board of Agriculture is composed of honorable men and women, elected by the people of the State of Michigan. Most of them, by the way, were the choice of the agricultural interests of the state. It is hardly conceivable that sufficient pressure could have been brought to bear upon this body to make them do anything not in harmony with the best interests of the institution.

No one can accuse the State Board of attempting to make any "grand stand play" in their recent attitude and action regarding the presidency change in the administration of the college, and the newspaper comment which has been provoked has been far from complimentary. It is evident that the underlying motive of the Board could have been a desire to win either popularity or cheap publicity.

Considerable unfavorably and seemingly unfair comment has been made upon the action of the Board in holding a so-called "secret meeting" at which Dr. Friday's administration of the college was discussed. It seems strange that it should be regarded as out of the way for the body elected by the people to have control of M. A. C., and specifically charged with the none too pleasant duty of "hiring and firing" the college president, if that body should get together and talk over either formally or informally matters relative to the successes or shortcomings of the president's administration. And most of us, if we were the president under discussion, would not care to be present at such a meeting.

And it further seems evident that the action of Mr. L. Whitney Watkins in standing for the dismissal of Dr. Friday was not prompted by a desire to increase his personal chances for political preferment. Since Mr. Watkins has been appointed by Governor Groesbeck as Commissioner of Agriculture he has shown a desire to support the governor on most important issues. He withdrew his support of the gas tax and after the veto of this measure it is reported that he exerted himself strenuously to secure votes for the governor's pet measure, the Smith weight tax bill.

It is now reported that in standing for the dismissal of Dr. Friday, Mr. Watkins has lost the standing which he has been trying so hard to secure with Governor Groesbeck, in the hope, it is stated, that the Governor would swing the Wayne delegation in case Watkins should run for governor in 1924. So again we come back to the same old place—there must have been some strong reason for getting rid of Dr. Friday just at this time. Various observers have different opinions as to just what issue determined the Board in reaching its decision to ask for the resignation of Dr. Friday.

The theory is advanced by some that Dr. Friday, although undoubtedly a most brilliant man, is not well fitted either by nature or experience to be a college president, certainly not the president of an agricultural college.

Mr. Friday is not an ordinary man. He is a genius, and a genius is a hard man to get along with. No one can co-operate with a genius. A genius does not wish to be troubled with details, or be bored with faculty meetings, such as had been customary at M. A. C. under previous administrations. If a student committee wait upon a genius in his presidential office it is not to be wondered at if occasionally he should lose his temper with their mediocre minds and comparatively embryonic intelligence and usher them out of his presence with ugly and menacing gestures wholly unfitting of the dignity supposed to be possessed by a college president.

And furthermore not even a genius could administer all of the details of the college personally, especially when absent, so much of this nature naturally fell to his assistant, Miss

(Continued on Page 23)

TO OUR CHIEF

EVIL has trampled every honest man;
The darkest hour has come to Michigan.
From coast to coast reproach and scorn are loud,
While honest heads in bitter grief are bowed.
Insulting ignorance snuffs out the light,
And petty politicians show their spite.
Wisdom and virtue from their seats are fled,
And leering insolence controls instead.
Arrows are shot in darkness at the just,
And learning's halls are humbled in the dust.
A slinking pack has driven out our chief
With petty insult that exceeds belief:
What private cause they had the deed to do
They have not said, this hole-and-corner crew.
Who ever heard about his foes before?
With open methods they do fear to fight;
They love the darkness rather than the light.
An able man from office they have driven,
And to the world no reason for it given.
No great man's ever harmed by such a crew:
It is to us apology is due;
No damage to our Friday have they done:
Ours are the faces they have spat upon.
A gentleman and scholar he'll remain—
What is our bitter loss may be his gain.
His fame is high and far the nation's o'er;
Their incest littleness now comes to view;
The microscope reveals their greatness too.
They surely have some claim to Fame's high honor
Against her will who force themselves upon her;
For history they save an obscure name
And win an immortality of shame.

Consolidated School Costs

By T. E. JOHNSON
Superintendent of Public Instruction

Here we have the up-to-date consolidated school, located at Grand Blanc, Genesee county.

A BULLETIN entitled, "Facts about Costs of Consolidated Schools in Michigan," has been published by the Department of Public Instruction. It contains a facsmile of a tax receipt of 1922 for each of the thirty-eight consolidated rural agricultural schools, similar data for a few graded districts which are not consolidated schools, and other interesting facts.

The facts and figures of a similar nature given at the foot of this page were obtained from the school superintendent and from the school director's reports of the districts.

It will be noticed that a comparison is made in each case between an ordinary graded district and a consolidated school district, that is, Suttons Bay is compared with Bear Lake and Mason with Grand Blanc. The assessed valuation, number of children on the census list, number of teachers employed, and types of schools are practically the same at Bear Lake and Suttons Bay. Mason has a larger nonresident enrollment and employs more teachers than Grand Blanc but they are very similar in other respects.

In making comparisons between schools as to costs it is just as essential to take into consideration the size of the district and the character of the courses offered as it is to compare the costs of farm management between farms that are of about the same acreage and that are carrying on practically the same lines of farming. We would not compare the cost of overhead in general running expense of a forty-acre farm with that of a one hundred sixty acre farm but would make our comparison in the case of a forty-acre farm with that of another forty-acre farm and of a one hundred sixty acre farm with that of another one hundred sixty acre farm. So in making comparisons as to school costs we should compare the twelve grade school of a consolidated district with that of a twelve grade school in a graded district. Practically all of the rural agricultural schools have provided for the twelve grade course of study. We should not compare the cost of the one-room, one-teacher, primary school with the cost of the twelve grade consolidated school. In the rural agricultural school they are not only offering twelve grades of work but have a sufficient teaching force to make it unnecessary for any teacher in the grades to have more than two or three grades to teach; they have also specially trained teachers for all of the high school courses including the vocational subjects. Just as it costs more to manage a one hundred sixty acre farm than it does to manage a forty-acre farm, likewise it costs more to maintain a good up-to-date twelve grade school in which vocational education is given special consideration than it does to maintain a one-teacher elementary school for the entire eight grades.

In the second place, in making comparisons there are a few additional factors that should be taken into consideration. Among there would the number of courses offered; the amount and character of the equipment; number of special teachers employed, if any; and whether the plan of organization and course of study is well adapted to the type and use of the school. The small school district should not attempt to provide the variety of courses that are possible in the larger school system. Both in the small graded district and in the ordinary consolidated school, we should avoid duplication of courses and of equipment and adhere quite closely to the essentials. This can readily be done by alternating certain courses; by conserving the teaching force through choosing

(Continued on Page 23)

And here is the old one-room country school, the kind we attended in our boyhood days.

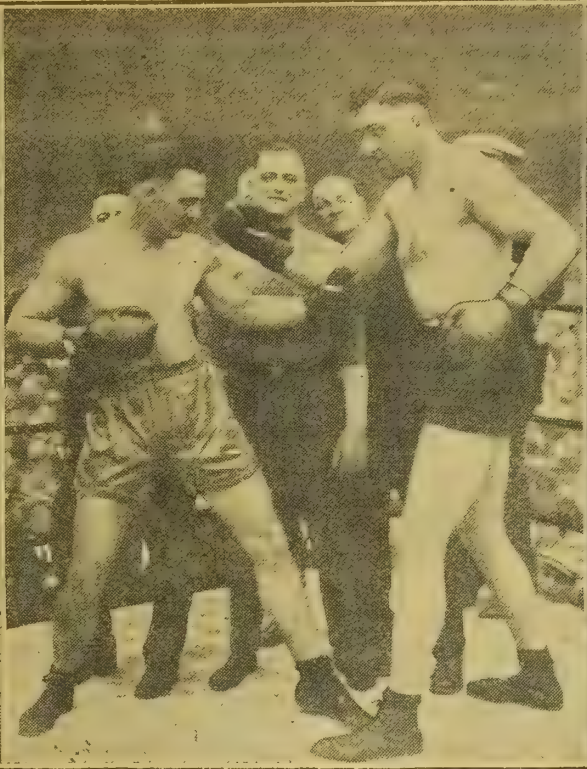
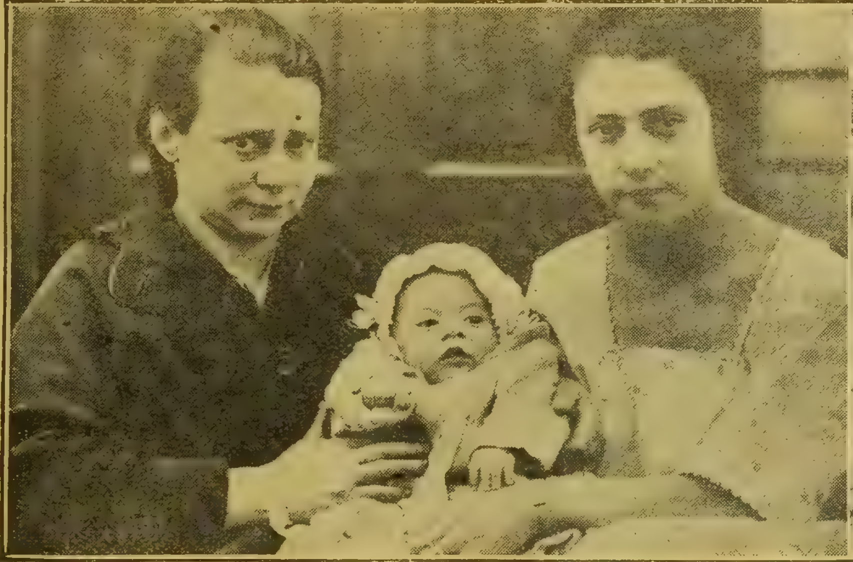
PICTURES FROM FAR AND NEAR

WORLD'S FIRST "WATER" COP.—So much water traffic has ended in a jam that the Police Department has decided to appoint a traffic cop for the wetter areas. Patrolman John A. Corcoran of the Harbor Squad, has been duly installed in a row boat and his eagle eye keeps things going in Newton Creek, Brooklyn, N. Y. We guess it'll be aerial cops next.



JUST BEFORE THE BIG FIGHT.—Floyd Johnson (left) and Jess Willard sparring just before the big battle of the Milk Fund Card. On one side was a speedy comer, a good hitter and a popular fighter, while on the other hand was a former champion and the man who was attempting a comeback. Willard knocked Johnson out in the eleventh round, and the Yankee Stadium rang with shouts and cheers.

A MODERN CINDERELLA.—It is not always that we hear only of sudden fame and fortune in fairy tales. Up to a month ago, Miss Marcelle Miller was selling cigarettes in the Hotel Knickerbocker Grill Room. Her beauty upon being observed, immediately secured her a place in the Ziegfield Follies, where she promises to develop into a successful stage career.



WORLD'S YOUNGEST GRANDMOTHER.—Mrs. Lillian Weitlesbach (left) just 36 years old, living in Cincinnati, Ohio, who claims to hold the world's title as the youngest grandmother. Her husband, also 36 believes himself to be the youngest grandfather. Their daughter Ethel (right) was married when she was 15 years old and at the age of 16 had a son.

IT'S THE DONKEYMOBILE FOR THE MOUNTAINS.—In the mountains of the Balkans, the Lizzie of the region is the donkey. Without it little travel could be done. Here is a little boy going to market, and he is just as cramped and gets just as many bumps as we recall in our many Ford travels.

SITTING A GOOD SADDLE ON THE "JUMPS."—A recent photo of the present ruler of Greece, King George, who is a keen follower of sports of all kinds, especially horseracing.

GIRL WRITER TRIES DEEP SEA DIVING.—Miss Helen Lois. noted newspaper writer, who is probably the first woman to go down under the sea in an outfit.

A NOVEL SIDE SHOW.—A professional trickster view for attention at the recent race meet at Epsom, England. Many of the stunts he executed were unusual and thrilling, and he soon had a large audience.

(Copyright Keystone View Company)

Noted for Rugged Service

The Hupmobile's reputation for ability to stand up, year after year, even under severe conditions, is common knowledge everywhere.

Back of practically every Hupmobile sale, is the fact that the buyer *knows* that he is purchasing rugged durability and low costs over a long period.

He knows, too, that throughout its unusually long life, he can count on the Hupmobile for reliable service, and brilliant service.

And he knows that it will give this service week in and week out with remarkably slight necessity of even minor adjustment or repair.

Hupp Motor Car Corporation, Detroit, Mich.

Make the First Cost the Only Cost

The value of a good silo reaches its greatest height in a Kalamazoo Glazed Tile Silo because the superior quality of Kalamazoo Tile means perfect ensilage. Stock raising and dairying are by far the most profitable types of farming, and silage is unquestionably the most economical feed for livestock and dairy cattle.

Kalamazoo Tile and Wood Silos

Our Glazed Tile silos are everlasting—decay-proof, storm-proof, vermin-proof; will not burn or blow down; save repair and paint bills. Three dead air spaces make perfect insulation against cold, heat, dampness. Kalamazoo Tile is made from selected quality clay in our own plant located in the center of the finest tile clay district. Our Wood Stave Silos have stood the test of 30 years. We are America's pioneer silo builders. All Kalamazoo Silos are fitted with continuous door frames of galvanized angle steel. Send for our free book of silo information.

ALFALFA ON SAND

I have a field of sand and gravel which I would like to seed to alfalfa. Which is the best, barley or oats to seed with and what shall I do to get a catch?—M. C., St. Johns, Mich.

—Barley is conseeded to be the best companion crop for alfalfa, since the barley plant takes much less moisture from the soil than oats. For best results with the alfalfa seeding, one bushel of barley per acre should be used rather than a heavier seeding. In order to get a catch with alfalfa it is important that northern grown seed or Michigan grown seed be used, preferably the Grimm.

On sandy soil in your region, lime is usually necessary, using two tons per acre of finely pround limestone. I wound suggest that you send a sample of your soil to the Soils Department, M. A. C., Lansing, for lime determination.

Planting should be made in April or early May, using twelve pounds of seed per acre, planting on a firm seed bed. The alfalfa seed should be allowed to go before the drill so as not to be covered to a depth of more than one-half to three-quarters of an inch.

Culture for inoculation may be secured from the Department of Bacteriology of the Michigan Agricultural College, E. Lansing. The price is 25c per bottle and one bottle contains sufficient material to inoculate a bushel of seed. Directions for application accompany the material.—J. F. Cox, Professor of Farm Crops, M. A. C.

IS PROPERTY EXEMPT?

I understand that a widow is exempt from taxes up to $1,000 on the home in which she lives. Is this so, or have I been misinformed. I have not paid the taxes for this year altho I have received notice to do so. What shall I do about it and whom should I see?—A Reader, Lyons, Mich.

—Compiled Laws of Michigan, 1915, Sec. 4001 provides that the following real estate shall be exempt from the payment of taxes: All real estate to the value of $1,000 owned and used as a homestead by the widow of any U. S. soldier or sailor who served three months or more in the Civil Mexican or Spanish American war. Such exemption would not apply to persons owning taxable property with a value of $3,000 or more.

To obtain the advantages of this exemption you should file affidavit with the township or county treasurer setting forth all the facts upon which you base your claim for exemption.—Asst. Legal Editor.

NO RIGHT TO SHOOT DOG

I am a reader of the M. B. F. and would like to know if one man has a right to shoot another man's dog if he gets out and comes on this man's land at night where he has dead stock lying?—A. K., Hart, Michigan.

—A man does not have the right to shoot another man's dog because he is trespassing on his property.—Asst. Legal Editor.

CISTERN WILL NOT HOLD WATER

I have a question I would like to have answered. I have a cement cistern, about a six inch wall, it will not hold water. It isn't cracked but steep through all over. Would like to know what I can do with it.—G. M., Hale, Michigan.

—I may say that this cistern may probably be improved by plastering and washing with a cement wash. I would suggest first cleaning the surface of the walls with a solution of one part muriatic or hydro-cloric acid to ten parts water to remove all dirt which may accumulate on the walls, after which they are thoroughly washed with water. A plaster is then mixed up of one part cement to two parts sand with about one pound of lime to each ten pounds of cement, this is plastered on the walls with a steel trowel and allowed to set for a day or two. A mixture of cement and water is then made up to about the consistency of thick cream, one or more coats of this is then applied to the surface of the plaster. If more than one coat is applied the first coat should be allowed to set before the second is applied, etc. This should render the cistern impervious to water.—H. H. Musselman, Professor of Farm Mechanics, M. A. C.

MUST GET LICENSE

Please inform us as to whether or not a person is required to get a license to peddle his own products in his county-seat town or a town outside the county in which he lives. —O. G. B., Fife Lake, Michgian.

—You would be required to obtain a license from the state treasurer to peddle your product: As to whether your county-seat town or other town would require an additional license, you should consult your prosecuting attorney, or village council.—Asst. Legal Editor.

PAYING HUSBAND'S DEBTS

Would like to know if husband and wife have joint deed, and husband should die, if wife would have to pay his debts? Could any one come and take personal property for a note eighteen years old, the party holding note claiming it had been renewed in last two years or could they put in a claim if wife should have public sale?—Mrs. O. S., Remus, Michigan.

—Upon the death of the husband, his estate is charged with the payment of his debts. The debts must be paid before the wife or other heirs are entitled to any of the estate, except the wife's dower or homestead right, which is not subject to the payment of his debts. Any land which the wife receives as survivor of her husband under a joint deed could not be taken for the payment of his debts.

If the note has been renewed within the last two years, the maker could not avoid his liability on the ground that it is 18 years old. But if it has not been renewed, he would not be liable.—Asst. Legal Editor.

RIGHT TO WATCH

I am writing you to know if there is any way of getting my watch back from a jewelryman when bought and paid for, then taken back for repair. I bought a watch last year in June from a jewelry store in Evart. After using it a few days it failed to run and I took it back for repairs. They claimed they were getting the repairs till about the first of January when the Evart Savings Bank closed their doors on a mortgage, but the goods are still there. Have they any right to hold it all this time? If you can help me get the watch I would like for you to do so.—D. B., Evart, Mich.

—The jewelryman has no title or interest in the watch, over which his creditors would have any control. He is merely a bailee of the property for the purpose of making repairs. Both the title and right of possession remain in you as against his creditors, and you, as bailor, could bring an action of replevin against the bank to recover the possession of your watch, after first making a demand upon them.—Asst. Legal Editor.

ATTACK ON HIGHWAY DEPARTMENT

In issue of April 28 you invited anyone to report unwarranted expenditures by state highway department. On the north end of trunk line No. 14, in T. 25 N. of range 7 W. or Garfield township, Kalkaska county, there is a prospected piece of work that any fair minded investigating committee ought to condem. Especially that part between section 8 and 9 in said township. This line runs for 8 or 10 miles through plains where no one lives. The only benefit will be to the tourists. There is an abandoned railroad grade paralelling this route for a number of miles which has not hills or bad swamps. While the route as surveyed has both.—I. G., Fife Lake.

—As you know, the Governor's veto message on the gas tax, which you no doubt read in the daily press, contained an attack on the State Highway Department. Rep. Evans who is regarded as very friendly to the Highway Department promptly introduced in the House a resolution calling for a thorough investigation of this department by a joint legislative committee. The rules were suspended and the resolution placed upon its immediate passage in the House and then sent to the Senate where a similar action was taken.

However, on the following day Senator Burney Brower, of Jackson, the Governor's recognized spokesman in the senate, moved that this action be reconsidered and that the resolution be referred to a committee. This was done and the resolution was never heard from again. The excuse given for such an action was that the resolution merely provided for an investigation of the people in the Highway Department and did not provide for the calling in of outside witnesses. It was felt that under such conditions the investigation would be more or less of a farce and that it could only result in a whitewashing of the department under investigation. In 1921 the State Administrative Board carried out quite a thorought investigation of this department and their report was that conditions were quite satisfactory.—Stanley M. Powell, M. S. Farm Bureau.

CAN COLLECT AMOUNT OF NOTE

Twelve years ago I backed a man's note for $100 which he neglected to pay. He worked for me which amounted to $25.00, which I payed on the note. But since there is $5.75 back interest which has been added on the note. The note now is $80.75 at 7 per cent interest. I got a new note Dec. 29, 1922. The new note reads that beginning Feb. 15, 1923, he is to pay me $10 semimonthly until it is payed. This man has worked at Ford's factory for three years, and pays no attention to the note. In the meantime he received $1,000 from his father's estate and he promised to pay it then, but didn't. The man the money was borrowed from refused to carry him any longer and the new note is drawn up to me and I had to give my note to the man the money was borrowed from first. Can this be collected and how much will it cost?—M. D., Bad Axe, Mich.

—From the facts you have given, I see no reason why you could not collect the amount of your note. If it is placed in the hands of some Detroit attorney for collection, I think he could get results for you—Asst. Legal Editor.

MUST HAVE BOTH SIGNATURES

Where a brother and sister hold a joint deed on property—the brother holding the deed lives in Ohio, the sister in Michigan, where the property is located. How is she to proceed to obtain the deed to sell the property? Both parties are willing to sell.—Mrs. C. F., Augusta, Mich.

—Both your signatures on the deed would be sufficient to convey the title, provided the deed was valid in every other respect. Merely have your brother execute the deed, sign it, and send it to you for your signature.—Asst. Legal Editor.

JUNE

TIS the glorious month of June;
Old Mother Earth is all in tune,
And we, the love of God, can tarce
In every smiling flower face.

The blue above, the green beneath,
Roses galore to make a wreath.
Velvet and red, yellow and white,
Others so pink, fragrant delight.

Pansies profuse, of the richest hue,
And every shade, wet with the dew.
Their faces shine with beauty true
Message devine from God to you.

Bevies of birds from leafy trees,
Gladden the earth and swell the breeze,
With music sweet and full of love
And thankfulness to God above.

'Tis the wonderful month of June,
Old Mother Earth is all in tune,
And we, the love of God discern
In fragrant flowers and lacy fern.

—Written for the Business Farmer by Mrs. Bessie O. Roberts.

The Improved Binder of Today Soon Pays for Itself By What It Saves

Every year the old binder falls off a bit more in efficiency. The owner hardly realizes the gradual decline. Finally comes a time when the risk is too great. Poor cutting, faulty binding, clogged elevators, heavy draft, delays, emergency repairs, lost bushels and loss of temper—these are incidents of the harvest with a worn-out binder.

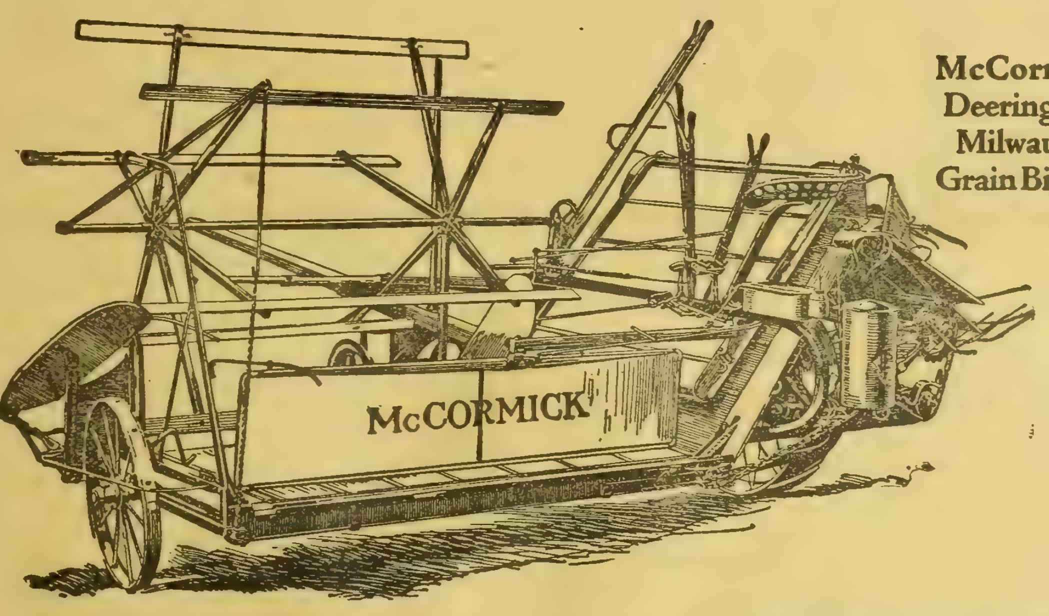
In the meantime the new McCormick, Deering or Milwaukee binder goes into neighboring fields and surprises and pleases its owners in a hundred different details. If you haven't seen the perfected binder of 1923 you can't realize what a vastly improved harvester it is. You will find it a marvel of skill and good workmanship, simpler, better made, easier to handle and ready for many years of good service.

Harvest is the critical time when all your plans and labors come to a head; go at it with trustworthy equipment. Will your binder stand the test this season? If any doubt is in your mind, invest in the crop-saving machine sold by your McCormick-Deering dealer. Look the binder over in detail at his store.

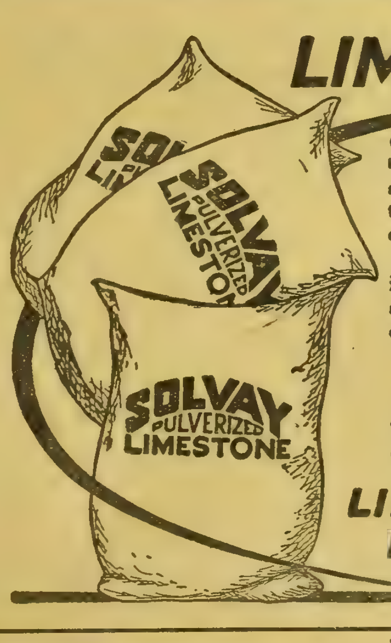
INTERNATIONAL HARVESTER COMPANY
OF AMERICA
(INCORPORATED)
606 So. Michigan Ave. Chicago, Ill.

These are a few of the strong points in the construction of the present *McCormick, Deering and Milwaukee Grain Binders:*
Better construction • Improved bearings • Lighter draft
Outside reel support • Grain-saving floating elevator
Durable woven straps for canvases • Improved bundle carrier
Tongue truck for steadying and carrying loads

Safeguard the harvest by the use of strictly high-grade twine—McCormick, Deering, International—made now in the famous "Big Ball" winding in which 6 balls do the work of 10 of the old style. Balls are of the old size but have 66% more footage. Arrange for delivery before harvest time.



McCormick, Deering *and* Milwaukee Grain Binders



LIME THE LAND

SOLVAY brings better, greater crops the first harvest. SOLVAY makes sour soil sweet and releases all fertility the land contains to hasten growing crops to full maturity.

Most farm lands need lime, and none is better than Solvay Pulverized Limestone—high test, non-caustic, furnace dried, and ground fine to spread easily.

Every farmer should read the Solvay Booklet on Liming —sent FREE on request.

Suppose a Jury Gave a Verdict of $5,000 Against You?

That is a chance you take every time your automobile goes out on the road. Such a verdict means a judgement against you and unless the judgement is satisfied they can seize and sell anything you own, house, barn, horses, cattle, land, or anything you have.

In Detroit in the month of April eighteen people were killed by automobiles. Only in five cases, according to the police records, was the automobile driver to blame. In eighteen cases the investigation showed as follows:

Walking into side of autos	3
Running into street from behind parked cars,	2
Running from curb into path of autos	5
Attempting to hitch on to moving autos	2
Riding bicycle from private driveways into path of autos	1
Speeding at intersections	1
Not under control	4

In thirteen cases the blame was on the pedestrian and in only five cases was the automobile driver at fault and yet in every case it brings trouble and annoyance. With the congestion of traffic in all parts of the state, the wise man will keep his car insured and allow the company to investigate and determine which claims should be paid and which ones restricted. That is the reason of the growth in automobile insurance.

UNCLE RUBE SPINACH SAYS

ARE OUR YOUNG FOLKS FOOLISH?

NOW it's long distance dancin'—dancin' jest to see how long a couple can keep goin'. A few years ago it wuz bicycle ridin'—six days at a time. Nothin' ever comes of it 'ceptin' somebody gits mentioned in the papers—mebbe gits their pictur' into the paper. Prize fightin' is foolish, brutal an' demoralizin' but some times brings a lot of money—'course money aint everything but it's handy to have around now and then—even money though, in too large quant'ties is debasin' lots of times. But dancin' jest to see how long one can stand up an' do it is darfoolishness.

Now fer instance, jest take the young girls an' young women 'at try this sort o' thing—ask one of 'em to tend baby fer mother 36 hours—ask one of 'em to wash dishes 52 hours, or to stand over a wash tub 5 hours, in fact ask 'em to do anything to help mother fer just one hour every day an' see what these marathoners would say.

Why don't cha' know they'd fall dead, purty nigh. They are lookin' for newspaper noteriety—nothin' else. Girls'll put on bathin' suits an' lay in snow banks to have their pictures took fer the papers—have done it an'll do it agin'—They'll walk the streets. if allowed, half clothed, jest for noteriety. I'm not sayin' young men—the little nickle-mustached fellers won't do the same thing. They will an' do do it—they don't amount to much anyhow—but our girls—our mothers-to-be! Well now ain't it jest an awful thing for them to be so foolish? Think of dancin' 92 hours jest to get her name into the papers? Nobody is benefited by it. No good has been accomplished—ain't it so? If our young women want their names printed in the papers—yes an' their pictur's too, let 'em git a reputation of bein' a homemaker, a good cook, one 'at knows how to help mother with her house work, a real she woman 'at expects sometime to be a wife an' mother an' feels cap'ble of undertakin' the job of carryin' it through.

Instead of goin' out an' tryin' to dance ninety or a hundred hours at a time let the dear little dames try helpin' mother 48 or 60 hours a week, 'stead of these little spirts of endurance once in a while, let her go to mother 'an say—"Mom'sy you have been a good mother to me all my life for 18 years"—or what ever the number of years,—"you've taken care of me without grumblin' or fault findin'—Mom'sy dear, I appreciate this an' from now on I want to show you that I am your willin' little girl, willin' to help you in every way I can. Teach me mother dear, to be as good a housekeeper as you have always been, teach me to be a homemaker an' a home lover. An' mother teach me an' tell me of mother love an' let me be your little girl for a while—jest the best little girl you ever had."

When our girls git this spirit there will be no more marathon dancers 'cause no he dancin' lizard'll dance 'thout a girl to dance with.

I am not worryin' a bit 'bout our farmer girls bein' marathon dancers as long as they stay on the farm. They make the best wives an' mothers in all the world. But they as well as the young men have heard the call of the city—when they mix with the city life—well what then? Will they be just as fine an' splendid? Some of 'em are, many are not—what will the harvest be?—Cordially yours, UNCLE RUBE.

THE NARROW WAY

"I don't see how you manage to live within your income, Jones. Aren't you cramped?"

"Cramped is no name for it! I have to go out and borrow five dollars every time I want to stretch."—Wayside Tales.

LOOKED IT

A washerwoman applied to a man for work, and he gave her a note to the manager of a certain club. It read as follows:

"Dear Mr. X: This woman wants washing."

Shortly after the answer came back: "Dear Sir: I dare say she does; but I don't fancy the job."

GET THE MONEY—AND SAVE IT

"Every man ought to save up enough money to buy a farm and get back to the land," shouted the orator with a mission.

"Yes, and then do something else with the money," remarked a sad-faced farmer in the audience.—Orchard and Farm.

Save Your Thresh Bill

by insisting that your grain shall be threshed by a Red River Special.

It beats out the grain when other makes depend upon its falling out. It separates by force and for that reason wastes less.

It has the Big Cylinder, the "Man Behind the Gun," the Beating Shakers and the Graduated Adjustable Chaffer, a combination found in no other machine.

It will thresh and do good work when conditions are bad and other makes have to stand idle.

Red River Special

is correctly designed and is built right.

It will run many years steadily without break-downs, always doing the most and the best of work.

Built in both wood and steel. A size for every need.

Roller Bearings on Cylinder and Wind Stacker shafts make it run easily.

It saves enough more of your time and grain to pay your Thresh Bill.

THE MARK OF BLOOD

A SERMON BY REV. DAVID F. WARNER

TEXT: Genesis 4:15b. "And the Lord set a mark upon Cain, lest any finding him should kill him." (A.V.)

MEMORIAL Day is over. All honor to the "blue and the grey;" hats off to our brave boys in khaki; and hearts humbled at the graves of our fallen heroes. Notwithstanding, the mark of blood is upon us.

A past issue of the Literary Digest has a comment on "The Trail of the Painted Posts." This is a row of painted posts set up from the line of attack to the rear, to help the wounded soldier back to refuge and mercy. It is literally a trail of blood.

Were one asked to indicate the course of this world, one could figuratively and litterally call it a trail of blood. It has been reckoned, that in the Christian era there have been two hundred and twenty seven years of peace. Does it not appear, therefore, that bloodshed has been the chief business of man? The fondness of man to memorialize the heroes of bloodshed has been seen in the establishing of commemorative days and monuments. As the heart of the world rambles back over past centuries, it must lament that they have been so filled with blood, and pain, and sin. But, also, they stand as ever ready reminders of needed redemption. This is the two-fold mark of blood.

Note the story of Cain in Genesis, the fourth chapter. The first scene is in verse eight and leaves the hands of Cain reeking with blood—his brother's blood. But, said Jesus, "he that hateth his brother is no less a murderer." The second scene is one of remorse—remorse of conscience. The mark of his brother's blood is upon him and it cries out for vengeance. He becomes a vagabond on the earth trailed by his brother's blood. Now, therefore, brother, "Leave there thy gift before the altar, and go thy way, first be reconciled to thy brother, and then come and offer thy gift," said Jesus.

In the third scene we find Cain having a sign appointed for him (mark set upon him). This is a severe reminder of the blood that cries out for vengeance, but also, and better, a mark of redemption. Even after Cain was guilty of this foul sin, God renews his covenant with him and assures him of protection. And this is always the mercy of our Father thru Jesus Christ the Divine Reconciler.

And what was Cain to do? Why, he was to keep his brother, not kill him (hate him). And though he had sinned, through the renewal of the covenant his calling was not changed. He was yet to go out as the redeemer of men. Of course, sin couched at his door, but God said: "Do thou rule over it." That is, "Bring your sin-offering and save your brother." O, man, no matter how many and unsightly be your marks of sin, bring your sin-offering in a surrendered will and know the joy of salvation and brotherhood.

But what did Cain do? He "went out from the presence of Jehovah and dwelt in the land of Nod?" His conscience made him a coward and an outcast in the sight of God, and he sought to soothe it in money getting and self-indulgence. How like the present age! But is it like you?

Now, all the political world has followed Cain into the field of slaughter. The latent, savage instinct of humanity, first seen in Cain was released yesterday on a wide and horrible scale. And, today, a blood vengeance is upon us. We are informed that the nations are preparing to bring in the god of war to "bestride the narrow world like a colossus." No matter how many Rachels weeping for their little ones, and their sons and husbands; and no matter what the cost in pain and anguish, the destiny of nations would be decided by blood. Yet, has not the history of nations in the past been written in the red blood of their sons? But also, was not the Kingdom of righteousness founded "in the Blood?" So, therefore, is the sacrifice of your life blood in service in this impressive and critical time, too great a price to pay for the establishment of Christ's Kingdom in the earth?

For, the world has followed Cain "into the land of Nod," into the land of city-building, with its trade, its art, and its adultery. "A greater Pittsburgh," "A new Chicago,"- "Dominant Dayton;" these with their thousands of factories, numerous banks and trust companies; but these with their empty pews, war preachers, prayerless Christians, and stench of adultery, have gone to live in the "land of Nod." To day this world is baptized in the spirit of industry and commerce, of pleasure and selfishness. She is bent, primarily, on building cities and establishing art and culture, and Cain is a prominent leader. Where are you living? Who is your leader?

All the world has followed Cain "away from the presence of Jehovah," leaving it yet unChristian in large part and worshiping man and his achievments. Even as I write we are beginning to draw the sword of a militant democracy from its scabbard again and to sheathe the sword of peace. The mark of blood is upon us. But this is not the wail of a pessimist. Personally, I am joyously optimistic. And when will the olive branch of peace be propagated in our land? I don't know. It may be remote. But Faith yet proclaims the Lord is in his holy temple. Let all the earth keep silent and expectant, "expecting till his eremies be made the footstool of his feet."

We shall now listen to the Blood that speaketh better than that of Abel," (Hebrews 12:24). This is the Blood that calls us back from the field of carnage to set up a Kingdom not of this world; back from the "land of Nod" where rules the spirit of man to the realm where rules the spirit of God; that call us out of the carnal world into the "presence of Jehovah."

Cain says: "Kill your fellowmen," but the Blood of Jesus says, "Love them." If our enemies art to be conquered, it must be by bleeding hearts rather than bloody swords. And Sherwood Eddy writes just this is going on now in India under the leadership of Gandhi, who now lies silent and lonesome in the enemy's prison. When will we in America believe that it is time to non-cooperate with evil and pay the extreme sacrifice for the good? Surely, it is the business of the church today to feed, and heal, and brother our erring world. The church has been humiliated in permitting the world war and it will be to her increasing shame if she permits another. Her supreme law is that of love.

Again, the Blood says: The church must return from the "Nod" to its unique and divine mission of preparing for a reign of Gospel peace. No ostensiable pleas for national honor and justice can change her mission. It is her solemn duty now, to strike hard to bring in that newer, brighter Kingdom that is not of this world. She must rise her ideals, float the banner of pease, and establish the authority of the Spirit and not of the sword, lest she become a disappointment both to her Head and to the world, whose spiritual hunger is daily increasing and must look to her for a filling.

At any cost the church must pay the price in priestly function of bearing the world back into the presence of Jehovah, its Invisible King.

Book Review

(Books reviewed under this heading may be secured through The Michigan Business Farmer, and will be promptly shipped by parcel post on receipt of publisher's price stated.)

"Making Yourself" by Orison Swett Marden, author of "Round Pegs in Square Holes," etc. viii-320 pages, 12 mo, cloth.

Again has Dr. Marden a congenial topic, in this new pronouncement on personal training. He believes and has constantly advocated that the secret of success lies within the individual himself—that nothing can keep back the person who is determined to succeed and who fits himself for success. "Making Yourself" is a direct challenge to every ambitious person to realize to the full his God-given attributes. ($1.75) Thomas Y. Crowell Company.

The Hunted Woman

By James Oliver Curwood

Michigan's Own and America's Formost Author of the Great Northwest

(Copyright by James Oliver Curwood

(Continued from May 26 issue)

HE began pacing back and forth in his room clouding himself in the smoke of his pipe. Frequently Joanne's mind had filled him with an exquisite delight by its quickness and at times almost magic perceptiveness, and he realized that in these things, and the fineness of her woman's intution, now lay his greatest menace. He was sure that she understood the meaning of the assault upon her that night, though she had apparently believed what he and Blackton had told them—that it had been the attack of irresponsible and drunken hoodlums. Yet he was certain that she had already guessed that Quade had been responsible.

He went to bed, dreading what questions and new developments the morning might bring forth. And when morning came, he was both amazed and delighted. The near tragedy of the previous night might never have happened in so far as he could judge from Joanne's appearance. When she came out of her room to meet him, in the glow of a hall lamp, her eyes were like stars, and the colour in her cheeks was like that of a rose fresh from its slumber in dew.

"I'm so happy, and what happened last night seems so like a bad dream," she whispered, as he held her close to him for a few minutes before descending the stairs. "I shall worry about Peggy, John. I shall. I don't understand how her husband dares to bring her among savages like these. You wouldn't leave me among them, would you?" And as she asked the question, and his lips pressed hers, John Aldous still believed that in her heart she knew the truth of that night attack.

If she did know, she kept her secret from him all that day. They left Tete Jaune before sunrise with an outfit which MacDonald had cut down to six horses. Its smallness roused Joanne's question, for Aldous had described to her an outfit of twenty horses. He explained that a large outfit made travel much more difficult and slow, but he did not tell her that with six horses instead of twenty they could travel less conspicuously, more easily conceal themselves from enemies, and, if necessary, make quick flight or swift pursuit.

They stopped to camp for the night in a little basin that drew from Joanne an exclamation of joy and wonder. They had reached the upper timber-line, and on three sides the basin was shut in by treeless and brush-naked walls of the mountains. In the centre of the dip was a lake fed by a tiny stream that fell in a series of ribbonlike cataracts a sheer thousand feet from the snow-peaks that towered above them. Small, parklike clumps of spruce dotted the minature valley; over it hung a sky as blue as epphire and under their feet was a carpet of soft grass sprayed with little blue forget-me-nots and wild asters.

"I have never seen anything a half so beautiful as this!" cried Joanne, as Aldous helped her from her horse.

As her feet touched the ground she gave a little cry and hung limply in his arms.

"I'm lame—lame for life!" she laughed in mock humour. "John, I can't stand. I really can't!"

Old Donald was chuckling in his beard as he came up.

"You ain't nearly so lame as you'll be to-morrow," he comforted her. "An' you won't be nearly so lame tomorrow as you'll be next day. Then you'll begin to get used to it, Mis' Joanne."

"Mrs. Aldous, Donald," she corrected sweetly. "Or—just Joanne."

At that Aldous found himself holding her so closely that she gave a little gasp.

"Please don't," she expostulated. "Your arms are terribly strong, John!"

MacDonald had turned away, still chuckling, and began to unpack. Joanne looked behind her, then quickly held up her softly pouted lips. Aldous kissed her, and would have kissed her again but she slipped suddenly from his arms and going to Pinto began to untie a dishpan that was fastened to the top of his pack.

"Get to work, John Aldous!" she commanded.

MacDonald had camped before in the basin, and there were tepee poles ready cut, as light and dry as matchwood. Joanne watched them as they put up the tent, and when it was done, and she looked inside, she cried delightedly:

"It's the snuggest little home I ever had, John!"

After that she busied herself in a way that was a constantly growing pleasure to him. She took possession at once of pots and pans and kettles. She lost no time in impressing upon both Aldous and MacDonald the fact that while she was their docile follower on the trail she was to be at the head of affairs in camp. While they were straightening out the outfit, hobbling the horses, and building a fire, she rummaged through the panniers and took stock of their provisions. She bossed old Donald in a manner that made him fairly glow with pleasure. She bared her white arms to the elbows and made biscuits for the "reflector" instead of bannock, while Aldous brought water from the lake, and MacDonald cut wood. Her cheeks were aflame. Her eyes were laughing, joyous and happy. MacDonald seemed years younger. He obeyed her like a boy, and once Aldous caught him looking at her in a way that set him thinking again of those days years and years ago, and of other camps, and of another woman—like Joanne.

MacDonald had thought of this first camp—and there were porterhouse steaks for supper, which he had brought packed in a kettle of ice. When they sat down to the meal, Joanne was facing a distant snow-capped ridge that cut the skyline, and the last of the sun, reflected from the face of the mountain on the east, had set brown and gold fires aglow in her hair. They were partly through when her eyes rested on the distant snow-ridge. Aldous saw her looking steadily. Suddenly she pointed beyond him.

"I see something moving over the snow on that mountain!" she cried excitedly. "It is hurrying toward the summit—just under the skyline! What is it?"

Aldous and MacDonald looked toward the ridge. Fully a mile away, almost even with the skyline now, a small dark object was moving over the white surface of the snow.

"It ain't a goat," said MacDonald, "because a goat is white, and we couldn't see it on the snow. It ain't a sheep, 'cause it's too dark, an' movin' too slow. It must be a bear, but why in the name o' sin a bear would be that high, I don't know!"

He jumped up and ran for his telescope.

"A grizzly," whispered Joanne tensely. "Would it be a grizzly, John?"

"Possibly,' he answered. "Indeed, it's very likely. This is a grizzley country. If we hurry you can get a look at him through the telescope."

MacDonald was already studying the object through his long glass when they joined him.

"It's a bear," he said.

"Please—please let me look at him," begged Joanne.

The dark object was now almost on the skyline. Half a minute more and it would pass over and out of sight. MacDonald still held his eye to the telescope, as though he had not heard Joanne. Not until the moving object had crossed the skyline, and had disappeared, did he reply to her.

"The light's bad an' you couldn't have made him out very well," he said. "We'll show you plenty o' Grizzlies, an' so near you won't want a telescope. Eh, Johnny?"

As he looked at Aldous there was a strange look in his eyes, and during the supper he was restless, and ate hurriedly. When he had finished he rose and picked up his long rifle.

(Continued June 23rd issue)

CHANGING TIMES

By JOHN T. BARTLETT

APPLE COLORS OF YESTERDAY

WHEN industrial America began to develop, and with it big cities, and big bodies of population widely divorced from the farm, then an element took on growing importance in the marketing of farm products. That element was appearance. In New York State, you can find, within twenty-five miles, families who would reluctantly accept the gift of Ben Davis apples, and families who, in the market, would invariably pick the same apple first. Appearance partly explains, undoubtedly, interesting happenings in apple history.

The past fifty years has witnessed the introduction of many new apple varieties. Through tests, both production and marketing, many have been eliminated, some have staid. Note, however, what powerful influences apples predominantly of a certain color—red—have had in their favor.

For the mass of people, there can be no argument—red is the peerless apple color. Back in the days when America was largely rural, appearance was of far less importance in determining an apple's popularity. Then two other colors had equal eminence with red—russet, and green. Those colors were associated with mighty valuable qualities in apples. There was no cider like Russet cider—no apples to keep into the spring like Russets. Today, you can find people readily who never tasted a Russet apple in their lives, possibly even never saw one.

Color has a great deal to do, unquestionably, with this condition. Red apples appeal most to the eye. They sell most readily in the market, other things being equal. In the war for survival with them, russet, green, yellow apples, all have a stiff handicap at the start.

The proportion of red apples going to market—this is a prediction—will be greater twenty-five years from now. Salability is a big virtue in an apple, and a popular color contributes much to it.

A RIP VAN WINKLE VISIT TO COUNTRY STORES

THERE are two things which Rip Van Winkle, visiting country stores of today, would find distinctly different. They are changes which have come about largely within the past thirty years. Both represent steadily accentuating condition.

One is the one-price system. The old folks can recall the time when no country stores at all sold on a one-price basis. The best buyer was the most industrious haggler. The storekeeper believed there was no other practical way to sell; justly as firmly, the buyer believed there was no other practical way to buy. The one-price system came into use as merchants got a vision of the possibilities in volume, and a true idea of the relative unimportance of the individual transaction.

The one-price system wins confidence, and saves tremendous amounts of time consumed when merchant and customer wage a battle of wits over small transactions.

Not all country stores, yet, are one-price stores. Some stores which set up to be, in practice are not. But the number of inflexibly one-price stores grows greater year by year.

Farm people, in particular farm women, are known as excellent buyers. If there is far less bargaining with merchants than formerly, "shopping around," always good buying practice, has lost far less of its caste. And "shopping around," a comparison of goods and prices, is far easier today than formerly, and growing easier all the time, owing to the second great change alluded to above. That is the sale of advertised, known-quality, merchandise.

In house furnishings, groceries, clothing, farm equipment, practically everything the farm family consumes or uses, advertised brands and makes are available. They immeasurably simplify the task of retail buying.

We suspect that Rip Van Winkle, in his day, was a poor buyer. Thanks to changes which have come about, today even Rip Van Winkle wouldn't find it hard to buy to advantage in country stores.

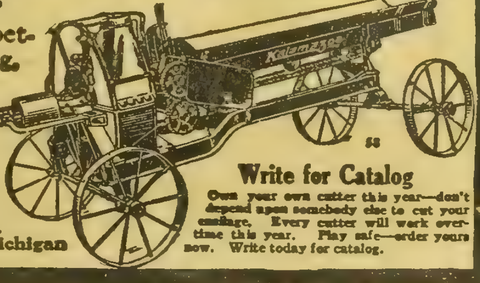
Roomy as many sedans—easy to handle as a roadster, this Oakland Coupe for Five combines a chassis of proved mechanical excellence with one of the finest of Fisher-built bodies! Ask any Oakland dealer to show you the many superiorities of this model.

Kalamazoo Ensilage Cutters

"The World's Standard"

Center-shear cut means better ensilage, smoother running, less power, no clogging of blower. One lever starts, stops and reverses. *Big capacity.* Perfectly balanced. Malleable, unbreakable knife wheel insures absolute safety and makes *fast cutting* practical. Three sizes to meet every farmer's need. Special Terms to Early buyers.

KALAMAZOO TANK & SILO CO.
Dept. 144 Kalamazoo, Michigan



Write for Catalog

Own your own cutter this year—don't depend upon somebody else to cut your ensilage. Every cutter will work overtime this year. Play safe—order yours now. Write today for catalog.

Sterilizes

A few spoonfuls of B-K in water absolutely sterilizes milkers, separators, churns, pails and cans—makes everything sweet and clean. B-K also kills the germs that sour milk.

B-K is a powerful germ killer—*no poison*, clear, clean, leaves no odor. Used by leading dairymen everywhere. In bottles or jugs at your dealers. Write for free booklet on dairy sterilizing.

In every case when writing say: "I saw your advertisement in The Michigan Business Farmer!" It will guarantee honest dealing.

"The Farm Paper of Service"

DR. FRIDAY RESIGNS

ONCE again the Michigan Agricultural College finds itself without a president. Most of our readers are familiar with the decidedly unpleasant odor which will permeate the campus for some time to come. It will not be as easy to secure a man who has a mind of his own to head the oldest farmer's school in America. The late unpleasantness got far too much publicity for the benefit of the college.

Our Lansing correspondent, Mr. Powell, who is a graduate of M. A. C. and who has given a summary of the events leading up to the acceptance of the resignation of Dr. Friday, on page three of this issue, admits that Dr. Friday is a genius, but hints that a genius is quite apt to be tempermental and headstrong. Colonel Roosevelt was credited with these same attributes. A man with new ideas is always a genius and a man who makes his ideas into realities is always headstrong, he must be to get them done.

Dr. Friday was the first president of the Michigan Agricultural College who ever took a direct and militant interest in the marketing problems of the farmers in Michigan.

We challenge any enemy of Dr. Friday to disprove this statement.

For this interest in the producer's problem he was throttled, just as every man or institution which seeks to tread on the sacred toes of the "middle-men" are bow-beaten, lied about and thus, finally put in a bad light before the very producers they are seeking to aid.

We are not concerned about Dr. Friday personally. We know he has resigned to accept a position which pays him nearly double his present salary and gives him a greater opportunity for personal gain.

What The Business Farmer is seriously concerned about is the fact that whenever a man or institution appears, seeking to solve the greatest of all the problems of the farmer—that of marketing—they become at once the target for an attack, which may be aimed from any strategic point, wheather it be the financial credit of an institution or the personal character of an individual but always with the sole object of annihilating the intruder.

Look at the record of the co-operative selling organizations which have been fostered in Michigan for the benefit of the farming business. How many have lived? None, that we know of, which are old enough to prove that they are a permanent success, strong enough to stand this continued onslaught.

And the farmers enemies have found the sure point of attack.

Destroy faith in the man or the institution and it crumbles into nothing. During the war we were taught to call it "propoganda" which is only a newer name for "lieing gossip." How easy it is to start! Like a pebble tossed into the pond, its waves reach in every direction until they beat upon the shore. Yet how gullible we all are. How quick we are to believe the untruth about the very thing we love or respect.

"My country—right or wrong—my country!"

That is the answer for the patriot. And that is the answer for the farmer who believer that there is a future in the farming business through the organized co-operative marketing of his produce.

THE WEAKEST LINK

NO one can drive over the State highways of Michigan, without wondering why it is, that there is no completed State highway, which connects any two prominent cities that is not broken into by unfinished stretches of road.

Can it be, as some of our readers have suggested, that it is the counties which have used the most political influence which have gotten the longer stretches of paved highway from the State funds available by the $50,000,000 good roads appropriation of 1919? It would appear to have been better practice for any one trunk line to have been completed by the best known method before proceeding with the next.

It also occurs to us that with the natural resources presented in certain districts of Michigan where Portland cement factories are in operation that the State of Michigan could well have afforded the purchase of such a site and the manufacturer of its own cement, if it could be done as we assume, at a lower cost than purchasing it on the competitive market. In our opinion it would have been possible to use the State Prison labor for this purpose to good advantage, and the State could have had a sufficiently large output of cement to take care of all of its building activities, not only of roads but of buildings.

We are not entirely discouraged with the road building program to date. We do not belive that graft has played a large part in the construction work, but we do know that much of the road built has cost the State more than it should, and because we need more highways and must at the same time lower the tax burden that we are carrying, a problem is presented which can be solved only by greater efficiency and a lowered cost per mile of construction.

The farmers of Michigan were right when they asked for a gasoline tax. The legislature was right when it voted the enactment of such a law, and the Governor was wrong when he vetoed it, in the face of this strong endorsment. The gasoline tax was a painless method of raising an immense amount of money, and securing a large part of it from those who are directly using the highways most. The collection of this tax was simple so long as no exemptions were made, becouse it was to have been made from the dozen or so importers of gasoline into the State. We never yet have understood why the gasoline tax was opposed by the automobile clubs.

Michigan has too many miles of road to be completed, which are really the "missing links" in our chain of good roads, for curtailment of the building program, at this time.

TOO MANY LAWS

ONE of the strangest political tendencies of our time is the suddenly increased faith of legislators in the power of laws to enforce themselves once they are reduced to writing. No belief has been so continuously and thoroughly discredited, yet none is so alarmingly alive. Every political philosopher from Montaigne's day to this hour has recognized that the best government is that conducted with the least law and machinery.

A multitude of evils attend the naive faith of legislatures in the auto-enforcement capacity of law as represented for a government on a piece of paper. One is an inevitable weakening of respect for a government born of a disregard for its more outlandish aspects. Another is the uninterrupted encroachment of government on the governed. A third and most distressing evil is the appalling expense attending the creation of multitudinous new bureaus and offices provided for.

The time may come when a candidate pledging himself to nothing but the repeal of two laws for every one created will be generally supported.

A FARMER'S MARKET AT HOWELL

ONE of our readers advises us that Howell, Michigan, offers an excellent location for a farmers' market, such as we suggested in the story of the successful market at Bloomington, Illinois, in the last issue. We have therefore appealed to Mayor Fishbeck, the newspapers and County Agent of Livingston County, to aid in the establishment of a farmers' market at that city.

Howell has a population, according to the last census, of approximately 3,000 and has shown considerable gain in the past three years, because of the rapid progress of several local manufacturing institutions. There are one hundred or more cities the size of Howell in Michigan which would be equally justified in establishing farmers' markets and thus bringing to their cities the trade and friendship of the farmers for many miles around.

It is not necessary to operate a daily market. A Saturday morning market will serve the purpose in the small city for some time until it is found profitable to open it on other days. We hope that the city of Howell will establish a market during the present season, and we hope our readers will suggest other towns and cities in Michigan where we can take up the matter, because The Business Farmer would like nothing better than to be able to point to a dozen or more successful farmers markets which were helping to solve in a practical way the century-old problem of bringing the producer and the consumer together, which it had fostered. Our readers should tell us where these markets are most needed.

RADIO ON THE FARM

IT has been some time since we mentioned radio on this page, and in that space of time such an improvement has been made in this new science that it is much more simple and practical for the isolated farm home to "listen-in" on the day's news, market reports, lectures and music from sending stations within a radius of five hundred to a thousand miles.

A simple improvement has been made whereby the storage battery for long distance receiving has been eliminated. Ordinary dry cells have taken the place and the cost of operation is so low that it is practically negligible.

Only a few evenings ago we left the supper table of a good farmer in the central part of Michigan, we went into the living room and the boy of the family, aged twelve, had already "tuned-in" and had received all of the baseball scores of the day and we sat in this living room, 15 miles from the nearest town of any size listening to a splendid concert of music and speeches being broadcasted from one of the Detroit stations.

The radio has proven one of the greatest inventions of the age for all people, but for the farmer it is a Godsend, the far-reaching importance of which has hardly been sensed, much less appreciated.

CHEAP POLITICIANS

ABOVE all things we detest a hypocrite. The cheap politician who plays to the gallery, and particularly the man who claims to be working in the interests of the farmer and who is only camouflaging, deserves more words of condemnation than we have in our vocabulary.

It seems as though the farmer particulary has been the innocent recipient of this sort of "help" during the past two years.

If we judge the present frame of the farmers' mind rightly, it is : that all he asks is a square deal, that he believes his business is as legitimate, and a little more so, than most other business, that he wants a fair price for what he grows, and demands that those who are telling most about how they are going to help him go to work at some other job.

The farmer will work out his own problems and do it much better than the so-called "leaders of agricultural thought" if they will just go back to their jobs, whatever they were, and leave us alone.

What the farmer has suffered from most is an over-production of would-be Moses, each pointing in a different direction to lead the farmer out of the pathless desert in which he has found himself the last two years.

ROAD DANGERS

WITH the number of automobiles being multiplied daily it is little wonder that the problem of traffic congestion and regulation is spreading into the rural districts.

The accidents from collisions and carelessness in country towns are much higher in proportion to the number of cars in operation than those in our larger cities where the drivers become accustomed to congestion and have thier cars at all times under control, watching out always for the other fellow who may be a "fool driver."

A suggestion or two on rural safety-first may therefore be fitting at the advent of the road congestion season. First we would urge our readers not to drive any vehicle on the road at night without a white lamp showing to the front and a red light to the rear. To drive without this precaution is risking your life in a manner most foolhardy. Many a man or woman who would die from fright at the idea of walking over Niagara Falls on a tight rope will drive on a country road on a dark night where automobile drivers racing at fifty miles per hour come within the distance of their own headlights before they see the vehicle without a rear end light for protection. Accidents from this cause are most common.

Another rule to teach your children, and yourself for that matter, is when walking on the road to walk on the side facing the approaching vehicle. This is contrary to the rule of the road when you are driving, but the padestrian can always step out of the way of the approaching automobile, while if walking on the opposite side a car may approach and run him down from the rear before he hears it or the approaching driver sees him.

PUBLISHER'S DESK

AGAIN

I THOUGHT perhaps some of my readers might be interested in the letter from Mr. Brace and my reply, because they too may have been "fed-up" on some of the insiduous propaganda which a certain type of individuals are always anxious to pass along. As we said editorially, no man or institution can begin to accomplish anything for the farming business, who is not immediately the subject of attack. But there is a smile in this sort of rot about The Business Farmer. Not later than a week ago, one of our agents was told that we had been bought out by Henry Ford! So, if you don't believe the Armour story, you can believe this later one. But listen:

Dear Mr. Slocum—I am a subscriber of the M. B. F. and have been since it started and get lots of good out of it. I think Senators Couzens is all right on the shipping Bill and think maybe he will work some for the farmer. Now, Mr. Slocum, here is a question I would like to have you answer in your next issue. It was reported and circulated that the M. B. F. was owned by Armour, the packer. Now, answer this straight and from the shoulder. You can use this if you see fit.—Wm. R. Brace, R4, Newaygo, Mich.

—My Dear Mr. Brace: I am glad to answer your kind letter of the 16th, inst, because this rumor has come to our ears before, but we have hesitated about answering it in these columns believing our readers would not in any case take it seriously.

However, Mr. Brace, you ask me for an answer "straight from the shoulder" and I do not believe The Business Farmer was ever challenged, that it did not come across immediately.

The Michigan Business Farmer is owned by the Rural Publishing Company, a Michigan corporation, incorporated in 1910 and the list of those owning 1% or more of the stock is published twice a year in accordance with the postal regulations in these columns. The list was published in our issue of April 28, on page 23 (495).

The writer, as president of this company, owns a majority of the voting stock in the corporation and to my knowledge, there is no person owning stock in this company who holds stock in or is identified with any large corporation.

I believe the confusion comes from the purchase last year of the controling interest in "The Michigan Farmer," by Senator Arthur Capper, of Topeka, Kansas, who owns also a number of farm, mail-order and political publications.

The Michigan Business Farmer is owned and edited in Michigan, by Michigan men and I repeat that if the control of this publication is ever sold by me, I will publicly announce in these columns that fact before the transaction is consumated.

In the meantime I hope you will nail this malicious lie, and advise the one who tells it to read the columns of The Business Farmer for a few weeks and then compare our independent stand with the average straddle-the-fence farm paper.

Thanking you, Mr. Brace, for your interest, I am, Yours very truly, Geo. M. Slocum, Publisher.

McRAE AGAIN!

In your Saturday's paper I notice on page 15 you say "The man who does business thru the United States mails must be honest. Uncle Sam is your attorney without cost when you have been defrauded thru the mails." Now if that's true, what can one do about Warren MeRae? I too sent him $5 and his letter to me stated the same to others "that he would send the prospective buyers to my farm, and in case these people do not buy please let me know and I will keep on sending you buyers until you make a deal."

So, I have recently written him to make good his agreement, he has had lots of time to send buyers here for the snow held off long this fall and its been a splendid winter. I also told Mr. McRae that if he didn't send us any buyers as per his agreement to return to me the $5 before corn planting and potato planting time.

I am waiting to hear from him. If the above statement is true in regard to Uncle Sam's mails, then I think Mr. McRae has something coming.—Mrs. B. G. W.

What the Neighbors Say

DISAPPOINTED OVER OUSTING OF FRIDAY

WE are greatly disappointed over the ousting of our able champion, Dr. Friday. We would feel no worse if we had lost our right arm. We have long been convinced of his wisdom and the sound policy for our agriculture which he adhered to was the cornerstone of agricultural prosperity. Let the investigation be complete. Let no villian escape the purifying effects of your "Big Bertha." May the farmers of Michigan waken to their responsibility of cleaning up the dirty gang that separated us from our able champion, Dr. Friday.—Carl C. DeWitt, Gratiot County, Mich.

THE "AGRICULTURAL PROGRAM"

I HAVE been considerably interested of late in the "Agricultural Program for an Industrial State" as advocated by Dr. Friday. The Business Farmer and others. The proposed program sounds good, but up to the present time I have looked in vain for some one to get down to brass tacks, be specific, and tell me just what I should raise on my one hundred twenty acre central Michigan farm.

This farm is located some thirty miles from Lansing and eight miles from the nearest railroad town. It is slightly rolling and fairly well drained though not tiled. The soil is clay loam and raises fairly good crops of wheat, oats, corn, beans, hay and in fact all crops adapted to this part of the country. For the past few years we have kept about forty ewes, three or four brood sows and horses enough to do the work. We raise about twenty acres of corn, ten to fifteen acres of oats, ten acres of beans, fifteen to twenty acres of wheat and cut thirty to forty acres of hay. Have also rented some additional land for pasture. We are too far from railroad to raise beets.

We realize that our wheat competes with Russia and South America, our corn, oats and hay with Ohio, Indiana and the whole corn belt, our beans with New York, California and Japan, our pork and dairy products with the whole northern half of the country, our beef with South America and the great west, our wool with Australia, and our beets with Louisiana and Cuba, so will some one please be specific and tell us just what to raise?

In a recent issue of the Business Farmer you say in effect that a Michigan farmer is a fool to raise wheat. (Ed. Note: In what issue did we make this statement, Mr. Subscriber?) I am inclined to agree with you and you may also include all the ordinary farm crops grown in Michigan. However, anyone so unfortuante as to own a farm in Michigan at the present time is up against it, and should be pitied rather than blamed. Real estate is assessed at full value, and taxes must be paid or the farm will be sold. It is possible that we would be better off to let the farm go, move to the city, and get a job, but most of us hate to leave that way so we will probably struggle along in the attempt to raise enough to pay the tax and keep alive, work the whole family, sixteen hours or more per day, when the weather is good, go fishing, when it rains, and hope for better times ahead.

Our worthy Governor has saved us two cents per gallon on all the gas we burn, and Henry Ford says that anyone can raise five dollars may soon have a flivver, so let's cheer up and be happy.—Subscriber, St. Johns, Mich.

4 TIMES Around the World with ONE OILING
100,000 Miles Without Stopping for Oil

An inventor who could develop an automobile, a railroad car or any other conveyance on wheels which would perform such a feat would be considered a wonder. But such is the record of regular accomplishment by the Auto-oiled Aermotor during the past eight years in pumping water.

Did you ever stop to think how many revolutions the wheel of a windmill makes? If the wheel of an Aermotor should roll along the surface of the ground at the same speed that it makes when pumping water it would encircle the world in 90 days, or would go four times around in a year. It would travel on an average 275 miles per day or about 30 miles per hour for 9 hours each day. An automobile which keeps up that pace day after day needs a thorough oiling at least once a week. Isn't it marvelous, then, that a windmill has been made which will go 50 times as long as the best automobile with one oiling?

The **Auto-oiled Aermotor** after 8 full years of service in every part of the world has proven its ability to run and give the most reliable service with one oiling a year. The double gears, and all moving parts, are entirely enclosed and flooded with oil all the time. It gives more service with less attention than any other piece of machinery on the farm. To get everlasting wind-mill satisfaction buy the Auto-oiled Aermotor, the most efficient windmill that has ever been made.

For full information write AERMOTOR CO. Chicago Kansas City Dallas Minneapolis Des Moines Oakland

MONEY TO LOAN

On the 33-Year Government Amortization Plan to desirable borrowers who own good, well-managed farms in ichigan and Ohio, and wish to borrow not over 50% of the value of their land plus 20% of the appraised value of the buildings.

No commissions—Low interest rates. No stock investment. Unusually prompt and satisfactory service. If your loan will meet these requirements, write us.

CANNING RECIPES WANTED

NOW that the canning season is on I would like to receive a recipe from every reader for a new or old-fashioned method of taste in preparing the strawberry, raspberry, rhubarb or any of the fruits into either a sauce, relish, conserve or new kind of jam. All these recipes are being filed until I complete our book and by fall I want every reader of M. B. F. to have one. I will print the best of them in each issue. I am looking forward to turning out a splendid book, complete in every detail.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

CHAMPION CANNERS ON TRIP TO FRANCE

FOUR young girls, fresh from the farm and members of the two highest ranking teams in national vegetable canning championship contests, started May 16th on a trip to France to demonstrate in that country the best American methods of home canning. They are to spend three months abroad as the guests of the American Committee for Devastated France.

The girls united at Chicago, Monday, May 14th. They departed May 16th for Washington to call on the President and the Secretary of Agriculture. They went from that city to New York and sailed on May 23 for France.

The girls make an unusual quartet of national champions, but they well earned their honors. First they won their state contests; then, last fall at the international livestock exposition here,' when nine states sent up teams to the first national canning competition, they became champions among 30,000 girls hailing from every state.

To Spread Club Idea

Beulah Rodgers and Katherine Belibaugh, who came from Eddyville, Ia., with a population of between 900 and 1000, constitute the Iowa team that won first place, and their companions on the trip are Bertha Roger and Elaine Hendricks of Burlington, Col., who composed the team qualifying for second prize. With them goes Esther Belibaugh, who as local leader has the credit of training the primier canners of the country, and who looks no older than her sister. The heads of the expedition are Miss Josephine Arnquist, agent in charge of girls' club work in Iowa, and Miss Maude E. Sheridan, state club leader in Colorado.

Whatever novel fruits, vegetables or meats France may offer these slender girlish tutors, they are undismayed at the prespect. They stand ready to can anything that can be canned by the cold-pack method. Elaine and Katherine have been canning for seven years, Bertha for six and Beulah for five. Demonstrating proper canning methods is an old story with them. These farmers' daughters are going to France to work, and they expect to expound this bit of better home-making wherever the American committee or the Minister of Agriculture may send them.

Canning is but one phase of the boys' and girls' club work fostered by the extension departments of the state agricultural colleges. Six hundred thousand boys and girls are enlisted in this potent agricultural movement. The girls' side of it is devoted to home-making. It trains them as it did the prize-winning girls to take a half bushel of apples and in an hour turn out something like 17 jars of baked apples, apple sauce, sliced apples for pies and apple juice for jelly. It also teaches these farmers' daughters bread-making, cooking, making of clothing, house furnishing and poultry raising.

The four leading canners are looking forward to two weeks in school at Troyes, but the Colorado misses have their eyes especially on Lille. They belong to a clothing club at home that adopted a French orphan and perhaps their chief goal in France is this youngster, Pauline Dupeuchelle.

HOLDER FOR YOUR BROOM

AN ordinary piece of rubber hose large enough to admit the handle of a broom thru the center will make a broom or mop holder for the kitchen. Select a piece of hose 6 or 8 inches long and cut both ends slantwise, so that when the hose is placed vertically against the wall it may be nailed top and bottom thru the tabs. The holder should be 2 or 3 feet from the floor. Brooms, of course, are placed in it upside down, allowing the brush part to keep its stiffness. Simply standing it in a corner always weakens a broom.

ONE OF THE REASONS FOR HAVING EZCEMA

IN the olden days our books tell us of the horrible cases or scurvy that used to be on board ships that sailed the ocean. It took so long a time to reach the different ports that the food question was a great problem in those days. They did not have the canned vegetables and fresh fruit that gave the system the lime juices that it needed so much. All these tales of horror were told of the anaemic, scurvy bodies that were aboard these ships. This is just another form of ezcema only worse and too much cannot be said about the care of ones bodies in making it healthy. We all know how well the animals of the field are taken care of so why not give a little of this attention to ourselves. It seems to me that with eating a great deal of the fresh vegetables and fruits in summer and canning all of the different kinds for winter use and with a lot of good drinking water you will soon erase the trouble at its source. I cannot help but write you women about this, because it is up to us to watch our table and what is put upon it for the family. This spring I received so many letters asking for a cure for ezcema that I have reprinted in the personal column a cure that came to my desk last spring. It makes me think that this dreadful disease comes after a winter of eating the wrong kinds of food.

KEEPING HOME SWEET

To have harmony in the home—

1. Think before you speak.
2. Respect others feelings.
3. Don't nag or find fault.
4. Don't feel superior to your companion.
5. Do unto him or her as you would like to be done by.
6. "Ours" should be the home pronoun.
7. Let there be no boss rule.
8. Keep respect for each other's feelings.
9. Don't decieve each other.
10. Don't speak crossly when your companion is angry or vexed about something.

A little love and affection will prevent petty quarèls. The whole secret depends on love and respect. Keep this in mind and you will never disagree nor quarrel.

THE CANNING BUDGET

SET your GOAL before you start your season's work. If possible make it to fit the needs of your family rather than to achieve only the actual project requirements for your age or year of work. We should all try unselfishly to measure all home-making projects in terms of the family rather than the individual.

We should plan for at least one serving of fruits and one serving of vegetables other than potatoes for each day of the eight months when fresh products are not readily available.

The budget outlined here, approved by the nutrition specialist of the College, is based upon that principle. In this chart you will notice that one column is given over to the needs of a single person. THIS WILL HELP YOU SET YOUR GOAL. It will help you, too, in planting your garden.

Product	Per Person for 30 Weeks
1. Greens Spinach Dandelions Chard Other Greens	5 quarts (one serving per week)
2. Tomatoes	10 quarts (two servings per week)
3. Other Vegetables Peas Beans Beets Carrots	15 quarts (two servings per week)
Supplement canned vegetables with stored ones, such as cabbage, rutabagas, and onions.	
4. Fruits (including Jellies)	30 quarts
Supplement canned fruits with dried ones, such as prunes and apples.	
5. Meats	30 quarts through warm month beginning April through October.
Total	95 quarts

Ratio of Uncooked to Canned Products

1 bu. peaches 18 qts., 1 bu. pears 30 qts., 1 bu. plums 30 qts., 1 crate blackberries (16 qts.), 1 crate strawberries (16 qts.), 1 bu. tomatoes 16 qts., 1 bu. string beans 20 qts., 1 bu. sweet corn 12 qts., (six small yield one pint) 1 bu. shelled peas 8 qts., 1 bu spinach or other greens 7 qts., 1 bu. small beets or carrots 16 qts.

Any reliable seed catalog will give you the amount of seed necessary for producing the vegetables you need.

Mothers Problems

READ FOR THE CHILDREN

ALL children love stories. It matters little to them whether the story be told to them; all they ask is that they may hear a story. Where it is possible, it is fine to set aside the hour between the evening meal and bedtime for a story hour, but in every family, that hour cannot be taken. Must, then, the children go without stories? Not necessarily.

There are few mothers and fathers so busy that they cannot snatch a few minutes each day to glance though their favorite magazine, to dip into a book for a chapter or so, or to persue the daily paper. All three of these sources are rich in story-material for children. Interesting bits of information, thrilling adventures, glimpses of wild life—all these are constantly being "run across" in reading, and, retold in language easily understood by the child, they form as interesting little stories as any child could desire. At the same time they are much more likely to contain real truths than the usual children's story.

Let it become a habit of mind with you to have the children in mind whenever you read. If you have never read for the children, you will be surprised at the number of interesting stories you can run across in fifteen minutes time. Soon you will learn to pick reading for yourself, in your snatched few minutes, which will be especially adapted for re-telling to the children later on. Your own pleasure in reading will not be destroyed if you read for the children as well as for yourself; it will, on the contrary, be enhanced. Also, if you are reading with the children's pleasure in mind, you will be far less likely to waste your valuable few minutes for reading, reading trash; you will choose your stories and your articles much more wisely and thoughtfully. Thus will not only the children be benefited, but you, also, by the habit of reading for the children.

BEWARE OF THE SUGGESTIVE WARNING

I KNOW a mother who, as she started to leave the house on an errand to a neighbor's happened to remember that children sometimes are guilty of poking beans and things up their noses with disastrous results. The children had never heard of nor thought of doing such a thing, but the mother turned and, in a few words, cautioned them: "Now Bobbie and Katie, whatever you do, don't put anything up your nose!". The children promised with blank faces, the mother shut the door and hurried across to the neighbor's house. As soon as she was gone, Katie turned to Bobby: "What did Mamma mean?" she asked. "I don't know," replied Bobby. "Come on, let's do it and see what happens!" Of course, they did it, and, of course, they found out what happened. The mother, on her return, found two frightened little children. A hurry call to the doctor was necessary to remove the beans lodged in the children's noses.

Had the mother not made that suggestive warning, the children would never have thought of trying the "stunt." She didn't understand what curious little animals children are. She didn't realize how strong the power of suggestion is in people, but especially in children. They are always wanting to find out "what will happen if." Therefore, if there is anything you especially want children to avoid doing, be very, very careful how you word your warning, and be sure that it does not take the form of a suggestion.

Explain why to children. If that mother sometime when the children had been playing with buttons or some such small articles had said: "I heard of a little girl once who put a button up her nose and it stuck there and the doctor had to come and take it out. It hurt the little girl a lot, and I'm sure she never did such a thing again. It is dangerous to put things up one's nose. You'll remember never to do it, won't you?" her children would never have come to grief as they did. Beware of the suggestive warning!—Margaret Bartlett.

THE TEN REASONS

Milk strengthens the body to resist disease.

Milk contains lime which helps build healthy teeth.

Milk helps keep the digestive tract in a proper condition.

Milk contains the vitamine needed for growth and health.

Milk supplies the fuel the body needs to perform its work.

Milk helps repair the wear and tear of the body.

Milk builds strong bones.

Milk prevents malnutrition among children.

Milk gives proper balance to a diet and insures the greatest efficiency.

Milk gives more food value for less cost than any other food.

HAVE A DUSTLESS DUSTER

You can make a dustless duster for yourself by saturating cheese cloth in kerosene oil and hanging it out in the sunlight to dry.

VACATION TIME

Margaret E. Sangster

THE grammars and the spellers,
The pencils and the slates,
The books that hold the fractions
And the books that tell the dates,
The crayons and the blackboards
And the maps upon the wall,
Must all be glad together,
For they won't be used till fall.

They had to work like beavers
To help the children learn;
And if they want a little rest,
It surely is their turn.

They shut their leaves with pleasure,
The dear old lesson books,
And the crayons and the blackboards
Put on delighted looks.

So children just remember,
When you have gone away,
Your poor old slates and pencils
Are keeping holiday.
The grammars and the spellers
Are as proud as proud can be
When the boys forsake the schoolroom
And the teacher turns the key.

The Runner's Bible

SPIRIT—It is the spirit that quickeneth, (John 6:63.)

All visible life is constantly dependent upon something beside air—a finer something than even the air itself. It is the "Fullness of God"—His Holy Spirit, the life of life. In it "we live and move and have our being."

Personal Column

Dear Friend—Please tell me how to use left over potatoes instead of frying them. Please give recipes for some kind of crullers. I would like to have someone send me the whole story of "The Blood Teendr" also the poem "The Arbutus" I will pay for them if money is asked.

How can I take rust stains out of a white woolen sweater? How can you keep flies away from babies? Miss Burdena Nelson, R. 2, Cadillac, Mich.

Potate Cakes—Shape cold mashed potatoes in small cakes, and rolls in flour Butter hot omelet pan, put in cakes, brown one side, turn and brown other side, adding butter as needed to prevent burning; or pack potatoes in small buttered pan as soon as it comes from the table, and set aside until ready for use. Turn from pan, cut in pieces, roll in flour, and cook as potato cakes.

Creamed Potatoes—Reheat two cup of cold boiled potatoes, cut in dice, in one and one-half cups white sauce.

White Sauce—Two tablespoons butter, two tablespoons flour, one cup milk, one-fourth teaspoon salt, few grains pepper. Put butter in pan and stir until melted and bubbling; add flour mixed with seasonings, and stir until thoroly blended; then pour on gradually while stirring constantly the milk, bring to the boiling point and let boil two minutes. If a wire whisk is used, all the milk may be added at once.

Potatoes Au Gratin—Put creamed potatoes in buttered baking dish, cover with buttered crumbs, and bake on center grate until crumbs are brown.

Delmonico Potatoes—To potatoes au gratin add one third cup grated mild cheese, arranging potatoes and cheese in alternate layers before covering with crumbs.

Crullers—One-fourth cup butter, one cup sugar, yolks two eggs, whites two eggs, four cups flour, one-fourth teaspoon grated nutmeg, three and one-half teaspoons baking powder, one cup milk, powdered sugar and cinnamon.

Cream butter and add sugar gradually, yolks of eggs well beaten, and whites of eggs beaten stiff. Mix flour, nutmeg, and baking powder; add alternately with milk to first mixture; toss on floured board, roll thin, and cut in pieces three inches long by two inches wide. Make four one-inch parallel gashes crosswise at equal intervals. Take up by running finger in and out of gashes, and lower into hot deep fat and fry.

Flys Kept away from the Baby—I would suggest that if the baby is out doors and sleeping use cheese cloth or mosquito netting by putting a stick up the front and back of the crib or basket and throw the netting over it. Try and keep the flies out of the house entirely. Remove all food as soon as the meals are over as this attracts them, and put garbage as far away from the house as possible. If the baby is kept sweet and clean, I cannot see why the fly will be with them any more than the grown-ups. The fly is our worst enemy and too much cannot be said about the disease they carry into our homes. They breed around the barn and it pays to fight them every day.

A Cure for Salt Rheum—3 tablespoons of sulphur; 2 tablespoons of cream of tartar; 1 tablespoon of nitrate of potash or salt peter. Mix, and at night put 1 teaspoon of this mixture in a little milk, water or syrup and drink.

Use this Wash for the Affected Parts—2 tablespoons epsom salts, 1 teaspoon of carbolic acid in one quart of water, boil 5 minutes and use by washing the spots affected.

At Night Rub On—Lonoline or sweet oil one ounce with ten drops of carbolic acid. I only made half of the recipe at a time. This is a wonderful cure. I have found if one keeps at it you will get the right results.—Mrs. B. Tidy.

Dear Madam—I seen in the farm paper where you wanted to know how some of the women made extra money. We live on a 12 acre farm about 11 miles from Port Huron. Last year we put in a small piece of watermelons, some cucumbers, some sweet corn, some onions, radishes, carrots, and beets. I sold all I could spare and could have sold more so this year I am putting in more. There is never much trade in the forenoon but lots in the afternoon and evening. Some days I would sell six or seven dollars worth in a few hours. There are quite a few wild berries near here and they always sell good, then I always raise quite a few chickens. They always grow fast and bring better than a dollar apiece in the fall. I am also enclosing some of my recipes that I know to be good. Wishing you good luck, I remain—Sarah Beauchamps, R. F. D. No. 1, Goodell, Michigan.

Sleeveless Sweaters Made—Saw Mrs. G. M's. add for the address of a woman who can make sleeveless sweaters so will send my own. I also piece quilts and do crochet work, can do other work, such as rugs, tidies, etc.—Mrs. Ettie Pratt in care of J. H. Burns, Gaylord, Mich.

—Will lady who wished some one to knit sleeveless sweaters please write to I. M. E., Box 203, Chesaning, Michigan.

TO "A SUBSCRIBER"

It seems to me you have condemnation in your heart for your husband which needs be eliminated. "Neither do I condemn thee" were the Omnipotent words you know. Its keeping a man down when he's down.

Its the beautiful uplifting thoughts he needs.

Search out his true and redeeming qualities and hold him to this incessantly every moment your thought is with him, and you will find your self far happier, and your unsatiable desire will cause you to forget yourself and life will take on an added charm. Only Love, (not condemnation) can awaken him. "Love never faileth."

This error is not unlike any other, is not surmountable, and the thing that now appears fixed, will detach itself like ripe fruit and fall.

This is both ethical and practical. When husband is away remember with—Emerson, Thou art not gone being gone,

Where e'er thou art,
Thou leav'st in him thy watchful eyes,
In him thy loving heart.

When husband returns home, forget all appearances of evil and see the perfect man, and let the real of you, the Truth of you, shine forth in all its effulgent beauty, and you will attract unto yourself your mate as of yore, when boy and girl together.—L. Baker.

Wild Hairs—Will you please ask the people if any one can tell how to get rid of wild hairs in ones eyes. I am nearly blind with them and if some kind friend will tell you so that you can put the remedy in your paper I will be thankful.—G. C.

About Sale of Rabbits—I saw by your paper lots of things of benefit to all, also Mrs. E. W. B. that wanted to know about selling rabbits, etc., back to the companies in New York and Kansas City, Missouri.

I will say we bought two pairs of rabbits of the Standard Food and Fur Association of New York a few years ago and they were $7.00 apiece and they were to buy back all that we raised. So we raised some and after awhile they bought one pair for $7.00 and were to pay us as per contract and said they would buy the rest if I would let them know how many I had so I did and they said they were not ready to receive them. I wrote different times and also only recieved $6.00 for the pair sent them. They were better stock than we received but they claimed they were under weight and I had a time to get the money from them. They are just frauds to our opinion. They figure on selling stock to you for a big price and get out of buying yours back. I have been waiting to advertise them to folks so they will not be fooled by them.—A Subscriber.

Cement for Mending Broken China—Stir plaster of Paris into a thick solution of Gum Arabic until it becomes a viscous paste. Apply it to the fractured edge and draw parts closely together.—Mrs. J. I. L., Topinabee.

To Remove Rust Stain—Make a paste of cream of tartar and water, cover the spot and hang the article in the sun, when dry brush off, repeat this until the spot is removed.

A Rose to the Living—I am sending a verse to you, a favorite of mine taken from "American Motherhood" published about 1915 or 1916.

"A rose to the living is more
Than sumptous wreaths to the dead;
In filling love's infinite store,
A rose to the living is more,
If graciously given before
The hungering spirit is fled—
A rose to the living is more
Than sumptous wreaths to the dead."

Mrs. Paxton.

Would like to hear from readers who would like crocheting done. Will accept cash or anything useful for myself or family.—Box 18, Turner, Michigan.

RECIPES

Chow Chow—1 peck or green tomatoes chopped fine, 2 heads of cabbage, 1 cup of salt, mix well and let stand over night. Drain and boil in 1 quart of vinegar and 2 quarts of water, drain again. 3 quarts of vinegar, 2 pounds of sugar, 1 bunch of celery, 1 tablespoon pepper, cinnamon to taste, heat vinegar again and pour over mixture. Makes 8 quarts.—Sarah Beauchamp.

Filling for Cookies—1 pound of raisins put through chopper, 1 cup sugar, 2 cups water, cook to a jelly.

—if you are well bred!

At the Movies—The man precedes the lady down the aisle to the seats. Sit quietly and do not talk in loud whispers. Do not applaud too loudly or laugh too boisterously.

THE SIGN For Your ROWENA OF QUALITY Protection

Lily White

"The Flour the Best Cooks Use"

Has a Wholesome Taste

Although people's tastes differ, nearly everyone prefers that clean, wholesome taste in bread. This flavor is always found in breads baked with Lily White flour. Fine wheats—the finest grown in America—are the foundation of this wonderful flavor. Absolute cleanliness and scientific milling—the result of more than 60 years careful study—brings it out. When you make bread the flavor is baked into the loaf. And it pleases. That is why Lily White has been the favorite flour of the best cooks for three generations.

Milk Bread made with Lily White

Our Guarantee

We Guarantee you will like Lily White Flour, "the flour the best cooks use" better than any flour you ever used for every requirement of home baking.

If for any reason whatsoever you do not, your dealer will refund the purchase price. He is so instructed.

Have Lily White in your flour bin the next time you bake.

If Ruptured Try This Free

Apply it to Any Rupture, Old or Recent, Large or Small and You are on the Road That Has Convinced Thousands

Sent Free to Prove This

Anyone ruptured, man, woman or child, should write at once to W. S. Rice, 408B Main St., Adams, N. Y., for a free trial of his wonderful stimulating application. Just put it on the rupture and the muscles begin to tighten; they begin to bind together so that the opening closes naturally and the need of a support or truss or appliance is then done away with. Don't neglect to send for this free trial. Even if your rupture doesn't bother you what is the use of wearing supports all your life? Why suffer this nuisance? Why run the risk of gangrene and such dangers from a small and innocent little rupture, the kind that has thrown thousands on the operating table? A host of men and women are daily running such risks just because their ruptures do not hurt nor prevent them from getting around. Write at once for this free trial, as it is certainly a wonderful thing and has aided in the cure of ruptures that were as big as a man's two fists. Try and write at once, using the coupon below.

Free for Rupture

W. S. Rice, Inc.,
408B Main St., Adams, N. Y.
You may send me entirely free a Sample Treatment of your stimulating application for Rupture.

EASY NOW TO RID YOUR PLACE OF FLIES

Widely Known Scientist Discovers Wonderful Chemical that is Fatal to Flies. Not a Poison—Harmless to Stock.

Flies are one of the most dangerous and annoying things with which the farmer has to contend. Now, through the discovery of E. R. Alexander, widely known scientist, you can rid your house and barns and livestock of these pests almost instantly, and with no trouble at all. This discovery is in the form of an organic chemical that is fatal to flies, and similar pests, such as chiggers, mosquitoes and moths.

This new discovery, which is called Alexander's Rid-O-Fly, is not a poison. Though it kills flies like magic, farm animals and human beings are not affected by it it all. In addition to killing these insects, Rid-O-Fly is a strong repellant. Flies will not come near stock or buildings where Rid-O-Fly has been used. Rid-O-Fly is particularly valuable for cows and horses, as it is a known fact that flies do untold harm to these animals.

So confident is Dr. Alexander that his discovery will rid your house, barns and live stock of these pests that he offers to send a $3.00 supply for only $1.25 on the guarantee that if Rid-O-Fly does not solve your fly problems it will cost you nothing. Two big Kansas City Banks guarantee the reliability of this offer.

SEND NO MONEY—just your name and address to the Alexander Laboratories. 1548 Gateway Station, Kansas City, Mo., and this introductory offer will be mailed at once.

The Children's Hour

Dear Uncle Ned—As I saw my letter in print, I thought I would write again. I have blue eyes, medium brown bobbed hair, and am light complexioned. I passed the eighth grade when I was fifteen. I am not going to school this year. I have given up going to high school. I live on a 600-acre farm. Of course you can't farm it all. We farm some of it and the rest we pasture for cattle and horses. The back part of the place is too hilly to farm. There are quite big hills, but not so big but that I have been on top of them. There are blackberries, raspberries and gooseberries in the pasture. There used to be some blackcaps but the fire ran thru and burned them all up. There is some strawberries, too, but they are tame. I just like to pick strawberries so I can eat them. Don't you, Uncle Ned? I like to pick the wild ones, too. We have quite a lot of fun picking wild berries as we have a large place to ramble over. There are some cherry, plum and apple trees on this place. There used to be peach trees but they all froze. It is too cold here for peach trees. I think Stella Violet Nowak had a long interesting letter in last week's M. B. F. It has been raining today. We had a snow storm here last week. In some places a foot of snow fell. We have been having quite nice weather only the wind is quite cool. It is awful cold at night. It has been so cold that the crops don't grow any. There aren't many crops around here. We have our garden, onions and sweet corn in and have a field nearly already to plant to early potatoes. We are going to put in some buckwheat, beans, field corn and late potatoes. I would like to correspond with some girl that can tat or crochet. If she will send me some patterns I will send her some. Your niece, Trecel Sweeney, R. R. 2, Cadillac, Mich.

—I am very sorry that you are not going to attend high school. It would be best to go through high school if possible, because even though you intend to live on a farm all your life, you will find a good education most valuable.

Dear Uncle Ned—Hello! I knew you would let me in. How are all of you this beautiful morning? I don't expect you all are acquainted with me as I am you, as this is the very first time I have ever attempted to join your merry circle. I will introduce myself: I am a "county jay," I am 11 years old, 4 feet and 9 inches tall. I have black hair which is bobbed; brown eyes, and freckles. I am in the seventh grade and my birthday is Oct. 8th. Have I a twin? I live on an 82 acre farm and I enjoy farm life very much. Say Uncle, I wish you and about a dozen of the cousins would come down and eat peaches with me providing you would wash your own dishes. I like to chase over the hills on horse-back better than I like to work in the house. Well my letter is getting long so I will close with a riddle: "What walks like a cat, acts like a cat and looks like a cat." Whoever guesses this riddle will receive a long letter. I wish some of the cousins would write to me. Your niece, Anita Ruth Cromwell, Elizabeth, Ind.

—Well, my niece from Indiana, I am glad to hear from you and I am sure all the boys and girls are too. I like peaches and can wash dishes so maybe I will accept your invitation. Tell us more about your home and state next time.

Dear Uncle Ned—I am a girl five feet four inches in heighth. I have blue eyes, light hair and light complexion. I weigh one hundred fourteen pounds and my age is between eleven and sixteen. Will some one try and guess my age. If you guess it right, I will write you a long letter. My father owns a grocery store. We have a dance hall over our store and a dinning room over our house for the A. O. O. G. lodge. Not long ago I read a letter in this paper that a girl in Bear Lake wrote. Her name was Retta Belle. It seemed so good to read a letter from anyone so close to my home. It is only six miles from here. I have one brother whose name is Ward. He is seven years old and in the second grade. I am in the eighth grade. I will close with a riddle and please write to me and tell me the answer: "One killed 12, yet slay none." If no one can answer it and don't by the next time I write I will answer it. I wish that some boy or girl of this merry circle would write to me and send me all the riddles they know. I would be very glad.—Phyllis Gibson, Box 53, Pierport, Michigan.

—So you enjoy riddles, do you? Have you been able to answer most of those that have appeared on this page?

Dear Uncle Ned—I am writing this letter to let you know I would like to join your circle. I have never written to you, but have read the Children's Hour which I enjoy very much. I am a girl, 13 years old, and 4 ft. 9 inches tall. I have blue eyes, light brown hair, dark complexion and am in the eighth grade. I live on a 40-acre farm. My father is a merchant in a grocery store. We have 4 horses, two cows, and one calf. My birthday is March 2. I was born in 1910. Have I a twin? I will close with a riddle: "How can twenty-five children keep dry under one umberalla?" The one that guesses this riddle will receive a long letter. I will say good-bye now. Your niece, Ruby Rooksby, Laconia, R1, Indiana.

—Another niece from Indiana! Our circle is widening. We now have members in Michigan, Indiana, Illinois, Ohio, Pennsylvania and New York.

Dear Uncle Ned—May I join your merry circle? I have never written before or seen any letters from around here, so I thought I would write. I always read over the "Children's Hour." I am five feet nine and one-half inches tall and weigh one hundred and thirty-eight pounds and live on a thirty-five acre farm which is about one-half river flats. Pine river is the north line of our farm. We raise mostly fruit. We have two horses and one cow. I live about three and three quarters miles southwest of Alma—Lawrence Chapman, Alma, Michigan, Route 1.

—Come again Lawrence.

Dear Uncle Ned—May I join your merry circle? I have been a silent reader for some time. My folks like the M. B. F. I like the "Children's Hour" best. Our school will be out next Friday. We are going to have a picnic. I wish you could come to it, Uncle Ned! I will describe myself so that you will know what I look like. I am 5 feet, 3 inches tall, weigh 107 pounds. Have brown bobbed hair, and brown eyes. I am between 13 and 18 years old. Anyone guessing my age I will write a card to. Your friend, Helen Goodrow, Hale, Mich.

—I, too, wish I could attend your picnic, because if there is anything I enjoy it is going to the woods and having a picnic.

Hello Uncle Ned—I have been a silent reader of the M. B. F. and the Children's Hour, and found it very interesting. I want to ask you if I can join your merry circle? I will guess the answer to the riddle Hazel Baker put in. It is "a candle." The one that guesses the answer to this one I will write a letter to. Here it is: "Over water and under water." Uncle Ned, will you have your picture put in the M. B. F. so we will know how you look? Do you have drawing in the paper? If you do I will draw something. Or can we have a contest on drawing or something else? Good-bye, Myrtle Taylor, Box 75, Watrouzville, Mich.

—Oh, I wouldn't dare print my picture in the paper. Why we would lose most of our subscribers and we do not want to do that, you know. Send me some of your drawings, Myrtle, please. Maybe we can hold a drawing contest soon. I would like to hear from the other girls and boys as to whether they would be interested in such a contest.

Write for free booklets on Farm Sanitation

They contain practical suggestions for the prevention of diseases common to livestock and poultry and describe in detail the many uses of

Kreso Dip No. 1

(STANDARDIZED)

Parasiticide and Disinfectant For all Livestock and Poultry

FREE BOOKLETS ON FARM SANITATION:

- No. 151—FARM SANITATION. Describes and tells how to prevent diseases common to livestock.
- No. 157—DOG BOOKLET. Tells how to rid the dog of fleas and to help prevent disease.
- No. 160—HOG BOOKLET. Covers the common hog diseases.
- No. 185—HOG WALLOWS. Gives complete directions for the construction of a concrete hog wallow.
- No. 163—POULTRY. How to get rid of lice and mites, also to prevent disease.

Kreso Dip No. 1 is Sold in Original Packages at all Drug Stores.

HOW ARENAC COUNTY IS PUTTING IT OVER

THE banking interests of the country are realizing more and more the importance of dairying to the welfare of their districts and instances are multiplying where banks are establishing dairy departments to finance farmers who wish to go into the dairying business in a scientific manner. In addition to this, chambers of commerce located in county seats are awakening to the value of dairying and are realizing the power they have to get action in bringing the big interests of their community together in working for the common cause.

Take Arenac County, Michigan, as an example.

The Arenac County Farm Bureau and the Standish Chamber of Commerce have been co-operating in the development of the dairy business of that county for some time. Every two weeks the Chamber of Commerce puts on a program at which noted speakers on dairying give their experiences and their views. But they have gone further than this. In co-operation with the banks, the Chamber of Commerce offers to finance any farmer who wishes to buy pure bred or good grade dairy cows. Work has been started in the formation of a cow testing association and 28 members have already been signed up, which means that the farmers who have enlisted will soon have eliminated their boarder cows.

But the Standish Chamber of Commerce has gone further than this. It has interested the Michigan Central Railroad to the extent that three pure bred Holstein sires have been leased by the railroad to three groups of progressive farmers of the county for an indefinite period of time. With the Chamber of Commerce enlisting the interest of the banks and the co-operation of the railroads in introducing pure bred sires and the formation of cow testing associations, Arenac County is on the way to big things in dairying and presents an example for other districts to follow.

Well defined dairying programs are being introduced by banks and chambers of commerce in many parts of the country and the officials of the National Dairy Exposition are looking for a large attendance from representatives of the financial interests who realize more and more the importance of dairying in building up a community. While planning to send representatives to the Exposition at Syracuse in October, banks and chambers of commerce in every part of the country will watch Arenac County and see how the dairy cow is putting it on the map.

THE EXPERIENCE POOL

Bring your everyday problems in and get the experience of other farmers. Questions addressed to this department are published here and answered by you, our readers, who are graduates of the School of Hard Knocks and who have their diplomas from the College of Experience. If you don't want our editor's advice or an expert's advice, but just plain, everyday business farmers' advice, send in your question here. We will publish one each week. If you can answer the other fellow's question, please do so, he may answer one of yours some day! Address Experience Pool, care The Business Farmer, Mt. Clemens, Mich.

REMOVING HORNS

Sometime ago I saw in the M B. F. where D. H. of Boyne City, Mich., wanted to know whether there was any better way of removing horns than by using caustic, and I wish to say there is a better way. Get five cents worth of nitric acid and put in a large mouth vial, and broom the end of a stick the size of a lead pencil. Dip the stick in the acid and apply to the horn or button until it is wet but not so it will run. I have used this treatment for years and it never fails with one application.—A. L., Breckenridge, Michigan.

"THANK YOU MANY TIMES"

I am writing to thank you many times for the favor you did me, by answering my inquiry. I think in my case, the lawyer that holds the will is the executor. He made the will and tends all their business, but it was on my mind to know what to do, so I am thanking you again for your favor.—Mrs. P. J., Gobles, Mich.

The penny may not be the best money in the world, but it goes to church more often than the dime, quarter or dollar.

You Can Buy a De Laval for $50 and Up—On Such Easy Terms that It Will Pay for Itself

Don't get the idea that a De Laval Cream Separator is high priced because it is the best. Considered on the basis of service a De Laval is the cheapest separator made. A De Laval costs a little more to begin with but lasts three or four times longer, and does better work all the time.

You can get a De Laval for as low as $50, and up, depending on the amount of milk you have to separate. No matter if you have one or a thousand cows, there is a De Laval just right for you. And you can buy a De Laval on such liberal terms that it will pay for itself while you are using it.

When you get a De Laval you not only get the best separator service for the longest time, at the least expense—on the easiest terms, if desired—but you can see what you are buying. You can try it; your local De Laval dealer will instruct you in its use and provide service should it ever be necessary; and you can always get parts from the De Laval Company at any time during the 20 to 80 years, or more, your machine should last. These important considerations are sometimes overlooked.

See the new 1923 De Laval at your local dealer's store. It is the best cream separator ever built. It has many improvements, skims cleaner, requires less care, and will last longer than any cream separator on the market.

You may be losing enough butter-fat with your present separator or by hand skimming to pay for a new De Laval every year and not getting it. If you do not know the name of your nearest De Laval agent, write us direct for complete information.

BINDER TWINE

THE
PRICE
IS
RIGHT

Are you remembering in purchasing your binder twine that you have a factory of your own at Jackson?

It is making the best twine that can be placed on the market and has a mixture of fiber this year. Manila is added to the sisal to give extra strength.

The State Farm Bureau and other organizations and dealers of the state are in position to handle your twine. If they do not, write direct for prices as we want you to use your own twine as we make 14,000,000 lbs. more than Michigan can use.

POULTRY

CARE OF DAY-OLD CHICKS

Will you please tell me how to care for day-old chicks brought from a hatchery? What shall I feed them? Will you please give me a good feeding formula that will bring them up to the broiler stage the quickest. How shall I care for a flock of hens to make them lay? Is it better to have the flock shut up in a chicken yard or to have them run at large? Which induces the greater egg production? Is grit good for little chicks? How about oat meal? —Mrs. D. W. J., Fowlerville, Mich.

It is important that limited and retarded early feeding be practiced. Practically all chicks sent to the College so far this year, for post mortem examination have shown unabsorbed yolks. The yolk that the chick absorbs just prior to hatching is sufficient food for seventy two hours. It is generally a good practice to leave the chicks in the incubator for twenty-four hours after the hatch is completed. The second day after the completion of the hatch the chicks are removed to the brooder house that has been prepared and ready for them. A coal burning brooder is the most satisfactory because of the surplus heat that is necessary for hatching at this season of the year and the additional factor of safety. The brooder then should be so regulated that the thermometer reads 90 degrees at the outer edge of the deflector.

Sand usually makes a good covering for a board or cement floor, in addition to providing gritty material that is necessary in getting the digestive tract in working condition. The second day after the hatch is completed the chicks should receive some skim milk. This should not be fed in galvanized dishes because of the lead impurities that may be released. It should be fed only in glass, earthenware, or wooden dishes.

On the third day the chicks should receive their first feed. This consists of one raw egg mixed with two handfuls of bran and three of rolled oats. The raw egg is a natural food there fore no dietarw disturbances should result. The bran is highly laxative and high in mineral matter and the rolled oats are very nutritional. This mixture could be given five times on the third day, at intervals of two and a half hours.

From the fourth to the fourteenth day three of the egg mixture, two of commercial chick feed, and one feeding of green food should be given. After the fourteenth day the chicks can be placed on commercial chick food and buttermilk mashes, leaving it before them at all times. Chick feed can be given in the morning and at night and green food at noon.

For the laying flock I would suggest following the standard two ounces of scratch feed per bird daily, containing equal parts of cracked corn and wheat. The dry mash should be available at all times containing equal parts by weight of bran, middlings, corn meal, ground oats and meat scrap. By regulating the amount of scratch feed given the hens will consume approximately two ounces of mash, thereby balancing the ration. This ration is used by all laying contests and experiment stations and has been proven more economical than the commercial mashes. The flock can be confined if plenty of green food is supplied daily, otherwise they should be permitted free range. A slightly higher production can be secured under confinement if the birds are properly fed.—E. C. Foreman, Associate Prof. of Poultry Husbandry, M. A. C.

A SOFT JOB

"Yes," remarked Ben Gonnadooit, yawning. "When I was with the railroad company I had the best job I've ever held. I wish I had it now."

"And what was that?"

"I was assistant to the man who taps the wheels of the cars to see if they are all right. I helped him listen."—Orchard and Farm.

A splendid opportunity to secure good foundation stock.

(Herds under State and Federal Supervision) For catalogs (ready June 1st.)

COL. J. E. MACK, Auctioneer. Address, F. J. FISHBECK, Howell, Mich.

INTERESTING FACTS ABOUT LIVINGSTON TESTING ASS'N

THIS association has just finished its first four months of testing in its second year and some gratifying results have been obtained. The work for the second year was started January 23, 1923, and at the time there were twenty-seven members, with an addition of two shortly after, which more than complete the number required.

The very first month, twenty-seven of these members agreed to weigh each cow's milk separately and keep a daily record of each cow's milk production, giving them a much more accurate record than if only an average of the one day that the tester visits the farm is taken for the entire month. Also greater pains were taken in feeding according to production and this, with the daily check up on each cow, is responsible for the wonderful showings some of these cows have made.

There are about 380 cows being tested each month in this association and of this number about 85 percent are pure bred Holsteins and the rest are grade Holsteins with the exception of one splendid pure bred Jersey herd. Every member has a pure bred sire at the head of their herd, and at the present time a County Bull Association is being organized.

The average per cow for the four months of this year is 33.43 lbs. butter fat per month. The highest herd average for this time for butter fat was 53.99 lbs. High cow honors go to Eamonon's Butter Maidie, a pure bred Jersey cow, in the Smith and Parker herd, having 339.50 butter fat with a feed cost of $36.04 in 120 successive days. A pure bred Holstein owned by C. S. Heeg & Son, made a record of 270.09 butter fat in 90 days, with a feeding cost of $28.34.

Another interesting feature is the record of Bessie Beauty Walker, a cow owned by J. B. Tooley. In the month of March she producted over 2,000 lbs. of milk and 82.64 lbs. of butter fat. Her daughter, Bessie Kalmuck, a Junior three-year-old, made over 2,000 lbs. milk and 90.24 lbs. butter fat in the same month, after completing a seven day record of 501 lbs. milk and 25.04 lbs. butter fat. The registered herd owned by Merle Crandell brought him $122 above cost of feed per cow, which we consider very good for a herd of fifteen head.

The average production per cow in the United States is 3,527 lbs. of milk. The average per cow in 120 cow testing association in the United States is 6,077 lbs. of milk, which is double the amount of a cow not in the association.

Michigan is just awakening to the fact that better dairying is absolutely essential to bigger profits and better living conditions in this state. The last official reports show that Netherland leads the world in milk production with 7585 lbs. per cow. Denmark is second with 6,950 lbs. and Switzerland a third with 5,666 lbs. milk per cow. These facts plainly show that Michigan has not yet reached the highest of its ability in dairying, but with the present good prospects we expect to be one of the leading dairy communities in the world.—Yours for better Feeding, Breeding and Weeding. Carl Hornung, Tester, Livingston Co-op. Ass'n.

VETERINARY DEPARTMENT

SWELLING UNDER JAWS OF EWES

I have a flock of sheep and about two weeks ago I noticed a swelling coming under the jaw of one of the ewes. Since that time it has developed in about one-quarter of the flock of 125. All the under part of the jaw and up around side of same is swollen. It does not affect them in eating. Is it dangerous, and what is it, and what is the cause?—A. L., Hale, Mich.

—The swelling under the jaws of your ewes may be the result of internal parasites. I would suggest that you have your local veterinarian examine them and if he confirms this diagnosis have him administer the copper sulphate treatment to the whole flock.—Russel A. Russell, Asst. Prof. of Animal Path., M. A. C.

CLAIM YOUR SALE DATE

To avoid conflicting dates we will without cost, list the date of any live stock sale in Michigan. If you are considering a sale advise us at once and we will claim the date for you. Address, Live Stock Editor, M. B. F., Mt. Clemens

The Agricultural and Business Situation

Revised Monthly by the Department of Research of the American Farm Bureau Federation.

IS THE PERIOD OF SEMI-PROSPERITY AT AN END?

From the low point in manufacturing activity, May to July, 1921, there has been a steady and rapid increase and for the last five months output has been proceeding at a rate almost 50 per cent greater than the low.

In building expenditures, the first four months of 1923 showed a gain of 51 per cent over the same period the previous year and after allowing for the present higher prices of building materials there is a net gain of 20 per cent.

Railroad carloadings have been running about 25 per cent over a year ago.

INDUSTRIAL HALT:

There has started, recently, a decline in this industrial activity, building operations in particular being curtailed. Wholesale prices also show a decline around 2 per cent and stock prices which reflect the judgment of speculators concerning future business are off about 9 per cent since the middle of March. There is now heard on every hand the question: Is the present period of so-called prosperity now heading toward another sharp down-turn in prices?

PRICE MALADJUSTMENTS:

Maladjustment in prices if persisted in, brings cessation in demand, causing a slackening in busines which may develop into depression. It is clear that the construction industry has been getting out of hand. Compared with a year ago building material prices are 31 per cent higher and metal and metal products prices 36 per cent higher. Farm prices for the same period show a gain of 9 per cent and food prices 5 per cent.

It is fortunate, therefore, that the brakes have now been applied for the widening of the price relationship would only hasten and make more serious the day of reckoning. That business has now entered the cautious stage is a hopeful sign for the longer continuance of the present period of semi-prosperity. The more substantial the adjustment, if not so extreme as to constitute a depression, the longer the continuance.

LABOR, RAILROADS AND BANKING:

The biggest obstacles to proper adjustment lie in the labor and railroad situations. In the one case there are advancing wages and a tendency to decreasing productivity per man. In the other, there is little likelihood of immediate reduction in rates and always a possibility of congestion.

The most stabilizing influence is the favorable money and banking situation.

In summary, it may be said that recent events which have emphasized the need of caution and have led to some curtailment of production will correct to a degree the labor situation and should make more possible the expansion of needed railroad facilities at lower costs. Adding to this the banking position as a positive constructive factor, it is difficult to believe that another business depression is now starting.

PROSPERITY INCOMPLETE:

Agriculture can hardly talk about prosperity as long as the price relationships remain so unfavorable to it. Even with the third largest crop in 1922, the position of the farmer in purchasing power, in terms of volume multiplied by price, is only three-fourths of pre-war. With both agricultural and industrial output at high levels, this means that the industrial groups are receiving the larger shares of the total stock of goods produced. The quickest way to change this is for farmers to shift to the other groups. This they are doing as shown by the reports of a net loss from farms during 1922 of 1,120,000 persons, 3.6 per cent of the agricultural population at the beginning of the year.

4. Relative Purchasing Power of Farm Products:

(U. S. Bureau of Agricultural Economics)

The quantity of various commodities which a given amount of each farm product would purchase at prices prevailing in 1913 is put equal to 100. The figures given represent the percentage of this quantity which the same amount of farm products would purchase in March, 1923. Prices at the farm are used for agricultural products, and wholesale prices at central markets for other commodities.

	All Commodities	Cloths, etc.	Fuel, etc.	Metals, etc.	Building Mtls.	House Furn'gs
Cotton	144	114	111	154	116	124

MARKET FLASHES

MARKET SUMMARY

Wheat and corn firm. Oats and rye steady. Beans unchanged after small decline. There is a liberal supply of eggs and the market is easy. Receipts of butter not sufficient to satisfy demand. Poultry quiet and steady. Good supply of strawberries and market is easy. Cattle steady to dull. Hogs firm to lower. Sheep mostly steady.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

IMPROVED FARMING CONDITIONS

THE mail order firms report much increased sales to farmers, but smaller sales of farm implements have been made than normal, although they exceed those made a year ago. Accepting the mail order business as one of the traditional barometers of business, good times are coming. Railroads are crowded with freight, and leading lines are getting ready to expend vast sums for much needed equipment.

Farm Women Combining

There was a conference in Chicago last week of farm women from fifteen states with reference to co-operation in marketing their eggs. Grading and packing were discussed, and it was planned to establish state egg selling exchanges in the different states. It was pointed out that producers must look after the storing of eggs in the flush season and carry them over to the winter season. Claims were made that the pooling plan would save consumers from five to ten cents a dozen and cause triple profits for the owners of the hens.

The Grain Markets

There has been a marked falling off in speculation in grain on the Chicago Board of Trade since the recent federal legislation controlling speculative trading, and this is attributed by leading speculators to the new law. This is brought forward as one of the principal reasons why wheat prices have failed to move up in response to a number of bullish influences, recent prices having been much lower than a year ago and far below those paid two years ago. The exports of breadstuffs have been much smaller than early this year, and recent exports of corn, oats and rye show marked reductions from those of a year ago. Corn is in a strong position, however, with materially lessened marketings by farmers and much smaller stocks in sight than a year ago. The same is true of oats, but the visable rye supply is much larger than at this time in 1922. Rye has been selling so much below corn prices that several cars were shipped from Chicago to Indiana recently to be ground up into feed for hogs. The agricultural department announces that the increased American production of rye comes at a time when resumption of normal conditions in central and eastern Europe and the stabilizing of prices in Europe point to a time when much of the hitherto large foreign demand for American rye will cease. This would undoubtedly bring about lower rye prices. Rye has been selling far lower than a year ago for many weeks, and recent sales were made at the lowest prices of the year, going off over five cents a bushel in a single week. On the same day May corn advanced 5⅝ cents. Sales of July wheat are made in the Chicago market around $1.10, comparing with $1.18¼ a year ago; July corn at 79 cents, comparing with 62 cents last year; July oats at 41 cents, comparing with 99¾ cents a year ago.

Good Profits From Cattle

In the issue of this paper of May 12, it was stated that better prices were expected for cattle. At that time only a few prime steers were selling as high as $10.25, the bulk of the steers going at $8 to $10. There has been a marked improvement since then, and the advance has been much quicker than was expected. Prosperity makes larger call for the higher-priced cuts of beef, and this means much larger premiums paid for choice corn-fed steers and heifers. Other kinds of cattle have shared in the rise, however, and prices have ruled far higher than one and two years ago, the market being much better than was expected a month or so ago. Topnotchers have sold for $11 per 100 pounds, these being long-fed heavy steers, and prime yearlings sold up to $10.85, the better demand centering on heavy steers. One of the farmers who made an especially good showing on the Chicago market was Lee Wadleigh of Iroquois County, Illinois, who was so fortunate as to sell 112 head of prime fat steers, with weights running from 1417 to 1659 pounds at $10.65 to $10.95. These cattle were bought as feeders in the Chicago market last October, when they averaged in weight 1042 pounds and cost $7.68. The margin of profit was $3.19, with a gain of about 500 pounds in weight. They were bred on the Bartlett-Frazier ranch in New Mexico. It is noteworthy that recent substantial advances in prices have taken place in the face of very large receipts of cattle. The week was broken by the Memorial Day holiday, and there was an advance on the following day, with the top as high as any day since January, and the general average the highest since last October. On the other hand, the many ordinary cattle sold lower, and there has been a marked decline in prices for butcher cows and heifers. Top beeves at $11 stood $1.65 above the high point of May last year. Recent sales were made in the Chicago market of the better class of steers at $10 to $11, the greater part of the steers going at $8.50 to $11.85 and down to $7.50 to $8 for the commoner lots. Grassy cattle are arriving, and the range of prices is widening out, with most of the light weight steers 50 to 75 cents lower than a week ago. Stockers and feeders of desirable quality bring $7.50 to $8.85. A year ago the best beef steers brought $9.25.

Hogs Marketed Rapidly

According to all accounts from farming districts, plenty of hogs are left, and these reports are confirmed by the greatly increased marketings in western markets over those of a year ago. On Monday last week Chicago received 74,491 hogs, the largest number ever marketed in a May day, and this started another downward movement in prices, hogs accumulating rapidly from day to day in the stock yards, as many thousands were carried over unsold daily. Sales were made far below prices of one and two years ago, and it cannot be said that there is a very bright promise for a change in the market trend of prices. Eastern shippers are fair buyers, and this helps prices some, but continuous reduced receipts are necessary to bring about better prices. The extremely large consumption of lard in this country and abroad makes a big demand for heavy hogs, and the best heavy butcher lots have been selling nearly as high as the highest priced light weights. At the same time it will not pay owners to hold their hogs after they reach maturity, and buyers are not particularly anxious to buy hogs weighing over 250 pounds. Our exports of lard and cured hog meats are all the time far larger than a year ago, and lard exports from North America for ten months of the fiscal year ending with April aggregated 794,837,476 pounds. The largest shipments to foreign countries for a full year were 868,942,000 pounds in 1921. Late sales were made of hogs on the market at $6 to $7.40, comparing with $8.85 to $10.70 a year ago.

Marketing Spring Lambs

Increasing receipts of spring lambs from California and the middle west in the Chicago Stock Yards have caused big reductions in prices from those paid at the start. Aged sheep continue scarce, but they have weakened in values, and heavy ewes are almost unsalable. There is an active demand for feeders in the Chicago market, and good sized lots have gone to the country, California feeding lambs fetching $12.50, while California killing lambs brought $15.50 to $15.75. Clipped yearling wethers have gone out to feeding districts costing $11.25. Quite a number of good sized shipments of California feeder spring lambs averaging around 60 pounds have been sent to Michigan.

WHEAT

The Detroit wheat market has had a weak time of it during the past couple of weeks. The first week prices did not change to any extent but last week declines totaled 3½ cents. The weakness of the market during the forepart of last week was hard to understand as the outlook seemed to show that the new crop was in bad condition and the country apparently was confronted with a shortage of supplies. Many thought it was smallness of export demand that was causing it; however, over the holiday export business became good but this had no effect on the trend of prices. Toward the close of the week the market developed still more weakness, owing to estimates by leading crop exports that placed the 1923 yield above all dealers' expectations. Export demand also showed a decline at the close of the week. Although there are many bearish features in the market right at the present time, the belief is general on the market that this grain is in a firmer position than it has been for several weeks.

Prices

Detroit—Cash No. 2 red, $1.28½; No. 2 white, $1.28½; No. 2 mixed, $1.28½.

Chicago—No. 1 hard, $1.13½; No. 2 hard, $1.12¼@1.13.

New York—No. 2 mixed, $1.15¼.

Prices one year ago—Detroit, No. 2 red, $1.21; No. 2 white and No. 2 mixed, $1.19.

CORN

The general tendency of corn was to follow the trend of wheat, but price changes were less frequent. There were several attempts by dealers to sell quite heavily but buyers were plentiful enough to cause sellers to rush for cover. Demand as a whole is only fair while receipts are small to nothing. The Detroit market is ½c higher than it was two weeks ago.

Prices

Detroit—Cash No. 2 yellow, 89c; No. 3, 88½c; No. 4, 86c.

Chicago — Cash No. 2 mixed, 82½@83¾c.

New York—Cash No. 2 yellow, $1.04¼.

Prices one year ago—Detroit, No. 2 yellow, 65c; No. 3, 63½c.

OATS

Trading in oats was fairly active during the last couple of weeks but prices followed the wheat market. Domestic shipping demand is slow. Receipts are small and the country is offering no grain to arrive. The Detroit market finished the week quiet and off 1c.

Prices

Detroit—Cash No. 2 white, 48c; No. 3, 47c; No. 4, 45½c.

Chicago — Cash No. 2 white, 43¾c; No. 3, 42¾c.

Prices one year ago—Detroit, Cash No. 2 white, 42½c; No. 3, 40½c; No. 4, 35@38c.

RYE

This grain declined more in price than any other during the fortnight ending June 2nd, losing 3c at Detroit. There is a quiet tone to the market.

Prices

Detroit—Cash No. 2, 75c.

Chicago—Cash No. 2, 70½c.

Prices one year ago—Detroit, Cash No. 2, 98c.

BEANS

The market continued to gain during the two weeks ending June 2nd advancing at Detroit to $7.75 per cwt. and was at this level when it closed Friday of last week. Before the close on Saturday there was a decline of 35c which leaves the price 15c above that in the last issue. Dealers say that the market got too much steam on and could not hold its gain.

Prices

Detroit—C. H. P., $7.25 per cwt.

Prices one year ago—Detroit, C. H. P., $9.25 per cwt.

POTATOES

Potatoes show no change and prices are at practically the same level they were two weeks ago. Old potatoes are easy, with receipts and demand both small. New stock seems to be what the consumer wants and the market for new potatoes is firm.

Prices

Detroit — Michigan, $1.26@1.33 per cwt.

Chicago—Wisconsin and Round Whites, 75@90c per cwt.

Prices one year ago—Detroit, Michigan, $1.75 per cwt.

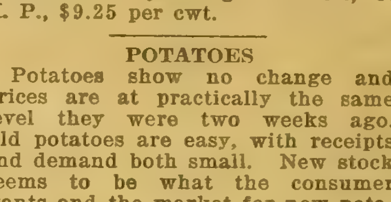
HAY

Little change is shown in market conditions. The demand is slow and trading quiet. Arrivals at most markets are reported light and a general lessening in country loadings is indicated. Best grades are firm in all markets but the general quality shown is from plain to poor.

Prices

Detroit—No. 1 timothy, $17.50@18; standard, $16.50@17; light mixed, $16.50@17; No. 2 timothy, $15.50@16.50; No. 1 clover mixed, $14@15; No. 1 clover, $13@14.

Prices one year ago—Detroit, Standard timothy, $21@22; No. 2 timothy, $20@21; light mixed, $21@22; No. 1 clover, $17@17.50.



Week of June 10

Although scattered electrical storms may occur in various parts of Michigan during most of the week, the first part is expected to be mostly fair. From Tuesday until about the end of the week conditions will be more unsettled and stormy. Heavy showers, thunder storms and brisk to high winds will form in different counties during the dates of the 12th, 13th, 14th and 15th. By Saturday brighter weather will occur and temperatures will become cool for the season.

Week of June 17

This week as a whole will average warm for the season. The week is expected to start with warm, humid weather in the state and continue more or less continuously throughout the rest of the seven days. From about Tuesday to Friday showers and thunder storms will be almost of daily occurance in many sections of Michigan. Fair weather about Saturday will also bring more seasonal temperatures into the Lake region.

We believe the weather for the next two or three weeks will be good for meadows and pasture but not so good for hay. This will not be a good corn period nor for barley, oats and rye. Grain farmers will be troubled with rust.

Better Returns
from your
Produce---

YOU can market your produce more profitably through the
Farm Bureau Produce Exchange.

Many farmers and shippers are not receiving the best market prices. Increase your returns through the service of the

Farm Bureau "Mitten" Outlet

FOR BEST RESULTS ship through your local Co-operative Association. Your co-op. manager is kept thoroughly informed by us on WHEN and HOW to make shipments.

—SHIP NOW
ALL KINDS OF POULTRY
Especially Broilers, Hens and Ducks

Shipping tags and information gladly furnished on request.

Other Products Handled and Marketed

Asparagus, Strawberries, Goosberries, Raspberries, Celery, Potatoes and all kinds of fruits and vegetables, also eggs.

Producers unable to ship through a co-op. should write us for information on how this service may be obtained.

BARRED ROCK HATCHING EGGS. NORMAN Heavy Laying Strain.
MRS. JESSIE B. DEAN, R. 1, Mason, Mich.

FOR SALE—BARRED ROCK HATCHING EGGS from good winter layers. $1.25 per 15 or $2.00 per 30 postpaid.
Mrs. Frank Millikin, R. 1, Rescommon, Mich.

THOMPSON STRAIN BARRED ROCK EGGS by 9 lb. males, bred to lay. Dark matings $1.75 per 15; $3.00 per 30 prepaid.
MRS. FRED KLOMP, St. Charles, Michigan.

EGGS FOR HATCHING—UTILITY STOCK. Grand White Wyandottes—M. A. C. Champions. Good, square deal. Reasonable prices. Send for price list.
C. W. HEIMBACH, R. 5, Big Rapids, Michigan.

THE PASSING OF DR. FRIDAY

(Continued from Page 3)

Florence Middaugh. It is said that the faculty resented receiving orders from Miss Middaugh that the president had never seen, and resented still more asking Dr. Friday about any question only to have him turn to Miss Middaugh to ask about it before replying.

Michigan farmers have been undecided as to what attitude to take toward Dr. Friday. He has outlined a program which is fundementally sound in so far as it goes, no doubt, but he has stopped short just where most farmers are convinced he should begin—with the promotion of co-operative marketing and reduction of the spread between the price received by the producer and that paid by the consumer, so that the farmer might receive more than about 33 cents of the consumer's dollar.

Speeches made by President Friday at Cadillac and at the Michigan State Grange at Kalamazoo lost him many farmer friends and were a keen disappointment to may who were hoping that Dr. Friday would prove to be the Moses who would lead the farmers of Michigan out of the desert of economic depression and into the promised land of economic satisfaction.

Fear that plans favored by Dr. Friday and Governor Groesbeck relative to the control of the Extension Division of the college and the county agent system would render the extension work a polical football and entangle it in the meshes of a political machine probably was one of the factors actuating the Board in its dicision to come to the parting of the ways with President Friday.

Friday is gone, but M. A. C. remains. The master hand of Dean Robert S. Shaw is at the helm guiding that splendid institution through the troubled waters until a permanent president is selected. The State Board of Agriculture is still the governing body. The advice of Governor Groesbeck has for once been disregarded. Perhaps anyway this centralization of state government has gone far enough and the people's elected representatives charged with a specific duty should go ahead and carry out as their wisdom and conscience dictates with the full assurance that they will have the moral support of those who by popular electorial mandate charged them with the duty of administering to the best of their ability the affairs of the Michigan Agricultural College.

CONSOLIDATED SCHOOL COSTS

(Continued from Page 4)

one well adapted course of study in which very few elective subjects are included; and by avoiding all duplications in equipment.

It would be considered poor farm management for a man who is operating a twenty or forty-acre farm to equip it in the same way that he would a one hundred and sixty acre farm. He must avoid too great an overhead in proportion to his farm investment and reduce the equipment to the minimum that is consistent with successful farm management on the smaller farm, whereas he might be using just as poor business judgement in attempting to operate a one hundred sixty acre farm with the twenty-acre farm equipment. Likewise, we would not expect the operating expenses of a fruit farm to be on a par with those of a dairy farm of the same acreage.

Some graded districts having a small assessed valuation offer more courses than others with double the valuation, and the overhead for the maintenance of the school is much higher than it would be if a more conservative type of program were adopted. This tendency should be advocated in the consolidated schools, and a good general course with equipment and teaching force that is in harmony with the actual needs and efficiency of the school should be the guiding principle for the management of these schools.

IT CLINGS TO THE PULLEYS

Copyright 1923, by The Goodyear Tire & Rubber Co., Inc.

"In the last four years my Goodyear Klingtite Belt has seen 113 days of threshing, with the harvest running 36,000 to 38,000 bushels a year. It grips the pulleys, stays on the job, never slips, and needs no dressing. Klingtite for mine."
—W. H. LINDEMAN, Hillsboro, N. D.

IF you want a belt that holds the pulleys in a slipless grip, delivers full power, makes the most of engine fuel and is easy on engine bearings, get the Goodyear Klingtite Belt. It is an all-weather belt, too. It requires no dressing, it needs no breaking-in.

Goodyear Klingtite Belts are made in endless type for heavy duty and in cut lengths for lighter drives. They are sold by Goodyear Mechanical Goods Service Station Dealers and by many hardware dealers

125,000 pairs a day!

what it means to your family on summer shoe bills

Remember, 125,000 pairs means all grades of shoes—for work, dress or play. They all have E-J wear, style and comfort—a big point with summer coming on.

For children especially E-J's fill the bill. We know, for there are lots of kiddies here in the Valley of Fair Play, and they all wear E-J's always.

For a "free-from-shoe-trouble" summer we recommend E-J's for you all. There's wear, style, low price and a smile of satisfaction in every pair you put on your feet. Why not? We *made* them with smiles!

Look for the E-J trade-mark on the box-ends on your dealer's shelves.

RATE REDUCTION SECURED BY BUREAU

THE Pere Marquette railroad has granted freight rate reductions ranging from 3½ to 6½ cents per hundredweight on grain by-products from Toledo to a number of Michigan points. The reduction was secured through the efforts of the Michigan State Farm Bureau Traffic department.

The new rate is effective July 1 and applies to such products as cottonseed meal, linseed oil meal, linseed oil cake, gluten feed, beet pulp, etc. The rates also apply to intermediate stations and will effect a good savings to buyers of these products. On the carload minimum weight of 40,000 lbs. for such products, the savings to such buyers at such reductions may range $14 to $26 per car. Following is the list of stations where reductions were made and the amount of the reduction per hundredweight in each instance: Almont and Sandusky—3½ reduction; Beaverton, Elk Rapids and Petosky—5½c; Harrison—6c; Brarytan, Grindstone City, Port Hope and Weidman—6½c.

STATE VETERINARY ASSN. MEET AT M. A. C.

THE members of the Michigan State Veterinary Medical Association will hold their forty-first annual meeting at the M. A. C., East Lansing, beginning June 26th and ending June 28th. In the afternoon of the first day several addresses will be delivered but the evening will be given over to entertainment. The following forenoon the members will listen to many interesting and instructive talks and after a recess for luncheon at noon several more talks will be given followed by meetings of local organizations. The interesting talks continue throughout Thursday forenoon and after lunch there will be a Question Box following which there will be a business session. And the ladies are to attend with their husbands, the officials of the Association promising them an interesting time during the meeting.

$12,000 IN CASH PRIZES AT HAY AND GRAIN SHOW

AT a meeting of the Agricultural Committee of the Chicago Board of Trade and the management of the Grain Show, a cash premium list for the Fifth International Grain and Hay Show was set at $12,000. In addition to this a special appropriation was made of $500 to make possible the Student Grain Judgeing contest. The following classes were approved:

Ten Ear Corn, $5,000; Single Ear Corn, $615; Flint Corn, $230; Wheat, $1,535; Oats, $965; Special Early Oats, $90; Rye, $360; Barley, $400; Hay, $800; Kafir & Milo, $250; Small Seed, $525; Soybeans, $430; Cowpeas and Field Peas, $160; Field Beans, $74; Junior Corn Contest, $336; For Special Ribbons & Soybean Trophy, $230.

FARMERS STILL SOLID FOR GAS TAX

INASMUCH as the legislature adjourned without passing either a gas tax or a weight tax and it is now reported that the Governor is planning to call a special session of the law makers to consider funding legislation, it is extremely interesting and timely to learn the attitude of the farmers of the state on this important issue.

Letters received at the Lansing headquarters of the Michigan State Farm Bureau indicate that farmer sentiment in favor of a two cent gas tax has only been strengthened by the executive veto which prevented the Warner gas tax act, supported by 99 of the 132 legislators, from going into effect in Michigan.

Farmers can scarcely see the justice of the present system under which they pay the main cost of improved highways which are largely used by commercial trucks, traveling men, tourists and city pleasure seekers. They are equally opposed to an automobile weight tax which ignores the mileage driven by the car and fails to derive any revenue from the ever-increasing tourist traffic or the highway-destroying fleets of drive-away cars.

Sentiments expressed in letters received from individual Farm Bureau members and local organizations are plainly and convincingly stated and leave no doubt as to the attitude of the writers. The attitude of many of the most thoughtful farmers is reflected in a letter from a leading Barry County Farm Bureau members who is the president of his township organization. He writes:

"Our members stand solidly for a gas tax and would favor no other measure. We would not favor the weight tax under any consideration. It would not catch the out of state autoist who uses his auto one day in the week and one who uses it seven days in the week. We do not believe in any compromises."

FROM HERE AND THERE IN MICHIGAN

A grade Holstein was the high cow in a recent report of the North Clinton Cow-Testing association, Clinton county.

Seventy schools in land clearing are being held in the upper peninsula this year, the schools continuing until the end of June.

The International Baby Chick Association will hold its annual convention at Washington, D. C., this year on Wednesday, Thursday and Friday, August 1st, 2nd, and 3rd.

Prof. E. H. Ryder, head of the history and sociology sections, M. A. C., has been granted a six months' leave of absence. During that period he is going to tour the world.

Chippewa county farmers are planning on asking their Board of Supervisors to engage a county agricultural agent for their county, the request to be made at the June meeting of the board.

There are 1,158 dairy herds in Michigan holding memberships in 58 different cow-testing associations, according to figures recently compiled by Prof. A. T. Baltzer of the Mich. Agricultural College.

The veterinary department of the M. A. C. is being reorganized under the direction of Ward Giltner, new dean of this department, to become, in addition to its teaching function, a thorough-going institution for the investigation of animal diseases.

As a result of the dairy and alfalfa campaign put on in Eaton county over a year ago, a large acreage of alfalfa seeded last year and nearly an equal amount again this year. The M. A. C. believes the tour is the best way of increasing acreage.

That the farm poultry flock is still the most popular and widely distributed "crop" in Michigan is shown by statistics at the Michigan Agricultural college which indicate that 180,000 of the state's 190,000 farms, or 92 per cent, maintain a poultry flock.

Farmers in the southwestern part of Michigan held their fourth annual Southwestern Michigan Soils Field day at the Cass county farm near Cassopolis, June 9th. The meeting was called for the investigation of the soils experiments conducted on this farm for several years.

Mr. Elton J. Van Leuven of Mt. Pleasant, Mich., has been made a member of the board of directors of the Seventh District Federal Land Bank. Mr. Van Leuven will represent Michigan and Wisconsin on the board of this land bank that serves the states of Minnesota, North Dakota, Michigan and Wisconsin.

Ridding the Isle of Crete of the famous bandit, Barbounis, and his band of 30 followers, who have terrorized islanders for 15 years is the feat credited to a Michigan girl, Miss Margaret Robinson. Miss Robinson, a near east relief worker, entered into negotiations with the bandit and his followers and before she was through they agreed to surrender to the Greek government, and join the army in return for their pardon.

Michigan Takes Lead At National Holstein Sale

Animals from Michigan Bring Highest Average and Michigan Breeders Pay Highest Prices for Best Offered at Annual Meeting at Cleveland

By J. G. HAYS

Dairy Department, Michigan Agricultural College

Frank O. Lowden was again elected president of the Holstein-Friesian Association of America at the 38th annual meeting in Cleveland, Ohio, June 6th.

MICHIGAN Holstein breeders surely can be proud of the part their state played in the national consignment sale held last week in Cleveland, for it can be truthfully stated that without the Michigan Holsteins and the Michigan breeders the sale would not have been quite the success that it was.

The bunch of black and whites representing Michigan in the ring last week brought more per head than did those representing other states, with the exception of California which sent only two heads, a bull calf which brought $3,100.00 and a heifer $600.00. This consignment is manifestly too small in numbers to figure against states sending five or more head, altho California should be complimented in sending such a good pair so far across the continent.

Michigan sold 14 head for $12,500.00, for an average per head of $894.28; Ohio sold 25 head for $15,800.00, for an average per head of $632.00; Wisconsin sold 15 head for $10,250.00, for an average per head of $616.66; Minnesota sold 6 head for $3,488.00, for an average per head of $580.83; Pennsylvania sold 13 head for $7,420.00, for an average per head of $570.76.

Furthermore, Michigan had the high honor of breeding and consigning the cow that topped the sale. She was Lakewood Maplecrest Amy No. 593,411, a 26.83 lb. two year old daughter of Maplecrest Korndyke Hengerveld, the only living century sire. Her dam, Belle Pietertje Hartog, is now on test and already has better than 34 lbs. to her credit. "Amy" came from the Battle Creek Sanitarium herd, W. W. Wentworth, owner. She sold for $1,850.00. Then the second highest selling bull of the sale, bringing $3,750.00, Sir Charlevoix Ormsby Finderne No. 377,019, yearling son of Kolrain Marion Finderne, 35,339.5 lbs. milk in a year, the second highest cow for milk in the world, was bred, raised and consigned by Loeb Farms of Charlevoix. This bull was topped only by Avon Pontiac Echo Lad No. 318,575, the son of the certain-to-be world's champion cow for butter production for all breeds, DeKol Plus Segis Dixie. Incidently this Dixie bull could almost be claimed as a Michigan bull altho consigned by Wisconsin, because he has been used during the last two years in this state by Dr. Consaul of Mt. Pleasant. He sold for $4,100.00.

Another point regarding the sale to exult over is that Michigan not only sold its cattle to the best advantage, but Michigan breeders also headed the list as buyers.

Out of 111 head sold in the sale for $69,375.00, an average per head of $625.00, Michigan bought 41 head for $30,795.00, an average per head of $751.00.

Next to our state as a buying state came Pennsylvania, taking 32 head at an average price paid of $612.34, then Ohio buying 16 head at an average of $461.25, Missouri took 6 head at an average of $390.00, and New Jersey 5 head at an average of $544.00.

The Michigan buyers were: Detroit Creamery Co., Mt. Clemens, 10 head, average $851.00; J. T. Berkheimer, Homer, 13 head, average $513.07; J. B. Jones, Detroit, 4 head, average $445.00; Battle Creek Sanitarium, Battle Creek, 2 head, average $825.00; Loeb Farms, Charlevoix, 2 head, average $662.50; W. R. Roach, Grand Rapids, 2 head, average $250.00; Wm. Tyson, Washington, 2 head, average 225.00; Lakefield Farms, Clarkston, 1 head, average $200.00; Mac Hart, Wilmot, 1 head, average $210.00; D. D. Aitken, Flint, 1 head, average $600.00; Newberry State Hospital, Newberry, 1 head, average $1,050.00; E. L. Bayne & J. B. Jones, Detroit, 1 head, average $3,750.00; W. W. Wentworth, Battle Creek, and Dudley Waters, Grand Rapids, 1 head, average $4,100.00.

Among the animals bought by these men was included the top bull of the sale, Avon Pontiac Echo Lad, bought by Wentworth and Waters and the top female, Lakewood Maplecrest Amy, bought by the Detroit Creamery Company, who also bought Canary Maid Promethus Champion No. 516212, a 34.87 lb. three year old consigned by the Newberry State Hospital, the third highest selling female; also the second high bull of the sale, the Loeb bull, bought by Jones and Bayne.

F. L. Houghton has done such good work as secretary of the association that he was re-elected to that position without opposition.

There certainly is nothing wrong with the Holstein industry of Michigan when breeders have the courage to consign a large number of cattle that top the sale in average selling price, and also when upwards of half of the total number of animals sold, were bought into the state by Michigan buyers.

The annual meeting on the day preceeding the sale days was marked by harmony throughout. The business was more or less routine. Important matters pertaining to amendment of the By-Laws were referred to a committe for thorough study and for report at the next Annual Meeting. The old officers and retiring directors were re-elected, and in the places of Messers. Davidson and Schroeder who resigned, were elected R. E. Chapin of Illinois, by the board, and Fred Peasley of Connecticut, by the meeting. Fifty Michigan men attended the meeting and sale.

President Lowden Asks Holstein-Friesian Association Pointed Questions

1. Shall a cow be denied advanced registry if her milk contains less than three per cent butter fat?
2. Shall the seven-day record be abolished?
3. Shall we follow up more fully the subsequent breeding record of cows which have made exceptionally high records in production?
4. Shall milking four times a day be encouraged?

PROBABLY the most important single factor in the development of the Holstein cow in America has been the Advanced Registry Department of the Association's work. There are some unanswered questions now before the Association for solution. I would briefly indicate some of the more important ones: Shall a cow be denied advanced registry if her milk contains less than three per cent butter fat? Shall the seven-day record be abolished? Shall we follow up more fully the subsequent breeding record of cows which have made exceptionally high records in production? Shall milking four times a day be encouraged? There are other questions of far-reaching importance to the breed.

During the last few years we have had a very able committee composed of the best scientific men and successful breeders at work upon the question of type. I happen to know that this committee has devoted an almost incredible amount of time to this important question. That committee has made its final report and we now have for the first time in the history of the breed a definite picture of what the Holstein cow and bull should be in the opinion of those best qualified to say. That represents a decided step in advance. It is a notable achievement. The question I now submit is, has not the time arrived when a like committee should be appointed thoroughly to revise the rules of advanced registry. The questions now before the Association would be considered by them. They could systematize rules and make of them a harmonious whole. Let it be remembered that the type as finally agreed upon by our able committee is always subject to revision. Final approval of that type depends upon the records at the pail of succeeding generations of cows which most nearly conform to the type. There must, therefore, be the closest relation possible between type and production.

Many experienced breeders felt for a time that we over-emphasized production at the expense of type. They believed that while the individual cow was producing unusual results we were deteriorating the breed. Now isn't it possible that we may go to the other extreme? At any rate we must study production closely—and generation after generation—if we would either prove conclusively that we have hit upon the perfect type, or, what is equally important, if we would prove its defects. These questions cannot be disposed of in a moment. They require extended study and investigation. They demand some painstaking work, which the committee upon type has so well performed. I recommend, therefore, that a committee be authorized to undertake this work.

The subject which has received the most consideration during the past year has been extension work. Little had been done during the preceeding year because of lack of funds. The increase in the transfer fee, however, authorized at the annual convention in Kansas City last year made possible the taking up of this work in a broad and comprehensive way. Calf club work has been carried forward until it now radiates into all the dairy sections of the United States. Over four thousand boys and girls have been actively enrolled in that work and the majority of them own purebred Holsteins. The Association keeps in touch with these boys and girls monthly through correspondence and the Calf Cub News, a little publication which we have started in the interest of calf club work. In order to avoid duplication, we are co-operating closely with the collegs of agriculture and with the local farm bureaus. We have proceeded on the theory that a county agent should be the actual head of all farm activities within the county and our calf club work in the county therefore is made in effect a sub division of the county farm bureau. The results already obtained show to my mind clearly that the calf club can be made a most effective agency in promoting the interests of the breed.

High Records From Common Cows

We, of course, believe in pressing the campaign for pure-bred sires. To that end, the chief feature of our exhibit at the National Dairy Show at St. Paul last October was the exhibit of the descendants of common cows where purebred sires were used. Among these cows were two which had made records of 950 and 1,025 pounds of butter, respectively, under practical farm conditions. They aroused great interest and became one of the most popular features of the show. We believe that no more effective way could be found of proving to the farem the value of purebred sires than this ocular demonstration of what their offspring would actually accomplish at the pail. These cows belonged to a cow-testing association, and they were also a demonstration of the value of

Pioneer Helps New Settlers

John G. Krauth, of Presque Isle County, Himself a Northern Michigan Pioneer, Tells of Settler's Problems and How He Has Helped to Meet Them

John G. Krauth, A Pioneer Settler.

WITH a frontier residence in northeastern Michigan of twenty-three years, coming here from Minnesota with a band of sheep, a first-hand experience with a settler's problem, in all its phases, leaving a lasting conviction on my mind as to the one course I should follow, and which I finally followed, in placing settlers upon cut-over land, well recognized for its fertility and diversity of crops, there were many points in my favor as a starter.

To start with, the fact must be recognized that stump land seldom attracts home seekers with swollen wallets or near swollen wallets, not when they can so readily finance the purchase of improved land.

Stump land is the last hope of a lean pursed settler urged by a consuming desire to possess his own fireside,—just as the lean in purse is the first and last hope of the possessor of stump land, and by the way, the only class that ever tamed a jungle, a fact lost sight of by many owners of wild land whose terms call for a stiff down payment, and prompt yearly payments, regardless of circumstances. Unless unimproved land owners display a real cooperative spirit with the home seeker, their land will not interest him.

It is not helping the new settler by simply permitting his payments and interest to lapse. Unless he receives an occasional lift, with no Shylock's toll attached, and in which the settler is secured by chattels, or by added improvements, in most cases of a permanent nature, the land owner has killed hope in the settler, his very best asset; and by this short sighted policy discouraged other buyers, thereby injuring the whole community.

There is nothing so depressing, so discouraging, so destructive to one's efficiency as a maturing debt on the roof that shelters, with no prospect in sight for meeting it promptly, or even reasonably promptly, thereby jeopardizing all at the mercy of a creditor, who is likely to develop shark traits, or who perhaps habitually banks on misfortune for his harvest.

In my early experience, I too, waited and watched for cash, or near cash buyers only, to storm the front door of my log shack in the brush, but the rush failed to materialize. Day by day, I was absorbing the bitter lesson that you can't connect a fat or near fat wallet with wild land to farm.

During this night sweating adventure, unpaid taxes grew and grew until they reached such a stage I was obliged to sprint like the old Harry in order to nose out the tax title sharks the last day of redemption each year of my watching and waiting campaign. The situation appeared so desperate that the shake of a banker's hand, during office hours, chilled me to the marrow.

In picturing lean pursed settlers, do not get the idea I am alluding to down-and-outers, but those only who are not circumstanced to meet yearly payments and interest for at least five years, however, who can at least make a small down payment on land, command a work team and a few necessary implements, means to erect temporary shelter and have money left for household requirements for at least six months.

While building material is high, and likely to remain so, the settler can get by for shelter. One of the most servicable log houses in my township did not cost $75.00 for low grade lumber, roofing, windows, plaster, etc. While it does not betoken opulence, nevertheless it is cozy and comfortable, and will answer for years if necessary. Later on, a finer building will take its place, but it will not be more comfortable.

There are no quick returns in the colonization or placing settlers upon stump land. It is a waiting game at best, but if properly managed and the agricultural conditions are favorable, which of course is understood, the returns are as sure as death and taxes; furthermore, it is not a business to be directed from a swivel chair in some distant office. The "head beetle" should be on the ground, or in his place, a representative with power to say yes or no, help, direct, etc.

As my operations center in the greatest yielding legume seed belt in Michigan, the success of the settler is in his own hands. A square peg will no more fit a round hole on northeast Michigan's farm land than elsewhere.

Forty-acre sales were never encouraged. Every cleared acre in northeastern Michigan should be backed by two to five acres of pasture. The settler that fails to capitalize grass in northeastern Michigan is not farming just because he happens to live on a farm. Intending settlers who could not visualize the value of a good pasture, received very little encouragement from me as our quota of square pegs is filled, with a waiting list.

In my method of encouraging settlers, they are not tied down to yearly cash payments. They can, however, if they so prefer, do so, or elect in any year, to grow a stipulated acreage of certified potatoes, grain, clover, alfalfa or vetch, for its seed value, with the understanding that the returns are to be applied on the purchase of the land. The amount received, be it large or very small, is to represent the only payment required the said year. A crop failure automatically postpones any payment the said year, but as this has not happened in my time we do not look for it to happen. "We" bank on the seed returns to dent the mortgage, for my success is linked with that of the settlers. I never lose sight of the fact that the settler is more important to my success than I am to his; but with him it is just the other way around, so naturally we lean on each other. Just as it should be.

No settler is going to improve property purchased on time that is likely to slip away from him for delinquent payments, during his trying years of building a farm from the wilds.

With the average settler, the critical stage arrives when his last dollar has been expended for first payment on land, (from five to ten per cent.) for temporary shelter which will serve for storage quarters for grain, machinery, with the bottom of the flour barrel in sight, no crops to speak of the first year save a garden patch, and the livestock to be provided for during the winter period, and no winter work near home that is dependable; the crisis has arrived. There is but one glue-pot that will hold the settler to the land, and that is credit. A short time loan on his personal effects at 12% or more, is not the proper glue. He must have a year's time at low interest, and a privilege of renewing several years, if necessary.

The first payment on land is loaned to the settler for cows at 6% for one year, with privilege of renewing annually for five years. If any reasonable financial assistance is required for seed, fencing, dynamite, or livestock, I feel it my duty to go to the rescue, notwithstanding the money I advance indefinitely at 6% may cost me 7%. It is this cooperative spirit that is so inspiring to the farm builder. A real business proposition even though the dividends are not just around the corner.

It won't do to say that poor settlers are no help to a new country. This is all bunk. The writer can not recall a single successful pioneer in Presque Isle county from banker

(Continued on Page 17)

Tests Prove Normal Silage Superior to Stover Silage

THE Michigan Agricultural College, through steer feeding experiments conducted during the past winter and forepart of this spring, again proves the superiority of good corn ensilage, containing a large amount of corn, over stover ensilage. The daily gain per steer of 2.77 pounds for the steers fed on normal silage, 1.99 pounds for the steers fed on stover steers silage, with some corn returned to it show without question the difference in the feeding value.

The experiments conducted by the Department of Animal Husbandry of the College began December 22, 1922, and ended May 15 of this year. Twenty-seven steers were used in the feeding experiments, being divided into three lots of 9 each. The cattle fed were the second prize lot of feeders purchased at the time of the International Live Stock show last fall, the prize-winning carload of twenty costing $9.00 per hundredweight and seven other steers which had been sorted from this carload previous to the show were bought at 8c, making the cost of the carload about $8.60 in Chicago. Weighted into the feed lot at the College the cost was $9.36 per hundredweight.

To produce one pound of grain it was necessary to feed lot 1: normal corn silage, 13.896 pounds; linseed meal, .759 pounds; clover hay .9270 pounds; shelled corn, 2.159 pounds. Lot 2 was fed the following to make a pound gain: 18.449 pounds of corn stover silage; 1.055 pounds of linseed meal; 3.225 pounds of shelled corn; and 1.689 pounds of clover hay. Lots 1 and 2 received shelled corn only the last 102 days of the experiment. Lot 3 received the following amounts to produce one pound gain: 16.453 pounds of corn stover silage; linseed meal, .983 pounds; shelled corn, 4.439 pounds; clover hay, 1.573 pounds. The total amount of feed required to produce a pound of gain was smaller in all three lots than last year.

The total amount of feed consumed in the 144 days by the three lots were: Lot 1, 49915 pounds of normal corn silage, 2728 pounds of linseed meal, 7758 pounds of shelled corn, and 3330 pounds of clover hay; cost $295.29. Lot 2, 47673 pounds of corn stover silage, 2728 pounds of linseed meal, 8334 pounds of shelled corn, 4365 pounds of clover hay; cost $245.98. Lot 3, 45643 pounds of stover corn silage, 2728 pounds of linseed meal. 12316 pounds of shelled corn, and 4365 pounds of clover hay; cost $294.12. Lot 3 received an amount of shelled corn approximately equal to that removed from the stover silage they were consuming for the first 42 days and in addition to this the same amount as lots 1 and 2 for the last 102 days.

To arrive at the cost of feeds the following prices were used; normal corn silage, $4 per ton; corn stover silage, $1.60 per ton; shelled corn, 70c per bushel; linseed meal, $60 per ton; clover hay, $10 per ton.

And in spite of the fact that there was such a wide difference in the cost of normal corn silage and corn stover silage the steers fed on normal silage returned a profit of $5.30 per head, while both of the other lots showed a marked loss, namely $5.35 per head for lots 2 and $9.02 per head for lot 3.

The financial statement covering the experiments recently issued by the College does not include labor costs or interest and gives the total costs of the three lots as: Lot 1, $912.58; lot 2, $860.37; lot 3, $919.74. Hogs were run with the steers and were fed tankage worth $70 per ton in addition to what they were able to pick up. It cost $8.22 to produce a hundred pounds gain, not crediting pork produced, in lot 1, $9.52 in lot 2 and $10.60 in lot 3. Crediting the value of the pork pro-

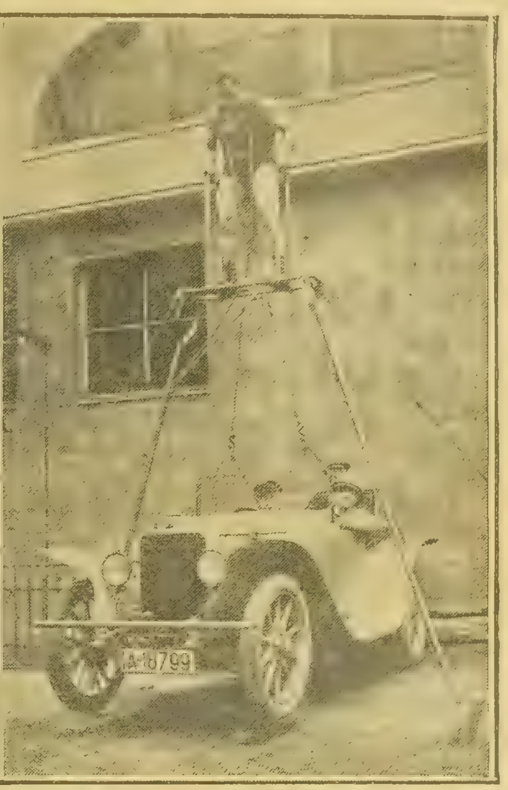
FROM FIELD TO SILO—Ronning ensilage harvester, drawn by a tractor cuts the corn and delivers it as ensilage direct to the wagon hauled alongside. This shows the outfit at work on the Detroit Creamery Company farm in Macomb County, Mich. Mr. Schultz, manager of this farm gives his opinion of its operation on page 19 of this issue.

PICTURES FROM FAR AND NEAR

AMERICAN VENUS THRIVES ON SUNDAES AND CANDY.— Miss Gertrude Artelt, picked as having the most perfect athletic figure, has delt a blow to the idea that a perfect figure means the loss of sweets. Miss Artelt, not only eats sundaes and candy but keeps "late hours" into the bargain.

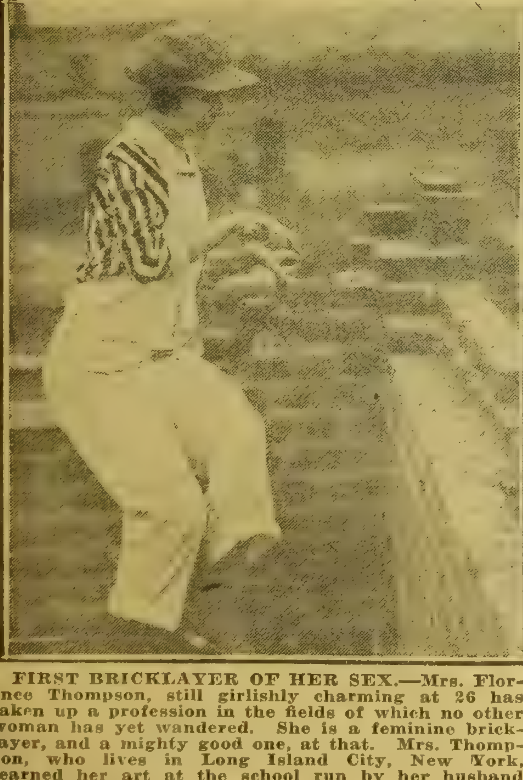
STAND UP THERE, LIKE A GOOD FELLER.—Its not ordinary mounts that the Mounted State Police use in their work. The animals, who are endowed with almost human intelligence, are taught all manner of tricks to test their speed and obedience. Photo shows the training of recruits, both men and horses, at the Commonwealth Armory Grounds, Boston, Mass.



AN ITALIAN HERCULES.—Cronos, known throughout the length and breadth of Italy for his unusual strength, is seen here lifting a four passenger car with the men in it. Hundreds of girls from Italy and nearby countries have fallen in love with this "cave-man". Moral: Be strong and the girls will be "strong" for you.

"VAMPS" AT DOG SHOW.—It is rather unusual for cats to appear at dog shows, but Bob, this beautiful canine, refused to appear without his two charmers. Photo shows the dog and his "lady friends" at the dog show held recently at San Francisco, California.

OH! CAN IT!—That will be the motto of the quartette of champion girl fruit canners, who sailed May 31 for France where they will teach the housewives American methods of fruit canning. Left to right:—Esther and Katherine Boligaugh of Iowa; Bertha Boger and Elaine Hendricks of Colorado.



FIRST BRICKLAYER OF HER SEX.—Mrs. Florence Thompson, still girlishly charming at 26 has taken up a profession in the fields of which no other woman has yet wandered. She is a feminine bricklayer, and a mighty good one, at that. Mrs. Thompson, who lives in Long Island City, New York, learned her art at the school run by her husband for bricklayers, and she claims it has made her economically independent.

WHERE AUTOMOBILES ARE FORBIDDEN.—Yes, there is such a place. Here carrying on their life as did their ancestors hundreds of years ago, the citizens of Veisingso, a remarkable little island community on Lake Vatern, Sweden's most lonely and picturesque lake, preserve their ancient habits and customs and have guarded against innovation by absolutely prohibiting automobiles within the bounds of their village.

THE OLDEST FARMER IN AMERICA.—That is the title claimed by George Elkins of Buncombe, Indiana. He is 98 years old and is still active in his farm work, doing plowing and other work around the property. He claims his longevity can be credited to keeping cool and not worrying, which tends to cut down a persons years. Also, it is his contention that some people push themselves into an early grave by being mean and always on the lookout to even up with the next man.

RHEUMATIC SUFFERERS!

I Positively Guarantee That My Remedy Will Cure the Worst Case of Rheumatism, Neuralgia, Sciatica, or Gout With the Understanding That It Costs You Nothing If It Fails.

During my sixteen years of drug experience, of which over four years I served under the Naval Bureau of Medicine & Surgery, hundreds have benefited from my dispensing of this wonderful remedy.

Originally, one of the foremost surgeons of the U. S. Navy perfected and prescribed this treatment in his practice with marvelous success.

If you wish to secure for yourself the amazing results that my remedy gives, fill out the coupon below.

References to my reliability, any bank of Greenville.

COUPON AND GUARANTEE

W. E. Zank, R. P., Greenville, Mich.

Dear Sir:—You may send me your Rheumatic Remedy under your guarantee. Unless you find $2 enclosed with this coupon, it is understood that I am to pay $2 and the postage when the parcel is delivered, but if I am not satisfied with the results produced by your remedy within ten days, you are to refund the purchase price upon request.

RAISING POTATOES ON 50-50 BASIS

I am growing certified potatoes on a 50-50 bases and would like to be informed what the custom is in the potato district in regard to what share of the expense the land owner should stand in growing, harvesting and marketing the crop?—C. C. S., Charlotte, Mich.

—I fail to find but very little material on farm lease plans for growing certified seed potatoes.

In figuring out any lease system the base depends on costs and general practices. The following data will give the reader a very good idea of what enters into the costs of growing potatoes and furnishes a basis for dividing these costs between landlord and tenant.

Data taken from Quarterly Bulletin Vol. 4, No. 3 of this station:

Cost of growing one acre potatoes—1921:

Seed	$ 4.54
Com. Fertilizer	.39
Manure	7.20
Seed treatment	.30
Poison & Spray Material	1.57
Storage Costs	.51
Selling Comm.	.17
Land rent	5.39
Equipment costs	2.00
Misc. costs	.60
	$22.67
Regular man labor	$19.49
Horse labor	8.76
Special labor	2.16
Piece work hired	.93
	$31.34
Total Cost	$54.01

The above costs are on ordinary potatoes yielding 155 bu. per acre.

Certified seed is worth from 50c to 75c per bu. more than ordinary stock. They will also yield much heavier than ordinary stock (estimated state average certified seed—1922—167 bu. per acre) and sell at approximately 50c more per bushel for table purposes.

The potato crop requires such a large amount of labor that the tenant cannot afford to spend much more on the crop and make it a profitable enterprise.—F. T. Riddell, Extension Service, M. A. C.

NOT REQUIRED TO PAPER HOUSE

I rent my farm for money rent. The tenant was to occupy one part of the house, and the other part I reserved for my own use. Later I moved to town and to accommodate tenant I let him occupy the whole house. Nothing was said about keeping the house papered. Now do I have to paper it, if they ask me to? They want part I reserved for myself papered. — K. McK., Millington, Mich.

—You would not be required to paper or otherwise improve the part of the house which you reserved for yourself in the lease.—Asst. Legal Editor.

CAN B COLLECT DAMAGES?

A's horses run away. B is driving in a cutter and as the horses run past the sleigh gets caught in the cutter and break the cutter. Can B collect damages?—A. K., Glennie, Mich.

—If A's horses were ordinarily gentle, and were being driven with proper care, B could not collect damages from A. A would not be liable for the injury, which was due to accidental circumstances, and not to his negligence.—Asst. Legal Editor.

CARING FOR LILAC BUSH

Would you tell me how to care for a lilac bush? Should the sprouts be dug away from the main bunch this spring or not until fall? What can I put around the roots to keep it thrifty and should the sod be taken away from it?—A Subscriber, Standish, Mich.

—It is very important with the specia varieties of lilacs that have been propagated by grafting on to common lilacs or on to privet, to keep the sprouts away. This may be done early in the spring and at such intervals during the summer and early fall as they appear. When the lilacs, however, are grown upon their own roots, that is having been propagated from cuttings, or when simply the old lilac from that is grown, it is not so essential to keep the sprouts dug away. It will encourage the growth of the plants to keep the soil well cultivated around the base of the shrub rather than allowing sod to grow there—C. P. Halligan, Professor of Landscape Gardening, M. A. C.

NO "COMMON LAW DIVORCE"

If a man's farm is sold under mortgage in August and he stays on the place, puts in crops, the next spring, could the holder of mortgage take crops that were not harvested at the time, one year from date of sale, or would they belong to the farmer?

I saw in the paper about the common law marriage. Is there a law for divorce the same way? Being separated for 5 years could the parties marry without going through the divorce court?—M. B. D., Mt. Pleasant, Mich.

—I am of the opinion the unharvested crops on the farm at the expiration of the redemption period would belong to the purchaser under the mortgage foreclosure sale. It is otherwise in the case of a tenant under a lease for an uncertain period of time, but here the mortgagor knew when his right to possession would terminate in the event he failed to redeem, and should have considered this when planting crops. Upon the mortgagor's failure to redeem the purchaser's title reverts back to the date of the foreclosure sale.

There is no "common law divorce" in Michigan. The only way a divorce can be obtained is by an order of the court, and the remarriage of either party without such an order, or decree, would be bigamy, and punishable as a crime.—Asst. Legal Editor.

LOAN FROM FEDERAL LAND BANK

Sometime ago you mentioned in your excellent paper that farmers who tried to obtain a federal loan and were turned down to report the case to you, so at this time I am availing myself of this opportunity and writing my experience to you. In March I made a application for a loan of $3,000 through the secretary of local association at Lansing and after following instructions, going through the red tape and paying a fee of $10, I waited for results. In April I received a reply from the federal land bank of St. Paul saying that they were unable to allow any loan on my application. This is what I cannot understand, when I have ample security and means of meeting the interest and payments. Not far from here a loan was made on a farm for $4,000. The place is the same size as mine and the buildings and land are no better. Neither have they any better security or means of making the payments. Also a neighbor of mine made an application for a loan but was refused.

I was lead to believe that if I didn't get my $3,000, I would get something anyway, but I did not.—Reader, Ingham County, Mich.

—Concerning the case of —— ——, I can do no better than to enclose copy of at letter written to these applicants by myself under date of May 2nd. I might say in addition that the applicants purchased this farm within a year.

In commenting on the property, the appraiser says, "This is a very poor seventy acres. It is in a run down condition, very poor soil. Farm is stony, has a number of bad depressions and brush is growing premiscuously and I would not recommend a loan for any amount. There is a large ditch tax against this farm spreading over a period of years that does not benefit the farm materially."

I presume you understand that the Federal Appraisers are appointed by the Farm Loan Board and we are not under any circumstances permitted to make a loan when their report is unfavorable. Therefore, there is absolutely nothing we can do under the circumstances. — H. K. Jennings, Secretary, Federal Land Bank, St. Paul.

"In reference to your application for a loan of $3,000, I have given same a careful reading.

"It appears from your letter that you are laboring under a delusion as to the ownership of this bank, inasmuch as you say the Government is now refusing the loan to you and —— ——, after he enlisted and served as a soldier in the late war. This bank is not a Government bank any more than a national bank is a Government Bank. The Federal Land Bank was organized by authority of an act of Congress and is regulated by the Farm Loan Board, which is a bureau in the United States Treasury Department. The Government, however, owns none of the stock in the bank and has no monetary interest in it in any way, shape or form.

"I find on looking over your application and the appraiser's report that there is nothing we can do under the circumstances, as the application was rejected by the appraiser. These appraisers are appointed by the Farm Loan Board in Washington and are supposed to represent public interest and to make an appraisal of all properties offered as security, recommending whatever loan they think is advisable under the circumstances. It so happens that the appraiser who made this appraisal is a resident of your county and has been for many years and for that reason we feel that the appraisal is probably one that could not be critized. I am sorry that the circumstances are not such as would enable us to make you the loan asked for."—H. K. Jennings, Secretary, The Federal Land Bank of St. Paul.

WHO IS LIABLE FOR FENCE?

The county commissioner told a certain man to cut and burn the brush along the roadside. He employed another man to do the work and ordered him to set the fire on a certain day. The day happened to be windy and the fire burned 40 rods of fence on my farm. Now who will be held responsible for the damage to the fence?—M. H. J., Millington, Mich.

—The person setting the fire would be liable for the damage done but damage could not be charged to his employer or to one directing his employer unless it could be shown that the ordering or directing by the employer or the county road commissioner directing the employer carried with it the instructions for doing the work in such a way as to constitute negligence chargeable to them. There are not sufficient facts stated in your inquiry to give an opinion of any merit pertaining to any one other than the person setting the fire who would be liable in damages for the destruction of the fence.—H. H. Partlow, State Hightway Dept.

STARTING HEDGE

I would like to start a hedge fence and saw an article a few years ago in the M. B. F. as how to start the brush cuttings but have lost the copy of the paper. Would you please tell me how to start the hedge brush?—G. S., Gaylord, Mich.

—A hedge may readily be developed from willow cuttings by taking the shoots of past season's growth about the thickness of a lead pencil, cutting the base of each cutting just below a bud and inserting the same in a soil that is fairly moist, preferably of a sandy loam character. Dogwoods, such as the Red Bark Dogwood, and populars may be started in a similar way. Most of the cuttings, if inserted to a depth of four to six inches, will produce roots and tops, providing an unusual drouth does not occur before the roots are formed. It is only the kinds of plants, however, that root most readily, such as the above named, that may be started in this way, and hence the formation of a hedge by inserting these cuttings in a line at about a distance of one foot apart is a very cheap and easy way of producing a hedge.—C. P. Halligan, Professor of Landscape Gardening, M. A. C.

KEY

L.—Polarine Light.
M.—Polarine Medium
H.—Polarine Heavy
S.H.—Polarine Special Heavy.
E.H.—Polarine Extra Heavy.

N. B. For recommendations of grades of Polarine to use in automobiles and trucks consult chart at any Standard Oil Co. (Indiana) station.

POLARINE is made for you. The harder you use your tractor, the more hours a day you work it—the more you need Polarine. The shorter the planting season—the more essential that you use Polarine.

WHY? Because a tractor, being run for profit, undergoing hard use, simply cannot afford the piling up of damage and the waste incidental to wrong lubrication. Polarine reaches and protects every friction point. The grade of Polarine indicated in the Chart as the correct lubricant for your machine has been determined scientifically *after* study of the oiling system in your particular make of tractor. Pump — screen — oil pipes — grooves of the bearings—piston clearance—all these factors have been considered.

Use Polarine

THE PERFECT MOTOR OIL

Made in Five Grades

Polarine does not break down. It maintains at working temperatures a complete oil film between piston and cylinder walls, avoiding "scored" cylinders and assuring perfect compression. Change your motor oil very frequently for greatest economy.

Because Polarine is perfect in body it maintains the piston seal perfectly. This means that the grade of Polarine which our engineering staff has recommended for your tractor will correctly lubricate your machine, insure its satisfactory performance under all working conditions, prevent overheating of cylinders with the resulting radiator troubles. It is heavy enough to minimize fluid friction.

Polarine is a primary product of the Standard Oil Company (Indiana). It is manufactured by trained men in the finest refineries in the world. The high quality of Polarine is invariable and always maintained.

Polarine

This illustration shows the replaceable cylinder, a feature in all International Kerosene Engines.

International Engines are Built for the Farm

INTERNATIONAL Kerosene Engines, with their steady power and large, well-balanced flywheels, are ideal for all of the lighter power jobs of the farm. You can hook one of the smaller sizes onto the cream separator and do a steady, satisfactory job of separating, without unnecessary work. And when the separating is over with, you can use the same engine for pumping water, turning the churn, washing machine, or grindstone, and for countless other tasks that are tiresome when done by hand.

There are also International engines in sizes up to 6 and 10 h. p., which are used for turning feed grinders, corn shellers and buzz saws, and for other jobs requiring more than 1½ or 3 h. p.

Any McCormick-Deering dealer will show you the various sizes and point out the distinctive features that make International engines so very popular with farmers everywhere.

Building Tile

Make the First Cost the Only Cost

The value of a good silo reaches its greatest height in a Kalamazoo Glazed Tile Silo because the superior quality of Kalamazoo Tile means perfect ensilage. Stock raising and dairying are by far the most profitable types of farming, and silage is unquestionably the most economical feed for livestock and dairy cattle.

Kalamazoo Tile and Wood Silos

Our Glazed Tile silos are everlasting—decay-proof, storm-proof, vermin-proof; will not burn or blow down; save repair and paint bills. Three dead air spaces make perfect insulation against cold, heat, dampness. Kalamazoo Tile is made from selected quality clay in our own plant located in the center of the finest tile clay district. Our Wood Stave Silos have stood the test of thirty years. We are America's pioneer silo builders. All Kalamazoo Silos are fitted with continuous door frames of galvanized angle steel. Send for free book of silo information.

Kalamazoo Tile Buildings
are beautiful, economical, practical, everlasting: better housing for your herds means bigger production. Get the facts. Let our Building Plan Department help you. Write for literature. Free estimates on receipt of your rough plans.
KALAMAZOO TANK & SILO CO., Dept. 244 Kalamazoo, Mich.

"THE BEAN and PEA FARMER'S FRIEND"

The American
Double Cylinder
Bean and Pea Threshers

The Bean and Pea Farmer's Friend

Built in three sizes—14x14 inch, 20x20 inch and 26x26 inch cylinders, to meet the demands of all. Threshes and cleans all varieties of beans and peas, and shreds their vines, as they come direct from the field, in one operation. Capacity and perfect separation guaranteed.

PRICE When you learn the price of these threshers you will be surprised. Write today for catalog, full particulars and prices. Just drop us a card.

What the Neighbors Say

FARMER CONTROL PRICES OF HIS PRODUCTS

HAVE been very interested in "What the Neighbors Say" from time to time as to the deplorable condition in which the farmer finds himself. Most of us know there is a screw loose somewhere and have different ideas as to what particular screw it is. One farmer said a whole lot, when he stated that it was the inability of the farmer to strike and thereby set a price on his product, as under the present economic system he is entitled to the same privilege as any other business, but as he is now situated he cannot control production, and through that way control price. But I think it could be brought about by co-operative organizations.

The Editor seems to think that reduction of wages to labor together with some form of easier farm credits and lower freight rates would do the trick. I think his reduction of wages is all wrong, as a pauper labor market is the last thing we want. Lower freight rates would be of some benefit and easier credits only enables the average farmer to more easily get into debt. What he needs is the power to set a price above cost of production the same as other business interests do.

Mr. Joseph Warnock submits a plan in your March 31st number, which would apparently cut the cost to the farmer in what he has to buy and thereby relieve him to a great extent in his living and operating cost, and in lieu of his power to set his selling price has the most to commend it of anything I have so far seen set forth. But that would be hurting the middleman and that isn't considered good form in the best society, and all the so-called farm leaders endeavor to steer him away from that dangerous ground. They are willing to help him in any way but the only way that will be of material benefit to him. "Why, Alice, how you talk!" What you need, Mr. Farmer, is to become efficient, make two potatoes grow where one grew before, so as to bring down the living cost to labor so wages can be cut and furthur curtail your market and prices. I presume the latter advice is considered "safe and sane" and would venture to say that ninety-nine out of a hundred bankers and businessmen would subscribe to it as just the proper caper and all that went before as treason and revolution of the rankest sort. Be that is it may, something will have to be done as a poverty strickened farming class will react and the whole business structure will take a tumble. — H. H. Lister, Oceana County, Mich.

WHAT ARE FARMERS TO DO?

I HAVE read with interest the different articles on rented farms in Michigan, and as I am a farmer and a renter I thought I would write you a few lines and if they will be any good to my fellow farmers just pass them along through your columns. So, here goes.

Four years ago my wife and I rented an 80-acre farm on the 50-50 plan. We owed just $25.00 to the world. As we had nothing to go on, excepting two cows and one horse, we had to buy half of the stock, horses and farming machinery. Well, I had to borrow the money from the bank, which I did at 12 per cent interest, and have paid that since then. The first year we did pretty well, the second year we raised better crops than the first year but when we sold the crop we just made our expenses. The season of 1921 we didn't raise anything on account of the awful drought up here. We bought over $300 worth of feed for stock, also $100 for seed this spring. I worked on the road to buy part and borrowed the balance. We had good crops this last year but here came a crisis. My creditors lost confidence in my ability to pay. They crowded me so hard that I sold all that I could sell and still farm, and still they are anxious. Now, I find that to finance this year I must have around $200. I also find by taking an inventory that I have personal property to the amount of $1,000 at present prices and $2,000 in debts, which leaves me $1,000 behind after four years hard work and a scant living. Now here is the vital question. Should I stay here and try to pay these debts or make an assignment to my creditors, go elsewhere and make a new start. I have always tried to play the game square. This is my home since boyhood. But without credit with a $1200 deficit, also $200 interest to pay if I stay, can I make good? I still believe in the old adage "do as you wish to be done by." Here is a proposition that I am unable to solve

I am willing to go down fighting, but am I doing justice to my good wife and our three children by actually denying them the necessities of life? As I look around I count a lot of farmers in Gladwin county and elsewhere in our state who are in the same predicament in which I find myself. What are we going to do? Any advice from you will be gratefully received. If my mistake will help others you can publish this without using my name.—A Renter, Gladwin County, Mich.

SECRET DIPLOMACY

THERE seems to be an effective effort to keep the public in the dark regarding the truth of the David Friday controversy. Neither President Friday nor the Board of Agriculture will talk and again the farmers are left in the dark regarding "the farmers' college." When the facts are withheld suspicions arise. In the short sojourn of Pres: Friday at M. A. C. farmers have been favorably impressed and led to expect great things. But the papers say he was opposed by a "certain farm organization." We know that was not the Grange, the Gleaners have protested against his removal. We can't think it was the Farmer's Clubs. The State Farm Bureau may be "the nigger in the wood-pile." It is a strong organization dominated not by its membership, which is merely a source of revenue, but by over a hundred well paid agricultural advisors and extension workers strong enough to thwart the desire of the farmers for a law to permit them to vaccinate their own hogs.

This County Agent-State Farm Bureau is already powerful and building for the future. It needs the control of the Agricultural College and Pres. Friday was not controllable. It would be very convenient if they could put a man of their own choosing in the President's chair. Clark Brody is mentioned. We will wait and watch developments.—M. N. D., Lenawee County, Mich.

MUSINGS OF A PLAIN FARMER

HO HUM! Digging post holes is hard work. I don't like these fussy jobs. Straight work is what I enjoy most.

I was informed by my dealer that fence has gone up in price, which is bad news.

I wonder what kind of a car Judge Gary drives, and while I was wondering, I got a post hole a foot out of line. Well! I must apply myself more to my business.

That's the bravest hawk ever I saw. He settled to the ground near me; within a stone's cast, and I hurled the diggers at him with great force. Wish I might throw them away for good.

Here comes two agents. If they offer me a cigar I'll take it and dismiss them. I am getting very apprehensive when I see that dotted line.

I would have given those fellows an order for that car if my wife hadn't appeared on the scene and given me that look I know so well.

When I start out on a buying campaign, she usually lassos me before I get any ink stains on my fingers.

Well I'll have to get a new car next year any way. Nothing will stop me! Nothing!

People will begin to think I don't know my own business.

I would sign an order for a lower price on sugar, a reduction in taxes, and a little good warm sunshine.

Nature tells me it is about supper time. I have set the last post for today. This is all.—A. P. Ballard.

OUR NATIONAL SAFEGUARD

A SERMON BY REV. DAVID F. WARNER

TEXT: "Righteousness exalteth a nation; but sin is a reproach to any people."—Proverbs 14:34.

ANTICIPATING Independence Day, it is, not our purpose as a preacher, to discuss politics, national rights, or patriotism, as commonly conceived; but rather, that which constitutes uprightness in a nation's life; that which will secure and maintain liberty; that which will make for national integrity. And that is told simply and with straightforwardness in the words of our text.

"Righteousness exalteth a nation." Here is a soundness, a condition in which all things are right and straight. Men in right relation to one another; in which case they must be rightly related to God. This renders a people—their business and social relations, their laws and judiciaries, their international status—as just and justified. And why not? This is every nation's divine opportunity. Righteousness is the constant and insistent demand of Isaiah, the statesman-prophet. And said Micah to the Jewish nation, "What does Jehovah require of thee but to do justly, and to love kindness, and to walk humbly with thy God." So it augurs well to have had President Harding say to the Shriners in Washington the other day, that the peace of this country depends not upon the sign, grip, or password of secret fraternal organizations, but fraternal feelings and relationships among all men. This he denominated as "political righteousness." And this Jesus of Nazereth called the "Kingdom of Heaven" on earth.

But what cowards! Why don't we confess it? The other day I fell into conversation with a fraternity man and a friend of labor. According to his own statement, he was a member of ten different organizations, all of which, said he, stand for the brother-hood of man. But, I interjected, "Where did your 'brotherhood' idea originate and in whom did it have its perfect expression?" But he hesitated. O, yes, he knew. But he had no mind to confess. I said, "Why?" "O," said he, "I don't believe it is time yet." Shades of darkness! Not time yet for the Kingdom of Heaven when coal and sugar combines and other monied monopolies are safeguarded by law? Not time, with protected bootlegging in high places and low? Not time, when the courts of our land hold the rights of property above the rights of man? "And ye would not," said Jesus to the Jewish nation. "Behold your house is left unto you desolate." And it is today. But what of America?

Fortunate for our thought and our being as a country, our system of American government was founded by those who had some acquaintance with the principles of the Christian's Bible, and many of whom professed them, and all of whom, we believe, are honest and just, and would have all men become more righteous and Godly in their political relations as they (the founders) understood them. In much of our early history church life was primary. Of course we have no sympathy today with the folly that tried to enforce a rigid sameness in practices and customs. But the Bible was the text-book of life and worship. Our forefathers came here to establish a government in which there would be liberty coordinated with justice. A fine conception, for we know at least today, that liberty without justice is a despotic thing. And this is declared in the preamble to our constitution.

To the fathers of our Americanism, it was a dream to be fulfilled, that this land should be a blessing to posterity and a home for the oppressed. This they consider to be the establishment of righteousness. But this pre-supposed well-night perfect humans. And they had no less a privilege than we. But have we established it? Have we when the privileges of wealth and position are robbing thousands of young men and women of their right to become educated and trained citizens? Have we when many are compelled to live in an indecent environment and wealth and privilege live in brown stone fronts on roomy, airy boulevards, and barricaded behind iron fences and cordons of servants? Have we when humans are but chattels to be manipulated at the will and caprice of capalistic overlords? Have we when farms are being deserted and men are becoming urbanized in taste and desire?

"Ill fares the land, to hastening ills
a prey,
Where wealth accumulates and men
decay.
Princes or lords may flourish or may
fade,
A breath can make them as a breath
has made;
But a bold peasantry, their country's
pride,
When once destroyed, can never be
supplied."

Though some men are fondly saying that the spirit of a free republic will some day achieve for us truth and honor, liberty and justice, integrity and righteousness; the humble, Godly man believes that it can be done only as that spirit is like unto the spirit of Him who dedicated in favor of all the nations, the Republic of the Golden Rule.

"Sin is a reproach to any people." So said the sages and the prophets. But the Jewish nation stubbornly plunged into captivity. Most of us have enough purity in our hearts and honesty in our purposes to sense the great sins of our day. But we differ on how to cure them. Our fathers, intoxicated in the atmosphere of their new-found freedom, differed on how to maintain social freedom. This was evidenced by the rules of restraint that obtained in some places as over against liberty of conscience in others. Briefly, this finally developed into a liberty of class and privilege; a liberty in which individualism flourished; which was divorced from righteousness and justice to all; and which through political manipulation has brought about our national evils. And this is our national reproach.

But back of all these evils the major cause stands out: SIN. For instance, sin couched at Cain's door and he slew his brother. And sin at our nation's door is slaying brothers upon brothers. Such is the inglorious reign of war and oppression. And we are head-on for another spell of unleashed savagery. Why? Because treating the symptoms of a disease will not cure it. We have been putting our trust in laws and courts, in conferences and treaties which involved force and secret alliances. And our judgment is certain. "And this is the judgment," said Jesus, "that men love darkness rather than light because their deeds are evil." So shall it ever be as long as the principle of force instead of social righteousness reigns in our political system. Will we place our confidence in Jesus Christ and the sermon on the Mount? Then we may have a social millenlum. –

"Why does not the West now after 1900 years, try the experiment of founding a state on the teachings of its Christ? I attack not your religion, nor would I compare it unfavorably with our Confucianism. You, however, do not practice your religion. With you a commercial relation comes first in all things; the moral relation is forgotten. Lasting peace will come only when you accept honestly the teachings of the Christ whom you now only pretend to worship." This is the challenge of a Chinaman, Li Moy Foo, to our so-called Christian America.

But how shall we establish this righteous state? Again we ask it. Say our Republican friends, "Have patience with us. We'll do it. We stand for justice, 'a full dinner pail,' and contentment." But G. O. P. farewell, your sun is setting. We have seen your business revival and full dinner pail, and have been disappointed; for we find in much of it but a respectable way of sinning. And we can say no more for any other selfishly partisian politics. The sooner we relegate unsocial politics to all the wrecked human ideals of the past, the better. God, help us to pray and work for that Isaiah-like man "who shall become a hiding

The Hunted Woman

By James Oliver Curwood

Michigan's Own and America's Formost Auther of the Great Northwest

(Copyright by James Oliver Curwood

(Continued from June 9th issue)

"There's sheep somewhere near this basin, Johnny," he explained. "An' I reckon Joanne-'ll scold us if we don't keep here in fresh meat. I'm goin' to bring in some mutton if there's any to be got, an' I probably won't be back until after dark."

Aldous knew that he had more to say, and he went with him a few steps beyond the camp.

And MacDonald continued in a low, troubled voice:

"Be careful, Johnny. Watch yo'rself. I'm going to take a look over into the next valley, an' I won't be back until late. It wasn't a goat, an' it wasn't a sheep, an' it wasn't a bear. It was two-legged! It was a man, Johnny, an' he was there to watch this trail, or my name ain't Donald MacDonald. Mebby he came ahead of us last night, an' mebby he was here before that happened. Anyway, be on your guard while I look over into the next range."

With that he struck off in the direction of the snow-ridge, and for a few moments Aldous stood looking after the tall picturesque figure until it disappeared behind a clump of spruce. Swiftly he was telling himself that it was not the hunting season, and that it was not a prospector whom they had seen on the snow-ridge. As a matter of caution, there could be but one conclusion to draw. The man had been stationed there either by Quade or FitzHugh, or both, and had unwittingly revealed himself.

He turned toward Joanne, who had already begun to gather up the supper things. He could hear her singing happily, and as he looked she pressed a finger to her lips and threw a kiss to him. His heart smote him even as he smiled and waved a hand in response. Then he went to her. How slim and wonderful she looked in that glow of the setting sun, he thought. How white and soft were her hands, how tender and fragle her lovely neck! And how helpless—how utterly helpless she would be if anything happened to him and MacDonald! With an effort he flung the thought from him. On his knees he wiped the dishes and pots and pans for Joanne. When this was done, he seized an axe and showed her how to gather a bed. This was a new and delightful experience for Joanne.

"You always want to cut balsam boughs when you can get them," he explained, pausing before two small trees. "Now, this is cedar, and this is a balsam. Notice how prickly and needlelike on all sides these cedar branches are. And now look at the balsam. The needles lay flat and soft. Balsam makes the best bed you can get in the North, except moss, and you've got to dry the moss."

For fifteen minutes he clipped off the soft ends of the balsam limbs and Joanne gathered them in her arms and carried them into the tepee. Then he went in with her, and showed her how to make the bed. He made it a narrow bed, and a deep bed, and he knew that Joanne was watching him, and he was glad the tan hid the uncomfortable glow in his face when he had finished tucking in the end of the last blanket.

"You will be as cozy as can be in that," he said.

"And you, John?" she asked, her face flushing rosily. "I haven't seen another tent for you and Donald."

"We don't sleep in a tent during the summer," he said. "Just our blankets—out in the open."

"But—if it should rain?"

"We get under a balsam or a spruce or a thick cedar."

A little later they stood beside the fire. It was growing dusk. The distant snow-ridge was swiftly fading into a pale and ghostly sheet in the gray gloom of the night. Up that ridge Aldous knew that MacDonald was toiling.

Joanne put her hands to his shoulders.

"Are you sorry—so very, very sorry that you let me come, John?"

"I didn't let you come," he laughed softly, drawing her to him. "You came!"

"And are you sorry?"

"No."

It was deliciously sweet to have her tilt up her head and put her soft lips to his, and it was still sweeter when her tender hands stroked his cheeks, and eyes and lips smiled their love and gladness. He stood stroking her hair, with her face laying warm and close against him, and over her head he stared into the thickening darkness of the spruce and cedar copses. Joanne herself had piled wood on the fire, and in its glow they were dangerously illuminated. With one of her hands she was still caressing his cheek.

"When will Donald return?" she asked.

"Probably not until late," he replied, wondering what it was that had set a stone rolling down the side of the mountain nearest to them. "He hunted until dark, and may wait for the moon to come up before he returns."

"John——"

"Yes, dear——" And mentally he measured the distance to the nearest clump of timber between them and the mountain.

"Let's build a big fire, and sit down on the pannier canvases."

His eyes were still on the timber, and he was wondering what a man with a rifle, or even a pistol, might do at that space. He made a good target, and MacDonald was probably several miles away.

"I've been thinking about the fire," he said. "We must put it out, Joanne. There are reasons why we should not let it burn. For one thing, the smoke will drive away any game that we may hope to see in the morning."

Her hands lay still against his cheek.

"I—understand, John," she replied quickly, and there was the smallest bit of a shudder in her voice. "I had forgotten. We must put it out!"

Five minutes later only a few glowing embers remained where the fire had been. He had spread out the pannier canvases, and now he seated himself with his back to a tree. Joanne snuggled close to him.

"It is much nicer in the dark," she whispered, and her arms reached up about him, and her lips pressed warm and soft against his hand. "Are you just a little ashamed of me, John?"

"Ashamed? Good heaven——"

"Because," she interrupted him, "we have known each other such a very short time, and I have allowed myself to become so very, very well acquainted with you. It has all been so delightfully sudden, and strange, and I am—just as happy as I can be. You don't thing it is immodest for me to say these things to my husband, John—even if I have only known him three days?"

He answered by crushing her so closely in his arms that for a few moments afterward she lay helplessly on his breast, gasping for breath. his brain was afire with the joyous madness of possession. Never had woman come to man more sweetly than Joanne had come to him, and as he felt her throbbing and trembling against him he was ready to rise up and shout forth a challenge to a hundred Quades and Culver Ranns hiding in the darkness of the mountains. For a long time he held her nestled close in his arms, and at intervals there were silences between them, in which they listened to the glad tumult of their own hearts, and the strange silence that came to them from out of the still night.

It was their first hour alone—of utter oblivion to all else but themselves; to Joanne the first sacrament hour of her wifehood, to him the first hour of perfect possession and understanding. In that hour their souls became one, and when at last they rose to their feet, and the moon came up over a crag of the mountain and flooded them in its golden light, there was in Joanne's face a tenderness and a gentle glory that made John Aldous think of an angel. He led her to the tepee, and lighted a candle for her, and at the last, with the sweet demand of a child in the manner of her doing it, she pursed up her lips to be kissed good-night.

And when he had tied the tent-flap behind her, he took his rifle and sat down with it across his knees in the deep black shadow of a spruce, and waited and listened for the soming of Donald MacDonald.

CHAPTER XXIV

For an hour after Joanne had gone into her tent Aldous sat silent and watchful. From where he had concealed himself he could see over a part of the moonlit basin, and guard the open space between the camp and the clump of timber that lay in the direction of the nearest mountain. After Joanne had blown out her candle the silence of the night seemed to grow deeper about him. The hobbled horses had wandered several hundred yards away, and only now and then could he hear the thud of a hoof, or the clank of a steel shoe on rock. He believed that it was impossible for any one to approach without ears and eyes giving him warning, and he felt a distinct shock when Donald MacDonald suddenly appeared in the moonlight not twenty paces from him. With an ejaculation of amazement he jumped to his feet and went to him.

"How the deuce did you get here?" he demanded.

"Were you asleep, Johnny?"

"I was awake —and watching!"

The old hunter chuckled.

"It was so still when I come to those trees back there that I thought mebby something had 'appened," he said. "So, I sneaked up, Johnny."

"Did you see anything over the range?" asked Aldous anxiously.

"I found footprints in the snow, an' when I got to the top I smelled smoke, but couldn't see a fire. It was dark then." MacDonald nodded toward the tepee. "Is she asleep, Johnny?"

"I think so. She must be very tired."

They both drew back into the shadow of the spruce. It was a simultaneous movement of caution, and both, without speaking their thoughts, realized the significance of it. Until now they had had no opportunity of being alone since last night.

MacDonald spoke in a low, muffled voice:

"Quade an' Culver Rann are goin' the limit, Johnny," he said. "They let men on the job at Tete Jaune, and they've got others watching us. Consequently, I've hit on a scheme—a sort of simple and onreasonable scheme, mebby, but an awful good scheme at times."

"What is it?"

"Whenever you see anything that ain't a bear, or a goat, or a sheep, don't wait to change the time o' day—but shoot!" said MacDonald.

Aldous smiled grimly.

"If I had any ideas of chivalry, or what I call fair play, they were taken out of me last night, Mac." he said. "I'm ready to shoot on sight!"

MacDonald grunted his satisfaction.

"They can't beat us if we do that, Johnny. They ain't even ordinary cut-throats—they're sneaks in the bargain; an' if they could walk in our camp, smilin' an' friendly, and brain us when our backs was turned, they'd do it. We don't know who's with them, and if a stranger heaves i nsight meet him with a chunk o' lead. They're the only ones in these mountains, an' we won't make any mistake. See that bunch of spruce over there?"

The old hunter pointed to a clump fifty yards beyond the tepee toward the lake. Aldous nodded.

"I'll take my blankets over there," continued MacDonald. "You roll yourself up here, and the tepee'll be between us. You see the system, Johnny? If they make us a visit during the night we've got 'em between us, and there'll be some real burrying to do in the morning!"

Back under the low-hanging boughs of the dwarf spruce Aldous spread out his blanket a few minutes later. He had made up his mind not to sleep, and for hours he lay watchful and waiting, smoking occasionally, with his face close to the ground so that the odour of tobacso would cling to the earth. The moon rose until it was straight overhead, flooding the valley in a golden splendour that he wished Joanne might have seen. Then it began sinking into the west; slowly at first, and then more swiftly, its radiance diminished. He looked at his watch before the yellow orb effaced itself behind the towering peak of a distant mountain. It was a quarter of two.

With deepening darkness, his eyes grew heavier. He closed them for a few minutes at a time; and each time the interval was longer, and it took greater effort to force himself into wakefulness. Finally he slept. But he was still subsconsciously on guard, and an hour later that consciousness was beating and pounding within him, urging him to awake. He sat up with a start and gripped his rifle. An owl was hooting softly, very softly. There were four notes. He answered, and a little later MacDonald came like a shadow out of the gloom. Aldous advanced to meet him, and he noticed that over the eastern mountains there was a streak of gray.

"It's after three, Johnny," MacDonald greeted him. "Build a fire and get breakfast. Tell Joanne I'm out after another sheep. Until it's good an' light I'm going to watch from that clump of timber up there. In half an hour it'll be dawn."

He moved toward the clump of timber, and Aldous set about building a fire. He was careful not to awaken Joanne. The fire was crackling cheerily when he went to the lake for water. Returning he saw the faint glow of candle light in Joanne's tepee. Five minutes later she appeared, and all thought of danger, and the discomfort of his sleepless night, passed from him at sight of her. Her eyes were still a little misty with sleep when he took her in his arms and kissed her, but she was deliciously alive, and glad, and happy. In one hand she had brought a brush and in the other a comb.

"You slept like a log," he cried happily. "It can't be that you had very bad dreams, little wife?"

"I had a beautiful dream, John," she laughed softly, and the colour flooded up into her face.

She unplaited the thick silken strands of her braid and began brushing her hair in the firelight, while Aldous sliced the bacon. Some of the slices were thick, and some were thin, for he could not keep his eyes from her as she stood there like a goddess, buried almost to her knees in that wonderous mantle. He found himself whistling with a very light heart as she braided her hair and afterward plunged her face in a bath of cold water he had brought from the lake. From that bath she emerged like a glowing Naiad. Her eyes sparkled. Her cheeks were pink and her lips full and red. Damp little tendrils of hair clung adorably about her face and neck. For another full minute Aldous paused in his labors, and he wondered if MacDonald was watching them from the clump of timber. The bacon was sputtering when Joanne ran to it and rescued it from burning.

Dawn followed quickly after that first break of day in the east, but not until one could see a full rifleshot away did MacDonald return to camp. Breakfast was waiting, and as soon as he had finished the old hunter went after the horses. It was five o'clock, and bars of the sun were shooting over the tops of the mountains when once more they were in the saddle and on their way.

Most of this day Aldous headed the outfit up the valley. On the pretext of searching for game MacDonald rode so far in advance that only twice during the forenoon was he in sight. When they stopped to camp for the night his horse was almost exhausted, and MacDonald himself showed signs of tremendous physical effort. Aldous could not question him before Joanne. He waited. And MacDonald was strangely silent.

The proof of MacDonald's prediction concerning Joanne was in evidence this second night. Every bone in her body ached, and she was so tired that she made no objection to going to bed as soon as it was dark.

"It always happens like this," consoled old Donald, as she bade him good-night. "Tomorrow you'll begin to get broke in and the next day you won't have any lameness at all."

(Continued in July 7th issue)

Uncle Rube Spinach Says:

AND A LITTLE CHILD SHALL LEAD THEM

FOLKS, I've often wondered what a childless home was like. A home where little ones never creep over the carpets, never upset things; where the laughter or the cries of a little one is never heard. I've often wondered what a home could be like without the little ones in it.

An' yet I find that many of our young friends are gittin' married with just one idea—"No babies for us. We want to have a good time, go where we please an' come back when we get ready."

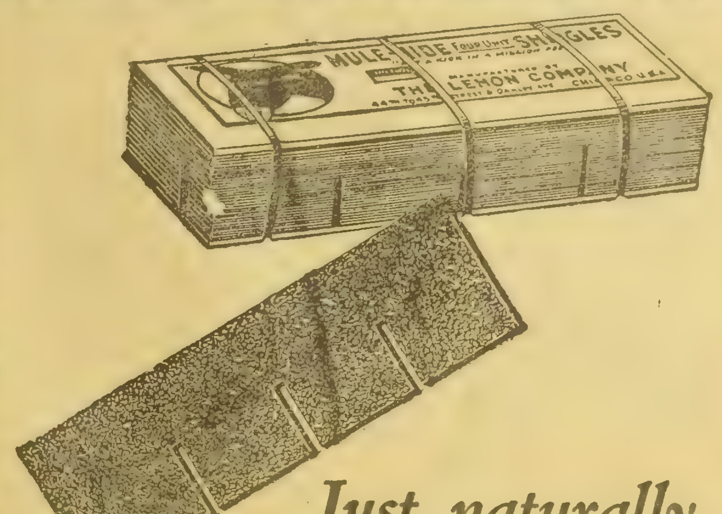
Well, of course, to most of 'em—many of 'em anyway—babies will come whether they want 'em or not—natur' has wisely provided fer that. But to think of a little one coming into a home where it is not wanted—can you imagine anything more horrible than that?

I wuz up town today an' I see somethin' quite a little out of the ordinary. A lovely, splendid young mother wheeling three little ones in a cab built 'specially for the little group. I had never seen the mother before—may never see her again, although I hope I may, but I stopped right in front of that cab, took my hat off to her, she smiled and said "Quite a nice little family, isn't it?" And folks, I had to admit that it wuz. An' she wuz so nice to talk to—she told me they were 4 months old. "Oh, yes," she sez, "they cause a lot of work, so many all at once you know, but I don't mind it a bit an' my husband is so good. If meals are not always quite on time he laughts an' says 'Ah, the kiddies have kept you busy have they,' an' we laught it off together an' that's all there is about it." Wonderful little mother! An' yet Bill Orpen of Paris, sez there are no beautiful women.

But to come back to where I started. What are these childless people goin' to do when the years count up onto 'em an' they begin to git old an gray? What will home be to 'em then? Will love fer each other endure the test when there is nothin' to think about only jest themselves? What would we do, we of middle life, were it not fer the sons and daughters—the children we have loved an' taken care of fer so many years? An' folks you know there is no time in a child's life when they are most interesih' when they are jest little bits of humanity, when we hear their first cry an' we take then in our arms to love 'em fer the first time. We think that is the time they are jest 'bout the necest they'll ever be. At six months they're still nicer, ain't they now? When they take their first totterin' steps—well what's finer 'an that? An' then they begin to lisp words an' our hearts beat a little faster jest 'cause baby is beginin' to talk. An' so it goes, an' now my oldest baby is 29 years old has a little girl 7 years old an' yet good friends she has been a comfort to me an' to her mother every minute since the day she first came into our lives, looked around a bit and went to sleep only to wake up an' look around again. An' so it has been with all the little ones—there are five—that have come into our lives an' they are ours—mother's an' mine—yes we've worked to take care of 'em but we've been glad to do it an' when we are old an' there is nothin' else we've got them an' that's enough.

But what will the folks that want no children do when they git old? Of course I am aware there are some childless homes where children would be more'n welcome—my heart goes out in sympathy to such—but to those who would not have the little ones in their homes—well I can't express my feelin's without breakin' some of the commandments so I'll quit. Cordially yours—UNCLE RUBE.

NOT A KICK IN A MILLION FEET



Just naturally wear longer

THE LEHON COMPANY
MANUFACTURERS
44th to 45th St. on Oakley Ave.
CHICAGO, ILLINOIS

"The Farm Paper of Service"

A SAFE AND SANE FOURTH

IN their anxiety to protect the life and limb of men and boys on America's great holiday, well-meaning, but ill-advised individuals have tried to make of Independence Day a celebration which is hardly in keeping with the spirit in which it was created.

A "safe and sane Fourth" is all right and we heartily endorse it, but it should well be remembered by some elders that this day of all the national holidays is a day of celebration—a day when we ought to be proud of the old flag and all that it stands for which is good, upright, and red-blooded. There are enough days in the year when we can curb the younger generation and tell them to be quiet, but this is the one day when they should be allowed to make all of the noise they want to and have all the fun possible.

To deprive a boy or girl of a cap-pistol, a package of small firecrackers, and some torpedoes with which to frighten Aunt Molly half out of her skin, would be curbing something which we like to point to in our men and women as distinctly American.

There is a class of blue-nosed individuals in America who would prohibit anything that brought fun to the heart of a child or a smile to the face of a grown-up. Unfortunately they are the ones who are promoting the "Safe and Sane Fourth." We are glad we had the opportunity of setting off giant fire-crackers, lighting whistling sky rockets and running like mad away from the two anvils which announced the coming of the fourth in our old county seat home up in Michigan, before the kill-joys arrived on the scene.

A COLD SEASON.

FROM all appearances the month of June is running a race with May to break all local weather records in the matter of average cold temperature.

Everything in Michigan and the nearby states is from two to three weeks retarded in growth, and not one-half of the corn planting was completed in Michigan within two weeks of the time the seed is usually in the ground. Reports come from several sections where re-planting was necessary because of the continued cold, wet weather.

Wheat and rye are in only fair condition. Oats are very backward. The growth is short and in Michigan and Wisconsin the crop is poor. Hay alone has shown a great improvement during the past two weeks, and pastures throughout Michigan are in good shape. The condition of the fruit is also very encouraging as this kind of a season does not mitigate against the productivity and quantity of orchards and vines.

Taken all in all there is nothing to be particularly discouraged about in the crop reports from Michigan and with higher prices which we fully anticipate this fall, the farmers of Michigan should receive a great many million dollars more for their products than they did last year, even though the quantity which they are able to harvest may not be as large as last.

POLITICS AND ECONOMICS

THE Commissioner of Agriculture in Idaho, Mr. M. A. Means, says, "The great trouble with our people today is that they have mixed two great problems—politics and economics." This, according to Mr. Means, "is not the solution of any farm perplexity, but well-balanced farming, where the farmer makes frequent sales from the farm, pays off his debts and stops paying interest and other overhead charges, is the problem we have to meet." By well-balanced farming the Commissioner means "cultivation that will not destroy the productivity of the soil by the continuous raising of wheat. Idaho farmers have gone to wheat so long that the soil has deteriorated in productivity 50 per cent. The humus in the soil has been lowered by raising small grains."

There is not a farmer in the Central West who does not realize that Mr. Means has stated a fact which must be confronted. Certain well-meaning individuals have so mixed politics and economics that they now believe the two to be one and the same thing. If the people think they want something it is good policy to give it to them whether or not it is sound economics.

We have felt for some little time that the farmers of America were waking up to the fact that they have been misled and have followed blindly directions which have not worked to their profit during the past two or three years.

Mr. Means in closing his statement confirms this in a pointed paragraph, "The political agitation to provide more farm credit is absolutely against sound principles of building citizenship. What the farmer needs more is time to pay off some of the debts he has already contracted. If the demagogue is brushed aside, the farmer himself can solve the problem by the old American spirit of industry and thrift."

And we might add that Mr. Means does not need to worry about the "old American spirit of industry and thrift, because that is a part and parcel of every good farmer. There is no lack of work on the farm nor desire on the part of the farm family to work. They have been working harder than the average city man these past two or three years, but against odds they have not been able to make the net amount which the laboring man did with no investment whatever, except his own time and energy.

HANDS OFF FARM PRICES!

AMERICA is facing agricultural suicide as a result of the loss of man power on our farms, says Senator T. H. Caraway, Democrat, of Arkansas, and he points out that the large number of farm folks going to the city is bound to bring a food shortage which will send the prices of agricultural products sky high at the expense of the public!

This is not exactly a new discovery. We have been pointing out for upwards of a year that the inevitable result of the migration of country folks to the city factories could result in only one condition and that was a shortage of food products and a consequent rise in prices, which we have hoped would put the farmer back on an equal basis with his city cousin in net earnings.

Senator Caraway, like some other misguided senators, would have the government step in at this time and fix farm prices so that the public would be protected. He claims that it would be to the benefit of the farmer and yet, it is our observation, that when the government steps in, practical business profits step out, and we believe that the farmer is today suffering more from misguided leadership and government interference than he is from a lack of market for his product.

There is a law which operates with the same precision and is as unvarying as that of gravitation. That law is the law of supply and demand.

The farmers of America are about to step into their own after two or three of the most depressing years in their history. They are going to step into this period of prosperity if the government and those who claim to represent the farmer will adopt the policy of "Hands Off!"

We have not noticed during the past two or three years that the government has been particularly active in keeping down the prices paid to union labor, the brick-layer, plasterer, carpenter, plumber, railwayman or factory worker?

Arkansas is an agricultural state, not of very great importance, but still there should be enough farmers down there to ask Senator Caraway to leave things alone and let the farm work itself out without political assistance. This same advice might be passed along to the senators of one or more states adjacent to Arkansas.

JOINING M. A. C. AND U. OF M.

ONE of the men outspoken in the matter of linking (through a joint administration board) the Michigan Agricultural College and University of Michigan is Eugene Davenport, former dean of the University of Illinois, now residing at Woodland, Michigan. Dr. Davenport is, as most of our readers know, a graduate who received three degrees from M. A. C. and was assistant Botanist at the Experiment Station, Professor of Practical Agriculture, and Superintendent of the farm, then left to become President of a Spanish agricultural college in Brazil, and returned to America to become dean of the agricultural college of the University of Illinois, from which he returned to his boyhood home only last year, since which time he has taken considerable interest in his alma mater.

In a recent interview Dr. Davenport points out that if a co-ordination of Michigan's two great educational institutions is to be made, and there are many good reasons, he says, for such a move, now is the idea time while the Agricultural College is without a president and directing head. "The college needs to catch the university spirit." says Dr. Davenport. "The function of the university primarily is research; teaching is but incidental. The college seldom has this point of view. I used to tell my students that the institution did not exist for them; that it existed for all the people—for the state. I said to them, 'In going out from this college, you are merely a sort of bulletin, taking to the people the message of the college.' Agriculture is not an individual or a class interest; it is a primary interest of the entire commonwealth. If an insect pest ravages the crops, the damage is as important to the consumers as to the producers. It is of more importance to the state than to the owner of the land that the fertility of the soil should be conserved. The owner will die probably within 50 years and he may expect the soil to produce during his life-time even if he abuses it. But the state must take thought for 1,000 years ahead."

To the average farmer in Michigan the present discussion as to the relative merits of linking the university with the college for the educational benefits which will be derived are not exactly clear, nor are they to us. But that some change must be worked out, however, was made apparent by the recent turmoil, and The Business Farmer is determined that politics must be taken out of the control of this college. If in doing so and to bring the college up to its former high standing it is advisable to co-ordinate its work with that of the university at Ann Arbor, well and good. This is a matter for practical educationalists to work out, and is certainly not one to be discussed by those who are not thoroughly familiar with present day educational methods.

This plan of co-ordination is, we understand, being carried out at Illinois, Iowa, New York, and in other important states with the same problems as Michigan. It should not be hard, therefore, to get the facts from these states and to apply them to the situation as is exists here. We are glad that Michigan has a man of Dean Davenport's ability and experience who will come out on so important a proposition and we commend to the Governor the highly valuable services of Dr. Davenport to guide him in this important discussion now under way.

HATS OFF H-F BREEDERS

OUR hats are off to the Holstein-Friesian breeders of the state of Michigan. Once again they have brought back to the peninsula state honors which places them in first position in the livestock development of Michigan. At Cleveland last week, at the Thirty-eighth Annual Meeting of the Holstein-Friesian Association of America, Dudley Waters, of Grand Rapids, paid $4,100 for Avon Pontiac Echo Lad, consigned by the Carnation Farms, whiles the Loeb Farms at Cheboygan sold a bull for $3,750. The buyers from Michigan carried off first honors in the number of cattle bought and the amount paid, buying forty animals, while Pennsylvania, the second state, bought thirty-three, and Ohio kept only seventeen of those offered.

Michigan was the birth-place of Holstein-Friesian popularity in the United States, and that we are going to maintain the lead in this important breed is proven by the business foresight of our breeders who bought last week.

How do you account for this, Mr. Pessimist? "I drove through five Michigan counties early last week and in my twenty-seven years among Michigan farms I never saw the farms better cultivated or in better condition! There may not be as many acres under cultivation this year, but there are more acres well cultivated!" The speaker was a man who is known to nine out of every ten farmers in Michigan by his first name.

Silos mean dairies. Dairies mean milk checks. Milk checks mean prosperity. Prosperity means more silos. More silos mean bigger dairies. Bigger dairies mean larger milk checks. And so on, ad finem!

Only two states in America have more silos than Michigan; Wisconsin and New York and the latter state leads us by so few silos that we imagine by this time, Michigan is second.

Every time the gasoline pump handle goes down, there ought to be two cents dropped into the good roads fund, at least most farmers think so!

PUBLISHER'S DESK

YOUNG ROOSTERS WANTED

$2 to $3 can be had for each young rooster you can spare. There is a poultry buyer near you who will gladly pay you these prices or more. All you have to do is to write the breed you have, being sure to state how many young roosters you can spare in first letter. George Beuoy, Poultry Expert, Kansas.

A READER kindly called my attention to the advertisement above which is appearing in some of the farm papers and wanted to know what I thought of it. Well, I will bet my last summer's straw hat that there is a catch in this propositon somewhere! I have written Mr. Beuoy and asked him to send me his proposition because I am sure it would be interesting to a great many of our readers, who usually have more than enough roosters which they would be glad to dispose of at $2 or $3 each. I have not had a reply from this gentleman as yet. If his propositon is one which we ought to relay to our readers it will appear on this page in the next issue, otherwise we would not advise saving any of your cockerels for the high prices which he mentions.

ANOTHER SCHEME NAILED!

A READER wrote me from Milford about the middle of May asking about a concern in St. Louis, Missouri, which sold a complete stock of goods to supply a retail store, asking me to look them up, and find out if they were reliable, because he had the idea of putting all of his money into a store and retiring from the farm.

We had our St. Louis representative look up this concern, found that they had no place of business except a desk in the office of a medical specialist, and from every appearance the scheme looked like a fly-by-night. In a circular which we secured, we find that this company was asking 25% down in cash, the balance to be accepted in trade of land or other property. For sheer audacity their statement that "we will accept good property in exchange, but interest and taxes must be paid to date, and abstract showing a good title must be furnished," is just about the limit.

We hope we saved this one reader the nest-egg which he has accumulated in many years of hard work on a farm, and which he was thinking of putting into a retail business. We have no idea how much he expected to invest but it must have run into several thousand dollars.

It is surprising how green the fields at a distance look to some folks, and we intend to repeat and repeat over and over again to our readers of this page our timely warning not to enter into any contract, or agree to pay large sums of money to anyone until you have made a thorough investigation, and have convinced yourself of their honesty.

It is easy enough to get pictures of big buildings or printed matter which gives the appearance of a concern of large size. If people would take the time to make a trip to headquarters, size them up with their own eyes, they might find what our St. Louis representative found in this case; a desk tucked away in a corner of an office, and operated by a man whom the average farmer would not trust with a silver quarter if he came to his front door.

* * * *

Several readers have written recently regarding a coal company located near Owosso, and said to be selling stock to farmers in Michigan. I asked our friend, A. B. Cook, Master of the State Grange, who lives near Owosso, regarding this company, and he replies as follows: "I know very little about the Owosso Coal Company. I know that several companies have tried on that location and with small success seemingly. The officers are strangers to me. If any person takes seriously a promise of 2% a month from an unknown stock salesman, a guardian should at once be appointed or there will soon be nothing to guard."

CHASING RAINBOWS

In the April 14, 1923, Business Farmer, I saw an article about the "Anneka Jan Bougardus" estate. There is also a similar estate in Holland from the same person. Can you tell me where I can write concerning the estate. My old grandmother who claimed and was taught to believe she was a direct heir. About 15 years ago she received a letter from a New York lawyer saying she was an heir and that they were sending in a dollar each to settle the estate. Tho I think that was just a scheme of some lawyer to get money. But it seems to me that grandmother's name must be on record of the lawyer would not have known where to write. My grandmother's parents came from somewhere near Elmira, New York. Any information will be gratefully received.—Mrs. S. W.

—This scheme for separating a large number of people from small sums of money is one of the most consistant forms of graft practiced in Europe. In England, where postal laws for some reason do not appear to be as strict, there are publications which devote columns of space to small advertisements for "Lost Heirs," most of which are plainly fraudulent. We repeat our warning to send no lawyer money who offers to prove your claim to a lost estate, at least until you have talked with a good local attorney in whom you have confidence. A recent estate consisted of most of the property on which Wall Street and lower Broadway, are built! The title to most valuable property has long ago been proven.

The Week's Editorial

THE FARMER: RICH OR POOR?

IF the debate between Mr. Borah and Lloyd George falls through, an interesting substitute might be a forensic fight to the finish between Senators Capper and Curtis on the subject of rural prosperity in Kansas. After a tour of the West, Senator Curtis, in company with colleagues, has returned to Washington to say that the people of Kansas particularly are interested at the moment in nothing but their own prosperity.

He intimates that when such matters as foreign relations and American entry into the World Court are mentioned back home a blank, dull expression crosses the Kansan's face and no intelligible reply is forthcoming. Senator Curtis avers that this fellow has his own little troubles, but that just now he is more intent on the close cooperation of a plow with the sod than on national contact with the world.

What makes this report interesting is that the reporter comes from the home of the farmer's professional mourner. Mr. Capper is the defender of the farmer on the way to crucifixion. He thinks up stays of sentence in the shape of rural credit and so on. Whether he believes it or not he gives the impression that the wolf's breath is always hot on the farmer's neck and that only men like Mr. Capper stand between him and bankruptcy and predatory forces. Senator Curtis says the Kansas farmer is going big. This is heresy in the Capper scheme of things, for no farmer must succeed in that philosophy, no farmer but is imposed upon by bankers and other powerful influences, no farmer who isn't losing money with marked precision year after year.

The matter should be threshed out between these men. The country doesn't want to go into such proposals as the one that the Government be selling agents for his crops, nor cut up his meet and dress him and tie his tie, if he is so devoted to considering his own prosperity that he has dismissed national affairs from mind.—Detroit News.

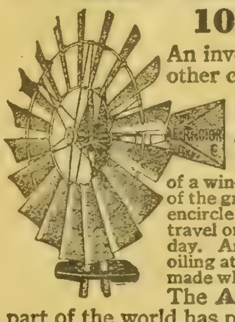
4 TIMES Around the World with ONE OILING
100,000 Miles Without Stopping for Oil



An inventor who could develop an automobile, a railroad car or any other conveyance on wheels which would perform such a feat would be considered a wonder. But such is the record of regular accomplishment by the Auto-oiled Aermotor during the past eight years in pumping water.

Did you ever stop to think how many revolutions the wheel of a windmill makes? If the wheel of an Aermotor should roll along the surface of the ground at the same speed that it makes when pumping water it would encircle the world in 90 days, or would go four times around in a year. It would travel on an average 275 miles per day or about 30 miles per hour for 9 hours each day. An automobile which keeps up that pace day after day needs a thorough oiling at least once a week. Isn't it marvelous, then, that a windmill has been made which will go 50 times as long as the best automobile with one oiling?

The **Auto-oiled Aermotor** after 8 full years of service in every part of the world has proven its ability to run and give the most reliable service with one oiling a year. The double gears, and all moving parts, are entirely enclosed and flooded with oil all the time. It gives more service with less attention than any other piece of machinery on the farm. To get everlasting wind-mill satisfaction buy the Auto-oiled Aermotor, the most efficient windmill that has ever been made.

For full information write AERMOTOR CO. Chicago Kansas City Dallas Minneapolis Des Moines Oakland

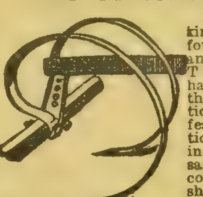
MONEY TO LOAN

On the 33-Year Government Amortization Plan to desirable borrowers who own good, well-managed farms in Michigan and Ohio, and wish to borrow not over 50% of the value of their land plus 20% of the appraised value of the buildings.

No commissions—Low interest rates. No stock investment. Unusually prompt and satisfactory service. If your loan will meet these requirements, write us.

FIRST JOINT STOCK LAND BANK OF CLEVELAND
Guardian Building, Cleveland, Ohio

ALL AROUND SATISFACTION FOR ANY CULTIVATION PURPOSE



It's through the right kind of cultivation that foul growths are kept down and can be eradicated. THE KOVAR DIGGER has opened the field for the right kind of cultivation and having exclusive features, will give satisfaction which no other machine will produce. Thousands of farmers have been convinced and we want to show you. Write for free booklet on land cultivation and how to work foul growths. KOVAR has the most successful Spring Tooth Corn Cultivator, also Harrow Cart. Write for further information and prices.

THE COUNTRY DOCTOR

By Anne Campbell

THE neighbors often saw his rig go by,
When dawn first painted pictures in the sky.
"There's sickness down at Stirling's place," they said,
Or "Guess the doc's been dressin' Andy's head."
And sometimes they would see him ridin' past,
An' leave their buckwheat cakes to run an' ast,
"Hey, doc, is Mrs. Hillock doin' right,
An' did you bring a girl or boy last night?"
The dear ol' doc's fine face would beam with joy
As he pronounced the tidin's, "Its a boy!
Just what they wanted, Bill,—an' doin' fine!"
An' then he'd go a joggin' down the line.

A sorta drawlin' voice he had, but kind;
A kinder man you'd almost never find.
Not much on bookkeepin,' his bills piled high.
He allus meant to send 'em by an' by,
But never bothered much. When crops were good,
He knew he'd get his money as he should,
Or if the price o' beel was up, he 'llowed
He'd get his office ready for a crowd.

Still doctorin' he is, where I was born,
But now I s'pose he sounds a motor horn.
Time's mebbe changed the buggy to a car,
But he himself's as changless as a star.
Still ridin' through the quiet country lanes,
A-healin' souls, as well as aches an' pains!—Detroit News.

—I am sure a goodly number of my readers will remember Ann Campbell Stark, when she so excellently piloted the editorial destinies of this very page. Some of her first poems appeared exclusively in The Business Farmer and marked the beginning of her popularity with the verse-loving public. Her poems now appear daily in a large number of American newspapers, where they are eagerly awaited. Herself a typical American mother, Anne Campell's poems come from the very heart of the home, oftimes mingle a tear with a chuckle; and are as tender and pure as her own three babies whom she adores.

CANNING CLUB WORK

Barbara Van Heulen, Assistant State Club Leader

EVERY girl is a potential homemaker. As such she should hold as her ideal, perfection in every phase of home-making. Much concerning the standards of the housekeeper is told by a peep into her canning and preserving cupboard, for well filled shelves indicate not only a general pride in all phases of household duties, but a regard for the health and consequent happiness of the family. The canning club offers to a girl the double opportunity to learn this type of home work in a pleasurable and scientific way, and at the same time to relieve her mother of some of the busy season's duties.

Canning, drying and brining are the principal methods resorted to in the preservation of food stuffs; of these, canning is the most desirable, for it keeps the products in a condition more like that of food freshly cooked, and furthermore, ready to be served on short notice.

The One-Period Cold-Pack method of canning, which is considered the best and safest for all meats, vegetables and fruits, is outlined in the bulletin for the use of the canning club members. In this process the products are sterilized in the closed jar, thus retaining their original flavor and form.

—I might add that the canning clubs are doing wonderful work and if any of our younger readers are interested, for further details write to me and I will send you one of these bulletins and you can read of the work that is being carried on for our mutual benefit in our own state.

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS: The Fourth of July is here with us once more and I am wondering if it would not be a splendid plan to use this day for a family gathering. Make it a co-operative affair so that all the burden and expense does not fall upon the one family. Maybe all the children could plan and return to the old follks with food prepared and altho we want a sane and safe Fourth, if there are any little ones it almost seems right to have a few of the pretty lights for the evening entertainment. Some one member of the family can go to town and buy just a few of these. The Fourth of July means a great deal to a real thinking American citizen and I know it will be impressed upon our minds during these adjusting years It is not a solemn day but should be one of rejoicing and hilarious but sane fun.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

THE USES OF VEGETABLES IN THE DIET

VEGETABLES, as well as milk, are listed as "protective" foods necessary to health.

First, vegetables constitute our main mineral supply for they contain many mineral salts such as iron, calcium and phosphorus, which are needed by the bones, muscles, nerves and blood.

Second, many of them contain vitamins which promote growth, protect us against such diseases as scurvy and some nerve disorders, and which help to prevent general malnutrition.

Third, the cell walls of the vegetable are bulky, and they increase our bodily efficiency by the laxative action which they induce.

Spinach, turnip tops, young carrots and tomatoes rank high among the vegetables, for canned as well as dried fresh, they fill some essential diet requirements.

THE USES OF FRUITS IN THE DIET

HAND in hand with vegetables in our diet plans go fruits. They yield mineral salts for proper functioning of the blood, and their acids stimulate the digestion of the rest of our food. Their color lends attractiveness to the meal, and they make ideal simple desserts.

Since vegetables and fruits are so necessary to our diet needs, we should so plan our meals that we have at least some fruit and a generous serving of vegetables other than potatoes, at least once a day. Furthermore, since it is not economical to buy fresh products throughout the year, we must try to can, dry or otherwise preserve them preceding the eight months during which the high prices prevail.

CANNING EQUIPMENT

1. Hot Water-Bath Outfit: A home-made outfit may be made by using a washboiler, a new garbage pail, a lard pail, a tin pail or any other receptacle with a tight fitting cover, deep enough to permit the water to stand at least one inch over the top of the jars. A false bottom or rack should be made to fit the canner. This should be so constructed as to permit free circulation of water beneath the jars. It should keep the jars one inch from the bottom of the canner. For a wash-boiler, the simplest rack is made of strips of lath with a cleat nailed across the under side of each end. Attaching a small piece of iron will aid materially in weighing down the wooden frame. For round corners a false bottom may be made by punching holes in an ordinary tin kettle or cake tin.

Avoid using straw or towels in the bottom, which will not permit water to circulate under jars. In using this type of canner the water should be heated before the filled jars are put in place. If the cover for your canner does not fit tightly, place a cloth over the canner and press the cover over this. If the water boils away during the processing, replace with boiling water.

2. Steamers: Any steamer which maintains a temperature equal to that of boiling water may successfully be used as a canner, Be sure that the steamer is practically air tight and allows no escape of steam, otherwise too low temperature will result. These cookers do not exert pressure. Therefore the time for processing products in these cookers is the same as that required for hot water bath outfits, and the processing time is counted FROM THE TIME THE LIQUID BOILS IN THE JARS.

ANTS

ANTS are attracted by various foods substances, especially fats and sugars; therefore, these foods should be kept in closed containers and crumbs or small amounts spilled on shelves or tables cleaned off at once.

The most effective way of ridding a house of ants is to find and destroy the nest by treating it with carbon bisulphid, benzine, gasoline or kerosene, or, if the nest itself cannot be found, often times the ants may be traced to the opening or crack through which they enter. Squirting kerosene into it or plugging it with cotton saturated with the oil will in many cases drive them away.

A temporary expedient for controlling ants is to moisten small sponges with sweatened water and place them where the ants are most numerous. Attracted by the sugar they will crawl into the sponge and may be killed by dropping into boiling water. The sponges should be baited again with the sweetened water, and if necessary, set in different places until the colony leaves the house.

A move effective but also more dangerous method is to moisten the spongue with sirup made by dissolving one pound of sugar in one quart of hot water and adding 125 grains (about ¼ ounce) of arsenate of soda. Some of these ants apparently carry this poisoned liquid back to the nest and feed it to the others there, thus gradually killing the entire colony. This mixture must be used with the greatest of care, as it is poisonous to both human beings and domestic animals.

Mothers Problems

SUMMER SLEEP

SUMMER-TIME spelles vacation-time, rest-time, recreation-time. It should mean a glorious period of growth, of body-building. During the months of freedom from school, every child should prepare himself for the next period of study and confinement. Fall should find every child in better condition physically than when school closed for the long vacation.

But does fall find all the children "fit?" It does not. Hundreds of children return to school in September worn out and run down by their summer vacation.

What is the cause of this? Many, many times the answer is: "Insufficient sleep." Children require as much sleep in summer as in winter, but many, many are the children who do not get so much by from one to three hours. If much earlier rising is in order, why, the bed-time hour for the young, growing child should be set ahead. Daylight-saving, as practiced in certain communities, is very, very detrimental to the health of children, inasmuch as it robs them of the sleep their bodies demand.

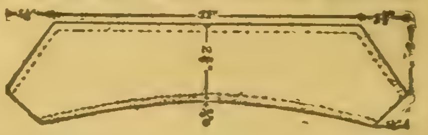
Real work and good, hard play are of great benefit to children, so long as the work is tempered to the strength of the child, and the hours of labor are not too long. If the future man and woman be considered, neither work nor play should be allowed to rob the child of the sleep Nature demands. For children under ten years of age, ten hours of sleep should be the minimum; after ten, nine hours are required for four or five years when eight hours a night will be sufficient.

Small children and nervous children should be required to take an afternoon nap during the summer when hot evenings may make it advisable to remain up after the regular bed-time hour.

Brilliant sunshine is enervating, so, also, are hot days. Sleep, and sleep alone can counteract the ill effectes of those two agents. If you value your children's health, see to it this summer that they have sufficient sleep.

Personal Column

A Cap for Large Ears—To whom it may concern: I have had a great deal of trouble getting something to hold the babys ears back. One of the twins grew up with big ears, the baby is 4 months old and has trouble with her ears. I tried many ways and then I saw an ear cap costing fifty cents. I got it but it did not fit so I copied it as close as I could and cut it to fit the baby's head, it works fine. The next one I'm going to lace in the back instead of sewing. I feel so good over it that I would like to pass the pattern on to some one in the same pickle I was in with my little boy.



He is six years old now and I am trying to fit him to a cap. I do not like to see children with big ears. The little cap inclosed fitted baby when she was two months old, now I have to add two inches on the top. I have a little stocking pattern I can pass along if wanted. They are all right for every day in the country. —Mrs. D. Mc.

Making Money at Home—My letter in May 12th issue, on hats and tams was fine and dandy. I should like to add a little more to it. Not all women are situated so they can sell such things on account of family ties and little ones at home. But if a woman is saving in all things, she can keep her money in her pocket. Many mothers have plush capes, velvet hats and coats hanging in clothes closets, which could be made into smaller coats and hats and tams, by ripping them up, brushing and steaming them. If neatly made they will do as well as new ones bought at a high price in the stores. And when her neighbors see how handy she is they will gladly let her make some of them for her at a fair price. Or I would do so or furnish the patterns for eight different designs of hats and tams at reasonable prices. If any mothers are interested and will send me a stamped envelope and full particulars I will gladly help them.—Mrs. G. W. Morgan.

THE WHITE LILY

O beautiful lily free from care,
Shedding your fragrance everywhere;
Tell me dear lily why you grow,
Tell me for I want to know.

I look with awe upon your stately form,
Fit to grace the halls of a nobleman born,
Your unspeakable glory reveves in me,
That wonderful presence, Divinity.

I know your secret dear lily fair,
That Omnipresence is everywhere,
Else you could not bear that royal grace,
And wear the beauty I see in your face.

Sacred lily I hold in my hand,
Your mission here I now understand,
Out of the depths of me now I know,
Wonderful lily why you grow.
—L. Baker.

Can washable flat finish wall paint be successfully applied over Alabastine? Would the Alabastine be apt to brush in with the paint or would it chip or peel off? I have several large rooms done with Alabastine and find it unsatisfactory as it soils so easily and cannot be washed. If I have to wash the Alabastine off before applying the flat finish it will mean several weeks of hard work, as the surfaces has to be gone over several times in order to remove all the finish—Mrs. V. C., Cass City.

—In regard to the use of oil paint over water tint on walls, if the tint is quite thin and is not peeling off at any place, I think you would be perfectly safe in putting oil paint on top of it. I happen to know of a case where a professional painter is putting two coats of oil paint over a very thin water tint. The removel of the tint is very laborious and if it is perfectly smooth it seems unnecessary.

For Burns—White of egg and olive oil, mix about half and half. This is very good for burns and prevents blisters and stops the burning.—C. J.

RECIPES

Hard Soap—3 pounds washing soda, 3 pounds lime and 7 pounds of clear grease. Put the lime and soda in six gallons of soft water. Let boil up good. Pour in tub and let settle over night. In morning pour off clear liquid in kettle, add grease and boil until it is about as thick as strained honey.—Sarah Beauchamp, St. Clair County, Michigan.

Cough Remedy—1 ounce peppermint, 1 ounce chloroform, 1 ounce oil of onions, 2 cups molasses and ½ cup water. Put all in a basin and stir until well mixed. Put in bottles. Cork tight and shake well before taking. This has cured horses of distemper.—Sarah Beauchamp, St. Clair County, Michigan.

Dill Pickles—Wash the cucumbers and let lay in water over night. In the morning pack in glass jars, and put one teaspoon of dill seed to each quart. Pour over brine made as follows: 3 quarts water, 1 quart vinegar and 1 large cup of salt. Boil all together and while hot, pour over the pickles and seal the jars. —Mrs. Agness Allen.

Rhubarb Conserve—4 pounds of rhubarb, 5 pounds of sugar, 1 pound seeded raisins, 2 oranges and 1 lemon. Wash and pull stalks of rhubarb and cut in one inch pieces. Put in kettle, sprinkle with sugar and add raisins and lemon. Mix, cover and let stand one hour. Place on range, bring to boiling point and let simmer forty-five minutes, stirring almost continuously. Fill jelly glasses with mixture, cool and seal.—M. S., Macomb County, Michigan.

Strawberry Short Cake—3 cupfuls flour, ½ cupful of butter or lard, ½ teaspoon baking powder, 1 egg, 2 tablespoonfuls sugar, 1 cupful milk, 1½ pints strawberries and 1 cupful whipped cream. Sift the flour with the baking powder, salt and sugar, then mix the butter or lard with a fork or tips of finger; add egg, well beaten and milk. The dough should be a soft one. Roll in two layers, spread in two greased pans and bake in a hot oven until light brown color. Mash and sweeten one cupful of the strawberries, put on one layer, then place second layer on top. Sweeten remainder of strawberries, spread on top layer and cover with the whipped cream. Decorate with whole ripe strawberries.

Pan Cakes—1 teaspoon butter, 1 teaspoon sugar, one egg, one cup sour milk, ½ teaspoon soda in milk, 1 cup sifted flour, ½ teaspoon baking powder. Mix dry ingredients except soda. Dissolve soda in milk. Add to dry mixture and then melted butter and beaten egg.—C. J.

The Runner's Bible

God is love (1 John 4:16) He that dwelleth in love dwelleth in God, and God in him. Devine Love has one infallible sign, it works good in every way upon all. It does not rob one to bless another, but "in blessing one it blesses all."

For I am persuaded, that neither death, nor life, nor angles, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate us from the love of God, which is Christ Jesus, our Lord. (Rom. 8:38-39.)

—if you are well bred!

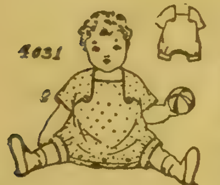
Dress—For Morning Wear: A simple wash dress in summer; one-piece wool in winter.

For Afternoon: Light voile, organdy or crepe in summer, dark silk or woolen in winter.

For Parties or Dances: Silk, chiffon or organdy; simple in style.

For Outdoor Sports: Separate skirt of wash goods, homespun or flannel with blouse or sweater.

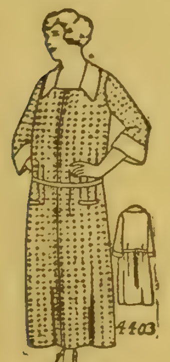
AIDS TO GOOD DRESSING



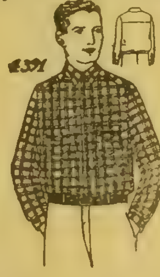
4031

For Our Baby—The simplest kind of clothes are the best kind in summer for the baby. The little one-piece jumpers for the children cannot be equaled in any other kind of garment to play in. The one in this issue is splendid made out of any good, strong, washable material in colors. Sleeves are very short in the summer dresses for the younger girl and lots of ruffling and plaiting. Lace is used a great deal in the large surplice collars on the young girls' dress.

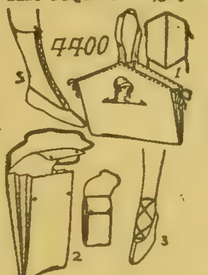
4031. A Comfortable Play Frock—The good features of this style is readily apparent. It may be attractively developed in percale with bindings of a contrasting color, or in chambray, pongee or crepe. The Pattern is cut in 3 Sizes: 6 mos., 1 year and 2 years. A 1 year size requires 2⅛ yards of 36 in. material.



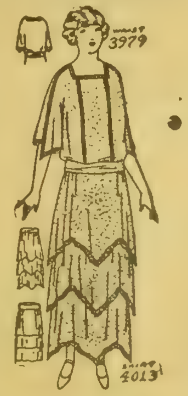
4403



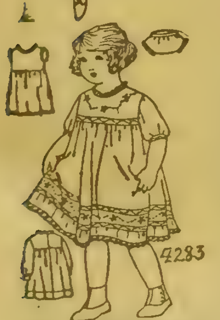
4391



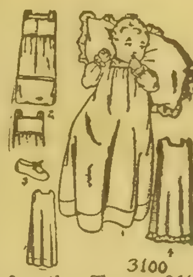
4400



3979
4013



4283



3100

4403. A Simple Comfortable House Dress—Figured percale and linene are here combined. This is a good style for gingham, voile or chambrey. The closing is under the tucks at the centre front.

The Pattern is cut in 7 Sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38 inch size requires 5 yards of 32 inch material. The width at the foot is 2 yards.

4391. A Popular, Practical Model—This style has good and comfortable lines. The closing is in coat style. Madras, gingham, jean, drill or flannel could be used for this model.

The Pattern is cut in 9 Sizes: neck measure: 14, 14½, 15, 15½, 16, 16½, 17, 17½ and 18 inches. A 15 inch size requires 4⅛ yards of 27 inch material.

4400. A Group of Bathing Accessories—Here is a good model for bathing shoes in either of two lengths, and a set of bags to hold a bathing suit. The shoes may be made of drill, satin, chamoisette or rubberized cloth. The bags also are good for the same materials.

The Pattern is cut in One Size for the Bags—and in 4 Sizes for the Shoes—3½, 4½, 5½ and 6½. The shoes will require ½ yard, 36 inches wide for one pair, size 4½. Bag No. 1 will require ¾ yard and Bag No. 2, ½ yard of 36 in. material.

3979-4013. A Frivolous Frock for Summer Weather—Charmingly youthful and with all up to date is this cool looking "flounced" dress. The skirt may be cut in pointed or straight outline. Dotted Swiss with bands of "Val" lace is here depicted. The new tub silks or foulard would be equally suitable. Organdy with hemstitching or crepe de chine with fagotting or drawn work, would be very pleasing. The waist Pattern 3979 is cut in 7 Sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. The Skirt Pattern 4013 is cut in 7 Sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. The foundation of the skirt could be of lining, and would require 1¾ yard, 32 inches wide. To make the dress for a medium size as shown in the large view, requires 9¼ yards of 32 inch material. The width at lower edge of the lower flounce is about 2½ yards.

4283. A Dainty Set for the "Little Girls" Wardrobe—This comprises a neat yoke dress that may be finished with or without the rufle, and a petticoat and comfortable drawers. One may use voile, lawn, batiste or crepe for the dress and cambric or nainsook for petticoat and drawers. It will require 1⅝ yard for the Dress, ⅝ yard for the Drawers, and 1⅛ yard for the Petticoat, of 36 inch material for a 2 year size. The Pattern is cut in 4 Sizes: 6 months to 1 year, 1, 2, 3, and 4 years.

3100—A Practical Set of Infants Clothes—This Pattern is cut in one size. It comprises a Dress, a Petticoat, a Barrie-coat or Pinning Blanket and a Slipper. Muslin, lawn, cambric, batiste, nainsook and silk are suitable for the Dress. The Petticoat may be cambric or lawn. The Barrie of flannel or flannelette with band of cambric or muslin. The slipper of kid, satin, suede, felt or eiderdown. It will require 2⅜ yards of 36 inch material for the Dress, 2¼ yards of 27 inch material for the Petticoat with 2 yards of embroidery for the ruffle. The Slippers will require ⅜ yard of 18 inch material and the Barrie-coat ⅜ yard of 27 inch material for Band, and 1 yard 40 inches wide for the Skirt.

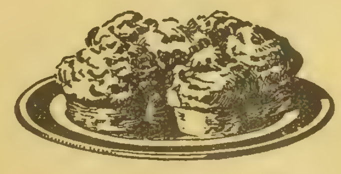
Lily White

"The Flour the Best Cooks Use"

Bakes Appetizing Breads

Foremost among the characteristics of a quality flour is its ability to produce breads of good eating qualities. Unless a bread has good flavor it will not be liked no matter how meritorious it may be otherwise.

One of the outstanding features of all breads baked with Lily White is the flavor. In addition to that Lily White breads are clean and wholesome. They have the right color, the right texture. These claims are not only based on fact but are actually existing in the bread. Try a sack the next time you bake and you will learn the difference between just ordinary flour and Lily White Flour.



Popovers made with Lily White

Our Guarantee

We Guarantee you will like Lily White Flour, "the flour the best cooks use" better than any flour you ever used for every requirement of home baking.

If for any reason whatsoever you do not, your dealer will refund the purchase price. He is so instructed.

If Ruptured
Try This Free

Apply it to Any Rupture, Old or Recent, Large or Small and You are on the Road That Has Convinced Thousands

Sent Free to Prove This

Anyone ruptured, man, woman or child, should write at once to W. S. Rice, 408B Main St., Adams, N. Y., for a free trial of his wonderful stimulating application. Just put it on the rupture and the muscles begin to tighten; they begin to bind together so that the opening closes naturally and the need of a support or truss or appliance is then done away with. Don't neglect to send for this free trial. Even if your rupture doesn't bother you what is the use of wearing supports all your life? Why suffer this nuisance? Why run the risk of gangrene and such dangers from a small and innocent little rupture, the kind that has thrown thousands on the operating table? A host of men and women are daily running such risks just because their ruptures do not hurt nor prevent them from getting around. Write at once for this free trial, as it is certainly a wonderful thing and has aided in the cure of ruptures that were as big as a man's two fists. Try and write at once, using the coupon below.

The Children's Hour

A WEDDING!

DEAR UNCLE NED:—Last September or October Ilah Hemminger sent a letter to the Children's Hour and you printed it. She asked the boys and girls to write to her. She hardly expected to hear from anyone but in a few days the letters began to come. She received some very nice letters from girls and boys in different parts of the state. A young man from Detroit wrote thanking her for her nice letter he had read in the M. B. F. She answered and they continued to write and at Thanksgiving time he came to see her and at several other times, and the pleasant friendship grew into a beautiful love that culminated in their marriage Saturday, May 19.

They often spoke of "Uncle Ned" and that they must write and tell him all about it and thank him, but I am afraid they are too happy now to remember to write and thank you so I will do it for them. For I thought you would like to know of the happiness you have brought into the lives of these two young people.

When the young man in the city read the little country girl's letter a strange new lonliness possessed him and he longed to visit the girl on the farm and share with her the beautiful out of doors with its birds and butterflies and wild flowers she loved so well.

I have often read that love transforms the features and makes a woman beautiful, and I am sure you would be very glad you printed that letter that made it possible for these two very young people to meet, if you could have looked upon the sweet face of this little bride made beautiful by a great love. Sending you their thanks and best wishes, I am sincerely Mary A. Johnson Blanchard, Michigan.

—Just like in fairytales, isn't it, girls and boys? She wrote a letter to the Children's Hour little thinking that it would be read and answered by her "Prince Charming." And he replied, choosing her letter from the many on the page, without the slightest idea undoubtedly that within one year she would become his wife, his queen. I am glad to know of the union of this couple and the part that Uncle Ned and the Children's Hour played in bringing it about. May their love for each other grow as the years pass.

Dear Uncle Ned:—I have written once or twice before. I don't know whether you remember me or not. I am writing to let you all know that we are back to Michigan and how glad we all are. It is surely better than New York state. We have a very nice place to live. It is about seven miles from Flint, and five miles from Davison. I received eight letters in answer to the one which I wrote the last time, and I surely enjoyed them all. I will close with a riddle: What time is it when you wake up in the middle of the night and scratch your head? Your friend, Miss Fairy Dunkles, R. No. 2, Davison, Michigan.
—So you like Michigan better than you do New York. Most of us think Michigan is the best state in the Union, I guess; I know I do. Please write and tell us about your trip. I am sure you have an interesting story to tell.

Dear Uncle Ned:—May I join your merry circle? I just read the Children's Hour and saw that few boys had written recently to you so I thought that I would write a little letter. My mother and brother James went to the show and my other two brothers went to the store and I had to watch the smaller children at home. I have 6 brothers. My father said all he wants is two more and he will have a ball team. I have two sisters, one is seven and one is married and has a baby boy. Our school was out today and we didn't have any school for two days because they are moving the school house fifty rods, because we are going to have a new school house next year. It is going to be made out of brick. It is going to have six rooms in it. Now I will describe myself. I am 5 feet and 2 inches tall and weigh 107 pounds, and I am 15 years old on March 2, 1924. Have I a twin? If I have one please write to me. I live on a farm of 40 acres. We have 3 horses, 4 pigs, 7 cows, 5 calves and 50 chickens, and we have a nice orchard. My dad and my oldest brother are working out and I have to do the farm work. Tomorrow I am going to drag the cornfield and then disc. The best job on the farm is milking. My sister and three brothers are playing on the coucg. They make a lot of noise. Say, Uncle Ned, I will get a picture of Alabaster Quarry and send it to you and show you how our big quarry looks. If I have a twin brother please write and I will be glad to answer your letter. Well, I saw a lot of riddles in the Children's Hour so I will put one in. 12 pans hanging high, 12 princes riding by, each took one, how many hung? There is a girl who wants us to send as many riddles as we can so I will put in a few more and some more the next time. Well, girls and boys the one that guesses the most answers will receive a present. What goes in the water and out of the water and never gets wet? What goes around the house and only makes one track? What is round as an apple and as deep as a cup, the thing in the middle goes flippity flop What is three cornered, square, black as a bear, guess this riddle or I will pull your hair. That's a pretty hard job to pull your hair because I won't be able to catch you. Well I think I'll close with this riddle. What has a long neck and no head? Will close for this time. Your new member,—Harry Rescoe, Box 151, Alabaster, Michigan.
—You are right, Harry, I haven't received many letters from boys during the past few weeks. Must be the boys are too busy with school and work about the farm to write. I hope that your letter gets them to writing again. I should like to see a picture of the quarry so be sure to send me one.

Dear Uncle Ned:—I would like to join your merry circle. I like to read the Children's Hour very much. I am to be 16 years old the 31st of July. I have dark bobbed hair, and brown eyes. We live on a farm of 163 acres. We have 6 cows to milk and I have to help. Our farm is two miles from town. For pets I have a pigeon, kitten, and two rabbits. I like pets. Don't you, Uncle Ned? With love,—Margaret Jackowiak, R. 3, Sherwood, Michigan.
—Yes indeed, I do like pets and I always have some about my home. But I do not like to milk cows. That is one thing I must confess I do not like about farming.

My Dear Uncle Ned—I wrote to you some time ago and thought I would like to see my letter in print again. Was down to Alpena, (that's a city about twenty miles from here) to write on the eighth grade examination, the 17th, and 18th of May, and wasn't I surprised when I found out that I had passed. Our graduation exercises are this month. My sister and her husband are going to take me with them for a trip to Utica, for a week. Won't that be nice? I will write and tell you all about it when I get back. Do you like to live in the country, Uncle Ned? I have always lived in the country but will have to go to the city on account of school. I think the answer to Esther E. Thaut's riddle is an automobile. Is it right, Esther? Uncle Ned and cousins, I wish you could see our orchard. The trees are all in bloom and everything so pretty. We have fifty trees in our orchard. Lovingly your niece,—Eleanor D. L. Stovel, Hubbard Lake, Michigan.
—Now do not forget, Eleanor, we will be expecting to hear from you as soon as you get back from New York State. Yes I like to live in the country. And I would not live in a big city unless the welfare of my loved ones or myself depended upon it.

Dear Uncle Ned:—May I join your merry circle? I am a reader of the M. B. F. and like it very much. I wrote a letter some time ago and saw it in print so I thought I would try it again. I received about 26 letters and I did not get to answer them all. Well, Spring is here with her sunny days and birds. It seems good to see the birds again after such a long winter. Don't you think so, too? Well I will describe myself. I am five feet tall, have dark brown eyes and hair, and am 14 years old. I live on a farm 9 miles from Cadillac and like the farm pretty well but I lived in town for 10 years and would like to go back. My birthday is the 12th of October. Have I a twin? Well I think I have taken up enough space so will close, hoping everyone is enjoying the Spring. From Rosalie Dupaw, R. No. 2, Cadillac, Michigan.
—I enjoy winter but I too like to see spring come and the birds return. I also like summer and fall, as all of the seasons are beautiful in their own way. I would not care to live where it was summer the year around or winter the entire 12 months, would you?

CHANGING TIMES

By JOHN T. BARTLETT

FARM OBSERVANCE OF HOLIDAY

IN OLD-TIME, rural America—not so very old-time, either—the almanac neglected to give two genuine, thoroughly observed holidays, and punctiliously made note of several which often had little holiday significance. Two holidays universally embarked on in true holiday spirit were Circus Day, and Country Fair. Those were red-letter days!

You have heard present-day fathers, instructing children in the real size of their blessings, tell of old-time Christmases, Fourth-of-July's, birthdays. In the old-time rural America, Christmases were often barren of giving, and Independence days barren of much exploding of fireworks. It was the town which developed the giving-at-Christmas habit. It was the town which put pep in the fireworks trade.

The farm did forget itself on Circus Day and Country Fair Day. Then, to use language of the youthful element of today, it "dolled up." To use expressive language of years ago, it "shelled out."

This is changing, and it is right that it should. Occasionally, on a Fourth of July nowadays, you see rockets blazing into the rural sky. Farm boys, too, are good customers of the fireworks department. There is vastly more giving at Christmas.

The size of a cent has grown smaller, physically and in the eyes of farm folks. There is room for celebration of holidays, while still farming the farm as it should be farmed, while still thriftily having regard for the future.

We have a neighbor who takes a half holiday each week in summer to play baseball. And he farms a first-class farm in a first-class way. He says he can work much harder through the week, get far more done, with that weekly ball game ahead of him.

The money and time which real holidays cost buys cheaply the mental and physical relaxation. And farmers need the latter just as much as anyone—who won't say, more?

1870 FARM BUSINESS KNOWLEDGE, AND TODAY'S

VISITING with friends in the next county last week, we were given an unexpected treat. At the request of our host, one of the children hied to the attic, and returned shortly with several bulky files of periodicals — farmpapers of fifty years ago. The big difference in editorial contents immediately obtruded on the attention—articles were chiefly on the cultural side of farming, field methods, animal husbandry. There was little about farm business methods.

In 1923, and the same has been true for several years, farmpapers give a great deal of attention to business aspects of farming. As time goes on, it can readily be foreseen, farmpapers will give still greater attention to farm business methods. Farmpapers will become more and more business papers.

There is a reason for this—not the commonly accepted reason. It is flattering for us to believe that the race of farmers has evolved greatly in the past fifty years, and farmers of fifty years ago used business methods with whiskers on them.

The fact of the matter is that average farm business knowledge of fifty years ago met current requirements very well, indeed. In thinking most about cultural methods, the farmer showed himself a good business man. Distribution in those days was a simple, uncomplicated problem. Implements of production were few and simple.

Just as the profitable operation of a department store is far more complex than the profitable operation of a peanut stand, though both are businesses, so the profitable operation of a modern farm is far more complex than the profitable operation of an 1870 farm. Consumption of farm products in markets hundreds of miles from their source; big cities; specialized farming; heavy capital investments in land and equipment—these are changed conditions produced by underlying economic trends. They have raised the farm from a simple business enterprise to one demanding a far greater order of business ability.

FARM MECHANICS

CEMENT TILE

What do you think of cement tile? Will they last if they are made right? I heard some say the acid in the ground destroys the cement and the tile will crumble.—J. S., Rhodes, Michigan.

—Many cement tile made several years ago failed under certain conditions, those which we have examined were laid in muck and sometimes in sandy ground. Some studies which we have made of the action of acid and water in the tile seem to indicate that the breaking or disintegrating of the tile is due partly to the passage of water through the walls of the tile as well as any acid which might be present.

We have, therefore, come to the conclusion that cement, tile, to be satisfactory, should be made watertight and this is possible with careful methods of manufacture. Tile of this kind, I am confident, will stand up under ordinary conditions of soil, but I think time is necessary to determine whether they can be adapted to muck and sandy soil.

We do not recommend that you attempt to manufacture your own tile, there are so many possible ways in which failure may occur would be so expensive of time as well as material so that it would scarcely be a profitable adventure, if your own time was considered of any value.—H. H. Musselman, Prof. of Farm Mechanics, M. A. C.

PIONEER HELPS NEW SETTLERS

(Continued from Page 4)

down or up, just as you choose to grade him, who did not land here busted, or with borrowed capital. Opportunity attracted them also.

With many early settlers, a bread and butter job came first in pineries and cedar swamp. Only pine and cedar were salable forest commodities; beautiful hardwood tracts were hardly salable during the pine age and went begging. However, many hardwood homesteads were taken up by camp followers and others with the idea of making the timber crop pay the expense of building the farm, but only in rare instances did the returns equal the wage of the lumberjack. In the eyes of the lumberjack the moseback settler was looked down upon with pity. Acres and acres of as fine hardwood as ever grew were purposely destroyed by fire to make way for field crops.

At this writing, the vast belts of hardwood which extended along the Huron shore from Bay City to Machinac broken only by stretches of plains land is no more. Gone with the carrier pigeon and the dodo. In its place, however, many fertile fields are yielding a variety of products, surpassed in volume per acre and quality by no section of Michigan, notwithstanding the dismal picture drawn of present conditions, and of future prospects of the round-shouldered, low-browed man with the hoe, swill pail and milking machine, in the upper part of Michigan by Russell Watson, Assistant Professor, University of Michigan, in his otherwise laudable plea in behalf of reforestation.

'Tis true, in the early days many well meaning settlers attempted to establish farms on the pine barrens because of the easier clearing, rather than face the task of subduing green hardwood land, notwithstanding virgin hardwood tracts could be homesteaded or acquired by direct purchase at prices ranging from two to five dollars per acre. It is mostly of these deserted plains farms we are now reading columns and columns about. Gee! How chronic kickers, who just naturally want to believe that the whole upper Lower Michigan is one barren waste, must gloat to read half facts, unfortunately emanating from such high authority to the detriment of our farm communities, as if our rose bushes grew only thorns.

With heavy marketing tolls, shanghaied by padded prices for his every purchase, with major farm crops representing in exchange value around thirty-five cents per dollar, handicapped by a custom that permits the Liverpool quotations for his exported surplus to govern the selling price in his home market, plus cartage, why in Sam Hill expect the farmer to look like a million dollars, even in the slashings of northern Michigan? As well damn the bird with the clipped wing for being unable to soar with the eagle. To aggrevate the situation, our cheap home grown labor is no longer secure. Just as soon as our boys grow into long pants and the girls grow into short skirts, they fly the nest for the hives of industry. The lure is even reaching the college professors.

Notwithstanding 57 varieties of draw backs in the farm game, the world must be fed and crops go in as usual, and when depression lays off the boys, those who are fortunate to have a dad on a farm in northeastern Michigan will beat it back to the old man's well-filled pork barrel and chicken coop, and they usually arrive busted.

In reading of northern Michigan's barren wastes, just remember there are progressive farming communities along the Huron shore from Bay City to Mackinac, and room for more desirable settlers.

You will pass red clover fields such as many sections in lower Michigan cannot grow dependably. Here too, alfalfa and sweet clover, Michigan's salvation, find a natural home, no hit or miss crop.

Where this great trio of soil builders, bone and muscle makers, can be depended upon year after year, let no pessimist tell you northeastern Michigan has no agricultural future.

OUR NATIONAL SAFEGUARD

(Continued from Page 9)

place from the winds." That man who shall drive the money-changers from the temples, and force political liars, crafty diplomats, and social looters into "in the sweat of thy face shalt thou eat thy bread" line. God forgive us for this jazz civilization. "Vanity of vanities, saith the Preacher; all is vanity."

Doesn't it seem, friends, that justice seems harder to administer year by year? In the courts there are so many precedents, technicalities, evasions, that justice seems thwarted. The man who is best protected and who gets the most rights is the man with the biggest pocketbook. Dr. Brumbaugh, ex-governor of Pennsylvania, says, "In litigation in courts we shall never get justice; but only when men learn to settle their difficulties according to the eighteenth chapter of Matthew." This is the principle of arbitration put to use in the settlement of difficulties. And this is a most practical way to make the theory of Christianity fit these modern times. But when shall this principle become authorative? When men are willing to give up sinning and become honest, sincere, pure, and sympathetic, in a word, brotherly.

Even so, only personal regeneration will safeguard us. If our country is to be righteous, every man must become true and righteous. How our unclean lips need the touch of the coal off the altar! Our moral sensibilities are stunned at the crying evils about us of corruption, theft, and brazen defiance of law. But not by suffrage or ballot plus all the enactments of laws and the decisions of courts, can we enthrone a converted conscience in the heart of the nation. This only when men and women are willing to walk faithfully in the "old paths" of righteousness. The final strength of a country consists of the sum-total of character in its subjects.

Now, therefore, may I inject a new spirit into the forthcoming Independence Day by saying until we get right with God and love to pursue the Christian way, our nation will never be exalted.

"Our fathers' God, to thee,
  Author of liberty,
To Thee we sing:
  Long may our land be bright
With freedom's holy light;
Protect us by thy might,
  Great God, our King.

AMBITION

"You will never get anywhere unless you have higher ideals than this," preached the woman at whose door the tramp had applied for assistance. "Are you really content to spend your life walking around the country begging?"

"No, lady," answered Weary Willie. "Many's the time I've wished I had an auto."—The American Boy.

An Eastern judge declares that "women's dress is the calamity of the ages". He must have paid for a few.

MR. FARMER!
Mr. Dealer Mr. Jobber

IT Is THE BEST

THE PRICE IS RIGHT

Are you remembering in purchasing your binder twine that you have a factory of your own at Jackson?

It is making the best twine that can be placed on the market and has a mixture of fiber this year. Manila is added to the sisal to give extra strength.

The State Farm Bureau and other organizations and dealers of the state are in position to handle your twine. If they do not, write direct for prices as we want you to use your own twine as we make 14,000,000 lbs. more than Michigan can use.

Millions and Movies

THROUGH the medium of slender strips of celluloid an actor appears simultaneously on thousands of screens in as many different towns. On the same evening, he entertains great armies of film fans who eagerly pay their money to see his performance.

So the movie star commands a king's ransom for a salary, and a fortune is spent profitably, to provide a proper background for his art. The movie multiplies personality—and earning power.

Advertising does the same thing for a manufacturer. It takes his message into thousands of homes—to tell folks why they should have his goods and how to get them. Advertising endows him with a thousand voices with which to tell his story.

But the value of advertising is by no means confined to the advertiser. It has a very definite value to YOU.

A glance through the advertising pages enables you to sift out the things that interest you. Sitting in your easy chair you can compare values and prices. You can select merchandise of indisputed worth—for only GOOD goods can stand the test of advertising.

Yes, advertising pays you, and pays you big.

Read the advertisements

THIS CAR FREE

Nearly everyone else owns a car! Why not you? It is not a question of money. Your spare time for a few weeks, mixed with preseverance and "gumption," is all that is necessary to win this latest model Chevrolet Touring Car.

Or, if you already own a car, get a radio set, baby chicks, pure-bred fowls, poultry books, etc.

It is the official organ of the Michigan State Poultry Association that makes this offer and our reliability is unquestioned. Someone is bound to win the car—why not you. Send post card for details.

$10.00 PER DAY CASH

If you prefer cash, drop us a post card at once, and we will send you details of our new method that enables any honest energetic person to make $10 per day, or more.

This is our own method, which we have tested for the past 6 months, and we know it gives an agent 50 to 500% better chance to earn real money, than any other ever tried.

Free Pamphlet

"VITAMINES AND CHICKS"
by

Prof. E. C. Foreman, Head of the Poultry Dept. at Michigan Agricultural College.

The big feature of our May number is Prof. Foreman's "Vitamine" article, which announces the wonderful effect of Vitamine foods on Baby Chicks. He gives actual facts and illustrations of results almost miraculous when Vitamines were supplied. Luckily, these Vitamine foods are common to every household, and Prof. Foreman explains which ones to use.

Already the demand for this article has almost exhausted our May edition, so we reprinted it in pamphlet form which we will give free to readers of the "Business Farmer" who subscribe direct from this ad., at our special trial price of 50c per year. ORDER TODAY, before the pamphlets are exhausted.

DAIRY and LIVESTOCK

AN IDEAL CERTIFIED DAIRY FARM

THERE is a certified dairy farm near Rochester, New York, which is unique in the degree to which intensified dairy farming may be successfully carried on. The 41 grade cows, giving on the average of 2¾ gallons per day, are kept in the stable throughout the season. The farm consists of 220 acres, of which 45 acres are given over to silage corn, 50 acres to winter wheat, 35 acres to hay, and 15 acres to potatoes. There are 40 acres of woods, 5 of which are given over to pasture and there are 14 acres given over to rotated pasture. Silage and hay furnish the roughage during the summer, while grain is fed throughout the season. With the extreme intensity used it is not economical to raise an young stock, for every cow in the barn must be a producer. Under these conditions, grade cows are best adapted for as soon as there is a decline in her milk production the cow may be promptly sold without great loss. The equivalent of 3½ men is required to operate this dairy.

Dairy farmers who are interested in certified milk plants will find much to study at the National Dairy Exposition which takes place at Syracuse, New York, October 5th to 13th inclusive. The exhibit of the United States Department of Agriculture will occupy 7,500 sq. ft. Factory and machinery exhibits will be displayed on a floor space approximately 65,000 sq. ft., while 25,000 sq. ft. of floor space will be occupied by the exhibit of supplies and equipment for the dairy and barn.

An added feature of interest in the Exposition this year is the World's Dairy Congress which holds two days' sessions at Washington, October 2nd and 3rd, followed by a day at Philadelphia under the auspices of the National Dairy Council, then adjourning to Syracuse where the remaining sessions of the Congress will be held at the Exposition.

RAMSEY AND BAKER HEREFORD SALES

TWO most important Hereford sales were held week before last. One was held by Warner Ramsey of Atherton and the other by Robert Baker of St. Clair, both sales being conducted under the very able direction of T. F. B. Sotham and Sons. The Ramsey sale was held on Thursday, June 7th, and the offering was composed of 35 head of high quality Herefords. The high price paid was $260 and the lowest $85 After the sale there was a wienie roast and moving pictures at the Ramsey farm cottages on Lake Huron. Those who wished remained at the Ramsey farm throughout the night. Many did this and then drove to the Baker sale on Friday. There were 35 head sold at the Baker sale, $277.50 being the top paid and $60 the lowest. The attendance was only fair at both auctions but all were there to buy. At both places before the sales interesting and instructive talks were given by T. F. B. Sotham, Commissioner of Agriculture L. Whitney Watkins, Prof. George A. Brown head of the Department of Animal Husbandry, M. A. C., and Col. Fred Reppert, who cried the sales. Lunches of Earliripe beef were served at both places.

CREAM SHOULD TEST 35 PER CENT OR MORE

Will you please tell me at what testing point is there the most money in Cream for the farmer who does sell his cream to the creamery, and why? Some say when cream tests from 25 to 35 per cent there is the most in it for the farmer, others say from 35 to 50 per cent. I am very much interested and would like to know at exactly what point.—W. H. L., Belding, Mich.

—From a general standpoint it is decidedly in the farmer's favor to separate cream that tests 35 per cent or above. The reasons are as follows:

1st. The average separator will separate just as cleanly and deliver 35 per cent cream just as well as it will a lower per cent, but beyond this point there is likely to be more loss of butterfat in the skim milk.

2nd. It is better to separate cream at 35 per cent instead of lower because there is more skimmilk left on the farm.

3rd. There is not so many pounds to ship and to pay express or freight on. Then, too, we find that 35 per cent cream is a little better than a cream that only contains 20 per cent butter fat.—O. E. Reed, Professor of Dairy Husbandry, M. A. C.

SLIME IN CREAM SEPARATOR

I have some cows that have been fresh for some time. Milk seems all right only when I wash the separator it is so slimy can hardly get it out of the dishcloth. It goes through a strainer all right. What is the cause and is there a cure?—W. S., Morley, Mich.

—We get the idea that the milk is not slimy when drawn and the slime is difficult to remove from the separator. I know only a few things that could cause such conditions. First, that the separator bowl has been standing in the sun and is hot at the time the milk is run through or that the slime is allowed to dry on the bowl. In the case the milk is slimy before drawn, the cow is evidently suffering from some udded inflamation or the milk has become contaminated with the ropy milk organism. Be sure to scald the separator bowl thoroughly after washing and wash bowl after each separation. All utensils should be thoroughly scalded, especial care being given to the seams.—P. S. Lucas, Associate Professor of Dairy Manufactures, M. A. C.

VETERINARY DEPARTMENT

PIGS SEEM TO BE SUFFERING FROM ECZEMA

I am seeking information in regard to a litter of five pigs just two weeks old. They are growing nicely and apparently doing well with the exception of one thing. They seem to have a sort of eczema inside the flaps of their ears, this does not run into the canal of the ear but seems to seat in the inside of the flaps of ears and also slight signs of the malady appear directly along the back bone and around the roots of tail. It looks very much like dirt and dirt scabs and has a tendency to crack. They are beded in oat straw and have free run and are not in muddy place. Sow shows no signs of this disease and it is her first litter and she had 12 and raised 10 and is in good condition.—F. D. M., Cedar Springs.

—In all probability these pags are suffering from a squamous eczema, sometimes called "soot of young pigs." This form of eczema is usually seen in pigs which are kept in unsanitary quarters. I would suggest the application of zinc oxide ointments to the affected parts once daily, usually two or three applications will suffice.—John P. Hutton, Assoc. Prof. of Surg. and Med., M. A. C.

MARE SUFFERING FROM TUMOR

I have a valuable brood mare that has something wrong with her throat and has been troubled for a year. I thought it was her mouth and I have had two different veternarys look at her and her mouth is all right. She has a baggy swollen throat back of the larnyx. She cannot swallow her food right. She will chew her feed and spit some of it out. Both the Drs. gave me medicine to syringe back in her throat but done no good. She is coming 9 years old and is ready to drop her 6th colt at any time. Would like to know what to do for her as she is failing on me no matter what I feed.—L. J. B., Coleman, Mich.

—In all probability this mare is suffering from a tumor affecting the pharnyx. The treatment is very difficult and unsatisfactory. A diagnosis can usually be arrived at by palpation through the mouth, the use of the laryngascope or an exploratory opening of the larynx. The treatment is surgical and consists in the extirpation of the tumor.—John P. Hutton, Assoc. Prof. of Surg. and Med., M. A. C.

FRUIT and ORCHARD

EDITED BY FRANK D. WELLS

PEACHES IN THE NORTH

IT IS possible to grow peaches much farther north than a commercial orchard of the fruit would be profitable. A writer in the Cyclopedia of American Horticulture tells how it can be done:

"Secure a very young tree, preferably a seedling from seed planted where a tree is desired, and train the trunk of it horizontally 8 or 10 inches from the ground, and suffer no branches to grow. Break off the tender branches when they are not more than three inches long by bending them sideways, not down over the leaf, as that would be likely to break off the leaf also. The trunk is kept horizontal by tying it loosely to a slender pole, which is fastened horizontally. Of course the tendency of the tree is to grow upward at the end, and therefore one must look to it about once a week that the branches are broken off and the trunk tied down. When trained in this way the tree will continue to grow vigorously until frost stops it, but it is necessary that the young wood has time to ripen sufficiently to endure the winter. If one ceases to break off the branches for four to six weeks before the usual time of frost, the wood at the end of trunk will be sufficiently ripened to stand the winter when protected."

During the winter the tree may be protected by placing some evergreen boughs under it, then covering the trunk from root to tip with boards nailed together at the edges like an eave-trough. Over this place more evergreen boughs.

In the spring the boughs are removed and the tree tied to the pole. The trunk is kept covered with the trough so as to prevent the sun from killing the bark.

Keep the tree growing horizontally for one or two seasons more, when the trunk should be from 10 to 15 feet long. Then allow it to grow upward and form a top. The long trunk will be flexible enough to allow the top to be bent over sideways sufficiently to be covered during the winter. It is placed on evergreen branches so as to keep the limbs off the ground, then covered with evergreens. Lastly but on boards to keep out the snow. Mice are kept out by a little ridge of earth thrown up about the tree.

Trees grown in this way are said to bear well and regularly. However, such culture is for the garden. It would hardly be thought of as an orchard venture.

In place of bending the little tree to form a trunk it might be better to have a branch about six inches above the ground and grow the trunk from this by cutting away the remainder of the top. A peach tree can be grown in such a way as this easily.

Perhaps some of our readers in northern Michigan have evolved a successful method of growing peaches. We shall be glad to hear from any such.

GIRDLING TO INDUCE BEARING

IN THE days before the midsummer market was flooded with peaches from the South, it was a practice among some northern fruit growers to girdle trees. By this process an increase of yield was obtained, also a product earlier and more highly colored than that allowed to ripen in its regular season.

This was easily done. A limb was selected for the purpose and a wire drawn around it tight enough to cut completely through the bark. After the fruit was harvested the limb was cut away, since the process would kill it.

Such a way of doing resulted in fruit that brought an extra price, but was hard for the trees. Southern fruit brought it into disuse.

The process with some modifications can often be used with good results in case of apple trees to induce early bearing or to force unprofitable trees to become productive. A narrow ring of bark, one-fourth of an inch or less in width, is removed from the trunk or a limb, care being taken that the connection is completely severed, so the flow of sap will be entirely cut off. The time for doing this is the latter part of June, the 20th of the month is a good date to remember. No injury will result, as the wound will close up during the summer. An abundand crop should result the following year.

TESTS PROVE NORMAL SILAGE SUPERIOR TO STOVER SILAGE

(Continued from Page 4)

duced at $7.20 per hundredweight the cost per hundred pounds gain in the three lots were $7.98, $9.26 and $10.18 respectively.

The steers sold on the Detroit market May 23rd at $10 per hundredweight straight, the top price for a carload of cattle on the Detroit market this year, after which several commission men and packers were asked to appraise the three lots. Lot 1 was appraised at $10.25 and lots 2 and 3 at $9.85 per hundredweight, the figures on profits and loss being based on these appraised values. The total profit or loss on the lots, not crediting pork produced, were: Lot 1, $39.05 profit; lot 2, $54.86 loss; lot 3, $92.84. Crediting the pork produced the gain for lot 1 was $47.74, the loss for lot 2 was $48.18, and the loss for lot 3, $81.16. The hogs following the steers were sold at $7.20 per hundredweight.

The finish of the steers and the actual dressing percentage of the three lots, namely 58.99 for lot 1, 54.72 for lot 2, and 56.45 for lot 3, indicate clearly that it is not desirable to endeavor to finish steers on stover silage; further, that contrary to the opinion often expressed, corn in the silo is worth just as much, if not slightly more than corn fed in the crib.

SILO FILLING NO LONGER A DRUDGERY

SILO filling is generally conceded the hardest and most disagreeable work on the farm. At least we have found it so on the Detroit Creamery Company farms, where we fill 24 large silo's to feed 800 head of dairy cattle.

Occasionally, some discouraged farmer writes an article, deploring the fact that silo filling is a back breaking and usually a nasty wet job. On this farm we no longer consider silo filling a drudgery, as for the last three years we have used the Ronning Ensilage Harvester, manufactured by the Morgan Harvester Co., of Minneapolis, Minn., which takes out the disagreeable part of putting up ensilage. Not only that, but from an economical standpoint, these harvesters constitute a saving that is well worth consideration. The eighteen men we had in the field, pitching and loading cornstalks, prior to the use of these machines have been eliminated. The saving of twine is also a big item.

The harvester cuts the corn into silage in the field and elevates it into high board wagons and thus entirely does away with all handling of the corn bundles. When one box is filled, another wagon drives up and the filled one is hauled into the silo, into which the silage is blown. Another advantage is that the corn in the form of silage is taken away as it is harvested, which is far ahead of the old method of having corn bundles left in the field to become wet and dirty. The corn does not touch the ground to mix with dirt; the sun has no chance to dry it after it is cut; when operations cease for the noon hour, or a shower of rain, the field is clean.

We consider the silo filling problem solved with this machine, and farmers will welcome it not alone for its labor saving propensities, but as a medium for making better ensilage and doing it with less cost.

One of the great savings we found in this machine is, it takes less power to operate it, than the old binders, there is no tying and packing of bundles, no slipping on wet ground. Two years ago, our corn was down and in bad shape to cut, it was a very heavy crop and the ground was wet. Without the Ronning machine it would have been impossible to have harvested all our corn.

We usually start filling our silo's the latter part of August, or the first week in September. We will be glad to have anyone come out to the farm and watch these machines in operation. These machines are now priced reasonable enough for any farmer to own one.—A. A. Schultz, Sup't. of Farms.

POULTRY

CANABALISM AMONG CHICKENS

Will you please tell me what could be the trouble with our two neighbors' hens. They have meat scraps, milk and different grains to eat but they eat each other. Sometimes they begin in the thigh and around the vent and pick so the intestines drag on the ground. They are Rhode Island Reds.—O. H. G., Manton, Mich.

—The form of Canabalism that is appearing among your neighbors flocks is not uncommon. The trouble originates where individuals in the flock develop a condition known as Inversion of the Uterus due to the strain of production, or it may be Inversior of the Cloaca caused by intestinal parasites. This reddened area attracks the birds and once the hens get a taste of blood this trouble may become quite prevalent.

It is usually a good practice to give the whole flock Epsom salts at the rate of one pound per hundred hens. If the trouble is induced by constipation, the salts will usually reduce the mortality and if there are one or more individuals in the flock that appear to be straining one of these birds should be killed and diagnosed for intestinal worms. The worms will usually be found in the Ceca or in the intestinal tract. Oil of American worm seed and turpentine using one teaspoonful of each to every twelve birds, is recommended for this latter trouble. Epsom salts should immediately follow this treatment and lime should be liberally used on the dropping boards two or three days following.—E. C. Foreman, Associate Professor of Poultry Husbandry, M. A. C.

FIRELESS BROODERS

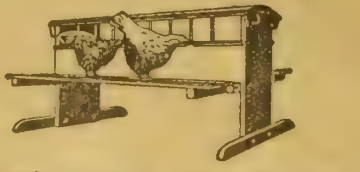
THE fireless brooder is very useful in its place. Chickens have been ruined by it thru the lack of thought of their owner, and chickens have been saved by it. For example, one over-anxious amateur piled the blankets on top of her fireless, and when a plaintive cheep disterbed her rest at night, she found the chicks wet with their own breath under the weight and warmth of the blankets. Another lady used felt to cover the top of her brooder, and thus shut out ventilation. Fireless brooders are meant for small groups of chicks. They must not be overcrowded. For the small brood they have a place to fill.

We like the round cheese box. It will hold fifteen chicks nicely, has no corners and is easy to work with. If a square box is used, the corners should be rounded with heavy cardboard. (Some types of smooth roofing, if it does not smell, are useful.) Tin may also be used, but the sharp edges must be folded down if this is used. A tomato tin with edges turned is about the righ size.

The idea of the fireless brooder is to make a temporary mother. Chicks like to feel the warmth and pressure on their backs of their mother's breast. The fireless substitute is a box with a few holes cut for ventilation just below the pad, and a sagging cheese-cloth on top on which are placed according to the weather, pads of old wool blankets or light comforters of cheese-cloth padded loosely with cotton as a baby's quilt is made. This retains the chick's own body heat and gives ventilation. The cheesecloth is shaped to fit the box, and is preferably held in place by a wire running around the outside of the box, with its ends looped together. The principle is the same as tying a cloth on a bottle, but the cloth bags in the middle. Cleats on the inside of the box are placed there to hold the pad up. Some people put a hem in the cheesecloth, and run the wire thru this like a drawstring. Then the wire is placed on the cleats and fastened securely, making as it were a mattress resting on the cleats.

This brooder is placed inside a box enough larger to give the chicks some runway in front. The two are kept in the house. When ready to use, the floor of the brooder is covered for an inch or two with clover or alfalfa chaff, hollowed out in the center like a nest. A fringe of wool or any cloth that will not ravel is tacked across the opening cut for a door. A box about an inch high filled with mellow earth is the barri-

Kelly's Poultry Feeder



The modern scientific invention—absolutely no waste, sanitary—built on practical common sense ideas. For feeding wet or dry mash, grit, shell, charcoal, grains, meal or sprouted oats. Cover and trough of 28 gauge galvo steel with ⅛-inch rolled edges—end uprights selected No. 1 grade cypress dipped in wood preservative stain—Has combination rack with projecting lips and two partitions forming three compartments—all lifting out when cleaning trough. Cover tipping back to refill trough. Side sections folding shutting out vermin at night. Fowls eat from either side. Equally as serviceable on the range as in the pens—feed being fully protected from dirt, litter or storm. Capacity 25 to 150 fowls. Size 36 inches long, 20 inches high, trough 9¼ inches wide, 5 inches deep. Weight, crated about 25 pounds. The price to you only $5.00 f. o. b. Saranac, Michigan. Order direct from this ad or send for free booklet to-day. We guarantee satisfaction.

MAMMOTH PEKIN DUCK EGGS FOR SETTING $2.00 or two settings $3.00. Also Wild Mallard Duck eggs same price. Very choicest stock. All orders prepaid. Cedar Bend Farm, Okemos, Mich.

LEGHORNS

LEGHORNS
S. C. Buff Leghorn Hens, Pullets and Cockerels. Hens and pullets $2.50 each; cockerels $3.00 to $5.00 each. Show birds a matter of correspondence. LAPHAM FARMS, Pinckney, Mich.

PULLETS BARRON ENGLISH WHITE Leghorns, eight weeks to maturity—May to October. Breeding flocks repeatedly culled by experts. Extra large and vigorous. Wedge shaped bodies, big looped combs. "Laybilt" in every way. Also breeding cockerels. Satisfaction and more or money back.
MORSE WHITE LEGHORN FARM,
Belding, Michigan.

cade we use for the doorway, since it holds in the chaff and gives the chicks a soft spot to scratch in. We like a box of earth, renewed from fresh soil that chickens have not run over, for baby chicks. They scratch in it, and seem to get something from the soil which they need. It is also good for their feet.

We have used the fireless brooder out of doors in mild weather by putting it in a covered coop.—Wallaces' Farmer.

MICHIGAN CROPS

NEVER USE POTATO PEELINGS FOR SEED PURPOSES

A few, maybe four, years ago, we got some seed potatoes, mostly small cuttings and peelings of Petoskey russets with a few white potato peelings mixed in. We experimented with these and saved the seed until we have raised several crops from it. The first crop did not get ripe before it was frost biten. Since then we had several crops, sometimes fair, sometimes not so good. Never on the best of potato ground. Several times they have been blight stricken. Last year's crop was hit by both frost and blight. The potatoes are of very poor quality. They are small in size. From this description would you advise they could be planted again and expect them to yield good and be a better quality potato if given better soil and better care? What would the certified Petoskey russets cost per bu.? Also state name, and price on some earlier potato if you can.—O. E. W., Wilmot, Michigan.

—Under field conditions it is never satisfactory to use potato peelings for seed purposes. It is true that under ideal soil conditions such as might be maintained in a well cultivated garden that fair yields can oftentimes be secured by planting the peelings to which are attached small pieces of potato with eyes. It is recommended that under field conditions, seed pieces average at least 1½ to 2 ounces in weight and that they be cut blocky or compact so that they will not dry out quickly in the soil. Every seed piece should have at least one or two strong eyes.

I would recommend that you secure a new lot of seed this year, preferrably seed that was certified in 1922. Such seed was grown under very careful cultural conditions and was inspected twice during the growing season by men trained in potato diseases. It was also inspected in the bin for uniformity of size, trueness to type, freedom from scab, etc. The planting of certified seed is a very good form of potato crop insurance since it has been proven by many demonstrations and tests in Michigan as well as in other states that certified seed outyields uncertified stock by approximately 60 bushels per acre. Furthermore, the quality of the product grown from certified seed is ordinarily far superior to that grown from common potatoes.

No doubt the poor yields that you have been securing from your potatoes is due to the fact that your potatoes are infested with diseases known as mosaic, or leaf roll which live over from year to year in the seed and produce inferior yields of poor quality.

Certified seed can be procured at a very reasonable price and this is an unusually good opportunity to invest in this high class seed. It is doubtful if the seed will be as low priced another season. You can procure certified seed of the Late Petoskey (Russet Rural) variety from the Seed Department of the Michigan State Farm Bureau, Lansing, Michigan or from the Michigan Potato Growers' Exchange, Cadillac, Mich. These two organizations are the official selling agencies for Michigan Certified Seed Potatoes.

For an early potato I would recommend the Irish Cobbler variety. Certified seed of this variety can be secured from the Michigan Potato Growers' Exchange, Cadillac. The price of certified Cobblers is approximately $1.75 per bushel f. o. b., shipping point, that of the Russet Rurals is approximately $1.25 per bushel for small lots—H. C. Moore, Extension Specialst, M. A. C.

More people work at singing, than sing at working.

Nothing keeps a secret like a tombstone.

DAY OLD CHICKS

Special For June and July

$10 and $12 per 100

THE SMART, STURDY, FLUFFY KIND

MARKET FLASHES

MARKET SUMMARY

Wheat easy after sharp decline on opening day of week. Corn shows no change. Oats and rye weak after small decline. Beans unchanged. Poultry steady. Butter and eggs firm. Strawberries easy. Trade in cattle market is slow. Hogs active to higher.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

FARMERS who own their farms clear from mortgages are much more hopeful than a year ago, but they realize that many things can happen to the crops and unusual interest is felt in the corn crop of the great corn belt. The most important recent event in Michigan is the permanent organization of the Michigan Fruit Growers, Inc., a state fruit exchange, with headquarters to be opened at once. Delegates from twenty-seven fruit shipping associations in western Michigan were appointed to attend the meeting in Benton Harbor. The boom in prices for spring lambs affects one of the leading Michigan industries, as does the animated demand for spring wool clips. Wool is being contracted in the west largely at 45 to 50 cents a pound and northern California wool is going on the market as high as 55 cents. There is a lively call in the range country for breeding ewes, but most of them are held off the market for future breeding. The domestic trade of the country is extremely large, while the foreign trade of the United States shows the balance of trade against us. Total merchandise exports for the five months ending with May were valued at $1,628,175, 477, while the imports were valued at 1,765,757,586, showing a balance against us of $137,-582,109. The total net imports of gold and silver for the five months amounted to $91,241,635. The total mechandise and gold and silver balance against us was $228,823,744.

Stockman have good reason to feel encouraged over recent sharp advances of prices for cattle, hogs and sheep, due to materially reduced receipts in the Chicago market. Within a week prime hogs advanced 50 cents, while prime spring lambs went from $14.85 to $16.35, and cattle rose as much as 25 to 50 cents.

Wheat Trade Broadens

For several weeks the volume of speculative business in wheat and other grains on the Chicago Board of Trade has shown a marked falling off, but recently trade in wheat has broadened out, and prices have been sensitive to crop reports. The buying side of wheat has been more favored much of the time, and fair advances have taken place on some days, prices at last having risen higher than a year ago. Corn, however, was in the strongest position of all the cereals, due to the disappearance of the greater part of the corn in sight and a good demand. A well-informed newspaper man with agricultural experience who is back from an automobile trip through the corn districts of Illinois, Indiana and Iowa, says that in about every place in these states farmers and grain dealers reported no corn left for shipment. He added that in many places where at this time of the year about 10 per cent of the corn is usually left, they are shipping it in to meet the feeder demand. There is a great deal of grinding going on by owners of attrition mills, the usual mixture being about three parts oats and one part corn. The feeders claim, however, that this does not make a satisfactory substitute for straight corn. The foreign demand for American wheat and flour has been much greater than a year ago, while exports of corn are unusually small as are those of oats. A short time ago the visible corn supply in this country was down to around 4,000,000 bushels, comparing with 30,313,000 bushels a year ago. That of oats wa about 11,-000,000 bushels, comparing with 47,272,000 bushels a year ago; and that of rye 16,000,000 bushels, comparing with 4,568,000 bushels last year. Corn planting has been unusually late, and this is, of course, a bullish feature. Late sales were made on the Chicago Board of Trade of July wheat at $1.11, the same price as a year ago. July corn sold at 82¼ cents, comparing with 62 cents last year; July oats at 42 cents, comparing with 34 cents last year; and July rye at 71 cents, comparing with 88 cents a year ago.

Choice Cattle Sell High

The general employment of labor at the highest wages ever known tends to increase the demand for the choicer cuts of beef, and the better offerings of beef cattle have been selling extremely high at times when the numerous lots of light weight grassy cattle were slow at weak prices. Last week's Chicago receipts of cattle fell much short of those for the preceding week and for the corresponding week last year, and a normal local and shipping demand brought about advances in the greater part of the consignments, although the best beeves failed this time to show the rise that took place in the principal part of the steers. Prime heavy steers sold at $11 to $11.25, and choice yearlings brought $10.50 to $11.25. A liberal share of the steers found buyers at $9 to $11, good lots going at $10 and upward, medium to good steers at $8.75 to $9.95 and common to fair steers at $8 to $8.70, while inferior little steers sold for $5 to $7.90. Butcher cows and heifers sold respectively at $4 to $8.50 for the former and $6 to $10 for the latter, while canner and cutter cows went at $2 to $3.95 and bulls at $3.50 to $8.50. Calves found an outlet at $5 to $11, and there was a limited call for inferior to choice stockers and feeders at $5.50 to $8.75, largely at $6.25 to $7.75. The best feeders were hard to find and were held at higher figures. Looking backward, it is recalled that a year ago the best beef steers sold at $9.75, two years ago at $9.15 and five years ago at $18.

Rally in Hog Prices

Following the recent numerous declines in prices brought about by the largest marketings ever seen in corresponding weeks in past years, the receipts fell off to such an extent that sellers were able to obtain several advances, the demand being better. As usual, Monday is the day of much the largest supplies in the market, and the opening of the week is almost certain of lower prices. There is little that is new in the hog industry, and everybody knows that early estimates of the supply in hog growing districts were far too low. It is possible, of course, that marketings will fall off to such an extent as to bring about a higher scale of prices, but such large supplies as have been offered in recent weeks can hardly fail to lower values. There has been a marked narrowing of prices of late, and both prime light and the best heavy butcher hogs sold at top prices. More hogs than usual have been received in eastern packing points of late, and this explains the smaller purchases made in the Chicago market by eastern shippers. A great many hogs of light weight are going to market because owners fear further reductions in prices, and most stock feeders are not disposed to hold their hogs after they weigh 200 pounds. Relatively low prices favor consumption of hog products, fresh and cured, and exports of lard and cured hog meats continue for heavier than a year ago. The stocks of meats in cold storage are far heavier than a month ago or a year ago, but the lard supply is far smaller. Short ribs are selling greatly below prices of a year ago, but lard is nearly as high as then. Lard substitutes are used far more largely than in former years. In many farming districts farmers are talking of breeding fewer sows, as at the higher price of corn, feeding swine is a losing game. The week closed with hogs selling at $6 to $7.30, the top being 50 cents higher than a week earlier. A year ago hogs brought $8.85 to $10.80.

Scarcity of Lambs

Recent receipts of spring lambs in Chicago were extremely meager, being the smallest ever seen in June, and sharp advances in prices took place. Far too few lambs are marketed to meet trade requirements, and at times prices have advanced to a point that checked sales in the retail meat markets of the country. The first shipment of Idaho spring lambs of the year arrived on the Chicago Market recently and sold for $16.25 per 100 pounds, their average weight being 66 pounds. Idaho flock masters are in the habit of marketing high-grade lambs, and they are sure of meeting with a good demand. Native lambs have been selling at $11 to $16.25, according to quality, and prime western range lambs sold up to $16.35, whereas a year ago prime lambs sold at $12.50. Following the yearly custom, the prefix "spring" is now omitted in speaking of this year's lambs, while last year's lambs are termed yearlings. Sheep are scarce, and ewes sell at $3.25 to $6.10, breeding ewes being in demand at $5.50 to $6.50. Yearling wethers sell at $11.25 to $14.75. There is a growing demand for good breeders, with not many on sale.

WHEAT

Wheat continued weak during the fortnight closing June 16th, and prices are lower, although several advances were made during the period. There is a dull tone in all markets but it seems to be more pronounced at Detroit and advances when they did come were not as great as the upturns in other markets. A decrease in the milling demand is blamed for the dullness at Detroit. The flour market at this point has been dull for the past several weeks and millers are buying only enough grain to take care of immediate needs. The Detroit market has had a good demand from the east and south for wheat for milling but there has been a serious falling off in this demand during the past few weeks. This added to the decrease in local cash demand has given the market quite a set-back. Dealers found they could not follow the advances made in Chicago and make sales. Aside from the lack of cash demand everything in the market favored higher prices. The crop outlook is about the worst on record and not improving as far as the winter crop is concerned. From Kansas the news shows the promise to be a little worse every day. There appears to be no end to the rain and fields are flooded. A great deal of the acreage is entirely destroyed and much of the state will not produce better than seed. Over the northwest recent rains have improved the outlook, but weather must be about perfect until harvest if there is to be given a fair crop of spring wheat. The European outlook, until recently one of the bearish features, is said to have had a setback, but there is some doubt in the minds of the trade as to the extent of the injury to the French crop as that country is not showing any anxiety to buy in the American market and Liverpool has not been strengthened by the crop scare.

Courage on the part of the bulls is greatly needed. This has been absent since the passing of the recent market law to regulate grain. The speculators were frightened off and the government has since been telling the trade that the law is not intended to drive out dealers, but simply to keep track of the business. The market is in great need of the support that formerly came from speculate buying and bulls are in hopes that there will be a return of buying sufficient to support the market and carry an advance past the first lot of profit-taking.

Prices

Detroit—Cash No. 2 red, $1.23; No. 2 white, $1.23; No. 2 mixed, $1.23.

Chicago—No. 2 red, $1.14.

New York—No. 2 red, $1.36¾.

Prices one year ago—Detroit, No. 2 red, $1.18; No. 2 white and No. 2 mixed, $1.16.

CORN

Week before last corn made a gain of 1c on the Detroit market and during the forepart of last week there was an advance but before the close of last Saturday the market down to closing price on Saturday of the previous week. Chicago reports an increase in commission house buying and a decline in country offerings but the price showed only a slight change owing to the dullness in the wheat market. Cash demand is reported to be moderate. Crop news is mixed, with some complaint of excessive moisture and weedy fields coming from the southwest.

Prices

Detroit—Cash No. 2 yellow, 90c; No. 3, 89c; No. 4, 87c.

Chicago—Cash No. 2 mixed, 83¾@84¼c.

New York—Cash No. 2 yellow, $1.01½.

Prices one year ago—Detroit, Cash No. 2 yellow, 65c; No. 3, 63½c No. 4, 62c.

OATS

The oat market shows very little activity and prices move within a narrow range being influenced by the trend of other grains. Domestic shipping trade was improved during the past fortnight and country offerings to arrive were light. Crop news is favorable.

Prices

Detroit—Cash No. 2 white, 48c; No. 3, 47c; No. 4, 46c.

Chicago—Cash No. 2 white, 42¼@44c; No. 3, 41@43c.

New York—Cash No. 2 white, 54@54½c.

Prices one year ago—Detroit, Cash No. 2 white, 40c; No. 3, 38c; No. 4, 34@35c.

RYE.

The demand for rye at Detroit declined during the past two weeks and the price is off 1 cent for the entire period. At Chicago the market had strong tone and prices are higher than they were two weeks ago. The market is steady to firm with receipts small.

Prices

Detroit—Cash No. 2, 72c.

Chicago—Cash No. 2, 70@71c.

Prices one year ago—Detroit, Cash No. 2, 90c.

BEANS

The bean market at Detroit took a bad fall week before last and although it tried to recover its losses last week it was 25c below the previous week's close when the market closed last Saturday. There is good demand for Michigan beans all over the country and the supply is not as large as some folks like to have the public believe. A dealer at Gratiot county, one of the largest bean producing counties in the state, writes to the Bean and Pea Journal as follows:

"A state jobber had on opportunity to place a number of cars of Michigan pea beans yesterday and at a price that would permit them to pay the country elevator 30c per cwt. more than the Detroit market. They put in telephone calls and talked with 33 elevators but only succeeded in buying 100 bags. Michigan beans have steadily been going into consumption notwithstanding reports by certain interests that the supply is in excess of the demand with very little consumption. We feel confident that the point has now been reached where the natural law of supply and demand will govern and that supplies are actually so low that when the planting of the new crop is over it will be impossible to buy Michigan beans freely and then only at materially higher prices.

"It is well understood that Michigan pea beans cook freely for the reason that they are all this season's crop. It is reported that some unscrupulous dealers are mixing foreign beans and that foreign beans do not cook up properly. We are convinced that this practice is only resorted to in isolated cases and we understand the Michigan Bean Jobbers' Association, main office, Lansing, will be glad to have samples of such mixtures and stand ready to prosecute to the limit.

"Ninety per cent of the new crop will be put in from the first to the 15th of June and we believe the acreage will be very large.

"The first of the new crop will not be available for four months so that the present small supplies will have to answer until that time. We predict that the supply of Michigan pea beans will be exhausted before the new beans are obtainable and it's our judgment that the market will gradually advance until that point is reached."

This seems to be the feeling on all sides, even dealers outside of Michigan state they believe Michigan beans are going to go higher. It is to be hoped that there will be no sudden sharp gains but a steady improvement in the tone and a gradual advance in prices. Rapid advances would undoubtedly do more harm than good.

Prices

Detroit—C. H. P., $7 per cwt.

Chicago—C. H. P., $7.65@7.90 per cwt.

Prices one year ago—Detroit, C. H. P., $9.65 per cwt.

POTATOES

The demand for old potatoes is decreasing daily as an increasing supply of new stock comes to market. The interest in the old crop has reached the point where many markets are not reporting on them. Prices on nearly all markets show a decline over two weeks ago.

Prices

Detroit — Michigan, $1.08@1.30 per cwt.

Chicago — Wisconsin and Round Whites, 80@90c per cwt.

Prices one year ago—Detroit, Michigan, $2.50 per cwt.

PRITCHARD'S
WEATHER
FORECAST
INTERPRETED BY THE STARS

Week of June 24

TEMPERATURES for the week beginning June 24th will average above the usual seasonal amount. However, temperatures will fall as low as 45 to 48 degrees in western part of Michigan and in other sections accordingly. The greater part of the week's rainfall will occur during first half of this week.

The lowest temperatures will occur at very beginning of week but from then until near the close they will be gradually rising, although at no time do we expect temperatures to be very high during this week. From Thursday to end of week temperatures will be falling.

Local rains and thunder storms will occur in this state during early days of this week and during middle part of week the winds will be strong in force. Last half of week will be sunshiny with cool nights and mornings.

Week of July 1

This week begins with fair weather but beginning about Monday and continuing for most of the week there will be light rains, electrical storms and some high winds in various parts of the state. Rains are expected to become heavier and storminess more severe as the end of this week approaches. The weather will be fair at end of week.

Cool Summer; Average Rain

The average temperature during July, August, September, October and November will be below normal. The rainfall will average about normal during this summer but in October and November moisture conditions will tighten up restricting many areas to a proper amount of moisture for the fall planted crops.

HAY

The light receipts reported in most markets are causing a continuation of the firmness shown in hay prices. Slight advances are reported in several markets. Flood condition is restricting the movement of both new and old alfalfa in the west and southwest. As a whole markets are steady to firm with prices well sustained at the close.

Prices

Detroit—No. 1 timothy, $17@18; standard, $16.50@17; No. 2 timothy, $15@16; No. 1 clover mixed, $14@15; No. 1 clover, $13@14.

Chicago—No. 1 timothy, $22@23; light mixed, $19@21; No. 2 timothy, $18@21; No. 1 clover, $15@16.

Prices one year ago—Detroit. Standard timothy, $21.50@22; No. 2 timothy, $16@17; light mixed, $21@22; No. 1 clover, $16@17.

WEEKLY MARKETGRAM

U. S. Bureau of Agricultural Economics

Washington, D. C.—For the week ending June 15, 1923.

FEED—Markets quiet, prices irregular. Moderately firmer tone in spot and nearby bran. Demand continues slow especially for deferred shipment offerings. Western jobbers bidding around $18.50 for July, August and September shipment bran in Kansas City market. Alfalfa meal 50c to $1 lower, offerings increasing. Quoted June 15; bran $19, middlings $23, flour middlings $28, rye feed $22.50, Minneapolis; gluten feed $37.15 Chicago; white hominy feed $32.50 St. Louis, $33.50 Chicago; 36 per cent cottonseed meal $35.50 Memphis, $36.50 Atlanta; 32 per cent linseed meal $38.50 Minneapolis, $39.50 Buffalo.

DAIRY PRODUCTS—Butter markets unsettled during week and both advances and declines have occurred. Foreign arrivals include butter from Denmark, New Zealand, Argentine and small lots from Ireland and Esthonia. Closing prices 92 score butter;—New York 38¾c; Chicago 39c; Boston 40c.

CHEESE—Markets about steady. No active buying for storage has developed. Hot weather has affected quality of current productions of pastures are not the best despite recent rains. Wisconsin production close to peak. Some 1300 cases of New Zealand cheese arrived at New York yesterday. Prices at Wisconsin Primary Cheese Markets June 14;—daisies 24c; double daisies 23½c; Young Americas 24c; longhorns 24c.

PRESIDENT LOWDEN ASKS SOME POINTED QUESTIONS

(Continued from page 3)

such associations. As I have said before, I think the breeders of purebred cattle have been remiss in not themselves joining cow-testing associations. In fact, I think that wherever there is a purebred herd, its owner should take the initiative, if there be no association in his community, and make his herd the nucleus of such an association. I believe as time goes on the average farmer who is looking forward for a purebred sire will prefer to buy from a herd which belongs to a cow-testing association. He knows that the great official records made are made under extraordinary conditions which it is not practicable for him to duplicate. In the past, therefore, he has too often been disappointed when he has purchased a bull produced under these conditions. He more and more wants to know what he may expect from a bull under the every-day conditions which surround him. Indeed, if a purebred herd cannot make a profit at the pail—and this can be best shown by cow-testing association records—isn't he likely to reason that the purebred is not for him. I do not mean for a moment to detract from the importance of our Advanced Registry work. That work will always be essential for the selection of seed stock. I mean only to supplement and carry it forward where it can be made available to the man who is actually engaged in the production of milk for the market. There is, therefore, in my opinion no more important work than encouraging and fostering cow-testing associations wherever possible.

STATE GUERNSEY BREEDERS' PICNIC

MR. W. J. Brown, of Detroit, has most willingly offered to all Guernsey Breeders of Michigan a treat that will prove extremely interesting and instructive. The event will be in form of an all day get-to-gather on June 28th at his delightful farm, "Peaceful Vista," Redford, Mich. The farm is located 3-4 mile north of Grand Lawn Cemetery which is at the intersection of the 13 mile road and Grand River road. Or inquire at the Redford Ford Garage for specific directions. Mr. Brown has one of the most completely equipped Guernsey Farms in Michigan and a herd well above the average. The forenoon will be spent socially, lunch served at noon, after which a program will be given. All interested in Guernseys can profit by attending this meeting—C. Faye Myers, Sec'y.

AN ERROR.

In the fourth paragraph of the article on Dr. Friday appearing on page 3 of the June 9th issue of the Business Farmer, an error occurs in that the word "not" was left out of the paragraph which should read, "It is evident that the underlying motive could not have been a desire to win popularity or cheap publicity." Mr. Powell, our correspondent, has called our attention to this error. We have investigated his copy as submitted and find that the error was made in our own typography.—The Editor.

Get
Bumper Crops

DON'T LET YOUR WARNING COME TOO LATE!

DANGER AHEAD

for the Automobile or Truck Owner who drives on the highways or city streets without the protection offered by this sound and pioneer Michigan automobile insurance company, against Fire, Theft, Collision and Personal Liability.

INSURE AGAINST IT NOW!

THE Citizens' Mutual Automobile Insurance Company of Howell, is continuing its remarkable record. The company is now starting its ninth season and has met all of its claims promptly, having paid over 12,600. It is a Michigan company and has carried insurance for such men as ex-Governor Rich, the late Governor Warner, ex-Governor Sleeper, and many of the leading bankers, lawyers, county officers, business men and farmers. It has saved its polity holders, in comparison with stock rates, many million dollars since its organization.

Mutual insurance has proven a success in America. The first American fire insurance company was a mutual company organized by Benjamin Franklin in Philadelphia in 1752. It has been continuous in operation and highly successful and now has net assets of more than a million dollars. Professor John A. Gilmore of Virginia, after careful study, announces that there were about 1550 stock fire insurance companies started business in the United States and 1300, or 84 per cent, have either failed, retired or reinsured. He announces further that there has been about 2900 mutual fire insurance companies organized and 700 of these have failed, retired or reinsured, leaving about 2200 still in existance and doing business today. 84 per cent of the stock companies have failed or retired and only 24 per cent of the mutuals, a splendid showing for the mutuals. An authority on insurance has said that no mutual company that accumulated gross assets of $200,000 or a cash surplus of $100,000 has ever failed in the history of the country.

For example, **You can insure your Dodge car for fire, theft and liability for $10.50** and collision at a small additional cost, other makes at equally low cost.

FARMERS' DAY AT M. A. C. JULY 27TH

Initiated during the war when Michigan farmers were called together in 1918 to consider the possibility of greater wheat production, Michigan Farmers' day, which will be celebrated July 27th of this year, has become one of the farm institutions of the state. Last year 5,000 persons attended the meeting and this year the day, which coincides with the ending of summer school, is expected to bring as many to the local campus.

This year the morning probably will be given over to an inspection of the college farm, the experiment plots, the herds and flocks and other items in which the actual tillers of the soil are interested. In the afternoon, following a picnic dinner, some of the best known men of the country will be present to discuss conditions of agriculture.

LIVE STOCK EXCHANGE HAS 181 LOCALS

Since the Michigan Live Stock Exchange organized its Co-operative commission house at Detroit a little more than a year ago, the membership of the Exchange had grown from 112 locals to 181 locals, thirty-one locals of this number have joined the Exchange since March 1, 1923. Successes of the Michigan Live Stock Exchange Co-operative Commission Merchants and the splendid service being given the shippers is steadily adding members to the Live Stock Exchange. It is reported that every live stock shipping association that investigates the Michigan Live Stock Exchange proposition joins up without further loss of time and starts shipping to the co-op. at Detroit. Just recently the Michigan Live Stock Exchange's Commission House at Detroit prorated a patronage dividend of about $7,000 on its first year's business, representing a ten per cent refund on all commission charges. Nothing like this ever happened when the old line commission firms handled all the business.

POTATO GROWERS ANNUAL MEETING

The regular annual meeting of the Michigan Potato Growers' Exchange will be held August 15th and 16th in the city of Cadillac. This meeting marks the conclusion of five years of successful sales service for this big commodity organization. Delegates from 130 local marketing associations will be present at this convention, besides many visiting members and others who are interested in the operations of the exchange.

LOOK OUT FOR INFERIOR CLOVER

A German firm informs the State Farm Bureau that Europe has very good prospects for a big red clover crop. Conditions are very promising in Austria, Hungary and Roumania. These countries expect to be great exporters of red clover, alsike and timothy in 1923. They are prospecting for markets. Michigan Agricultural College and Michigan farm tests have shown that this seed is far behind our Michigan or northwestern grown clovers. It winter kills. Millions of pounds of this inferior stuff is bound to come in and will be mixed with good seed by some distributors. The Michigan State Farm Bureau Seed Dept. handles only northern grown Michigan and northwest seed. When you plant Farm Bureau brands, you can't go wrong.

RAILROADS TO SPEED FARM SUPPLIES

Special service in transporting farm supplies has been guaranteed co-operative buying associations in the eastern and middle-west states by 12 big railroads as the result of a conference held between representatives of the roads and the farmers' organizations in Cleveland last week. Eight co-operative associations distributing farm supplies were represented, including the Michigan, Indiana and Ohio State Farm Bureaus. The combined purchasing power of the eight organizations, it was estimated at the conference, will reach 25,000 cars this year, including supplies of feed, seed and fertilizer.

WHEAT CROP IN EIGHT FOREIGN COUNTRIES SHOWS INCREASE

The 1923 wheat crop in eight foreign countries that last year produced more than one-fifth the total world crop is forecast at 750,785,000 bushels as compared with 656,988,000 bushels in 1922 according to radiograms received by the United States Department of Agriculture from the International Institute of Agriculture at Rome. The countries include Spain, Bulgaria, Poland. India, Japan, Egypt, Algeria and Morocco.

POTATO EXCHANGE OPENS BRANCH OFFICE

On July 1st the Michigan Potato Growers' Exchange opened a branch sales office at Edmore in Montcalm County to take care of the rapidly increasing business in the Montcalm-Mecosta territory. Mr. George Wagner, well known potato buyer and broker, holds the position of branch manager.

FROM HERE AND THERE IN MICHIGAN

Freemont to have $46,000 modern hotel.

Ewen—New bank building to be erected.

Pickford—New high school to be erected.

Ann Arbor—$1,000,000 library building being erected.

North Adams—Work started on construction of Main street.

Marlette—Much work being done on improvement of water system..

Kalamazoo—Western normal college to have new $190,000 gymnasium.

Laingsburg — Consumers Power Company to furnish light and power here.

Port Huron—Canal to be opened between Lake Huron and Black river.

Ironwood—National charter granted to Merchants & Miners' National Bank, capital $100,000.

Lansing—$5,000,000 bonds issued for road improvements. M. A. C. to build $160,000 stadium. Work started on widening Woodward ave.

Manistee—New water pump to be installed on north side of city. Work started on new band stand on River Street. Gas struck in drilling for oil.

Apprentices are needed in all lines of skilled labor. There is an increasing shortage of competent workers in the building industry and many others.

Growing scarcity of common labor and education of the coming generations toward professional lines will continue to effect our country in the direction of higher cost of living.

Grand Rapids—$150,000 paper company organized here. W. O. Boyle to erect large office building on Lake Drive. Many improvements to be made in sewer system. State Street to be widened soon. Work started on paving Ninth Street.

Saginaw—$500,000 bonds issued for street improvements. Shriners to erect a new temple. Contract let for construction of new club house. Institution for Blind to be enlarged at cost of $40,000. Community house to be erected soon. $12,000 orphan billet to be constructed. Saginaw in midst of building boom.

The National Electric Association is making a survey to determine the location of power plants and transmission lines in Minn., Ia., Mo., Ill., Wisc., Mich., Ind. and Ky. for the purpose of providing for the development of electric current throughout the entire Middle West according to a plan that will avoid duplication and waste.

Detroit—Air freight service to Cleveland to be inaugurated by end of month, three hydroplanes with capactiy of 1200 lbs. freight each to make daily trips. Masonic order to erect $5,000,000 temple, covering entire block and using 8,000 tons structural steel. Tent colony during last fortnight has grown from a handful of open-air residences to a small city containing hundreds of families, who have taken this means of fighting the home shortage and attendant high rentals. Rents in many parts of the city have almost doubled within last month. Ford Motor Company now turning out 6,700 cars a day, expects to maintain same output through 1923 and 1924.

Three thousand carloads of potatoes have been sold for its members this season by the Michigan Potato Growers Exchange. This is 500 cars more than were handled last year.

Kris P. Bemis of Scottville represented the Michigan Potato Growers' Exchange on the recent seed potato growers' tour of Long Island. This island, just at the front door of New York City, is the largest seed potato market in the world, using 500,000 bushels of seed annually.

Summer Cut Price Clean Up Sale

HEAVY O.D. BLANKETS $2.98

Genuine army pure wool blankets worth at least $7.00, full bed size about 66 x 84 inches. The ideal blanket for the home or camping, motoring, etc. Gives more warmth than two ordinary blankets. Sale price only $2.98 plus postage.

Fruit Growers To Compete in World's Markets

Important Meeting At Benton Harbor Links All Leading Fruit Shipping Associations into One Big Fruit Selling Organization Under Guidance of Michigan State Farm Bureau

NO one is more aware of the sleeping- sickness which has hovered over the Michigan fruit industry than the fruit growers themselves. When they found their own children buying apples wrapped in Pacfiic coast trade-marked wrappers, they began to rub their eyes —now they are wide-open, and we predict that five years will see Michigan apples, peaches, cherries, grapes and pears in control of the markets. Michigan fruit has that unbeatable quality called "Flavor"—everyone here knows it, now the fruit growers will tell the world about it!

DETERMINED that they will get to the bottom of the question of why California fruit can be placed on the market at Detroit so that it will sell for less money than fruit from the fruit belt of Michigan delegates from 25 of Michigan's leading fruit shipping associations met at Benton Harbor on June 19th. The outcome of this meeting was an organization known as the Michigan Fruit Growers, Inc., a state-wide co-operative fruit selling agency for local associations and their members.

Officers and the Executive Committee were chosen and the Exchange will begin doing business shortly. Central headquarters will be located in Benton Harbor while temporary offices will be established in Grand Rapids during the winter apple shipping season.

The new Exchange will be affiliated with the Michigan State Farm Bureau under the commodity type of organization in the same way that the Michigan Elevator Exchange, the Michigan Potato Growers Exchange, Michigan Milk Producers Association, Michigan Livestock Exchange and the Michigan Produce Exchange are now connected with the State Farm Bureau for the promotion of their mutual interests.

Strong for Organization

The Benton Harbor meeting proved that the fruit growers are thoroughly convinced as to value of co-operative organization and realize that they will never obtain the full return from their crops until they unite and work together in merchandising their crop.

The Michigan Fruit Growers, Inc., is interested in promoting better market returns for Michigan fruit men through co-operative selling, grading, packing and advertising of the whole Michigan fruit crop. The Fruit growers are also interested in better and cheaper transportation service.

One of the biggest problems confronting the new organization is a shortage of refrigerator cars for moving the 1923 crop. A census of the refrigerator requirements of each of the local associations represented at the organization meeting was taken with a view of informing the railroads of just what the actual requirements will be for the coming season. Mr. E. L. Ewing, traffic manager of the Michigan State Farm Bureau, will handle all questions of car supply and other transportation problems for the Michigan Fruit Growers, Inc.

Officers of the Exchange are: President, James Nicol, South Haven; vice-president, M. D. Buskirk, Paw Paw; secretary and treasurer, F. L. Bradford. The officers and Henry Weltman, Stevensville, and Herbert Nafzinger, Millsburg, constitute the executive committee.

Mr. James Nicol, former head of the Michigan State Farm Bureau expressed himself as very enthusiastic over the new organization.

To Fight Competitors

"We found it necessary to organize," said Mr. Nichol, "because there are problems with which we cannot deal through the national organization. We shall continue to make use of the national organization wherever our interests are identical with those of other sections of the country. We are willing to agree with the national marketing agencies not to dump our products into markets already supplied, or we are willing to accept aid in promoting the interests of our industry in a national way, such as by advertising or in the opening up of new marketing areas.

"But we have problems which we cannot expect the national organization to help us in. We cannot hope that the national organization will take sides with us in sectional questions, for it is the function of such an organization to represent the industry as a whole.

"But the Michigan fruit growers, having come into the markets more recently, find that the fruit growing districts which have long been organized have things pretty much their own way.

"This is particularly true of the California fruit growers, who have perfected a most efficient organization. We have to hand it to them; whatever they want they seem able to get. It is because of their efforts and the influence they exert in Washington that we find our industry so discriminated against in the matter of freight rates.

"The fruit growers of Georgia, also enjoy many such preferential arrangements. This they have attained through organization. Now the South is rapidly developing into a favorable market for our products, but we find that it costs us more to send our fruit to Georgia than it costs Georgia growers to market their fruit in our markets.

"At present we are not strong enough to render an effective protest, but within a year or so we are going up to the Interstate Commerce Commission with our complaint and we expect to have united support from the fruit growing interests of Michigan and the powerful co-operation of the Michigan Farm Bureau.

Going After Railroads

"The problem of immediate importance to us is that of refrigerator cars. There are not enough of these cars to meet the needs of the fruit shippers. Accordingly the best organized districts have had more than their just proportion of this service. We are going to serve notice on the railroads of the needs of our industry this year and make a demand for the needed number of cars.

"If we do not receive proper consideration from the railroads we shall be prepared to present our case before the Interstate Commerce Commission. We are informed that we have cause for damages if the railroads refuse to give us adequate service after we have given them them proper notice of the amount of commodities we are prepared to ship.

"The utmost of our energy will be exerted to improve the quality of the Michigan fruit output. In this respect Michigan is at a disadvantage as compared with such highly organized fruit-shipping districts as California and Florida. Those states ship only their best fruit. They can not afford to let poor stuff go to market. In consequence of their systems of grading the quality of their output is always uniform, and the reputation of their product is established in every market.

"We want Michigan fruit to be as favorably known wherever it is offered for sale, and the only way to attain this is to grade the output and offer only articles of approved standards.

Not Against Retailers

"It is no part of our plan to curtail production or to increase prices to the consumers, or to do away with retailers. We recognize that the men engaged in retail trade perform a valuable service. We want to increase the demand for our products by making them more desirable, for that is the only effective way to build business."

The fruit growers already have taken an advanced step toward improving the condition of their products on the market by establishing pre-cooling stations. These are plants having cold storage equipment in which the fruits are chilled and reduced to the proper moisture content before packing in refrigerator cars. It is said that fruit so treated can be marketed in perfect condition anywhere in the country. The fruit growers' exchange now has four of these stations in the fruit belt and expects to increase the number perhaps to 20 or more.

Associations which ratified the by-laws of the Exchange are located at the following shipping points: St. Joseph, Stevensville, Bridgeman, Millsburg, Sodus, Lawrence, Bangor, Fennville, South Haven, Paw Paw, Decatur, Grand Haven, Hart, Shelby, Onekama, Kibbie, Grand Rapids, Saugetuck and Benzonia. Delegates from the Byron Center and Coloma associations were present but lacked home authority to vote. Associations at Sawyer, Hartford, Fremont, Brunswick, Scottville, Dowagiac and Frankfort, are expected to affiliate with the Exchange later in the season.

Don't Worry About Money, Michigan Has $10,000,000, Says Fuller

IF you have been worrying about how to pay your banker, tax-collector and undertaker, forget it, because your own state of Michigan has more cash on hand in its general funds, at the close of its fiscal year, June 30th, than it has had in years.

The exact figures will not be available for a few weeks, as the accounting division of the State Administrative Board will not close its books until July 10. But, reckoning from the last monthly balance sheet up to June 1, the approximately correct figures are that the State will enter the new fiscal year with $9,273,000 cash in the General Fund.

Other items in the assets of the General Fund are:

Deposit to the credit of the State Fuel Administration, being the money set aside for the administrator early last winter but not used, $50,000; bankers' trust deposit for sinking fund interest, $132,172.50; loan to industrial funds, $377, 102.63; due from other funds, $1,160,450; public utility appraisals receivable, $185,987.46; automobile license fees available for the State Highway Department but not apportioned, $491,960; uncollected State tax levy for 1922, $4,000,000.

Total Assets $16,200,000

The total of the General Fund assets is $16,200,000. The liabilities of the General Fund are about $10,000,000, the largest item being between $6,000,000 and $7,000,000 of legislative appropriations made in 1921 but not paid out.

Others of the larger of the State's financial assets not in the General Fund are: In the war loan sinking fund, $658,000; in the soldiers' bonus sinking fund, $1,631,000; in the highway bond sinking fund, $1,650,000; in the auto theft fund, so-called, being moneys received for motor car title certificates, $733,000; in the fund in which is kept moneys received at branch offices for auto licenses, $215,000; fees received from motor car operator licenses, $343,000; in the highway construction fund, $1,717,000; motor car license moneys not yet transferred to the general fund, $1,949,000.

The fiscal year 1922-23 is the first to close in which a balance sheet was made at the end of each month showing the condition of the General Fund.

The State Board of Tax Commissioners has the preliminary work pretty well in hand for the annual meeting of the State Board of Equalization, which convenes the first Monday in August. On that date the tax board will present to the equalization board its valuation of each county. Official notification of these valuations being furnished to the counties, each county, beginning the third Monday in August will have a chance to give reasons, if it has any, why its new valuation should be reduced. Detroit's assessed valuation this year is about $200,000,000 higher than the assessed valuation of 1922.

Commissioner George Lord, of the tax board—the equalization board is composed of the three tax commissioners, Commissioner L. Whitney Watkins, of the State Department of Agruculture, and Auditor-General Oramel B. Fuller—being a resident of Detroit, has been given the work of looking after Wayne County's valuation. All of the 83 counties are grouped in three lots with one tax commissioner looking after valuations in each group.

A table compiled by Commissioner Lord shows that of the $5,622,913,389 assessed valuations reported this year by the 83 counties, about 80 per cent is real property and 20 per cent personal, the exact figures being: Real, $4,490,284,601; personal, $1.132,628,788. Last year the State was equalized at $5,000,000,000.

Information at the tax board's offices is that the valuations of the 83 counties submitted to the equalization board will show total valuations close to $6,000,000,000.

N. Y. Dairy League Completes Successful Year

Did a Gross Business of Over $82,130,000 and Establishes Twenty-Seven New Plants During Second Year of Operation

THE Business Farmer is giving space to the major part of the president's report to members of the Dairymen's League of New York state, at the close of their second successful year, because it is of vital interest to the dairymen of Michigan and other dairy states. New York is blazing the way for successful co-operative milk distributing. It is a gigantic undertaking, as you will see by reading this report. It means going into Big Business, against odds and opposition. It takes men, brains and money, and plenty of each to make a success of co-operative marketing. The New York milk shed is first, but Detroit is Fourth City. Our dairymen must be prepared for the inevitable!—Editor.

THE Dairymen's League Cooperative Association, Inc., has just completed its second successful year as a commercial organization.

We, who are managing your affairs are conscious of the great handicap under which you men are laboring. We know that there has never been a time in the history of this country when the purchasing power of farm products, including milk, was as low as it has been for the past few years. This condition has been with us so long that our patience is very apt to give way. We are worried about our investments and our future and those who have been most progressive are the hardest hit. For many, many years farming including dairying, has been extremel discouraging and for two generations we have watched the boys and girls leave the farm because of the many unattractive conditions. I say unattractive when compared to the more attractive environment of the cities, for the cities have taken the best youth in the land and have prospered. Why? Because they have had the benefit of the wonderfully fertile farms of America and the low prices which the consumers have paid for farm products. City groups have organized, country groups have tried to work as individuals. We cannot help but observe our great disadvantage.

These are all facts which you have known. You all know we have hit bottom, therefore, I could have easily passed them over, but I believe it is better for us to face the facts, firm in the conviction that the way we are following leads to the only logical solution of our economic problem.

Look Into the Future

The turn of the tide is here, so let us look for a moment into the future. Although during the past two years we have been burdened with a great milk surplus, which has brought about ruinously low prices, it is perfectly evident that right now we have one of the most active milk markets that we have known since the war. At the same time every other business is prosperous. Our slogan "Cost of production plus a reasonable profit" is now within the realm of possibility, and I ask this question, "Why are we not getting it—why was the price of milk reduced last month and this—why were four millions of dollars taken from the incomes of the dairymen of this territory in just two months?" Why? Because some farmers still believe in going out alone or in competing groups.

Review Progress

Your organization has proceeded along lines always progressive, and at the same time conservative,—conservative in that it still refuses to plunge into new and untried fields without careful consideration and preparation.

The adoption of a fixed marketing program is decidedly a progressive move. FIRST came the development and expansion of our fluid business. New plants have been built, or acquired, plants have been improved and put under the New York Board of Health. A year ago we had only 400 cans of direct fluid trade, while today we have over 8,000, and of this only 2,000 were obtained by purchase. On June 13th, this reached a new high level, when our own plants shipped into New York City 10,257 cans of milk and 110 cans of cream.

SECOND, the development and expansion of our evaporated milk business. During the past year our plants have been brought up to the highest point of efficiency in production and sanitation with greatly increased capacity. Our policy is to turn out the best evaporated milk in the world. It was upon this plan, permanently fixed in our minds that our new selling and advertising campaign was based, putting Dairylea milk on the same price level with other leading advertised brands of evaporated milk.

Fluid Milk First, Evaporated Second

We have selected these two lines of production in which your association has a distinct competitive advantage. Fiuld milk always first, and evaporated milk second. This does not mean that future changes in marketing conditions may not lead us into other endeavors. For this coming year, however, our whole efforts are being thrown into selling these two leading products.

In having these great evaporating plants, our farmers are kept constantly under the New York Board of Health supervision and a great volume of class one milk is available for shipment on a moment's notice and at times, when it is not needed for fluid consumption, we are diverting this high grade product, not into butter and cheese, but into the much more profitable by-product, evaporated milk. In the selection of the new trade name "Dairylea," we have a different idea with but little change. This name is unique, and all our own.

Subject to Attack

During the past year, cooperative associations have been subject to attacks from certain interests that still seem to cherish the hope that they will be able to break up these farmers' organizations. The League has, of course, had to withstand its share of these attacks. In its marketing operations, it has been a popular target. Much of this criticism, we know, has been due to a lack of understanding of what the association is trying to do. However, recent months have witnessed a decided weakening of this hostility toward the organization. Business men, bankers, and the public generally are beginning to recognize your association, not only as a progressive business concern but as an institution destined to accomplish a great work in lifting farm life to a higher level than it has ever attained before.

In all its business relationships, the association has maintained a business-like attitude. Your officers and directors have felt that only by adhering strictly to constructive policies can any co-operative enterprise hope to achieve real and lasting success. This attitude, perhaps, more than any one thing is gradually winning for the association stronger support from its members and from the general public.

In short, we are beginning to realize more fully our responsibilities to each other as members of one great enterprise. We also recognize, as an association, our responsibilities to all other co-operative marketing and buying associations throughout the length and breadth of this land. They have many things in common. The misfortunes of one has its sympathetic reaction in all the others. Likewise, the successes of one of them carry encouragement and hope to all the others.

More than this, we recognize our great responsibilities as a big service organization to the general public, especially the consuming public. Our great purpose is not to fix the price of the commodity which we have to sell, but to so work out the problem of distribution and marketing that the farmer will get a fair price for his milk and the consumer will get all the benefits of uniform quality and service that orderly marketing can provide.

Within one year the League has put its own plants in a position where they can do their part in tak-

Expert Explains What is Happening in the Sugar Market

By SIMON G. PALMER, Sugar Statistician, Washington, D. C.

THE recent spectacular rise in the price of sugar, the second within the past three years has attracted universal attention and condemnation. Responsibility for such perpendicular market movements usually is traceable to the parties who have most to gain by them. Normally, all of our sugar comes from two sources; domestic, including beet, Louisiana cane and insular, and foreign sugar from Cuba. Inasmuch as the domestic crop had all been harvested and most of it marketed before the rise came, most of the domestic producers had nothing to gain, however high prices might go. The reverse of this condition existed in Cuba, which had just started grinding a crop estimated at about 4,000,000 long tons, of which only 343,663 tons had been made and exported when the rise began.

From late in December and all through the first three weeks of January while domestic beet sugars were being marketed the N. Y. price of imported raws and of refined made from them was falling, the total amounting to ½c per pound. All of a sudden the price of both raw and refined shot upward, raws advancing $3.19 and refined $3.33 per hundred.

One of the reasons which our seaboard refiners assign for the rise is that the tariff on sugar was increased late last year. They do not allude to the steady decline which preceded the rise, nor do they explain how an increase of duty of sixteen one-hundredths of one cent per pound could be responsible for an increase of over $3.00 per hundred in the price of sugar.

The other reason given by the seaboard refiners is that one of the four leading sugar statisticians of Cuba reduced his earlier estimate of the Cuban crop now being harvested to 3, 670, 000 long tons. The three other statisticians adhere to their estimates of 3, 725,000; 4,000,000 and 4,119,000 long tons, respectively. It is worthy of note that during all this sugar shortage excitement, Willett & Gray our most reliable sugar crop statisticians have not reduced their Cuban crop estimate of 4,000,000 tons and on the world crop, their latest figures show an increase of 513,182 tons over last year's crop. It thus would appear that both reasons given are mere camouflage, used for the purpose of fooling the American people.

Present Price and Production Cost

Nor does it appear that the present high price of sugar bears any relation to the cost of production. At the time the sensational perpendicular rise began, Cuban sugar was selling at prices more than one-third higher than the average price Cuba had received for her sugar for 10 years prior to the war and hence it is to be assumed that her producers already were making a handsome profit. Sugar has gone up considerably over 3c per pound and since the rise set in Cuba has exported 2,108,000 tons, on which a rise of 3c would net her producers an extra profit of $126,000,000. But this is only beginning. On May 19, the port warehouses of Cuba were bulging with 812,000 tons of sugars, on which 3c a pound represents an extra profit of over $49,000,000. In addition to this, on May 19 there were 532,000 tons of manufactured sugar at plantations and in transit to shipping ports, on which an extra profit of 3c per pound means an additional $32,000,000. In addition to this, based on the lowest crop estimate yet made by any sugar statistician, they will produce another 248,000 tons before they cease grinding, on which an extra 3c per pound will yield them still another $15,000,000. So that altogether, the 3c rise will have cost the American people the enormous sum of $222,000,000 and will have added a like sum to the net profits of producers of sugar in Cuba.

It is not to be assumed however, that this $222,000,000 of extra profit bled from the American people goes to enrich the people of the Island of Cuba, for the Cuban sugar industry is no longer Cuban. Ever since the Cuban reciprocity 20 years ago American seaboard refining and other American interests have gradually been acquiring Cuban caneland and sugar mills and erecting new mills until to-day they admit that two-thirds of the crop now is produced by Americans. They admit that the American investment in

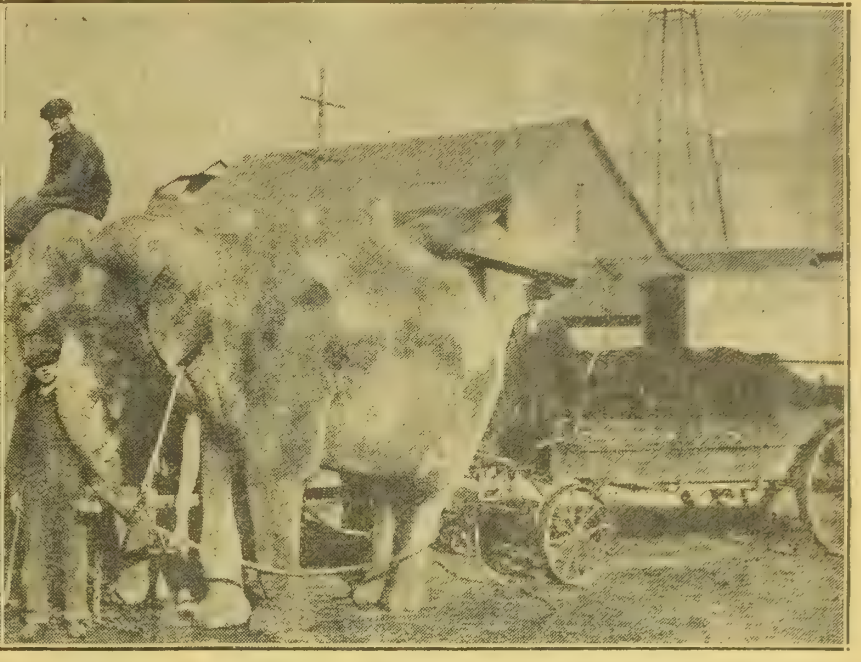
STEERS IN LOT 1 IN M. A. C. FEEDING EXPERIMENT

Here we have the nine steers that were fed normal silage in the feeding experiments conducted by the M. A. C. last winter. This lot was appraised at $10.25 per cwt. at the Detroit market.

PICTURES FROM FAR AND NEAR

WORLD'S LARGEST SHIP RETURNS FROM TRIAL RUN.—Uncle Sam's giant liner, the Leviathan, on the recent trial run to the Bahamas and return acquired the title of "Queen of the Seas" by proving herself the fastest liner afloat, establishing the record of 28.04 knots in one hour. It will be remembered that the Leviathan is the former German Vaterland and that the United States has been reconditioning the liner. This month it will make its first trans-Atlantic trip under the flag of the United States Shipping Board. Officials are pleased with the performance of the Leviathan on her trial trip and state that she will do even better in crossing the Atlantic.



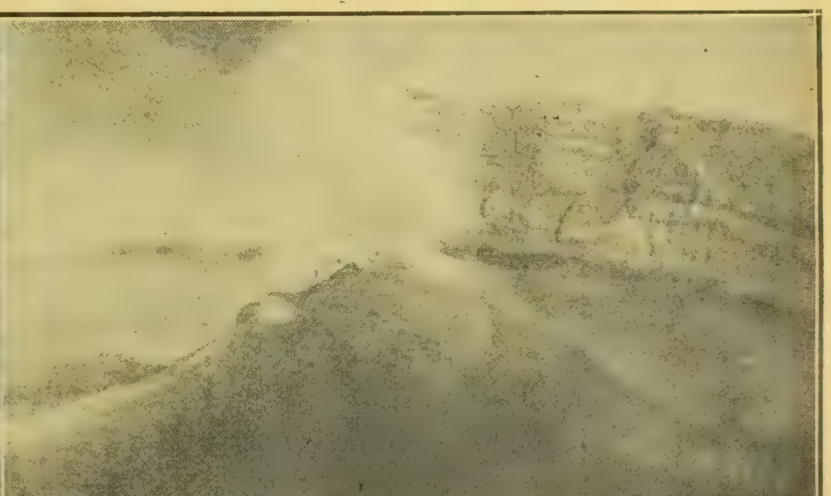
ELEPHANTS PULL MACHINERY ON CIRCUS FARM.—On the Wallace farm which was established by the late B. E. Wallace, founder of the Hagenbeck-Wallace circus, such sights are common during the winter months. This farm is the winter quarters of the John Robinson and Sells-Floto circuses, is composed of 550 acres and located near Peru, Indiana. Five manure spreaders like the one shown here are used on this farm and many times they are pulled by elephants as the spreaders are loaded so heavily that often horses or mules cannot pull them. It is through the courtesy of the International Harvester Company that we are able to publish this photograph.

NEW PREMIER ARRIVING AT No. 10 DOWNING STREET.—Here we have the latest picture of Premier Stanley Baldwin arriving at his new home in London, No. 10 Downing Street, to begin the business of prime ministering. Although he accepted the position only a short time ago he is filling the place of the former prime minister very satisfactorily and his friends predict that he will become one of England's greatest premiers.

HUNDREDS VIEW WEST POINT GRADUATION EXERCISES.—High military officials helped make the graduation exercises at West Point, New York, memorable. Parades, drills, etc., were the order of the day, and the men acquitted themselves as good soldiers should. Photo shows Gen. Pershing congratulating Cadet Francis Rarick Johnson, of Tacoma, Washington, the honor student of the class of 1923.

NEED A GOOD TINNING JOB DONE?—Here is Mrs. Catherine Fellers of Cincinnati, Ohio, who at sixty-five, is just beginning to get a little fun out of life. She is the only woman tinner we ever heard of, and has been in the business for forty years. She first started as a helper to her husband after they were married, and when he died she took over the job alone. Mrs. Fellers is just as spry today as she was years ago.

CEMENTING THE FRIENDSHIP BETWEEN AMERICA AND FRANCE.—American and French soldiers took part in the unveiling ceremonies of a beautiful monument erected at Chaumont, France, depicting the aid and friendship given by the Americans during the World War, to the French. Its symbolic artistry is truly beautiful.



MOUNT ETNA ERUPTS AGAIN.—Europe's greatest volcano, Mount Etna, has just completed an eruption that caused damage amounting to over $14,000,000. Towns were wiped out and hundreds of lives lost during the few days the burning lava poured down the sides of this great mountain which is located in Sicily. Many new craters were opened.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

CAN CONTROL BLACK KNOT OF PLUM

Is there any cure for Blackknot on plum trees?—W. M., Clayton, Mich.

—The Black Knot of plum can be controlled by carefully cutting out and removing from the orchard all of the diseased parts. The best time to do this trimming is in the winter or spring before growth starts. If the disease is well started, the cutting out of knots must be continued through the summer and close inspection will be necessary the first year to eradicate the new knots which will appear. After the disease is well in check a single annual inspection will keep it under control. Sprays help to some extent but will not take the place of cutting out the knots.—C. W. Bennett, Research Assistant in Plant Pathology, Michigan Agricultural College.

NOTE OUTLAWS IN SIX YEARS

Suppose one party has a note against another for a certain amount of money, without any security only names of husband and wife owing the money. The note has been running three and four years already. But is only made for one year. Little is being done in keeping up the interest. About one and a half years interest has been paid so far. I would like to know if there is any such thing as the note becoming outlawed according to Michigan laws? Is there such laws in effect? What is the time limited? What should one do to keep the note from being outlawed if there is a danger and what is your best advice to collect any on the note?—G. H. S., Boyne City, Mich.

—The time within which suit must be brought on a note in Michigan is 6 years. Payment of interest would revive the debt, however, and the 6 year time limit, in that event, it would probably be advisable to be figured from the date of the last interest payment. If there is no prospect of collecting in any other way sue on the note.—Asst. Legal Editor.

MARKETING MOHAIR

Will you please tell me a reliable place to market Angora goats wool or Mohair and how much more should it bring per pound than sheep's wool?—V. N., West Branch, Mich.

—I believe that you could market this through the wool pool of the State Farm Bureau to excellent advantage. The Secretary of the American Angora Goat Breeders' Association is C. E. DeGoff, Reed Springs, Missouri, and he could no doubt give you valuable information as to mills which are purchasing mohair. The value of mohair per pound varies a great deal, even more than sheep's wool. Where one takes excellent care of his goats and produces a first class quality of mohair, it brings a higher price per pound. On the other hand, where the goats are not well cared for and properly handled, it is worth very little more than wool.—Geo. A. Brown, Professor of Animal Husbandry, M. A. C.

WANTS TO COLLECT STORAGE CHARGES

I would like a little information on this subject. An agent came to my place on the 18th of July, 1921, with a second-hand separator and asked me to buy it. I told him "no" I did not want it. But he wanted to put it in the house for a while as he said he didn't have room in his auto to take it home, so I let him leave it. He said "use it if you want to." In three months he came back and I told him again I didn't want it. We were going to move in a few days and he asked me if I would take it with me to help him out. So I told him I would. He said "if you can sell it I will give you $5." Now after bothering with it he doesn't want to pay me anything for my trouble. He wrote me last week he had sold it and the man would be after it. I wrote him and said when he came and paid for taking care of it he could have it. Now we haven't any use for it. He says we used it and that paid us for our trouble. Can he take it without paying storage on it?—E. B., Bentley, Mich.

—In absence of any expense or implied agreement it would be assumed that your use of the separator would be your compensation for keeping it. In order to recover a greater amount, it would be necessary to show that the agent expressly agreed to so compensate you, or that the circumstances were such as to imply such an agreement.—Asst. Legal Editor.

SPRAY TO USE ON PEAR, PLUM AND PEACH TREES

I am writing to ask your advice about a suitable spray solution to be used for pear, plum, cherry and peach trees. I use lime sulpher and arsenate for apple trees but I have set out some of the above named fruit trees this spring and would like to know what to spray them with.—E. R., Standish, Mich.

—The pear, plum and peach trees should receive the dormant application of lime-sulphur solution. The cherry does not ordinarily need to be sprayed with the dormant application. It is too late now, however, to make this application on any of the trees and it is probable that there was not much need for the spray except possibly on the peach trees for leaf curl. They should all be sprayed early next Spring in order to prevent injury from San Jose scale and from leaf-curl on peaches. We will send you our bulletin giving directions for spraying all kinds of fruits.—W. C. Dutton, Research Associate, Dept. of Horticulture, Mich. Agricultural College.

TAXING CATTLE

On the 7th day of May of this year I had 300 steers shipped here to graze. Will sell and ship them out this fall. Will I be compelled to pay taxes on them here? At that late date would they not be assessed where I bought them, near Bad Axe, Michigan? How long would cattle have to be in a township before they can be assessed?—J. C., Gaylord, Michigan.

—Uuder the provisions of the Tax Law of the State of Michigan, it is presumed that all property will be assessed. Section 17 of the General Tax Law provides that "no change of location or sale of any personal property after the first day of May in any one year shall affect the assessment made in such year", yet this does not mean that the assessing officer is limited to the first day of May in making his assessment. It only provides that a change in location or sale of property after the first day of May shall not affect the assessment.

Some years ago we requested an opinion from the Attorney General as to whether or not an assessing officer could add to his assessment roll personal property brought into the assessing district after the second Monday in April. In his opinion, the Attorney General said that "assessing officers are not obliged to assume that property which comes into their assessing district after the sceond Monday in April, or even after the first day of May, has been assessed for taxation in some other district. In a good many cases delays in transit occur, or delays in the actual work of assessing in the district from which the property came, or in other cases property coming in from some other state where the time of assessment is different from that of Michigan, might vitally affect the question. Where, however, the owner of the property feels he has been wrongfully assessed, he should undoubtedly make his showing to the board of review and obtain such relief as he is entitled to. Unless you can show that the cattle were actually assessed for this year in the locality where they were purchased, we believe the assessing officer will be justified in in placing them upon the assessment roll.—Board of State Tax Commissioners.

WEEVILS IN BEANS

Two years ago I raised beans. They were all right. Planted seed last year and my beans were nearly all full of bugs. Some have told me it was the time you planted them. If this is true I would like to know what is the cause and what time of the year they should be planted?—W. W. W., Quincy, Mich.

—I believe that much of the trouble arising from bean weevils is due to carelessness in sowing "boggy" beans. The treatment recommended now-a-days, is really quite cheap. It consists in fumigating with carbon disulphide which costs about 6c per pound now, if purchased of the makers in fifty pound drums. To be sure it costs ten or twelve times that much if purchased at the drug stores in one or two pound lots. One can pay for the drum and get his money back after returning the drum.

This material can be used to kill woodchucks, gophers and other vermin about the farm. Use about one pound to fifty bushels in a tight bin, and take every precaution possible to avoid accident by fire or by breathing the fumes. The fumigation should be put on during warm weather since no fumigant works well when the temperature is down. This fumigation should be done at a distance from barns and other buildings since the fumes from the carbon disulphide might work down and kill animals in the barn. Also the insurance lapses during the operation if done in the barn. Air the beans well after the operation is completed in order to rid the beans of the oder.

The bean weevil will continue to work in dried beans until they are completely destroyed. Fumigation should be carried on not more than forty-eight hours since a longer exposure is likely to injure the germinative power of the seeds.

As a final warning, great care must be exercised to avoid accident from an explosion or from anything breathing the fumes.—R. H. Pitt, Professor of Entomology, M. A. C.

WHAT SHARE SHOULD B GIVE?

If A furnishes a brood sow for B to raise pigs or hogs on shares what share should he give if pigs were sold when old enough to wean, and what share should he give if he fitted them for market (light weights)?—Reader, Byron, Mich.

—If the pigs were sold at the weaning age B should receive whatever share would reasonably compensate him for his labor in taking care of them and for the feed required from the time he received the brood sow. If they were fitted for the market B would be entitled to a greater share because of his greater expense in fitting them for the market. A should give B whatever share is reasonable according to the circumstances and the general custom observed in the community.—Asst Legal Editor.

HORSESHOE PITCHING

I SUPPOSE you horseshoe pitching fans are planting 'em right next to the stake (those that aren't ringers) figuring on trying for the big silver loving cup given by the Business Farmer to the champion pitcher of Michigan, decided at the State Fair. Last year it was won by Mr. L. M. Wilks of Battle Creek but he must win it two times more before it belongs to him permanently so you have ample opportunity to wrestle it from him, that is providing you "slipper slammers" get busy and practice. There is no question in my mind but that there is a farmer in Michigan who can win from Mr. Wilks but don't forget, this man from Battle Creek was in Florida last winter playing, finishing seventh in the national tournament, while you were wallowing through snow banks. So you better practice. And say, don't argue, just send to the Horseshoe Editor of the Business Farmer for a free copy of the National Rules and carry it in your hip pocket. Then if your partner starts arguing prove it to him. No doubt many of you have held local tournaments already and I would like to hear about them. What is your best record in a game? How many ringers can you get in 50 points, pitching 40 feet? Come on boys, let's have a farmer state champion this year.—Horseshoe Editor.

State Fair is Now a $5,000,000 Project

A BIG step forward in the Michigan State Fair's race not only to hold supremecy but to win international supremecy is predicted by Secretary-Manager George W. Dickinson for this year's exposition which will be held in Detroit from August 31 to September 9.

The Michigan State Fair is now a $5,000,000 project. The premiums will go over $100,000 and $50,000 worth of free attractions will be offered for the entertainment of visitors in addition to the many exhibitions and the twenty-two big shows on the "Midway."

The live stock and agricultural exhibits are constantly growing and the fair officials are struggling with the problem of accomodating them. Within the next year, however, spacious new buidings will be erected under the latest $1,000,000 bond issue, which was authorized by the legislature this year.

These exhibits this year are expected to excel in quantity and quality the exhibits of former years.

An interesting action of the fair management this year is the increase in accomodations and premiums for horses. Horse lovers and horse breeders have felt that this subject had not received enough attention in years past so the fair board decided to do everything possible from now on to encourage the breeding of fine horses of every class.

Mr. Dickerson is now in correspondence with the state and federal governments in an effort to bring on even more extensive exhibits this year. The federal government has already pledged an excellent dairy exhibit which should prove of great value to every dairyman.

The 1923 dog show should be a "thriller." Dogs of all kinds will be exhibited but the big attraction will be the demonstrations by trained Police Dogs. They will show how they guard property, find lost objects and catch fleeing criminals.

Cat show, poultry show, domestic science and manual training exhibitions, gardening exhibit, apiary exhibit and many others have been arranged. The electrical and mechanical exhibits are expected to be quite complete and very interesting.

"All work and no play makes Jack a dull boy" is something Mr. Dickerson believes in. As a result he has arranged an entertainment program that will be without equal in the nation.

On the "Midway" where there will be twenty-two snappy shows, life will be one round of pleasure. In selecting these shows Mr. Dickerson and members of the business committee made a special trip to Indiana in order to make sure that the shows were not only real high class, worth while attractions, but also that there would be nothing in any of them that might offend the wives and children of fair visitors.

The shows, which have been highly praised by the press in many cities passed the Michigan State Fair's inspection with flying colors.

The entertainments classed as free attractions include many of the best acts in the country. There will be horse races featuring the famous trotter, Peter Manning, driven by America's Premier reinsman, Thomas W. Murphy.

Peter Manning will race against the Michigan State trotting record of 1:59¾ and Mr. Dickerson predicts that a new mark will be set.

Three great bands have been engaged for concerts and other musical numbers. The 91st Highland band of Canada, an organization that made an enviable reputation before and during the war will appear under the direction of Lieutenant Stares. Cervonis concert band and a military hussar band also have been engaged.

There will be auto polo matches, thrilling balloon and parachute races, a girl will ride a horse in a 40-foot dive and there will be a number of tumbling and exceptionally good aerial acts. Two great fireworks demonstrations have been arranged. One will be given twice daily during the fair. The burning of Smyrna will be depicted the first three days and from then on the spectacular feature "India," which includes live elephants driven by Hindus in native costumes, will hold forth.

In the automobile races half a dozen or so high powered machines, piloted by crack drivers, will be entered. Keen competition is promised and it is hoped records will be set for this track.

Both from the agricultural and entertainment viewpoints the fair this year will excel any that has been held in the country and fully half a million persons are expected to attend during the ten days. Arrangements are being made to accomodate each day 1,000 automobile tourists. They may pitch their tent within the fair grounds and "keep house" there for a reasonable sum.

TRAINING TOMATO VINES

ONE tomato vine properly pruned and trained to a support of some kind will produce as much fruit as two that are allowed to grow at will. The tomatoes will also be of better quality and ripen more uniformly. By pruning, I mean the removal of surplus growth which appears usually at the base of each branch after fruit has begun to set. There is a general opinion that the ground for tomatoes should not be manured; but if the shoots which heavy manuring causes to grow so readily are removed, the strength that would otherwise take the form of excessive growth goes into the maturing fruit. Either a trellis of wire or one straight stake as is some times used for grapes, should be provided, and the vine tied to it with soft strings. It is often desirable to use three light stakes driven down in the form of a triangle and tied together at the top. A tomato vine that is trained to one straight trunk should reach a height of four or five feet, depending on the variety. The sun can reach every part of it, and there will be little cause for rotten fruit.—H. F. Grinstead.

NEW YORK CENTRAL LINES

Our earnings in hauling your products

THE Government does not guarantee us any income.

The rates fixed by the Interstate Commerce Commission are intended to be such as will enable the railroads as a whole to earn at least 5¾% on the value of their properties. Out of this net income they must meet interest on debt, pay dividends to the stockholders and build up a surplus as required by prudent business management.

The railroads earned 3.31% in 1921, and 4.14% in 1922. This year they hope to do better. They must do better if necessary new capital is to be attracted to railroad development.

It was only during the period of Government operation that railroad net income was guaranteed. That income was based on pre-war earnings, and averaged 5⅓% on the value of railroad property.

If any railroad fails to earn 5¾% on its investment, the Government doesn't make up the difference; and the law provides that anything earned above 6% must be equally divided with the Government.

As stated by the Interstate Commerce Commission in a recent decision, the rate provision of the Transportation Act "carries with it no guarantee", but "it is, instead, a limitation".

WANTED: Girls for good paying and steady positions. Mt. Clemens Pottery Co., Mt. Clemens, Mich.

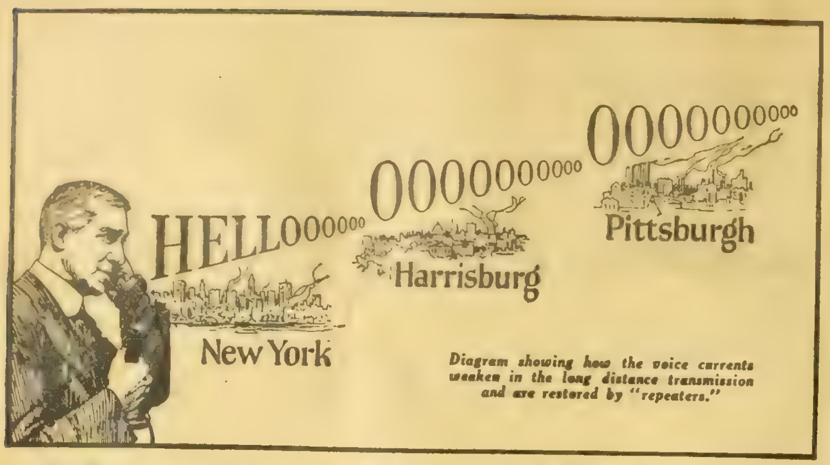

Diagram showing how the voice currents weaken in the long distance transmission and are restored by "repeaters."

Mastering Nature's Forces

Without the telephone "repeater," the entire electrical power available on the earth would not be sufficient to make trans-continental speech commercially possible. The three thousand repeaters now in use on Bell System long distance lines have increased the talking range of every telephone by thousands of miles. By making possible the use of smaller gauge wires, repeaters have kept down the cost of equipment by millions of dollars.

The repeater is only one out of scores of scientific developments of equal or greater importance in the advancement of telephone service. Bell System progress has been a continual encounter with seemingly impossible barriers, and a continual finding of new ways to overcome them. Each step in extending the range of speech has come only after years of study. Each important piece of telephone apparatus has had to be created for the need. Each working day this pioneering goes on. Nature is harnessed to a new duty and mechanical ingenuity improves the tools of service, as fast as science finds the way.

Not only is the Bell System daily conducting research within its own nation-wide organization, but it is studying the discoveries of the whole world of science for their possible application to telephone service. Only by such eternal vigilance has the United States been given the best and cheapest telephone service in the world.

What the Neighbors Say

DOES ONAWAY NEED A MARKET?

I HAVE read with a great deal of interest your articles on Farmers' Markets and I see no reason why a Farmers' Market could not be established in our little city of Onaway and be run successfully.

Onaway has a population of 3,000 and labor is well employed here. One factory here employs 1000 to 1200 men and of course there are other smaller institutions. Laboring men are so completely employed by the factory that it is next to impossible for a farmer to hire a man.

I have taken this matter up with our county agent, Mr. I. J. Sours, and he is going to take it up with the Chamber of Commerce, the editor of our paper the Outlook, and others. A word of encouragement from you might help the matter along. Anything you can do along this line will be greatly appreciated. —E. G. Storm, Onaway, Mich.

—Our readers near Onaway, ought to get busy right away if they want to get a farmers' market in operation there this season. We suggest a Saturday morning market to start with. Mr. E. G. Storm deserves the active help of the business farmers near Onaway and we are sure he will get it.—Editor.

DOESN'T LIKE WORK OF HIGHWAY DEPARTMENT

WOULD you like to know something about Branch Trunk Road No. 57, Boyne Falls to Boyne City and then to Walloon Lake? Why has the state been over five years on part of this road? Why does the state spend money on road across private property which has not been condemned but which must be before they can get title? Why do they abandon good road along settled and cleared farms which has been used and kept up at a cost of $1,800 per year by state and county for years for an almost impossible route through swamp for three miles with no family on same and one-half mile longer? Why fight? Court battled over three years and they started work before the outcome of the court proceedings. Have they the advantage of pre-court decision? Do you think it is right for private money to have to foot the bills for those proceedings? When finished it will be just a gravel road but it has already cost enough to have made the old road a 20-ft. cement driveway. The building of this road is in a sinking swamp. Rebuilding it this spring and again next spring as will be necessary will cost more than the entire old route would. Rogers turned this route down and it was given up in favor of the old route before the war, but two men were powerful enough to have it reconsidered. So at last Rogers said in letter that he would build on proposed new route if right of way was got and they are still fighting for that right of way. But they have fooled Rogers into thinking they had it, so he let contract. He knows now that one of the many suits that have been brought is pending in the Supreme Court and also some talk of investigation. He has, for awhile, at least, quit work on road and refused to gravel but the powers-that-be here in county regardless of state actions are going ahead on the two most disputed farms so as to get travel on it this summer. The two farms are ruined by road as was promised they would be if owners fought the road. Nearly $100,000 has been wasted so far. Would you like all the facts or history of this road back over 15 years? This is not very much of this history but enough to find out if you are interested. The deal has been rotten, the facts as stated and many more and worse can be proven. Went to see Rogers last June, personally, and he promised me that he would stop all work on disputed farm until they got title, if ever. He let work go on three weeks, spent over $6,000 on this farm and got the work in such shape that when they come to condem it again, no three men would dare say it was not necessary. And besides they took good care not to let it be seen by commissioners in summer when damage to farm could be easily seen but brought them here in middle of winter when everything was burried under three feet of snow. If you look into this matter don't do as the ——— ——— did by writing to men here. It got a very brief answer that there was nothing to it. Their one big worry has been that their methods and the facts would leak out. Court actions have been kept very quiet, nothing in local papers and never a word in any outside paper and yet a big story here of dirt, fraud and misunderstanding. Hope you will take time to figure this out, have done the best I could under present conditions.—C. L. G., Boyne City, Mich.

SOMERSET FARMERS FAVOR A THEORETICAL EDUCATION

THE Tri-County Grange of Somerset, Mich., held a debate as the Literary part of their program, Friday evening, June 22nd. The question was: "Resolved, that a practical education is better than a theoretical one!"

Col. E. H. Kerr, Master of the Grange acted as chairman. The judges selected were J. M. Bowyer, DeWitte Sawyer and Mrs. Henry Herrald. The affirmative was supported by Samuel LeMaster and Floyd H. Smith and the negative side by Shirley L. Burr and George B. Smith.

The affirmative contended that the most successful men, including Abraham Lincoln did not go to school beyond the eighth grade, that the prisons are full of college graduates, and that students from the agricultural college are at a disadvantage when placed in competition with practical farmers. A case was cited where an agricultural student who hired out on a farm, tried to harness a team of mules by putting the crupper straps around the mules necks. They also contended that taxes paid to support our high schools are putting the farmers in the hole financially, causing bankruptcy in many cases.

In the opinion of the judges the negative effectually tore down the arguments of the affirmative by citing actual statistics, regarding the percentage of college graduates in prison, and also the percentage of college graduates in prison, and also the percentage of successful men who are college graduates, having acquired theoretical training before entering upon business.

They contended that the farmers financial troubles are caused rather by a neglect of theoretical training in the principles of economics and government. They pointed out that theoretical training along mechanical lines, has produced great labor saving devices on farm and in factory, but that a lack of proper theoretical training in economics and government, had brought about an unfair distribution of the benefits derived, the result being that 65% of the present wealth of the country is in present wealth of the country is in the hands of 2 per cent of the population. They maintained that this condition could be corrected by supporting the schools through excess profit taxes and surtaxes instead of direct taxes as at present.

They charged that neglect of theoretical education among the masses on the subject of taxation, is fostered by millionaires who endow colleges and contribute campaign funds to both political parties, in order that they may keep the voters in ignorance or confused on these important subjects, so that in the last session of Congress such taxes were reduced rather than increased.

They even expressed the belief, that, with an increase of theoretical education on this one subject, an industrial millenium can be brought about by one decisive election, possibly that of next year, that the farmer can be freed from his present heavy burden of taxes by throwing it upon those better able to pay, that currency deflation brought about by the money power can be checked, if farmers will study theory and give less attention to propaganda given out by those claiming to be practical politicians.—F. H. Smith, Secretary.

"Say, young feller, d'ye know how clost ye come to shootin' my prize Holstein? Ye knocked the hat offen the hired man when he wuz milkin' of 'er."—Judge.

THE SECRET OF SIMPLE LIVING

A SERMON BY REV. DAVID F. WARNER

TEXT: "Be not therefore anxious, saying, 'What shall we eat?' or 'What shall we drink?' or, 'Wherewithall shall we be clothed?' for after all these things do the gentiles seek. * * But seek ye first his kingdom, and his righteousness, and all these things shall be added unto you."—Matt. 6:31-33.

"SUFFICIENT unto the day is the evil thereof." And there is enuf in this day to test well our outlook on life; to test its simplicity. With "wars and rumors of wars" added to all other disorders of modern life; its intemperance, luxury, gaeity, and artificiality; we are in much confusion. And we are looking for an escape? We shall find it in the secret of simple living. One who cares to live the life that lifts is fondly longing to discover this secret.

Someone has said this generation is given over to "food and fun." What folly! And how far retired from the Christian ideal! Being anxious, distracted about what we shall eat, drink, and wear is the spirit of the heathen world, said Christ. Have you never visited the folks with apparently simple wants and manners, who lived out in the peace of the hills, and by murmuring rivers, and with all nature to calm their souls? And haven't you said to yourself surely this is the simple life? Did our Lord refer to such as these? Or did he refer to those who live in the environment of art and culture? No matter, so long as the bite of food or the outer garment claims the prime attention and intention of life. No matter, so long as life is lived for "food and fun." Here one's plans are brief and sensual and life is easily disturbed and given over to anxiety. "Be not anxious for your life." And yet for many of us, life is narrow and anxious, not broad and free. We live in bewilderment and confusion because we live for the present and for ourselves instead of living for two worlds and for others. Therefore life loses genuine simplicity.

But what is the secret of simple living? Paul found it in a certain "goal" toward which he was pressing; in a specific type of character which he called the "high calling of God." This he calls a secret of such comparative value as to count all other things as but refuse. In Emersonian thought and figure, he had hitched his wagon to a star. Life was not eating and drinking but a high-orderd purpose to establish the Reign of God.

Then that life is simple which is long-sighted in its vision, and which runs along the far-reaching plans of our Father in heaven. That life is complex and wordly which is short-sighted in its vision; out of touch with God and his plans for the ages; cumbered about with temporal things instead of being urged with an eternal purpose; and which is concerned with fleeting appearances instead of spiritual experiences.

When shall we see that the simple life is one controlled by the inner law? In proportion as we have to be controlled by external law; by outward restraints; in that proportion is our life complex and disorderly. Of course, immature life is regulated, for the most part, by an external law of restraint, as for instance, the life of children. But do we want to remain as children in mind and morals. Then control must come from within. And this is our only salvation from anxious, worried living. It is the only thing which makes you plain in your living, high in your thinking, and exalted in your resolves and purposes. In World War days I took a party of friends to visit the Wright aviation field at Dayton. We appeared at the gates but I had forgotten my pass. Were we to be admitted? I spoke to a soldier on guard. But he refused. Then he spoke to a corporal higher up. They were weighing the matter. This was an irregularity. Who knows but what this party might be here to prey upon Uncle Sam's soul and spread disorder in the camp. But we were admitted. Just so, many complexities and disorders get into our life because a selfish you stands guard; a you of pagan interests and tastes. The "corporal higher up" is not consulted; that sovereign, inner law of the Spirit; that writing upon the heart. And the whole world needs a dedication to this life principle of seeking first the love of God and the love of one's neighbor, to exalt her to a state of harmony and peace. That we have the opposite of peace means that we are at cross-purposes with God.

So when life is centered in the love of God and our fellow man; eating, drinking, and dressing are but incidents in our passing. And in these there is modesty and simplicity. Certainly, there is a demand for a growing consciousness of the real value of simple dressing. The demand of the Spirit for modest attire is that we might be "a typical instance of all who were to believe in him (Christ) and gain eternal life."—Moffat. This ideal will rid us of much of the vanity and snobbishness shown in present day dressing. Says Miss Blood, of the Columbia School of Oratory, culture will do this. Certainly, Christian culture will for Christ says that such pride and guadiness is but the hangins-on of paganism.

Neither, defile your body thru foods. Here again, is demanded the inner law of restraint. Even Topsy, the old family mare had it, for father said, no matter if she gets to the oats bin she will eat no more than she needs. This kind of horse sense is much need by some humans. Know ye not that your body is not an experimental labratory? But "Know ye not that your body is a temple of the Holy Spirit which ye have from God"? Defile it not thru intemperance in eating or drinking.

But simplicity touches all phases of living and is meant to be both a personal and a social asset to the world. It has to do with our home life, our pleasures, and our business. But one cannot be simple in the detailed outer life until simplicity touches one's thinking and one's resolves; the aspirations and loves of one's heart. So again, the secret is discovered in Isaiah 26:3, "Thou wilt keep him in perfect peace whose mind is stayed on thee".

"The mind is its own place and can make a heaven of hell or a hell of heaven". And says the Infinite Purpose, "As a man thinketh in his heart so is he". With a mind stayed on the purpose of God, there is security and fine prospect. Ideally, with this man, there should be no worry about what to-morrow might bring forth. "Sufficient unto the day is the evil thereof." This is the secret of simple living.

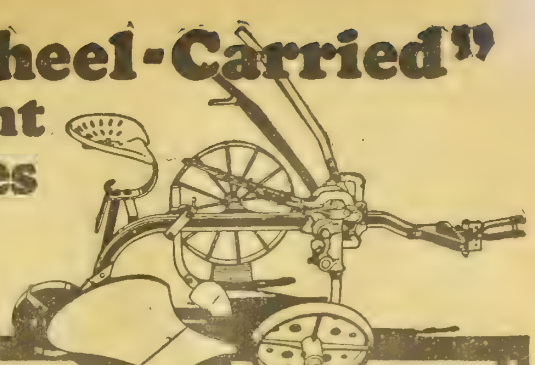
But many of us have not yet reached this celestial plane in life. Yet it is enough to be reaching after it. Still, multitudes of folks have their minds stayed on self. And some of them live in the M. B. F. parish. Day after day you have gone to your fields and your kitchens depending upon our own right arm, our own strength; in a word, self-confident. You did it yesterday and succeeded. Why not today? Yesterday your body was strong, brain was clear, and foot was sure. You depended on our own self and was not disappointed. Why not today? And so it happens that today again you easily cope with all the daily demands. And why not tomorrow?

Well, tomorrow comes with the first illness, the first gray hair, the first revelation of the loss of strength. And what disappointment! You had not seen yourself before as becoming enfeeble. You had stayed your mind on what you supposed to be a perfectly able self. Now, your support is going, your life is shrinking, occasioning a bitter surprise. Your house is beginning to fall. And are you still anxious for tomorrow? Learn the secret of simple living, which is a God-reliance instead of a self-reliance. "Come now, ye that say, today or tomorrow we will go into the city and spend a year there, and trade, and get gain; whereas ye know not what shall be on the morrow. What is your life? For ye are a vapor that appeareth for a little while, and then vanisheth away." And James says further that "all such glorying is evil" when God is left out of our plans.

Here is the essential, "Seek first

(Continued on Page 17)

"All Wheel-Carried" Pulls Light and Makes a Good Seed Bed



A rolling landside supports the rear, making an "all-wheel-carried," level-running plow—all weight is rolled—none dragged. No bottom friction against furrow wall or furrow bottom—no "sledding" or "running on its nose." That's why unusually good work and unusually light draft are features of the

John Deere
Syracuse No. 110 Sulky

Plows at desired depth when turning square corners—the lever that controls the front furrow wheel is right at the operator's hand. When you reach the end of the field, all you have to do is release the lever latch. The front furrow wheel casters on the turn—guides the plow perfectly. Then, as the plow settles on the straight-away, the lever seeks the proper position and locks automatically.

Here are other features you are sure to appreciate: The close-fitting shares are quick detachable; the two-axle front furrow wheel support prevents binding or cramping; the bearings are sand-proof; the plow is simply made and strong in every part.

John Deere dealers can furnish this plow with the type of bottom adapted for best results in your soil.

FREE BOOKLET describes the No. 110 Sulky Plow. Write today, address John Deere, Moline, Ill., and ask for booklet CI-4 33

ntinued from June 23rd Issue)

SHE limped into the tepee with John's arm snugly about her slim waist. MacDonald waited patiently until he returned. He motioned Aldous to seat himself close at his side. Both men lighted their pipes before the mountaineer spoke.

"We can't both sleep at once tonight, Johnny," he said. "We've got to take turns keeping watch."

"You've discovered something today?"

"No. It's what I haven't discovered that counts. There weren't no tracks in this valley, Johnny, from mount'in to mount'in. They haven't travelled through this range, an' that leaves just two things for us to figger on. They're behind us—or DeBar is hitting another trail into the north. There isn't no danger ahead right now, because we're gettin' into the biggest ranges between here an' the Yukon. If Quade and Rann are in the next valley they can't get over the mount'ins to get us. Quade, with all his flesh, couldn't climb over that range to the west of us inside o' three days, if he could get over it at all. They're hikin' straight for the gold over another trail, or they're behind us, an' mebby both."

"How—both?" asked Aldous.

"Two parties," explained MacDonald, puffing hard at his pipe. "It there's an outfit behind us they were hid in the timber on the other side of the snow-ridge, and they're pretty close this minute. Culver Rann—or FitzHugh, as you call him—is hustling straight on with DeBar. Mebby Quade is with him, an' mebby he ain't. Anyway, there's a big chance of a bunch behind us with special instructions from Quade to cut our throats and keep Joanne."

That day Aldous had been turning a question over in his own mind. He asked it now.

"Mac, are you sure you can go to the valley of gold without DeBar?"

For a long half minute MacDonald looked at him, and then his voice rumbled in a low, exultant laugh in his beard.

"Johnny," he said, with a strange quiver in his voice, "I can go to it now straighter an' quicker than DeBar! I know why I never found it. DeBar helped me that much. The trail is mapped right out in my brain now, Johnny. Five years ago I was within ten miles of the cavern—an' didn't know it!"

"And we can get there ahead of them?"

"We could—if it wasn't for Joanne. We're makin' twenty miles a day. We could make thirty."

"If we could beat them to it!" exclaimed Aldous clenching his hands. "If we only could, Donald—the rest would be easy!"

MacDonald laid a heavy hand on his knee.

"You remember what you told me, Johnny, that you'd play the game fair, and give 'em a first chance? You ain't figgerin' on that now, be you?"

"No. I'm with you now, Donald. it's——"

"Shoot on sight!"

"Yes."

Aldous rose from his seat as he spoke.

"You turn in, Mac," he said. "You're about bushed after the work you've done to-day. I'll keep first watch. I'll conceal myself fifty or sixty yards from camp, and if we have visitors before midnight the fun will all be mine."

He knew that MacDonald was asleep within fifteen minutes after he had stationed himself at his post. In spite of the fact that he had had almost no sleep the previous night, he was more than usually wakeful. He was filled with a curious feeling that events were impending. Yet the hours passed, the moon flooded the valley again, the horses grazed without alarm, and nothing happened. He had planned not to awaken old Donald at midnight, but MacDonald roused himself, and came to take his place a little before twelve. From that hour until four Aldous slept like dead. He was tremendously refreshed when he arose, to find that the candle was alight in Joanne's tepee, and that MacDonald had built a fire. He waited for Joanne and went with her to the tiny creek near the camp, where both bathed their faces in the snow-cold water from the mountain tops. Joanne had slept soundly for eight hours, and she was as fresh and as happy as a bird. Her lameness was almost gone, and she was eager for the day's journey.

As they filed again up the valley that morning, with the early sun transfiguring the great snow-topped ranges about them into a paradise of colour and warmth, Aldous found himself mentally wondering if it were really possible that a serious danger menaced them. He did not tell MacDonald what was in his mind. He did not confess that he was about ready to believe that the man on the snow-ridge had been a hunter or a prospector returning to his camp in the other valley, and that the attack in Tete Jaune was the one and only effort Quade would make to secure possession of Joanne. While a few hours before he had almost expected an immediate attack, he was now becoming more and more convinced that Quade, to a large extent, had dropped out of the situation. He might be with Mortimer FitzHugh, and probably was—a dangerous and formidable enemy to be accounted for when the final settlement came.

But as an immediate menace to Joanne, Aldous was beginning to fear him less as the hours passed. Joanne, and the day itself, were sufficient to disarm him of his former apprehension. In places they could see for miles ahead and behind them. And Joanne, each time that he looked at her, was a greater joy to him. Constantly she was pointing out the wonders of the mountains to him and MacDonald. Each new rise or fall in the valley held fresh and delightful surprises for her; in the craggy peaks she pointed out castlements, and towers, and battlemented strongholds of ancient princes and Kings. Her mind was a wild and beautiful riot of imagination, of wonder, and of happiness, and in spite of the grimness of the mission they were on even MacDonald found himself rejoicing in her spirit, and he laughed and talked with them as they rode into the North.

They were entering now into a hunter's paradise. For the first time Joanne saw white, moving dots far up on a mountain-side, which MacDonald told her were goats. In the afternoon they saw mountain sheep feeding on a slide a half a mile away, and for ten breathless minutes Joanne watched them through the telescope. Twice caribou sped over the opens ahead of them. But it was not until the sun was settling toward the west again that Joanne saw what she had been vainly searching the sides of the mountains to find. MacDonald had stopped suddenly in the trail, motioning them to advance. When they rode up to him he pointed to a green slope two hundred yards ahead.

"There's yo'r grizzly, Joanne," he said.

A huge, tawny beast was ambling slowly along the crest of the slope, and at sight of him Joanne gave a little cry of excitement.

"He's hunting for gophers," explained MacDonald. "That's why he don't seem in a hurry. He don't see us because a b'ar's eyes are nearsighted, but he could smell us half a mile away if the wind was right."

He was unslinging his long rifle as he spoke. Joanne was near enough to catch his arm.

"Don't shoot — please don't shoot!" she begged. "I've seen lions, and I've seen tigers—and they're treacherous and I don't like them. But there's something about bears that I love, like dogs. And the lion isn't a king among beasts compared with him. Please don't shoot!"

"I ain't a-goin' to," chuckled old Donald. "I'm just gettin' ready to give 'im the proper sort of a handshake if he should happen to come this way, Joanne. You know a grizzly ain't partic'lar afraid of anything on earth as I know of, an' they're worse'n a dynamite explosion when they come head-on. There—he's goin' over the slope!"

"Got our wind," said Aldous.

They went on, a colour in Joanne's face like the vivid sunset. They camped two hours before dusk, and MacDonald figured they had made better than twenty miles that day. The same precautions were observed in guarding the camp as the night before, and the long hours of the vigil were equally uneventful. The next day added still more to Aldous' peace of mind regarding possible attack from Quade, and on the night of this day, their forth in the mountains, he spoke his mind to MacDonald.

For a few moments afterward the old hunter smoked quietly at his pipe. Then he said:

"I don't know but you're right, Johnny. If they were behind us they'd most likely have tried something before this. But it ain't in the law of the mount'ins to be careless. We've got to watch."

"I agree with you there, Mac," replied Aldous. "We cannot afford to lose our caution for a minute. But I'm feeling a deuced sight better over the situation just the same. If we can only get there ahead of them!"

"If Quade is in the bunch we've got a chance of beating them," said MacDonald, thoughtfully. "He's heavy, Johnny—that sort of heaviness that don't stand up well in the mount'ins; whiskey-flesh, I call it. Culver Rann don't weigh much more'n half as much, but he's like iron. Quade may be a drag. An' Joanne, Lord bless her!—she's facing the music like an' 'ero, Johnny!"

"And the journey is almost half over."

"This is the fourth day. I figger we can make it in ten at most, mebby nine," said old Donald. "You see we're in that part of the Rockies where there's real mount'ins, an' the ranges ain't broke up much. We've got fairly good travel to the end."

On this night Aldous slept from eight until twelve. The next, their fifth, his watch was from midnight until morning. As the sixth and the seventh days and nights passed uneventfully the belief that there were no enemies behind them becamse a certainty. Yet neither Aldous nor MacDonald relaxed their vigilance.

The eighth day dawned, and now a new excitement took possession of Donald MacDonald. Joanne and Aldous saw his efforts to suppress it, but it did not escape their eyes. They were nearing the tragic scenes of long ago, and old Donald was about to reap the reward of a search that had gone faithfully and untiringly through the winters and summers of forty years. He spoke seldom that day. There were strange lights in his eyes. And once his voice was husky and strained when he said to Aldous:

"I guess we'll make it to-morrow, Johnny—jus' about as the sun's going down."

They camped early, and Aldous rolled himself in his blanket when Joanne extinguished the candle in her tent. He found that he could not sleep, and he relieved MacDonald at eleven o'clock.

"Get all the rest you can, Mac," he urged. "There may be doings tomorrow—at about sundown."

There was but little moonlight now, but the stars were clear. He lighted his pipe, and with his rifle in the crook of his arm he walked slowly up and down over a hundred-yard stretch of narrow plain in which they had camped. That night they had built their fire beside a fallen log, which was now a glowing mass without flame. Finally he sat down with his back to a rock fifty paces from Joanne's tepee. It was a splendid night. The air was sweet and cool. He leaned back until his head rested against the rock, and there fell upon him the fatal temptation to close his eyes and snatch a few minutes of the slumber which had not come to him during the early hours of the night. He was in a doze, oblivious to movement and the softer sounds of the night, when a cry pierced the struggling consciousness of his brain like the sting of a dart. In an instant he was on his feet.

In the red glow of the log stood Joanne in her long white night robe. She seemed to be swaying when he first saw her. Her hands were clutched to her bosom, and she was staring—staring out into the night beyond the burning log, and in her face a look of terror. He sprang toward her, and out of the gloom beyond her rushed Donald MacDonald. With a cry she turned to Aldous and flung herself shivering and half-sobbing into his arms. Gray-faced, his eyes burning like the smouldering coals in the fire, Donald MacDonald stood a step behind them, his long rifle in his hands.

"What is it?" cried Aldous. "What has frightened you, Joanne?"

She was shuddering against his breast.

"It—it must have been a dream," she said. "It—it frightened me. But it was so terrible, and I'm—I'm sorry, John. I didn't know what I was doing."

MacDonald had drawn very close.

Joanne raised her head.

"Please let me go back to bed, John. It was only a dream, and I'll tell it to you in the morning, when there's sunshine—and day."

Something in MacDonald's tense, listening attitude caught Aldous' eyes.

"What was the dream?" he urged.

She looked from him to old Donald, and shivered.

"The flap of my tepee was open," she said slowly. "I thought I was awake. I thought I could see the glow of fire. But it was a dream—a dream, only it was horrible! For as I looked I saw a face out there in the light, a white, searching face—and it was his face!"

2 A.M. EN ROUTE— JOHN BROWN IN PINETREE (10 MILES AWAY) HAS JUST PHONED FOR HELP WITH A SICK HORSE

"Whose face?"

"Mortimer FitzHugh's," she shuddered.

"Yes, it was surely an unpleasant dream, dear," he comforted her. "Try and sleep again. You must get all the rest you can."

He closed the flap after her, and turned back toward MacDonald. The old hunter had disappeared. It was ten minutes before he came in from out of the darkness. He went straight to Aldous.

"Johnny, you was asleep!"

"I'm afraid I was Mac—just for a minute."

MacDonald's fingers gripped his arm.

"Jus' for a minute, Johnny—an' in that minute you lost the chance of your life!"

"What do you mean?"

"I mean"—and old Donald's voice was filled with a low, choking tremble that Aldous had never heard in it before—"I mean that it weren't no dream, Johnny! Mortimer FitzHugh was in this camp tonight!"

CHAPTER XXV

DONALD MacDONALD'S startling assertion that Mortimer FitzHugh had been in the camp, and that Joanne's dream was not a dream, but reality, brought a gasp of astonishment and disbelief from Aldous. Before he had recovered sufficiently from his amazement to speak, MacDonald was answering the question in his mind.

"I woke quicker'n you, Johnny," he said. "She was just coming out of the tepee, an' I heard something running off through the brush. I thought mebby it was a wolverine, or a bear, an' I didn't move until she cried out your name an' you jumped up. If she had seen a bear in the fire-glow she wouldn't have thought it was Mortimer FitzHugh, would she? It's possible, but it ain't likely, though I do say it's mighty queer why he should be in this camp alone. It's up to us to watch pretty close until daylight."

"He wouldn't be here alone," asserted Aldous. "Let's get out of the light, Mac. If you're right, the whole gang isn't far away!"

"They ain't in rifle-shot," said MacDonald. "I heard him running a hundred yards out there. That's the queer thing about it. Why didn't they jump on us when they had the chance?"

"We'll hope that it was a dream," replied Aldous. "If Joanne was dreaming of FitzHugh, and while still half asleep saw something in camp, she might easily imagine the rest. But we'll keep watch. Shall I move out there?"

MacDonald nodded, and the two men separated. For two hours they patrolled the darkness, waiting and listening. With dawn Aldous returned to camp to arouse Joanne and begin breakfast. He was anxious to see what effect the incident of the night had on her. Her appearance reassurred him. When he referred to the dream and the manner in which she had come out into the night, a lovely confusion sent the blushes into her face. He kissed her until they grew deeper, and she hid her face on his neck.

And then she whispered something, with her face still against his shoulder, that drove the hot blood into his own cheeks.

"You are my husband, John, and I don't suppose I should be ashamed to let you see me in my bare feet. But, John—you have made me feel that way, and I am—your wife.

He held her head close against him so that she could not see his face.

"I wanted to show you—that I loved you—that much," he said, scarcely knowing what words he was speaking. "Joanne, my darling——"

A soft hand closed his lips.

"I know, John," she interrupted him softly. "And I love you so for it, and I'm so proud of you—oh, so proud, John!"

He was glad that MacDonald came crashing through the bush then. Joanne slipped from his arms and ran into the tepee.

In MacDonald's face was a grim and sullen look.

"You missed your chance, all right, Johnny," he growled. "I found where a horse was tied out there. The tracks lead to a big slide of rock that opens a break in the west range. Whoever it was has beat it back into the other valley. I can't understand, s'elp me God. I can't, Johnny! Why should FitzHugh come over into this valley alone? And he rode over! I'd say the devil couldn't do that!"

He said nothing more, but went out to lead in the hobbled horses, leaving Aldous in half-stunned wonderment to finish the preparation of breakfast. Joanne reappeared a little later, and helped him. It was six o'clock before breakfast was over and they were ready to begin their day's journey. As they were throwing the hitch over the last pack, MacDonald said in a low voice to Aldous:

"Everything may happen today, Johnny. I figger we'll reach the end by sundown. An' what don't happen there may happen along the trail. Keep a rifle-shot behind with Joanne. If there's onexpected shooting, we want what you might call a reserve force in the rear. I figger I can see danger, if there is any, an' I can do it best alone."

(Continued in July 31st Issue)

Uncle Rube Spinach Says:

WHAT'S COMIN' NEXT?

IT'S gettin' to be a pretty lively ol' world, now, ain't it? We've pretty night got to go armed even to go up town. Well mebbe it ain't so bad as that here in my home town but when I read of the things that're goin' on in other places I'm gettin' scart just a bit—I'm takin' not so many chances an' go out in daylight an' not very far then.

When I read the papers and learn that 15 year old girls have commenced shootin' ol' fellers, killin' 'em deader'n a door nail, I'm just lettin' lots of daylight shine between me an' all kinds of women.

Anna Daidoue, age 15, shot an' killed her suitor, Frank Loranto, aged 40. At 15 Anna should not have had a suitor—she should be playin' with her dolls an' livin' like a girl of that age ort to live.

At 40 Frank Loranto ort to have known better'n to be foolin' around with young girls of 15 years of age.

Killin' a man like that mebbe is helpin' society some—any way we can git along without men like that, but it ain't always Frank Loronto's that's bein' killed.

You know it's gittin' to be rather a common thing for a woman to shoot a man—always, or most generally its 'cause the man has done her a wrong—that's always her plea—she has "been betrayed by him" an' she kills him an' a jury will usually aquit her of the murder charge an' she is free to go out an' be betrayed agin an' mebbe shoot up some other guy who happens to fall for her kind of love.

I'm not sayin' but what some men should be shot an' even killed—some of 'em deserve it—I'd like to shoot a few of 'em myself—but jest the same I don't believe women should have a monopoly on the shootin' business. An' so you see I'm kinda keepin' sly of meetin' 'em 'cause they're gettin' too handy with their arm'aments. Women are all right in their proper place if you get what I mean. I sort of kinda like 'em an' all that, but I don't like the idea of 'em bein' so handy an' being ready to snuff a man's life out without a minute's notice.

No man should ort to be killed without a little chance to git ready for the change. It's a serious sort of a thing to jump out of this world into another—one we don't know a thing about, an' so I sez there should be a curb of some sort put onto our women. Make 'em take out a license for killin' or do sim'lar, so's we'll know what to expect an' when to expect it.

Now you know I ain't sayin' a word agin women—not reg'lar women so to speak, but with so many killin's an' everything I'm gettin' afraid.

An' so, for fear I might say something that would rile some female woman up a little, I'll jest stop right here. Cordially yours, UNCLE RUBE.

THEY MAKE EVERY MINUTE COUNT

"My Goodyear Klingtite Belt enables me to take advantage of every minute in the working day. I have been through four threshing seasons with mine, and it has never delayed operations for a second." —E. W. AMES, Wichita, Kansas

YOU put an end to your belt troubles when you use a Goodyear Klingtite Belt. It is slipless, powerful, and easy-running. It requires no dressing. It needs no breaking-in. Both custom threshers and general farmers recommend Goodyear Klingtite Belts.

Goodyear Klingtite Belts are made in endless type for heavy duty and in cut lengths for lighter drives. They are sold by Goodyear Mechanical Goods Service Station Dealers and by many hardware dealers.

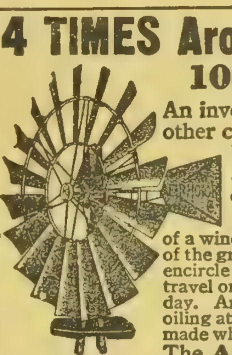
4 TIMES Around the World with ONE OILING

100,000 Miles Without Stopping for Oil



An inventor who could develop an automobile, a railroad car or any other conveyance on wheels which would perform such a feat would be considered a wonder. But such is the record of regular accomplishment by the Auto-oiled Aermotor during the past eight years in pumping water.

Did you ever stop to think how many revolutions the wheel of a windmill makes? If the wheel of an Aermotor should roll along the surface of the ground at the same speed that it makes when pumping water it would encircle the world in 90 days, or would go four times around in a year. It would travel on an average 275 miles per day or about 30 miles per hour for 9 hours each day. An automobile which keeps up that pace day after day needs a thorough oiling at least once a week. Isn't it marvelous, then, that a windmill has been made which will go 50 times as long as the best automobile with one oiling?

The **Auto-oiled Aermotor** after 8 full years of service in every part of the world has proven its ability to run and give the most reliable service with one oiling a year. The double gears, and all moving parts, are entirely enclosed and flooded with oil all the time. It gives more service with less attention than any other piece of machinery on the farm. To get everlasting wind-mill satisfaction buy the Auto-oiled Aermotor, the most efficient windmill that has ever been made.

"The Farm Paper of Service"

STATE TREASURY FLUSH

ABOUT the most welcome news that we could hope to spread from this page is the report from Mr. O. B. Fuller, Auditor General, that the state of Michigan closed the fiscal year on June 30th with nearly $10,000,000.00 in cash in its state funds.

Farmers are going to begin to wonder right away if it is not possible to reduce the tax burden which has been around their necks for the past few years, and The Business Farmer wants to go right on record that this is no time for the state to accumulate a cash reserve when the farmers of the state have been suffering from so long a depression.

Mr. Fuller issues another hopeful note in that the 1923 state tax is likely to be $16,000,000 which would represent a reduction of $1,300,000 from the 1922 levy. During the past few months Wayne, Macomb, and St. Clair Counties have been entirely reassessed and it is said that the increased assessment in Wayne County alone amounts to $200,000,000, which indicates in a small way, at least, the growth and prosperity of Michigan's metropolis.

With the increased valuation and the lowering of state expenditures which Governor Groesbeck has worked so diligently on, it is to be hoped that the yoke may be lightened at least somewhat during this year. There is absolutely not the slightest question but what increasing taxes were arriving at a point where agriculture in this state could not bear the load which it was asked to carry. The news of lowered taxes is therefore most gratifying and will do much to rebuild a sound agriculture in Michigan.

NEW YORK DAIRY LEAGUE A SUCCESS

IF you are a milk producer shipping in the Detroit area you ought to be interested in the president's report which is practically a summary of the second successful year of the New York Dairymen's League which has gone into the milk situation in America's greatest milk market in a manner that is strikingly commendable.

Nearly one-tenth of all the men, women and children in the United States of America live in the New York Milk area, and each morning must find on their doorstep fresh milk for their daily food requirements. The problem of producing this milk and getting it to them fresh and economically is one which staggers the imagination, and that the dairymen themselves, after years of unsuccessful dealings through middlemen, in this market, should have come to the solution of operating their own business and providing a means of outlet for their by-products is an object lesson for the dairymen of Michigan.

Our milk-producers must not overlook the fact that Detroit is now fourth city and that other metropolitan districts of Michigan are increasing in population more rapidly than any other similar section of the United States. The problems of New York state are or will be identical with our own. Our dairymen might as well be prepared for the inevitable.

Like every other cooperative marketing association, the Dairymen's League has been subjected to a consistent attack which is aimed (as all other similar attacks are aimed) at the morale of its members. If the enemy of cooperative marketing can destroy the faith of the individual member in the officers or leaders of the enterprise in which they are engaged, there is no question but that they can spell its ruin.

The foundations of great business are not built in a minute. Only experience can guide the footsteps of these courageous leaders, who are pioneering the distribution of milk by the producers themselves, in the world's greatest milk market.

It might be possible for those now in control of the milk distribution in the Detroit area to work out a practical plan with the milk producer, which would split the possible profit fifty-fifty and to formulate a workable plan which would not require the milk producer to actually go into the business of distribution. However, those in control of the situation do not seem willing to recognize the inevitable and so in justice to their own business the milk producers of Michigan must be studying the plan which New York state has been working out with the success indicated in this article.

We advise every milk producer to take time now, or lay this copy aside until he has time, to read and digest this report.

WHAT IS HAPPENING TO SUGAR BEETS?

IF you have been wondering what is going to happen to the sugar beet industry now that the sugar profiteers once again have in their control the price of sugar in these United States, you will be interested in the article by Simon G. Palmer in this issue.

The beet sugar industry in America is facing a crisis. Not that the crisis is any more acute today than it was five years ago, but it is more apparent. As has been pointed out, the United States, which could raise all the sugar needed in the world in its own beet fields, now supplies less than two-fifths of its own consumption, and depends on the cane growers of Cuba and other foreign countries for the principal supply of one of it greatest necessities. Unless this industry is protected it is easy to predict that within five years bats will be flying through factories in Michigan, Colorado and California, and the towering smoke stacks will be only monuments to an industry which once promised so much to both the producer and the consumer.

M. A. C. POT STILL BOILING

WE predicted that the ousting of Dr. Friday, former president of the Michigan Agricultural College, would hardly clear the atmosphere or prove to be a step in the right direction unless it be that his martyrdom should mark the ending of politics in the administration of our college.

Now reports tell us that the state administrative board has withheld all extension funds until the college authorities give the board the information it desires regarding the connection between the extension fund expenditures and activities of the Michigan State Farm Bureau. This order withholds approximately $150,000 appropriated for the college by the last legislature, and means that so long as this horn-locking continues all extension work at the college will have to cease.

Some time ago the state administrative board decided to investigate the claim that the partial payment of the county agent by the State Farm Bureau was leading to a virtual control by that farmers' organization. The Secretary of State was empowered to investigate and his claim now is, that he has not been able to get the information which is desired from Farm Bureau officials. Of course all of this is a petty squabble, in which the innocent by-stander, which happens in this case to be our own agricultural college, is the only one that will particularly suffer. Right now, at a time when extension work is most important; in a season of the year when the farmers of Michigan most need its services and when they are beginning to cash-in on the work which the extension department can do for them, there arises a political squabble which makes this department entirely inactive and impotent.

Over in Oklahoma, as you will note by reading "This Week's Editorial" they are having the same kind of trouble where politics has crept into the administration of the state's agricultural college. If you get any consolation out of others' troubles similar to your own, you can read that with some satisfaction.

In the meantime news items tell us of the weakening of the excellent faculty which M. A. C. was building up. Today we read that Professor C. A. Conger, acting head of the department of zoology and physiology has resigned and is leaving for Wesleyan University. How can they expect the farmers of this state to be patient in the face of such conditions?

BANK COMMISSIONER OPTIMISTIC

WE get accustomed to reading a lot of more or less irresponsible information as to the farmer's condition. Often we are inclined to give credence to these statements directly in proportion as they compare to our own condition.

No man in Michigan, not excepting the government and agricultural crop reporters and statisticians, is in as good a position to judge the actual business condition of the farmers of Michigan as is the state banking commissioner. The local bank is the barometer of the farmers' condition, and while we have on several occasions pointed out localities in the state where the local bank was either not in a position or preferred not to take care of the farmers' needs in his community, we will go on record, now that the worst of the crisis is over, by saying that the bankers of Michigan, as a whole, have by extending credit, counsel and advice helped our farmers to get back on a safe and sound footing.

The farmers are not the only ones who had to go through this period of adjustment following the war-time conditions. We have heard it said that few businesses were able to catch step with the slowing down of the demand which followed the war, and nearly every business found itself loaded up with more expense that it could carry if it were to show a profit. The farmers of this country have had to go through this same sort of deflation, have had to lay off the hired help which they found necessary through the war, have had to strictly economize in order to bring their expenses within the margin of their receipts.

This year, 1923, is the year in which we have predicted the farmers of America, and particularly of Michigan, the state which we know best, will stage a come-back which will be felt in business circles everywhere.

It gives us a feeling of stability, therefore, to have Mr. Hugh A. McPherson, state banking commissioner, endorse our optimism when he says, "The farmers of Michigan as whole, are in pretty good financial shape. Of course, there are some communities that have been hit harder than others. But as a whole, the farmers' bank deposits have not kept step in decrease in comparison with the price he has received from his product. The farmer is gradually getting himself back in good financial shope, and with a good summer, he will be back to where he was in 1920, if records of bank deposits may be taken as a basis for the assertion."

FRUIT GROWERS AWAKEN!

HISTORY was written at Benton Harbor last week when the fruit growers organized a state-wide cooperative fruit selling agency under the title of "The Michigan Fruit Growers, Inc.," with James Nicol, former head of the Farm Bureau, as president.

This is not the first state-wide fruit growers organization. We have had horticultural societtes for years back without number, but this is the first time that an organization has been formulated, the sole purpose of which is to secure a wider and better market for Michigan fruit.

The example set by the fruit growers of California and the Pacific Coast have not passed unnoticed by those who are familiar with the quality of Michigan fruit and recognize the position it should occupy on the markets of the world. If the fruit growers in other states can accomplish a demand for their products which raises the price to a point where it is profitable to the grower then it can be done in Michigan and the organization of the fruit growers into a solid, well financed and well managed business organization is necessarily the first step in the right direction.

HIGHWAY FUNDS ABOUT GONE!

A report submitted to the state Administrative Board today by the State Accounting Division shows that the State has tentatively authorized highway work which exceeds by $111,597 the money it will have available this year, including the $5,000,000 bond issue recently authorized but not yet sold.

The report shows that the State owes $2,854,039 on uncompleted contracts and $3,544,344 on projects contracted since June 1 and those authorized by the board but for which contracts have not yet been placed. Other contingencies will cost the State $285,403, making a total tentative indebtedness of $6,683,787. Against this the State has in the highway fund $1,572,190 and $5,000,000 to be raised from the sale of bonds leaving a deficit of $111,597.—News Item.

THIS means that many of the projects about half completed through the state will have to remain untouched the balance of 1923. It means also that parts of some roads will be ready to be rebuilt, by the time they are completed from end to end. It means more than this however—it means that some manner of getting a larger share of the road funds from those who use the roads most, must be devised.

The strange thing about it is, that those who use the roads for hauling or pleasure are perfectly willing to pay the necessary cost of building good roads and keeping them up. When a class are so willing to "pay-the-piper," why is the state so reticient about putting the tax where it should be? We give up!

PUBLISHER'S DESK

DON'T SAVE 'EM!

FOR the information of the thousands of our readers who have been breathlessly counting their young roosters preparatory to shipping them to George Beuoy, of Kansas who advertised in other farm papers under the heading, "Young Roosters Wanted" and offered to pay $2 to $3 for each young rooster that could be spared, we have secured some information.

In the first place, Mr. George Beuoy, is the manufacturer of instruments for caponizing poultry, and in the letter which he sends in answer to your reply as to how many roosters you have ready for shipment, and of what breed, he tells you that he will send a complete caponziing outfit for $5, that is, if you order within two weeks. We have no doubt but that the method of caponizing is sound and the instruments valuable, but there is no excuse for a manufacturer stooping to advertising which misrepresents the facts in order to get inquiries, and it is up to the publisher who accepts this advertising to investigate it before it runs in his columns.

You can let your young roosters go. George Beuoy of Kansas doesn't want them!

REGARDING THE ANNEKA JANS BOGARDUS ESTATE

EVERY day our readers are sending in additional information regarding the Anneka Jans Bogardus Estate, which as we under stand it, owns the lower part of New York City. They tell us it only remains for a few shrewd lawyers to properly present their claims and the courts will return a fortune to the estate which will make Mr. Henry Ford's ready-cash look like a Sunday school collection.

We learn, for instance, that there is an Anneka Jans Bogardus Society in Michigan, of which L. C. Tefft, of Leslie, is president, and Ethel Kelsey of Jackson is secretary and treasurer. We mention in particular the fact that this society has a treasurer, and dues, which we understand for the state society is only 50 cents, but for the national society is five dollars "for registration" $2.00 per month forever afterwards. This ought to build up a considerable estate for someone, if there are enough direct or indirect descendants, and it should not be hard to prove at this price per head that there are a great number. For instance, if there were five hundred descendants who paid in $2 per month, not to mention the original $5 registration fee, this would create a fund of $1000 per month, or if there are 5000, which we would more readily expect, this would create a fund of $120,000 per year, which would in time, if properly invested, create a nice little nest egg for those who are piloting the destiny of the society.

In a printed circular which comes to our hands, we notice that what the National Committee is most worried about, is that their plans are getting some publicity, and they beg of each member of this society to keep as quiet as possible as to the amount they are paying in and what they are doing.

Perhaps we haven't taken this matter seriously enough, but recently we were in New York and we did not notice that they were particularly worried down on Wall or Broad Street, in fact they seemed to be contentedly going ahead building thirty and forty story buildings on property which, if we are to believe the letters we get, belong to folks scattered all over Michigan.

Apparently the investors in these sky-scrapers are taking a long chance on the faulty title which the heirs of one Anneka are about to prove!

FINANCING THE FINANCIERS

A LARGE amount of money has been invested in the so-called mortgage and loan companies, and we have received several inquiries during the past few weeks from farmers who have recently been asked for further investments. My advice is, to ascertain at what price these stocks are being quoted on the Detroit market. Most of them are selling way below par, as you will notice for example, in a special report just received regarding one of them, which we believe to be reliable.

"The Bankers Mortgage & Loan Co., is not listed on the Detroit Stock Exchange but is traded quite actively here in Detroit as an unlisted stock The market at the present time i uoted at $3 bid, and $3.50 asked for the unit. The preferred has paid their dividends since the organization of the company but we believe there has been a delay of from 10 to 20 days in mailing the checks. The company is well managed and we feel that at the present market value the stock is quite attractive."

If you are thinking of buying any loan or mortgage stock we will be glad to get you a special report regarding the company and the price at which the stock is being sold on the Detroit market.

The Week's Editorial

IN OKLAHOMA TOO!

ANOTHER political explosion at the Oklahoma Agricultural College. Out goes the president appointed two years ago and with him will doubtless go a large percentage of the present teaching staff. In comes another president with new ideas and a new bunch of faculty members.

The new president will stay until another turn of the wheel of politics. Then he, too, will go into the discard and there will be a new deal all around.

This sort of thing has been happening right along. There have been five presidents at the Oklahoma Agriculture College within 11 years. The longest term of service of any director of the experiment station since the college was founded has been three years. The average term of service of other faculty members has been scarcely longer.

A condition like this is not good for the school. Teachers like to stay put. They want to be measured in terms of usefulness, not of politics. For many years it has gradually become increasingly harder to get good teachers to come to the college at all, and the courage of the teaching staff itself has been steadily declining.

At the college is a great experiment station in which both the state of Oklahoma and the United States government invest annually tens of thousands of dollars to find out things about farming. No experiment can be proved in less than five years. No director of the station can do much in the three years which is his maximum term of office. It is a safe bet that, regardless of the best efforts of the teachers and experiment station workers themselves, half of the annual appropriation has been wasted every year by the frequent changes of plan and method. Neither can any man do his best work when he lives under the shadow of a sudden dismissal without cause.

I am quite willing to assume that every man who takes a job there goes in with high ideals of service and a desire to do his best for the farm boys and girls of Oklahoma. But none of them, from the president down, gets very far toward a realization of his ideals. The college is too much the football of politics for that. Educators in either agricultural colleges speak of it as a sort of a joke. They know that no colege run as this one can deliver the goods.

What is the trouble? Fundamentally it is merely that the college and all its works are controlled by a political-minded board of agriculture, the majority of whose members are appointed by the governor and may be removed at any moment with or without cause. The presi-

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

THRESHING TIME RECIPES

THE recipes for our cook book have been splendid and I feel that our readers have really taken a keen interest in the work and hope to have a splendid book for the farm women of M. B. F. I would like to receive some of your tried recipes for the threshing season that will be with us in so short a time. I would like to have some letters upon simplifying the work for the farm women during these days. I will pay one dollar each for every letter accepted for use in the paper. Remember I am still working and saving all the letters received. Let us all take an interest in this work. Help one another.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

"WAIT TILL YOUR PA COMES HOME"

"Wait till your Pa comes home!" Oh, dear!
What a dreadful threat for a boy to hear.
Yet never a boy of three or four
But has heard it a thousand times or more.
"Wait till your Pa comes home, my lad,
And see what you'll get for being bad.

"Wait till your Pa comes home, you scamp!
You've soiled the walls with your fingers damp,
You've tracked the floor with your muddy feet
And fought with the boy across the street;
You've torn your clothes and you look a sight!
But wait till your Pa comes home to-night."

Now since I'm the Pa of that daily threat
Which paints me as black as a thing of jet
I rise in protest right here to say
I won't be used in so fierce a way;
No child of mine in the evening gloam
Shall be afraid of my coming home.

I want him waiting for me at night
With eyes that glisten with real delight;
When it's right that punished my boy should be
I don't want the job postponed for me;
I want to come home to a round of joy
And not to frighten a little boy.

"Wait till your Pa comes home!" Oh, dear,
What a dreadful threat for a boy to hear.
Yet that is ever his Mother's way
Of saving herself from a bitter day;
And well she knows in the evening gloam
He won't be hurt when his Pa comes home.

(Copyrighted: Edgar A. Guest.)

CANNING THE "COLD-PACK"

THE last issue told how to use a boiler for the new cold-pack method that is being used by all the modern housewives and I am going to give you a few simple rules to follow.

Points to Remember:

Use absolutely fresh products only.

To prepare preserved peaches, pears, apricots, plums, strawberries, raspberries, etc., follow the general directions for canning fruits.

1. Wash the fruit in cold water.
2. Blanch—that is, scald in boiling water, from five to ten minutes, or steam from fifteen to twenty minutes.
3. Plunge into cold water for two minutes.
4. Peel or skin—as needed.
5. Remove seeds, stems and blossom ends according to common sense.
6. Pack as much as possible into absolutely clean scalded jars.
7. Cover with a heavy syrup made of the following proportions of sugar and water—two and a half pounds of granulated sugar to three quarts of water—boiled together for five minutes.
8. Place a new rubber on each jar, and partly close down the covers.
9. Place the cans in the boiler, cover with cold water until the jars are submerged at least two inches.
10. Put on boiler lid, bring to boiling point, and boil steadily the length of time allowed in the canning table.
11. Then remove, close permanently without opening, no matter how much the material in the can may have shrunk. If more convenient, cool in the water.
12. Turn upside down on a cloth and cool, away from draughts. If the jars leak, new rubbers will have to be put on and the process repeated.
13. Store in a dark place, moderately cool.

Various blends of flavoring may be used in preserving, as a little stick cinnamon or a few whole cloves in the syrup for citron, apples, pears, peaches, currants, or fresh figs; lemon or orange rind with that for apples, pineapples, prunes, figs or blackberries, etc. Sometimes in preserving, it is possible to blend fruit flavors by using a contrasting fruit juice instead of water in making the syrup.

SAVE WILD FRUIT

IN these days the automobile and trolley bring the countryside within reach of all, and wild fruits are easily obtainable an almost every leisurely trip to the open. Get into the habit, therefore, of always including a basket with your impedimenta when you take excursions afield.

Spiced Wild-Apple Jelly—To make this jelly, cut up any desired amount of wild apples or tame ones. Put in a kettle and add cold water and vinegar (three-fourths water to one-fourth vinegar) until you can just see the apple, boil until a mush, stirring and mashing. Strain through jelly-bags, measure. Allow three-fourths cup of sugar to each cup of juice. The pectin test may be used if desired. Boil the juice with a muslin bag of mixed spices very rapidly for twenty minutes; then add sugar which has been heated and boil five minutes or until it sheets from a spoon. Pour into sterilized glasses, cool, seal the glasses with hot paraffin and cover.

Monadnoc Blueberry Pudding—For this puding, stew one quart of fresh berries—or same amount of canned ones—sweeten to taste, and fill a mold with alternate layers of berries and sliced buttered bread; pack closely, fitting the bread into the mold so that it may be perfect when turned out. Be sure that the bread, berries and juice are so proportioned that the bread may be well soaked. Stand over-night, if possible. Eat cold with whipped cream.

OKLAHAMA HOUSEWIFE JELLIED WHOLE CHERRY ORCHARD

JUST as the cherries were ripe a severe hail storm came up and so damaged the entire crop that it was not worth picking, so far as the general market was concerned. The wife of the owner of the cherry orchard had witnessed a demonstration of concentrated fruit pectin and knew that with its use cherry juice could be converted into pure, delicious cherry jelly. So she gathered the entire crop, promptly made juice of it and little by little, as she found time, she converted the cherry juice into jelly. The cherry is a fruit so deficient in pectin arrived to help out the housewife, she was unable to make a single glass of cherry jelly, much less "jell" an entire orchard.

—Pectin, as you know, is the gelatinizing principal of certain ripe fruits and it is on the market now for use in making jellies from fruit that never would jell without it.

CAMP COOKING

FOR cooking, the following utensils are necessary. Be sure to take a large fryingpan, kettle for cooking vegetables, a coffee-pot, and a knife, fork, spoon, plate, cup and bowl for each person. If you are to camp in a rocky country, it is better to take plates , cups and bowls of aluminum or heavy tin, for enamel ware will chip if dropped.

When you go into camp, take enough supplies with you to last several days so that, although you may be near enough to town to run in at any time, you do not have to do so. The relief from the necessity of preparing the daily schedule for marketing is wonderful. The fact that you do not have to make a definite effort to go somewhere and talk to people adds more than you think it does to the rest and repose of camp life and the benefit that you will receive from it throughout the year.

You can take a far greater variety of canned vegetables and fruit into a camp near home than is possible when the camp lies at the end of a long day's paddle through the wilderness lakes with several "portages" or "carries" between. There every ounce counts, for you carry your entire supply of food as well as everything else on these lake and forest camping trips.—The Designer.

CLOTHES TO TAKE ON A CAMPING TRIP

A MOTHER packs a knicker suit if she has one or bloomers and middy. She needs also a warm skirt and sweater, a rain-coat and hat, rubber boots or storm rubbers, and comfortable shoes and sneakers. Don't forget the favorite sunburn remedy. A bottle of iodine, a package of gauze, a roll of bandage and a spool of adhesive plaster practically complete the first-aid kit.

The men of the family will take what-ever outdoor clothing they have, including khaki and wool trousers, a flannel as well as cotten shirt, a sweater and a rain outfit. It is entirely practical to dress both the younger boys and girls in boys' khaki suits of "shorts" with flannel shirts and woolen trousers if it is cool in summer in your part of the country.

Every one should have a complete rain outfit. Do not allow any member of the family to go about in wet clothing. It is just as easy to be comfortable in camp as it is at home.—The Designer.

Mothers Problems

DAD LOVES THE CHILDREN, TOO

DON'T forget that Dad loves the children, too! They are not his alone to punish and scold, and yours to love and enjoy. All day long you have them—when they are good, when they are naughty, when they are mischievous. Dad sees them for a much shorter time each day, and he ought to see them at their best. But do you let him? Many mothers do not. For Dad they store up every childish misdeed that has occurred; they "fill him up" with stories of how naughty his boys and girls are, how mischievous, how saucy, how disobedient, till Dad's idea of his children becomes sadly warped. Perhaps he becomes "Lord High Executioner", punishing the offenders till they learn to fear him; or perhaps he remains silent, regarding them with such a stern eye of authority and disapproval that they shrink from him and endeavor to keep out of his way.

When Dad comes in from the field, let him find his children happy and glad to see him. Let him take them as they are, and get acquainted with them with an unbaised mind. There's time enough after the little folks have been tucked in bed to talk over their various misdeeds—and Dad and Mother should talk them over, for the children belong to both parents and two heads are required to solve the problems that arise in the raising of children. You, the mother, have seen them so much and have become tired by the care of them, you cannot think clearly the best and the proper means of overcoming some fault, some habit, some actual misdeed, but Dad, whose mind all day has been on different matters, can give a clear, unwearied mind to child problems.

Sometimes, it is true, Dad must punish, but never, never let him become, "The Punisher." It destroys his happiness in his children; it destroys their happiness in him. He may not see them many hours a day, but surely when he does see them he should be allowed to see them as they are, not as they are pictured by their tired mother's eyes. Remember, Dad loves the children, too!—Margaret Bartlett.

THE CHILD WHO REFUSES MILK

SOMETIMES, even on the farm where there is generally milk in abundance, the child weaned from his wholly milk diet and initiated into the delights of solid food, will refuse to drink milk. Or, sometimes, at the age of two or three, he will suddenly rebel against drinking milk. All too many times he is allowed to drink it or not as he chooses. If he refuses to drink it, no effort is made to bring back his taste and enjoyment of it.

This attitude, however, is wrong. Milk is needed, and needed in abundance, by the growing child. No other food can take its place in the child's diet. Somehow he must again acquire the habit of drinking milk. But how?

There are many ways of making milk attractive to a child. Sometimes a pretty cup or class, never used for anything else, will make a child willing to drink milk, just for the pleasure of handling the attractive bit of glass or china. Drinking the milk through straws nearly always appeals to children, especially if two or three drops of flavoring extract has been added to the milk. One mother succeeded in winning back her child's lost appetite for milk by tinting it delicately with pure vegetable colors.

Pasting a pretty picture on the bottom of the glass (outside) for her little girl to see when she had drained the glass was the ingenious method employed by another mother. A piece of hard candy dropped in the glass, or a stick of gum, has served the same purpose: the child would drink the milk in order to obtain the "sweet."

No tea or coffee should ever be allowed children, but cocoa and cereal coffee are beneficial. These can be made entirely of milk, except for the small quantity of water needed to dissolve the powder.

Such "encouragements" need usually be used but a short time. Soon the habit of drinking milk in one form or another will be re-established, and, with a little care on the part of the mother, it never again need be broken.—Margaret Bartlett.

Personal Column

Remedy for Removing Wild Hairs—Here is a remedy I have saved from another paper we take, for the subscriber who asked for a remedy for wild hairs in the eyes. I do hope G. C., or any one needing such a remedy will try this. I suffered for 18 years with them, tearing and scratching my eye spending hours with my hand glass and tweezers in removing those little needlelike irritants until I was in despair. One day I had an inspiration—alum and vaseline! I drew out every hair in my eyelid, moistened the alum and gently rubbed it over each lid until they felt puckered, then at night a tiny bit of vaseline on the tip of my little finger was rubbed in thoroughly. I procured a tube of the white vaseline, but I suppose any clear vaseline would do as well. I rubbed this in every night for a week, and whenever I had to use my tweezers I followed with alum. In less than a month the irritation grew less, and almost before I realized it a new growth of eyelashes was in evidence. Now for more than two years I have taken such comfort, seldom having to use the tweezers.—A Subscriber.

Can Anyone Help this Girl?—This letter was received the latter part of May and I am giving you folks the important parts of it and you can have the writers name upon request. A subscriber sent it to me.

In reading our last M. B. F. I see you want to exchange your quilt pieces for something useful. Now as I am a stranger to you I would say that my circumstances are such that I'm badly in need of bedding at the present time. I live on a farm and have three children. My oldest daughter is a mute, also she is crippled in her arms to such an extent as to make hard work for her impossible. She does wonderful crochet work in any patterns that are called fillet crochet. And as we are in very poor circumstances she crochets and does odd sewing (plain) to help her go to the Flint school for the deaf. We could make good use of your pieces either on shares or in exchange for needle work. We have tried several friends who we thought would do this but never could get enough to piece each one and could not buy. My parents and sisters keep her in thread and what clothes they can. She will be home June 4th. Could we in any way make a deal for her sake. I can refer you to any one almost, in Clare county. She has been born and raised here. Can also use any clothing we get for two girls 15 and 17 and a boy 2 years. Sickness and a tubercular father has caused these conditions.—A Subscriber.

Sent in by a Subscriber—We will be waiting for you all in the summer time to come, when the whip-poor-wills will awaken you from nine o'clock to one. You will miss the street-cars and busses when the hills loom up in view, but I don't believe you'll regret it, yet you'll think that you really do.

You have simply formed a habit that the tasks you must perform must surely be complied with from the day that you were born. 'Tis true, we all must labor but not as some can see, for labor should be a pleasure it appears that way to me.

The change from shop to freedom, the sunshine, and the hills, will surely make a difference when it comes to comparing ills. Just a habit boys I tell you a habit pure and strong, all it needs is the scent of clover, then you'll see where you are wrong.

Just a change a change will show you, just one glance in freedom's clime will make up for the difference, and the years you have left behind. The evergreens will charm you lads as you were never charmed before, and old gray haired dad and mother will be waiting at the door. Old Spot he too will welcome you, your playmate of years ago, he also, will be waiting for the comrades he used to know.

Sleeveless Sweaters Made—In the M. B. F. of May 12, I saw that Mrs. G. M. would like the address of a lady who could make sleeveless sweaters. I made a number of them for the soldiers. I was complimented on my knitting the other day. As I have some spare time I would like to get something along that line to do.—Mrs. Genevieve Vanderberg, Plainwell, Michigan.

For Colds that have not gone too far—One cup sugar, one-half cup water, cook until like a molasses, cool and add one-half ounce paragoric and ten cents worth of glycerine and stir. Dose: One-half spoonful for children and one spoonful for adults.—Mrs. Julia Hipkins, Macomb County, Michigan.

Pine Tar and Honey for Cough—Would like to ask you to tell me how to prepare homemade pine tar and honey as a cough syrup. Four of our children are coughing similar to whooping cough, but do not whoop. They contracted this in the wake of measles. Would appreciate your advice.—Mrs. I. H., Allegan County.

The Runner's Bible

(Copyright by Houghton-Mifflin Co.)

Be Ye Thankful: Col. 3:15— Begin to give thanks even before you open your eyes in the morning. As consciousness creeps over you, follow it with a thankful prayer for life, that a new day, another chance, is yours, and be glad in your heart of hearts that you have faith in God, and at least a partial understanding of devine law. Be thankful for the beauty of the morning, that you have eyes to see it and the faculty to enjoy it, and as the day advances, forget not to be grateful over the small joys as well as the large ones,—the new flower, the book, the letter, the meeting with friends, the kindly word; be thankful for knowledge, for the lessons that come through mistakes and misfortune; be glad that the misfortune is no worse; in fact be thankful for everything. The least you must give is a thankful heart, and a thankful heart is a fertile field; the Lord plants the seeds of his richest blessings in just such a field.

RECIPES

For Bumps and Bruises—Butter and brown paper.—Mrs. M. E. K., Grand Ledge, Michigan.

Cup Cakes—This is my best cup cake recipe: One and one-half cups sugar, one-half cup shortening, one-half cup sweet milk, two cups flour, three eggs, one-half teaspoon cream tartar, one-fourth teaspoon soda and one teaspoon vanilla. Beat sugar and shortening to a cream, add beaten yolks and beat again, add milk and flour alternately. Flour should be sifted three times, add soda dissolved in a very little water, add egg whites beaten very stiff with cream tartar beaten in them at the last.—Mrs. C. W. James.

Rancid Lard—A subscriber asked for a cure for rancid lard. Heat and boil raw pared sliced potatoes in lard and it will completely take away the rancid odor. For a large spider full I use three or four potatoes.—A reader.

Pea Timbales—Cook one quart of peas or the equivalent of one can of peas. Rub through a sieve. To one cup of pea pulp add two beaten eggs, two tablespoons melted butter, two-thirds teaspoon salt, one-eighth teaspoon pepper, a few grains of cayenne, and a few drops of onion juice. Turn into buttered molds, set in pan of hot water, cover with buttered paper, and bake until firm. Serve with one cup of white sauce to which is added, one-third cup cooked peas drained and rinsed.

Spinach—Cook required quantity of spinach in its own juice, drain, chop fine, season with salt, pepper, a pinch of sugar and liberal butter to taste. Heap in a mound, smooth, garnish with a ring of egg slices, and surround with a hot, rich tomato sauce; serve at once.

Canning Rhubarb—For canning rhubarb for pies, wash, cut into inch pieces, put in glass cans, fill up with cold water, one teaspoon of salt to a can and seal.

Canning Strawberries—While making your syrup fill cans with berries and set in oven and you'll find you can get in many more berries, without crushing too. Have ready some boiling water, pour on syrup and fix your cans as you would for cold pack. Then set your cans in the boiling water off the stove and leave untill water is cool, take out and seal tight.—Mrs. M. E. K., Grand Ledge, Mich.

Brown Cake—One cup sugar, one-half cup shortening, one-half cup molasses, pinch of salt, one teaspoon cinnamon, one-half teaspoon cloves, one-half teaspoon ginger, two eggs, one cup boiling water, two teaspoons soda, two and one-half cups flour. Bake in a moderate oven.—Mrs. R. H., Allegan County.

Steam Brown Pudding—Two tablespoons butter, two tablespoons sugar, cream together, one egg, one-half cup of boiling water one-half cup molasses, one teaspoon soda, one and one-half cups of flour. Add dates or nuts and steam one and one-quarter to one and one-half hours.—Mrs. R. H., Allegan County.

Salmon Loaf—After removing the bones from one can of salmon, add two tablespoons of butter, two eggs, one cup of bread crumbs, one cup milk, salt and pepper to taste, put in tin and steam for one hour.—Mrs. J. W., Sinlac County.

Sauce for Salmon Loaf—One cup of boiling milk one tablespoon of cornstarch, one egg, boil till it thickens, pour over salmon loaf and serve while hot.—Mrs. J. W., Sinlac County.

Chocolate Pie—Two tablespoons grated chocolate, one and one-half cups milk, beaten yolks of three eggs, stir one tablespoon of flour until smooth with a little milk one-half cup sugar, stir all in boiling milk and cook until it thickens, bake crust first, put in filling, whip the whites of eggs with a little sugar and flavoring, spread on top and brown in oven.—Mrs. J. W., Sinlac County.

Cherry Conserve—Three cups of cherries, three cups of pineapple, three cups of red raspberries, three oranges, twelve cups of sugar. Grind cherries, pineapple and oranges. Boil slowly until it thickens. Add any other fruit desired; for every extra cup add a cup of sugar.—Mrs. L. V. Johnson.

Cream of Pea Soup—Four cups of milk, one quart of peas, one-half small onion, salt and pepper, one tablespoon of butter, enough boiling water to cook peas and onions. Boil peas and onions in very little water until done. Remove onions and pass peas through colander. Have milk scalding in a double boiler and add butter and flour after blending them together. Add peas and serve with a spoonful of whipped cream.—Mrs. L. V. Johnson.

Salmon Salad—One can red salmon, two large potatoes (diced), two hard boiled eggs chopped fine, three small onions chopped fine, two or three stalks of celery improves it. Mix together and season with pepper, salt and vinegar to taste, if there happens to be no salad dressing made and no time to make it. Mrs. Carpenter.

Dumplings that are always light—When making chicken and dumplings, instead of boiling the dumplings take part of the gravy, put in a kettle or in bake dish that can be covered tightly then put in the dumplings and bake in fairly hot oven. For a small family take two cups of flour, one-half teaspoon of salt, one large teaspoon baking powder and add sweet milk to make a soft dough. Divide into eight or ten dumplings and drop into gravy and bake.—Mrs. Carpenter.

Chicken Diarrhea—Sweet oil applied to the vent of a little chicken that shows signs of white diarrhea will save its life, if it is bad the remedy will need to be used several times, and feed raw white of egg in water if real weak.—Mrs. N. Lindley.

To Whiten Curtains—Towels, pillowcases or wash cloths, put a tablespoonfull of cream of tartar in the boiler and boil up as usual.—K. L.

—if you are well bred!

Traveling-Dress—Dark suit or dark one piece dress or the new tweed sports suits with a blouse to either match or white tailored waist. With dress a wrap, close fitting hat, dark gloves, dark shoes.

Accept no attention from strangers. Stay in seat and read, write, or nap. Do not walk up and down aisles.

Lily White

"The Flour the Best Cooks Use"

From the Finest Wheats

From the finest wheat one has reason to expect the best flour. From the finest flour one may well expect the best baking.

Lily White is milled from the finest wheat grown in this country and not surpassed anywhere. It is scrupulously cleaned, scoured and washed, and milled by the famous six-break system to a granulation that is perfect. Its volume, color and flavor are just right for the making of appetizing, wholesome breads. From Lily White you may expect the best baking. We guarantee it. You will produce better baking and like it better than with any flour you ever used.

Parker House Rolls made with Lily White

Our Guarantee

We Guarantee you will like Lily White Flour, "the flour the best cooks use" better than any flour you ever used for every requirement of home baking.

If for any reason whatsoever you do not, your dealer will refund the purchase price. He is so instructed.

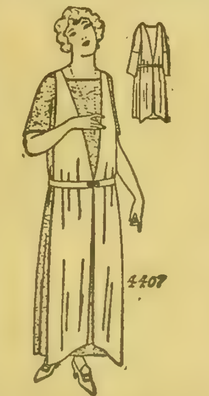
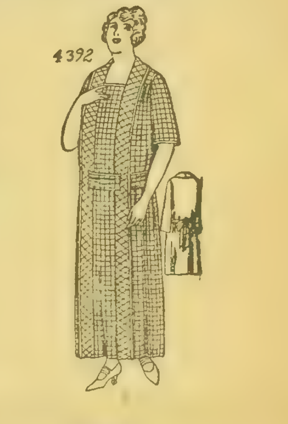
"Millers for Sixty Years"

AIDS TO GOOD DRESSING



4407



4392

A Stylish Afternoon Gown

4407. Satin crepe was used for this model, the under dress being beaded in an all over design, and the reversed side of the crepe used for the panels. This is a smart style, that will lend itself to various combinations of material.

The Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38 inch size requires 4 ⅝ yards of 36 inch material for the dress and 2 ⅝ yards for the panels. The width at the foot is about 2 yards. To make dress with short sleeves ½ yard less material is required.

A Comfortable Top Garment

4093. For cool days of all seasons, and for all materials for all seasons, this model is very appropriate.

Gabardine and taffeta are nice for a light weight garment of this kind. For more warmth, one could have broad cloth, velours or serge.

The Pattern is cut in 4 Sizes: 6 months, 1 year, 2 and 3 years. A 2 year size requires 1 ⅝ yard of 40 inch material.

A Popular One Piece Dress

4392. This style has slenderizing lines and is becoming to youthful and mature figures. Gingham with linen would be fine for this, or ratine with binding in a contrasting color. Taffeta too will be attractive for this style.

The Pattern is cut in 8 Sizes: 36, 38, 40, 42, 44, 46, 48 and 50 inches bust measure. A 38 inch size requires 6 ⅛ yards of 32 inch material. The width at the foot of the dress is 2 ½ yards.

A Comfortable "Smock"

4415. This model reflects the most popular of this season's dresses for young girls. It has a comfortable raglan sleeve, which may be finished in wrist or elbow length, and a jaunty collar. Dotted percale with facings of white linen is here illustrated.

The Pattern is cut in 4 Sizes: 6, 8, 10 and 12 years. A 10 year size requires 2 ⅞ yards of 32 inch material. Collar and sleeve facings of contrasting material require ⅝ yard.

A Practical Undergarment

4406. Nainsook, crepe, silk and muslin are good for this model. It is especially suitable for stout figures affording comfort and ease.

The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 2 yards of 36 inch material.

A Smart Dress for the Growing Girl

4413. Striped and plain ratine are combined in this instance. Figured and plain woolen, crepe, and linen are also attractive for this model.

The Pattern is cut in 3 Sizes: 12, 14 and 16 years. A 14 year size requires 3 ⅝ yards of one kind of material 32 inch wide. To make as illustrated requires 2 yards of plain and 1 ⅝ yard of figured material.

The Children's Hour

A CLUB SONG

There are boys that take to banking,
There are boys that like the law;
There are boys that think the busy doctor
Is the one whose life has not a flaw—
There are boys that strive to make big fortunes
But for us you need not feel alarm,
For the boys that we want in the future
Are the boys on the good old farm.

There are girls that think the city
Is the only place to go;
There are girls that do not care for cooking,
Who have never time to knit or sew:
There are girls that think the joy of living
Is an auto or a dress so fine:
But the girls that we want in the future
Are the girls with the 4-H sign.

There are clubs for girls in sewing,
There are clubs in canning, too;
There are clubs that teach us to feed poultry
As the best of poultry breeders do—
There are clubs for raising corn and taters,
Feeding pigs, or sheep, or baby beef:
All these clubs to make us better farmers
Are the clubs of 4-H leaf.

There are clubs to spend your money,
There are clubs to join for fun;
There are clubs to chase along the cattle,
Or with clubs sometimes a game is won—
There are clubs we often swing for dumb-bells,
There are clubs that father took to me,
But the finest club you e'er could mention
Is the Boys and Girls Club for me.

Dear Uncle Ned:—May I join your merry circle. I wrote before but I guess it went in the wast-paper basket. My father has taken the M. B. F. for several years. I have brown bobbed hair and gray eyes. But I'm not very fleshy. I have five sisters and three brothers, Mae, Grace, Gertrude, Edna and Thelma, Arthur, William and Thomas. The first four mentioned are married. I am in the seventh grade. We had a picnic the 25th of May at Sand Lake about 9 miles from here. We took our dinner and had a good time. I went in Freeman McCrory's car. Coming home we came around by the Hemlock Road and up through Reno to Hale. There was Grace Graves, Audrey Harris and my sister Edna and I in Freeman's car. I live on a farm of fifty acres. We have 12 cows, 9 calves, 11 pigs, and about 85 chickens. I will close by asking some riddles. What is the most beautiful piece of furniture? What reaches from New York to Boston without moving. Will close, your niece, —Erma White, Hale, Michigan.

—My, I'll bet you had a fine time at your picnic. I often think that I would like to hold a picnic and have all the members of the Children's Hour attend it. It would be some jolly crowd wouldn't it?

Dear Uncle Ned:—May I join your merry circle? Have been a silent reader for some time, so thought I would write. But I'll bet my letter will never escape the waste basket. I will describe myself: I am 10 years old, four feet seven inches tall, light complexioned, brown eyes and brown hair. I live on the Iosco County Farm, of which there is 160 acres of land. We will be here two years this coming year. We have all the conveniences like they have in the city. We have thirty head of cattle, two horses and one sheep. The sheep belongs to my brother Herbert. For a pet I have a dog named Rex. I have three sisters and three brothers. My two youngest brothers and myself are going to school. Our school let out May 12th. We liked our teachers real well. Their names are Mr. Curry and Miss Lietz. I have a nice home, Uncle Ned. You ought to see it. My mother and father are both good to us children. They give us anything we want. My sisters are all good to us. We can stay with them any time. I like birds, Uncle Ned, and I wouldn't harm them on a bet. I must close. Will some of the nieces and nephews write to me? I will answer all letters received. We like your paper. Your niece, Floreen Miller, R. 1, Tawas City, Michigan.

P. S.—I don't know your address so am sending it to the Michigan Business Farmer. Hope you get it. Would you state your address in the paper.

—You must be a happy girl with everyone so good to you. I am sure you appreciate it and do everything to show that you do. My address is: Uncle Ned. Michigan Business Farmer, Mt. Clemens.

Dear Uncle Ned:—I have been a silent reader of your merry circle for some time and enjoy reading it very much. May I join your merry circle? I am 5 feet 3 inches and a half tall, have black hair and blue eyes. I am 17 years of age. I live on a 10 acre farm. I wish some of the girls and boys would write to me. I will try and answer all the letters I receive. Your niece.—Julia M. Bindon, North Branch, Michigan.

Dear Uncle Ned:—May I join your merry circle as I have never written before? I am fourteen years old, my birthday is April 6th. Have I a twin? Am 5 feet and 1 inch in height. Have light hair and blue eyes. Am in the ninth grade as I just got my diploma. If the boys and girls of my age write to me I will answer them. I am going to send Phyllis Gibson some riddles. Now I will close with a riddle: Black and white and read all over? Your niece—Gladys Harris, R. No. 5, Paw Paw, Mich,

P. S.—I think the answer to Anita Ruth Cromwell's riddle is a cat.

—Surely you may join the Children's Hour. I hope you are going to attend high school this fall. Are you?

Dear Uncle Ned:—I thought I would try my luck in writing again. I suppose everybody is wondering how old I am. Well I am going to tell. I was 17 the eleventh of January 1923. Have I a twin? If so I wish they would write me a letter. Uncle Ned you said maybe we could hold a drawing contest, now would we draw anything we wanted to or everyone draw the same thing? I would like to have a drawing contest. Uncle Ned do you like cherries and raspberries? If so, this is the place to get them. I am your Nephew,—Lawrence Chapman, Alma, Mich., R. F. D. No. 1.

—Well, well, Lawrence, I am glad to hear from you again. Yes, I think we will be able to hold a drawing contest in the near future. According to my present plans you would all make a drawing of the picture on the front page of the issue in which I announce the contest. More details soon.

Dear Uncle Ned:—It's raining to-day. We haven't had rain up here for so long that I think the swamp must be drying up and the ladyslippers are surely looking rather sad. You can see from this, Uncle Ned, that I must live up in northern Michigan where they have lakes and swamps. In fact I can claim a mile of beautiful lake shore and arbutus and ladyslipper beds for my very own and a ramshackle old dock with one redeeming feature—a spring board. My home is on the edge of the resort region and a little to the northwest lies Lake Michigan with its chain of beautiful summer colonies—Charlevoix, Petoskey, Roaring Brook and Harbor Springs, the little Indian town where Father Marquette erected a cross and where later a convent was built, is not unattainable. A road winding in and out among the maples along the shore connect it with Harbor Springs. Right here in our own little lake is an island where the Mormans held the Feast of Fruits. If you have ever been here you know how wonderful it all is. I seem to have gotten this letter a little mixed up. Perhaps you would like to know something about who is writing this but I won't say much except that I am sixteen, a senior in high school and swim. Sometimes I amuse myself by making baskets. I shouldn't like to have an Indian see them though. They might bob my hair a little too close to my head and I don't want it bobbed. at all. I haven't any brothers or sisters and so sometimes I get just a wee bit lonesome and I would like to have some of the other boys and girls write to me. Do you suppose they would? Your niece, Virginia Lehmann, R. 2, East Jordan, Michigan.

—My, what a very interesting letter. I hope you will write often. I like to read your letters and know that the members of our circle will too and will want to hear more about the country around your home.

Dear Uncle Ned:—Here I am again. I'm rather lonesome so thought I would write to you for pastime. It's certainly fun to write letters and I enjoy it. The last time I wrote to you I mentioned my sister who wanted the girls and boys to write to her, so they did but never thought about me. She received over three-fourths of the letters. That wasn't hardly fair, was it Uncle Ned? I go in swimming quite often and enjoy the water very much. Diving bothers my nose but I dive in spite of it, although it chokes me. Next month my brother Leander is going to take our family to Ann Arbor when he gets a cast for his back. He has tuberculosis of the spine and the doctors order him to wear a cast. He suffers driving this terrible warm weather, I wish it could rain. If any of the cousins have the words to "Star of the East" would you please write them and send them to me as I'd like to know the words when my sister plays the piano? With love to Uncle Ned and all the cousins.—Iris Arnold, R. 4, Box 474, Mt. Clemens, Michigan.

—So your sister got nearly all of the letters. Well, that did not seem exactly fair. But you never can tell, maybe you will get all of them the next time. If you will wet the inside of your nostrils with your fingers when going into the water you will find that diving will not bother you as much. Wet the inside of your ears also if they bother you.

Dear Uucle Ned:—I have been a silent reader of the boys' and girls' page for three years or more. I was fifteen years old on June 10th, I am a blonde, have blue eyes and natural curly, bobbed hair. I will take up eleventh grade work next year. I live on a one hundred and ten acre farm, two and one-half miles from the nearest school. I have four brothers and one sister older than I and little twin brothers, four years old. I wish some of the boys and girls would write to me. I will answer all letters received. As this is my first attempt I will close. Your niece, Henel Marsh, Brown City, Michigan.

—So you have read the Children's Hour for three years or more and have never written. You have been silent too long I would say. Let us hope you do not wait another three years before writing again.

Dear Uncle Ned:—I have been reading the Children's Hour and I liked it. May I join your circle? I am eleven years old, my birthday is September 19th. I have bobbed dark brown hair. I am in the seventh grade. I go to country school and take music lessons. I have been to my friends home. She said she wrote and had her letter put in the Children's Hour and is corresponding with a girl. I have a pet kitten, its name is Snippy. We have seven cows. I milk one. We raised a nice lot of chickens. We have a pet colt, its name is Ruby. We have another colt named Pansy. I feed and water them. I would like to have some girls write to me.—Miss Edna Brown, R. F. D. No. 2, Carson City, Michigan.

—You must have a great time with the two little colts. You have given them very nice names.

Dear Uucle Ned:—I have been reading the Children's Hour and I found some pretty interesting letters. Myrtle Taylor, Watronzville, Michigan, suggested having a drawing contest. I think this is a good suggestion and that it would be a lot of fun. I for one, love to draw and will send in some drawings if you will have the contest. I am fifteen years old and will be a sophomore when school begins. I have dark brown eyes. I am writing this letter just to let you know that I am very much interested in the drawing contest, but I hope to write a longer one the next time. Will some of the boys and girls please write to me? I will try to answer all letters. Edna Weifenbach, Box M, Beulah, Michigan.

—Another young artist who wants us to hold a drawing contest. We will soon, so begin practicing in real earnest.

Hello Uncle Ned:—May I join your merry circle? I have been a silent member for quite a while. I have written a few times before, but only one of my letters was in print. Last Sunday it was my birthday, the tenth of June. My age is between ten and fourteen. Who ever guesses my age will receive a card or letter from me. Uncle Ned, I certainly would like you to hold a drawing contest. I like to draw very much, and I will surely join the contest. It seems as though we were going to have plenty of tame and wild strawberries this year, our pasture is white with strawberry blossoms. I love to pick strawberries or any kind of berries. Don't you want to come over and pick strawberries with me? Well I see that waste waste paper basket eyeing my letter, and I am afraid he will catch it. I enjoy reading the children's Hour. Your niece,—Dorothy Postma, R. 1, Rudyard, Michigan.

—I guess we will have to hold a drawing contest sometime soon. If I can not come and help you pick strawberries how would it be if I help you eat them? I like that kind of a job.

Dear Uncle Ned:—I always enjoy reading the girls and boys letters and thought I would write too. I am sixteen years old, am I too old to join the merry circle Uncle Ned? I am 5 feet and 1 inch tall. I have medium brown hair and it is bobbed and I have a fair complexion and wear "specks". I have three sisters and two brothers. I will be a junior in High School next year. I am going to take the following subjects: English III, French I, Modern History, and Book-keeping. I have 8½ credits so far. I go to school at Charlevoix. I live on a farm of 80 acres and love farm life. We have a good view of Lake Michigan and receive the cool lake breeze in the summer time and the cool wind in the winter. We can see the Manitou and Missouri go by nearly every day. Northern Michigan is the place to live in the summer time on account of its cool and healthy climate. Many resorters come up to Charlevoix every year. Well I am going to do some guessing. The answer to Anita Ruth Cromwell's riddle is a "kitten", and Helen Goodrow's age is sixteen. I agree with you Myrtle Taylor, I wish Uncle Ned would let us have a drawing contest for I love to draw. Well, I will have to ring off Uncle Ned, or you will not want me to write any more.—Edith E. Chew, Bay Shore, Michigan.

—You are indeed lucky to live so near the lake as the lake breeze is so cool and refreshing. I live a little over two miles from Lake St. Clair.

RADIO DEPARTMENT

EDITED BY J. HERBERT FERRIS

VACUUM TUBES THAT OPERATE ON DRY CELLS

You say the radio to the farmer is a Godsend. You probably can imagine what it is to an invalid farmer confined to his home, isolated from his family. I have an outfit, my problem is the storage battery. Can you give me more information about the improvement you mention in your editorial in the issue of June ninth or tell me where I can get all details and oblige.—M. I. T., Birch Run, Mich.

—The improvement referred to in the editorial in our June 9th issue is vacuum tubes that operate on dry cell batteries instead of a storage battery. One new tube is called UV-201-A or C-301-A according to the company that makes the tube. This tube is a five volt tube and can be worked on a six volt storage battery if you wish but I find it better to use three dry cell batteries, making 4½ volts. It is possible to do this as the tube draws only one-quarter ampere, so three dry cells on one tube last for about a month if set is used two hours a day. The tube fits the standard socket and you need no vernier on your rheostat; however if your rheostat is the vernier type you need not change it. Also you do not need a potentiometer as the tube is not sensitive to plate voltage. There is a slight difference in the hook-up but this is explained in the literature that comes with the tube. With a one-tube set using this tube I had very good results last winter, receiving from Georgia, Kentucky, Tennessee, Alabama, Nebraska, Iowa, Missouri, Minnesota, Illinois, Ohio, Pennsylvania, New York, New Jersey; and I also had Texas and Cuba—only once though.

Another tube is the WD-11 or "peanut tube" as it is called. This tube requires a special socket so if you already have your set built you would have to get an adapter. The WD-12 tube operates the same, the only difference is that it is made to fit a standard socket. The "peanut tube" draws only one-quarter ampere and is designed to operate on a single dry cell battery of 1½ volts. One dry cell will operate one of these tubes intermittently from 60 to 90 hours depending upon the length of intervals the tube is used. I have used one of these tubes with very good results and at the present time am using a WD-12 tube for a detector and a UV-201-A tube for an amplifier. Of course the first tube is operated by one dry cell while the other is operated by three. With the WD-11 or WD-12 a vernier on your rheostat is very useful but there is no advantage gained through using a potentiometer. You will find with this tube that a slight turn of the rheostat or vernier will make a difference in your receiving while with the UV-201-A or C-301-A the signals or music come in just as strong when the filament current is just turned on as when turned on in full. The "peanut tube" does not light up like the other tubes. When the current is first turned on you can not see that the filament is burning but when current is turned on full it shows a slight glow.

A new tube on the market is the UV-199 made by the General Electric company. I have never tried it but many experts say the tube works fine. This tube requires so little filament energy that an ordinary dry cell battery will operate one tube for a long time. The tube seems to be very delicate and needs to be handled with care.

All of the vacuum tubes I have discussed can be used as detectors or amplifiers, but the UV-201-A tube is declared to prove the best amplifier of the three kinds. All of these tubes sell for $6.50 each and you should be able to secure them from your local dealer in radio supplies. Information on the difference in hook-up comes with the tubes. If we can furnish any other information write us; we are always at our readers' service.

N. Y. DAIRY LEAGUE COMPLETES SUCCESSFUL YEAR

(Continued from page 4)

ing care of New York City's maximum demands for fluid milk at any time.

On March 31, 1922, the association was operating eighty-four plants, of which number forty-six were shipping milk or cream or were in position to do so. Eleven were manufacturing case goods, twenty-five were making butter or cheese. On March 31, 1923, the association was operating one hundred and eleven plants and out of this number eighty-three were under board of health inspection, either shipping or ready to ship fluid milk into New York City at a moment's notice.

And the Test Came!

Probably never again in the history of the association will there be so remarkable an example of the possibilities of organization and plant control as was furnished, when on April 1, 1922, a considerable group of the dealers who had formerly bought of us refused to sign the association contract. The production department was called upon to divert and handle through its own operation a million pounds a day more on April 1 than was handled on March 31. But with the aid of field men the emergency was successfully met so that less than one tenth of one percent of all the milk withdrawn was left on the farms to be hand skimmed or otherwise disposed of.

Five veterinarians have been employed by the association during the past year and have been kept very busy making the required examinations of dairies and dairy barns throughout the territory.

The great increase in our selling activities, especially in view of the stress the League has put upon the high quality of its products, has made our central laboratory at Utica one of the most important parts of the organization. The laboratory has kept a daily check on the character and quality of every product that has been put upon the market. No consignments are released for shipment from any plant until an analysis has been made, not only at the plant but at the central laboratory at Utica .

Advertising and Selling "Dairylea"

All sales and advertising activities have been planned with a view to increasing the farmers' net return per hundredweight on raw milk delivered. To accomplish this, two distinctive objectives have been set up; first, better marketing facilities for fluid milk, and second, better merchandising of by-products. Gradually, we have been working toward the time when we will sell a maximum proportion of our milk directly to the channels which serve the consumer. By adopting "Dairylea," which is applicable to all our products, as our new brand name we have emphasized our transition from the bartering stage of collective bargaining into the field of propriety brand merchandising. Because we know that unbranded merchandise never commands more than the bulk market price, we have already taken steps to co-ordinate our manufacturing and sales effort so that we produce nothing but the highest quality of merchandise worthy of bearing the League's brand.

Heretofore, the League has sold from fifteen cents to seventy cents below the market due to lack of advertising and sales effort.

Ice cream has been advanced fifteen cents per gallon above other dealers within the last few weeks without loss of business, and it is our belief that it is only a question of time when all other by-products of the association will bring the highest market price to which their high quality entitles them. In order to get the full value of our cheese operations, however, it will be necessary eventually, we believe, to manufacture a high grade package article under our own brand.

The fluid milk department comprises the greatest field for future development. The New York problem, however, remains to be solved, and we believe the League must become a larger factor in the direct to consumer business before it will have a sufficiently great influence on the meptropolitan market to increase the farmers 'net return. Your officers and directors believe this is the big problem which faces the League and should be solved during the next twelve months.

The League a Large Exporter

The export department has made distinct improvement in its field of operations during the past six months. Over 100,000 cases have been sold since the first of January. A large part of this has been shipped to Germany, which netted from five cents to fifteen cents per case above our domestic price. League milk is now on sale in Germany, England, South Africa, West Africa, Palestine, Syria, Cuba, and Panama.

During the coming year we will have a man in England who will be in close touch with our heaviest export markets, and will be in the closest possible touch with the situations which may be turned to our advantage in the above mentioned countries.

15 Schools Feed Milk Gladly

The bureau of nutrition has been mainly occupied the past year in inaugurating in several schools of the city the program of milk feeding. The children in fifteen public schools in the city are now drinking from one-half pint to one pint of milk at recess time every day.

The results are already beginning to show that the children thus fed are better and stronger both physically and mentally and that the consumption of milk in the homes of these children has been increased.

Milk in Tank Cars.

The traffic department has been experimenting during the past year with the transportation of milk in tank cars. If these experiments finally prove successful, it will probably revolutionize the transportation of fluid milk to consuming centers. The tank which we have used is built on the idea of a thermos bottle and requires no ice and it would do away with the present method of handling these thousands of heavy milk cans every day.

Our legal department has seen a very busy year and has been successful in every stand it has made for the association. You are all familiar with the several court decisions made during the year establishing the League's right to do business as a co-operative association and recognizing the fairness of its methods. You are also familiar with the decisions of the courts establishing the legality of your pooling contract. Every suit in which the legality of the general operations of your association was involved has been decided by the trial courts in your favor, and while some of these cases are now pending in the appellate courts, your directors have entire confidence that the judgments already will be affirmed.

During the fiscal year just closed the gross sales of milk and milk products made by your association amounted to $82,130,902.17. The total deduction for certificates of indebtedness for the year amounted to $4,622,579.76, or five and three-fifths percent of the total sales. The total amount of deductions for administrative expenses for the year was $2,335,192.63, or two and four-fifths percent of the total amount of sales.

In the history of mankind are certain milestones that denote the time and the place where humanity, as a whole, took a forward step towards better living conditions, sometimes towards better understanding of spiritual matters, and sometimes toward better economic conditions that vitally affect us. Such a forward step towards better economic conditions is now being taken throughout this entire land in the cooperative marketing movement. We have been leaders from the start and we shall never falter.

THE SECRET OF SIMPLE LIVING

(Continued from Page 9)

the Kingdom of God." Faith in this principle will tear one away from the rubbish of life and the surface satisfactions of our day and make certain one's possibilities for happiness and success. And when we get back to the simple, modest tastes of true life we are doing much to unify and simplify the social life about us. To be "in tune with the Infinite" is to radio the secret of true living.

THAT CURIOUS DEVICE FOR MAKING FIRE

It was only seventy-five years ago that a woman of the Middle West wrote to her cousin in New York:

> "Last winter I was told of a curious new device for making fire. It consisted of small splinters of wood with tips of some substance that bursts into flame when rubbed on a rough surface. If you can procure some of them for me I shall be grateful."

Matches were in general use in Europe for years before they were seen in this country. There was no means for spreading such news rapidly. Today, the new invention that contributes to comfort or convenience is quickly known the country over. Advertising conveys the information. The farmer's wife in Texas or Idaho is as well posted on these things as the city woman of the East.

Don't overlook the advertisements. They are heralds of progress with real news for you and your family. They save you time, lighten your work and enable you to obtain the utmost in value for the money you spend.

TIME GIVEN TO READING THE ADVERTISEMENTS IS WELL SPENT

THIS CAR FREE

Nearly everyone else owns a car! Why not you? It is not a question of money. Your spare time for a few weeks, mixed with preseverance and "gumption," is all that is necessary to win this latest model Chevrolet Touring Car.

Or, if you already own a car, get a radio set, baby chicks, pure-bred fowls, poultry books, etc.

It is the official organ of the Michigan State Poultry Association that makes this offer and our reliability is unquestioned. Someone is bound to win the car—why not you. Send post card for details.

$10.00 PER DAY CASH

If you prefer cash, drop us a post card at once, and we will send you details of our new method that enables any honest energetic person to make $10 per day, or more.

This is our own method, which we have tested for the past 6 months, and we know it gives an agent 50 to 500% better chance to earn real money, than any other ever tried.

Free Pamphlet

"VITAMINES AND CHICKS"

by

Prof. E. C. Foreman, Head of the Poultry Dept. at Michigan Agricultural College.

The big feature of our May number is Prof. Foreman's "Vitamine" article, which announces the wonderful effect of Vitamine foods on Baby Chicks. He gives actual facts and illustrations of results almost miraculous when Vitamines were supplied. Luckily, these Vitamine foods are common to every household, and Prof. Foreman explains which ones to use.

Already the demand for this article has almost exhausted our May edition, so we reprinted it in pamphlet form which we will give free to readers of the "Business Farmer" who subscribe direct from this ad., at our special trial price of 50c per year. ORDER TODAY, before the pamphlets are exhausted.

HOLSTEIN MEN PLANNING TOURS

BREEDERS of Holsteins are planning a series of tours to start July 24th and to cover 25 of the main Holstein counties of the State. The plan is to spend one day in each county visiting farms where matters of Holstein interest are to be found—a boy's calf, a prominent sire, a well arranged barn, a profitable cow testing association bunch, a herd of good individuals, cows with creditable A. R. C. or semi-official records, etc. The tourists will halt at noon for basket lunch and a speech or two. Amongst the corps of speakers secured for the several counties are D. D. Aitken, Ex-President of the National Holstein Association; Earl Cooper, Calf Club leader, and C. M. Long, manager of Field Work, both of the Extension Service of the National Holstein Association; E. L. Smith, President, and H. W. Norton, Secretary of the State Holstein Association; A. C. Anderson, former head of the Dairy Department of M. A. C., etc. The tours are being arranged by the local Holstein officials and the County Agents in co-operation with J. G. Hays, the Holstein Field man for Michigan. Full details will be announced later, meanwhile Holstein fans should start grooming the old flivver for the chase.

MICHIGAN SHORTHORN BREEDERS' ASSOCIATION TOUR

THE three day tour arranged by the Michigan Shorthorn Breeders' Association, covering parts of Ingham, Eaton, Calhoun, Branch, Hillsdale, Lenawee and Wayne Counties, proved to be very valuable to the breeders who made the trip and deepened the interest in the breed along the entire route.

The tour started from the Michigan Agricultural College, where their fine herd of Shorthorns and other breeds of live stock were inspected with considerable interest. The remainder of the day was spent in Eaton County, visiting the following herds: I. P. Zimmerman, Dimondale; Wm. Geisenhafer, Dimondale; L. P. Otto, Charlotte; and Simpson Brothers, Charlotte.

The last stop was made at Simpson Brothers, Charlotte, where lunch was served and a number of short talks given by the breeders and others present. The Eaton County breeders are a live bunch, there being over twenty cars out and about eighty people present at the last stop.

The next morning the hikers gathered at the Branch County Farm where a good herd of Polled Shorthorns has been maintained for several years. From here, J. E. Sanderson's herd at Coldwater was inspected after which the following Hillsdale County Herds were seen: Ralph Wheeler, Quincy; Ed. Franks, Montgomery; Wm. Ossius, Hillsdale.

During the afternoon a short time was spent at J. R. Rogers & Sons, Morenci, dispersal sale of their herd of Shorthorns. This herd has for many years been developed along dual purpose lines and while many of the cows offered had records of from eight to eleven thousand pounds of milk yearly, they also showed a blockiness and thickness of fleshing that was very commendable. The prices realized were not high, but good cattle sold where they can be raised at a profit. R. J. Bidwell's herd, Tecumseh, was visited the same evening, where their sale cattle, sold a few days ago, were inspected with considerable interest.

The third day was devoted largely to Washtenaw County herds. Calls were made on the following breeders: Ferman Clemens, Saline; Adam Knapp, Manchester; M. P. Alber, Manchester; Jay Smith, Ann Arbor; H. W. Hayes, Chelsea; Thos. Smith, Ann Arbor.

A picnic dinner was served on the lawn of Mr. Hayes, after which a short meeting was held and talks given by Prof. W. E. J. Edwards, An. Husb. Dept., M. A. C., East Lansing; P. P. Pope, Mt. Pleasant; V. A. Freeman, Livestock Ext. Spec., M. A. C.; H. S. Osler, County Agent, Washtenaw County; and others. At this time the Southeastern Michigan Shorthorn Breeders' Association was organized with the following officers: President W. H. Hayes, Chelsea, Vice-President, J. Smith, Ann Arbor; Sect.-Treas., Ferman Clemens, Saline; Directors, Thos. Smith, Ann Arbor; Nathan Alber, Manchester; Wm. Kelley, Plymouth; and L. C. Kelly, Ypsilanti. A great deal of enthusiasm was shown, fully 140 being present. During the day more than thirty cars were in line at one time. This made quite an impressive array and elicited considerable comment along the route. Later in the afternoon, the cavalcade directed its progress toward Henry Ford's farm at Dearborn. On the way a stop was made to see L. C. Kelly & Son's herd at Ypsilanti, who maintain herds of Shorthorn and Polled Shorthorns.

The visit to Ford's farm was of particular interest. Mr. Ford purchased the DeGarmo, Highland, Michigan, herd, last fall. Practically all of these cattle are of Duchess breeding and it is understood that Mr. Ford plans upon developing this herd still furthur along dual purpose lines.

Many fine individuals and herds were seen on this tour, so many that space will not allow of particular mention.

The hospitality exhibited by the breeders visited and the enthusiasm shown by the large number who took in the trip demonstrated that they still have great confidence in the reds, whites and roans and that the Shorthorn is one of the most solid stones for building the foundation of a permanent agriculture.

FEEDING TOO WIDE A RATION

We have a flock of sheep and fed them all the ensilage they would eat and cornstalks and hay (clover and timothy mixed). When the lambs came they would get the scours when a few hours old and die in two or three days. What was the cause?
—H. S., Harrison, Mich.

—The trouble which you are having with your sheep is due to the fact that you are feeding too wide a retion, that is, one containing too much carbohydrate material and not enough protein material.

With all the silage they would eat, cornstalks and mixed hay, the sheep would eat larger proportion of silage and would take only a very small amount of the clover from the mixed hay.

The amount of silage fed to breeding ewes should be limited to not to exceed two and one-half pounds per head daily and in addition they should receive a good amount of clover or alfalfa hay and a small amount of grain for the last thirty days preceding lambing.

As a grain ration, there is nothing better than oats, which should be fed to the extent of one-half pound per head daily.—Geo. A. Brown, Professor of Animal Husbandry, M. A. C.

MICHIGAN'S NEW CHAMPION HOLSTEIN

EMPRESS Prilly Rosewood, a Holstein cow owned by E. M. Bayne of Romeo, Mich, has surpassed all former records of butter-fat production for the breed in 305 days as a Junior four year old, and is declared new state champion by the Advanced Registry. In 305 days she produced 20746.9 lbs. of milk and 650.23 lbs. of butterfat. This fat production is equal to 812.78 lbs. of butter.

VETERINARY DEPARTMENT

RINGWORM

I have a barn full of cows and steers and heifers and a few of these seem to have a skin disease that seems to be catching. It looks similar to ring worm and is around the eyes. The hair comes off and it is a greyish color, sort of scurf, no matter comes from it. Afterwards it comes on the body. It is rough like a wart but does not bunch up like a wart. Can you tell me what it is and what I can do for it?—S. McD., Sparta, Mich.

—These cattle are in all probability suffering from ringworm, a contagious skin disease due to a fungus the

MISSAUKEE GUERNSEYS. A NEW CROP OF calves coming soon. No females for sale. Order that new calf of A. R. Sire and Dam.
A. M. SMITH, Lake City, Michigan.

GUERNSEYS—Registered Bull Calves, Cheap, also grades. Best of breeding for production and size. George Damken, North Manchester, Indiana.

Trichopyton tonsurans. The treatment depends somewhat on the extent and form of the eruption. When feasible it is advisable to clip off the hair and soften up the crusts with soap and warm water. This may be followed by painting the areas with tincture of iodine. Most cases yield to treatment with any disinfectant.—John P. Hutton, Asso. Prof. of Surg. & Med., M. A. C.

CASE OF MASTITIS

I have a cow which came in about one week ago. From the first there was something wrong with one of her front teats. When milking this teat gave only two or three squirts at a time. In about ten minutes she would give a little more. Her teat does not seem to be soft and spongy like the rest and a hard tube has formed inside of the teat. There is also a small bunch where the tube goes up into her bag. The bag is also a little bit caked in the quarter where the sore teat is. She gives about twelve quarts of milk from the other three. I have tried a milk tube but it doesn't help. Will be much obliged for any information on what to do for her.—W. G., LeRoy, Michigan.

—I am very much afraid that the cow will lose the teat. You have a case of mastitis where treatment will do very little good. When the teat canal becomes thickened and the quarter gives but little milk treatment is usually very unsatisfactory. The milk glands of the affected quarter change into connective tissues so that they do not function any more and there is no treatment that will restore them to a normal condition again. The best thing perhaps that you can do is to dry the quarter up as soon as possible. Should you decide to try treatment I would suggest that you put the case in the hands of a competent veterinarian who can give the case his personal attention.—J. P. Hutton, Associate Professor of Surgery and Medicine, M. A. C.

FARM MECHANICS

STORING DYNAMITE

ONE of the most serious problems to the farmer who is anxious to make use of dynamite as a labor-saving device on the farm is the question of the safe storage of his explosives and accessories. Where only a small amount of explosives is used from time to time, and where a dealer is conveniently located who has storage facilities, it is probably best to buy only the quantity of explosives required for the day's work. Of course, the dealer charges a profit on his explosives sales so that the farmer in this case has to pay part of the dealer's storage charges. If the farm is large enough to support a magazine of its own, the farm owner can save a considerable amount on his explosives by building a small magazine at a safe distance away from roads and dwellings where the dynamite can be kept under lock and key and where it will be protected from fire and flying bullets.

Neither dynamite nor detonators, which latter term includes both blasting caps and electric blasting caps, should be kept in any dwelling house whatever. Neither should the blasting caps or electric blasting caps be stored in the same building with dynamite. It must never be forgotten that it is in the combination of the two that the greatest storage hazard exists. If dynamite alone is set on fire, it generally burns up peacefully without exploding, and while the caps would explode if they were in a burning building, the damage that they would do is relatively small as their action is very local. However, if dynamite and caps stored together should take fire, the exploding caps would detonate the dynamite which would do an immense amount of damage. The only other way of exploding dynamite is to fire a rifle or pistol bullet into it. Therefore the dynamite should be stored in a place where a stray bullet cannot penetrate.

Dry storage is necessary for both caps and explosives. Moisture is bound to spoil dynamite in time. Therefore dynamite should never be stored in a dug-out, cellar, or underground box or room of any kind. The storage place should be dry and well ventilated. The old injunction to keep the powder dry applies with equal force to twentieth century high explosives and blasting caps as it did to the black powder of Cromwell's time.

It is hardly necessary to add that dynamite and detonators should be kept under lock and key at that, as it gives one an uncomfortable feeling to have dynamite stolen, and it is certainly not a safe plaything for children.

Care should also be taken to keep dynamite out of the reach of cattle, as it has a sweetish taste which cattle seem to like, but dynamite should be labeled "for external use only". Taken internally, it is decidedly poisonous.—Arthur LaMotte, , Mgr. Technnical Section, Explosives Dept., E. I. du Pont de Nemours & Co.

EXPERT EXPLAINS WHAT IS HAPPENING IN SUGAR MARKET

(Continued from Page 4)

Cuba exceeds one billion dollars and that they own four and one-half million acres of cane land capable of producing 11,000,000 tons of sugar annually when all of it shall have been planted. The Sugar Trust alone now producing 180,000 tons of raw sugar in Cuba, owns no less than 32,000 acres of virgin tropical cane land. It thus will be seen that the bulk of the profit arising from the present sugar gouge is finding its way to the plethoric pockets of our seaboard refiners who would not dare unduly to increase the margin between raw and refined for fear of our anti-trust and trade regulatory laws. But owning sugar estates in Cuba they can without fear, raise the price of raw sugar at will, making their inordinate profits out of production instead of refining in America and snap their fingers at our Department of Justice.

Cuba Produces Sugar at Lower Cost

By reason of various local conditions which prevail in Cuba, that island produces sugar at a lower cost than it can be produced at home, in our insular possessions, or elsewhere in the world and hence a reasonable duty must be maintained on sugar if the domestic industry is to continue to exist. The removal of this duty is the measure for which the refiners have been persistently working for more than 20 years. With the removal of this duty the seaboard refiners would be able to "dump" Cuban sugar onto our market, at so low a price as to destroy the domestic industry in one season, after which with no competition to fear, they could raise the price at will. The price the American people would have to pay for sugar can be judged by the price which now prevails and the price which prevailed in 1920 when they pegged the price of raw sugar at 2c per lb. f. o. b. Cuba.

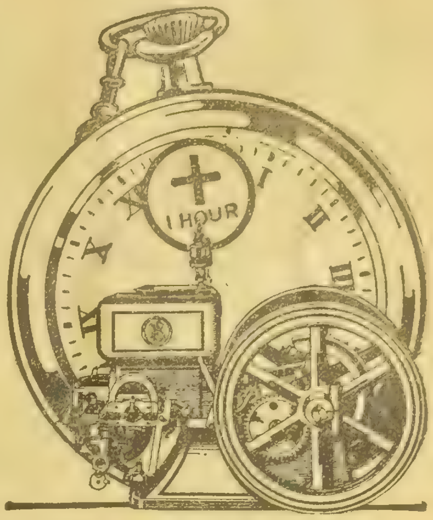
In the United States we have sufficient sugar beet area from which to produce the sugar of the world but we produce at home only about two-fifths of the sugar we consume; importing the balance from Cuba which is beyond the reach of our trade regulatory laws.

The extra $222,000,000 which the present sugar gouge is costing the American people is a sufficient sum with which to erect nearly 200 one-thousand ton beet sugar factories with a capacity of producing 2,000,000 tons of sugar a year. Not only would this insure the American people against future sugar gouges, but under normal conditions of 6c sugar and $6.00 beets the 17,000,000 tons of beets required to make this 2,000,000 tons of sugar would annually turn $102,000,000 into the pockets of American owners instead of its going to the exploiters of Cuba who never miss an opportunity of robbing the American people.

However, much or little sugar we produce at home, American producers, dealers and speculators all are amenable to every United States law which has been or which may be enacted to protect consumers from extortion. The solution of the sugar question would appear to be plain.

Radio is revolutionizing Mississippi river shipping and speeding up the arrival and departure of freight putting the skipper and the boat companies in close touch with each other, thus obviating delays in loading and unloading freight or in waiting on the arrival of departure of boats.

"What's an hour worth to a farmer?"



WOULD you pay two cents for an hour's spare time a day? Would your wife? It doesn't cost that, even, to gain an hour on pumping water alone—with a Hercules Engine.

Saves so much time on so many chores!

Suppose you pump 60 gallons of water from a well 50 feet deep, and carry the water 100 feet. Time you've done that little job, you've lugged 500 pounds a quarter of a mile. And it will take you all of fifteen minutes to do it.

For less than two cents, a 1½-h. p. Hercules will pump 60 gallons a minute for sixty minutes—and deliver it 100 feet or more away.

It will saw wood, or grind feed, or run a separator, or a fanning-mill, or do any of a dozen other muscle-racking chores just as easy—and just as cheaply!

And still you worry along without a Hercules! Why don't you send for the book that tells you what one can actually SAVE you and gain for you?

HENS GET LAME AND DROOPY AND THEN DIE

My hens get lame and droopy and then die. I thought you could print in the Business Farmer what would be good for them.—Mrs. M. S., Harrisonville, Mich.

—Lameness and droopiness are common manifestications of various diseases. For this reason it is difficult to make an accurate diagnosis on the basis of symptoms alone. The fact that there are a number so involved in the flock would indicate the presence of disease.

Lameness is one of the clinical symptoms of Tuberculosis. Fowls may have this infection for a long time without showing any external symptoms. The following symptoms, however, are present in so affected birds: Emaciation, leg weakness, or lameness, pale comb and wattles, ruffled feathers, and finally droopiness. The appetite of the fowl usually remains good until shortly before death. Upon opening the affected birds, the liver in many cases will appear spotted with white nodutes or areas. The fact that lesions are present, however, is not always an indication of Tuberculosis and for this reason it sometimes requires a laboratory examination to make sure of diagnosis.

Practically all domesticated birds are more or less susceptable to this trouble and the healthy birds should not be exposed to the affected stock. The germs are disseminated thru droppings which contaminate the premises, food, and drinking water, thus communicating the infection to other birds.

In preventative treatment, the houses should be maintained in as sanitary a condition as possible. Dropping boards should be used and plenty of light and ventilation supplied. It has been the writer's experience on many extention trips throughout the State, that this disease prevails more commonly where dirt floors are in use and where dropping boards are absent.

Thorough cleaning and disinfecting is of course, necessary in controling this disease. Sunlight should be made possible in the yards and houses and lime should be liberally used in the runways in the cleaning up process. The young stock should be raised away from the parent flock because this disease is not transmitted thru the egg and if a high mortality results in the parent flock the young stock can be raised on a new soil absolutely free from this trouble.

It may be necessary to dispose of the entire old flock and allowing the poultry houses and yards to remain unused until the disease is thoroughly cleaned up. A reliable disinfectant used in a three or five per cent solution should be liberally applied. The drinking utensils, roosts, floors, hoppers, etc., should also be thoroughly soaked with disinfectant. The young stock can be introduced after a thorough disinfecting of the house and yards, with the assurance that further trouble will seldom break out if sanitary conditions prevail.—E. C. Foreman, Associate Professor of Poultry Husbandry, M. A. C.

PURE BRED BARRED PLYMOUTH ROCK

Kindly furnish me the requirements of a pure-bred Barred Plymouth Rock.—A. W., Stockbridge, Michigan.

The common disqualifications for the Barred Plymouth Rock are as follows: Red in any part of the plumage; two or more solid black feathers in the primaries, secondaries, or maintail feathers: shanks other than yellow, dark spots do not disqualify; side springs on the comb or feathers on the shanks; comb other than single.

Color: comb, face, wattles, and ear lobes: bright red; beak: yellow; eyes: reddish bay; shanks and toes: yellow; plumage: grayish white, each feather crossed by regular narrow parallel sharply defined dark bars that stop short of positive black free from shafting, brownish tinge or metallic sheen; the light and dark bars to be of equal width, in number proportionate to the length of feathers and to extend through out the length of feathers in all sections of the fowl; each feather ending with a narrow dark tip; the combination of overlaping feathers giving the plumage a bluish appearance and of even shade throughout.

Weight: cock 9½ lbs.; cockeral 8; hen 7½; pullet 6.—E. C. Forman, Associate Professor of Poultry Husbandry, M. A. C.

THE EXPERIENCE POOL

Bring your everyday problems in and get the experience of other farmers. Questions addressed to this department are published here and answered by you, our readers, who are graduates of the School of Hard Knocks and who have their diplomas from the College of Experience. If you don't want our editor's advice or an expert's advice, but just plain, everyday business farmers' advice, send in your question here. We will publish one each week. If you can answer the other fellow's question, please do so, he may answer one of yours some day! Address Experience Pool, care The Business Farmer, Mt. Clemens, Mich.

HOW TO SET A TRAP FOR WEASELS

LAST year during my dinner hour a litter of weasels attacked and killed about half my flock of turkeys and this is the way we caught them:

We shot two and five of them we caught in a trap. I found three of the little dead turkeys after they had made their raid and one I used for bait and two I tied in a sack. This is the way I set the trap: I saw a weasel in an old smoke house where I had a hen setting in a box. There was a hole under the sill that they used for a runway so I drove a stick about eighteen inches long in the ground near the sill and set my trap between the stick and sill and tied the little turkeys feet to the top of the stick, allowing the head to hang eight or ten inches above the ground. The weasel will rare to get his prey. He is cautious not to get in the trap when he goes up but when he comes down he is not watching where he lands. Of course the trap must be set on the side of the stick where the head hangs down. With the three little turkeys and a sparrow I caught four in this place. I placed a loose coil of old barbed wire around the stick to keep out the poultry. The seventh one I caught in the chicken house. Upon noticing a commotion among the chickens at roosting time I went out there. As I entered the house I saw a dead chicken and caught the scent of a weasel. I used just the head and all the neck and set the trap same as before except that I leaned boards up around the trap leaving spaces at the bottom for weasels to get in.—M. M. C.

FRUIT and ORCHARD

EDITED BY FRANK D. WELLS

NOTES AND COMMENTS

Some good varieties of black sweet cherries are wanted for Southern Michigan. Of all fruits suitable to this climate, the black cherry is the hardest tree to grow. It persists in dying at the slightest provocation, or with apparently no excuse at all. No better service could be done the horticulture of this section than to discover some variety that will be satisfactory. Who knows of some seedlings that are promising?

* * *

The peach may be budded on either peach or plum stock, and grow. At one time the plum was used because it was supposed to be hardy, so was a point for the tree agent with an easy conscience. But the tree is slow in growing and never really does well, so most nurserymen have abandoned the plum for this purpose, the peach stock being so much more desirable. But it still remains a talking point for some salesmen.

* * *

There is a small demand for plum grafted on peach stock. For orchards on light soil that are to be grown in a hurry this kind of a tree may be of use, but is short-lived. On heavy soil, which is best fitted for the plum, a tree on stock of its own kind may be slower of growth, but it will live longer and in the end should be more satisfactory.

The Agricultural and Business Situation

Revised Monthly by the Department of Research of the American Farm Bureau Federation.

WHEAT—

Wheat is a sore spot with agriculture and has been constantly growing worse since the termination of the war. Wheat prices, this spring, have been averaging close to $1.20 compared with $1.35 for the corresponding months a year ago and $1.70 two years ago.

Acreage this season was reduced five and one-half per cent from last year and June forecasts indicate production five per cent under 1922 and two per cent less than the 1917-22 average.

Of the 1920 crop, 44 per cent was sent abroad; the 1921 crop, 34 per cent; and by June 30, 1923, the exports of the 1922 crop will probably show about 26 per cent.

The coming crop will face more serious competition abroad if Broomhall's prediction of increased European production (Russia included) this year is correct. Canada's output also promises to be as large as the record of last season. India has produced an exportable surplus of fifty million bushels over 1922.

Efforts are under way to stimulate domestic wheat consumption which has been declining. Per capita consumption around 1840 averaged 3.8 bushels; around 1880, 4.9 bushels; and 1910, 5.6 bushels. From this high point it has fallen to 4.8 bushels for the four year average 1919-22 and 4.5 bushels for 1922.

Exports to the extent of 20 per cent of the crop and per capita consumption on the basis of pre-war would equal 1923 production as now forecasted.

PORK—

Fat hogs are now around $7.00 compared with $10.50 a year previous. There is a surplus of about 12 per cent above last year's production to be absorbed. Exports which since the war have been taking about 15 per cent of the pork output, are now running 40 per cent higher than the corresponding months in 1922.

Per capita consumption of pork for four post-war years averages 71 pounds compared with 72 for four pre-war years. Per capita consumption of beef, however, has been declining, the average since the war running at 59 pounds compared with 75 pre-war. The livestock industry has laid plans for a campaign to increase the use of meat.

PRICES—

Prices of farm products are 5 per cent higher than a year ago and food prices 4 per cent higher. This compares with an increase of 15 per cent for clothing; 28 per cent for metals; and 26 per cent for building materials. The purchasing power figure for farm products in terms of all commodities is 70, which is 5 less than the corresponding month last year.

Eggs	117	113	109
Butter	149	153	129
Wool	235	223	148

4. Relative Purchasing Power of Farm Products:

(U. S. Bureau of Agricultural Economics)

The quantity of various commodities which a given amount of each farm product would purchase at prices prevailing in 1913 is put equal to 100. The figures given represent the percentage of this quantity which the same amount of farm products would purchase in April, 1923. Prices at the farm are used for agricultural products, and wholesale prices at central markets for other commodities.

	All Commodities	Cloths, etc.	Fuel, etc.	Metals, etc.	Building Mtls.	House Furn'gs
Cotton	136	106	108	141	106	116
Corn	91	71	73	94	71	77

1922	69	April	70

MARKET FLASHES

MARKET SUMMARY

Wheat quiet. All other grains are easy. Butter and eggs in good demand and steady. Poultry wanted and market firm. Dressed calves steady. Vegetables easy and active. Fruits in fair demand. Hay scarce and firm. Cattle trade sluggish and prices off. Hogs active at unevenly higher prices. Good demand for sheep turns prices upward.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press.—Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Advertising Michigan Fruits

MICHIGAN Agricultural College is planning a campaign to bring the famous fruits and berries of the state into greater popular favor, although they already are well known and highly regarded in this part of the country. Its nearness to Chicago, Milwaukee and other cities and Lake Michigan steamers render the peaches, strawberries, plums, cherries, etc., easily obtainable; to say nothing of the delicious Michigan grapes, which since the prohibibtion amendment to the United States constitution have been even more popular than heretofore. Michigan's need is to identify its products, and a campaign of advertising may be expected to be of material help.

Duluth Rye in Chicago

A cargo of 240,000 bushels of Duluth rye has been unloaded in Chicago, and another cargo of 280,000 bushels was shipped there a little later. A large acreage was devoted to rye in the United States last year, the main object in view with most farmers being to meet the expected big European demand. Unfortunately, the foreign outlet failed to equal the surplus supply, and prices suffered a great decline, July rye selling a short time ago 26 cents below the high time of the season. The fall in prices started up a fresh foreign demand, and Norway bought in a recent day 500,000 bushels at a very low price. Rye is now being substituted for corn as stock feed, it being cheaper than corn, with the visible corn supply of insignificant proportions, while rye stocks in sight a short time ago aggregated 15,420,000 bushels, comparing with only 2,580,000 bushels a year ago. The while the visible corn supply at the same date was down to 3,165,000 bushels, comparing with 31,326,000 bushels a year ago. Germany is the principal buyer of our surplus rye, but up to a short time ago that country had imported 70,000,000 bushels less than we expected. Rye for July delivery sells in the Chicago market at 63 cents, comparing with 85½ cents a year ago.

The Fall in Wheat

Extremely sensational declines have taken place in wheat prices in recent weeks, sales for July delivery in the Chicago market being made close to $1 per bushel—the lowest prices touched in a very long time and too low a figure to make growing this cereal at all profitable for farmers. A marked falling off in speculative trading is generally understood to be the main cause of the cheapness of wheat, sales being made at much lower prices than in recent years. It has gone well below the prices of one year ago, while it is far off as compared with other years, having sold a little more than two years ago around $1.33. Naturally, crop conditions exert their influence in establishing prices for wheat, but the prospective foreign demand is probably a more powerful factor. Owing to the fluctuations in foreign money values and other conditions abroad, Europe is to buy a month's supply of wheat at a time, instead of two months' as of late. This will cut out purchases of around 50,000,000 bushels per month in the world's markets, it is estimated, and it promises to be a highly important factor in depressing prices. Little that was not already known was brought out by the recent wheat conference in Chicago. Wheat harvesting is working its way northward, having began some time ago in the southwestern winter wheat states, where the weather has been forcing, while it has been hot in the northwestern spring wheat states. Wheat and flour exports are still exceeding those of a year ago, but exports of corn, oats and rye are much smaller than at that time. The visible supply in the United States is decreasing weekly, but it is larger than a year ago by about 6,000,000 bushels. Oats are a few cents higher than a year ago, the visible supply in this country being reduced to about 9,000,000 bushels, comparing with over 44,000,000 bushels last year. Late sales were made of July wheat at $1.02, comparing with $1.14⅜ a year ago; July corn at 78½ cents, comparing with 62 cents last year; and July oats at 40½ cents, comparing with a year ago.

Hogs Go Up and Down

Fluctuations in hog prices of late have been greater than usual, with rather sharp advances at times when the receipts fell off materially, followed by as severe declines when higher values brought in much larger supplies. According to all accounts, plenty of swine are left in feeding districts, and the tendency is to get them marketed whenever prices undergo any considerable advance. Eastern shippers are large buyers on some days, thus far their operations have not been large enough from one week to another to maintain prices on a higher level. In short, existing conditions show no marked change, with the average quality of the Chicago market receipts much poorer than several weeks ago and a consequent widening out of prices, the bulk of the sales showing a spread of 75 cents per 100 pounds. Consumption of fresh and cured hog products continue on an extremely large scale, with especially heavy sales of lard, stocks of which are far from large. Still, prices of lard are lower than last year, and cured hog meats are far lower, with weekly exports of provisions greatly ahead of a year earlier. Grass hogs are comprising increasing proportions of the marketings, and they sell at a big discount. The recent appearance of cool weather meant a great deal to farmers who were marketing their hogs, as the previous extremely hot spell was hard on hogs in transit, large numbers of dead hogs being taken from the stock trains arriving in the Chicago stock yards. Chicago received last week 215,096 hogs, comparing with 184,713 a week earlier and 177,493 a year ago. Combined receipts in twenty markets for the year to late date aggregate 21,707,000 hogs, comparing with 16,956,000 for the same time last year. There were late sales in Chicago of hogs at $5.80 to $7.25, the top being 20 cents lower than a week earlier and comparing with $11 a year ago. Light hogs sold highest, with the best heavy butchers a dime under them.

Grass Cattle Go Lower

As the season advances grassy cattle comprise an increasing proportion of the receipts in western markets, and Chicago is getting its share of these, the result being the usual decline in prices. The cattle receipts have been reaching generous proportions, and the declining percentage of good corn-fed beeves has made them sell very well, although they had to go at generally lower prices than during the previous week. Even prime cattle sold lower as a rule, while yearlings of all kinds sold materially lower. Weather conditions had a great deal to do with the market, the terrific heat of several days causing a great falling off in the consumption of beef, followed by increased consumption after it turned cool. The week's top price, $10.40 was paid on Monday for prime heavy cattle, being a dime lower than the highest price paid during the previous week. Fat butcher stock was sold much better than grassy cows and heifers, being in good demand, while the latter were away off, undesirable cattle, including steers, being as much as 75 cents lower. There was a small stocker and feeder trade, most lots selling much lower, with the bulk going at $6.25 to $7.75. The best beef steers sold after Monday at $11.10 to $11.20, the bulk of the steers bringing $8.65 to $10.85 and good to choice steers being 25 to 40 cents lower. Common steers sold at $6.50 to $7.50, and cows and heifers brought $4 to $8.50, while canner and cutter cows went at $1.50 to $3.50. Calves brought $4 to $10.75. A year ago the best beef steers sold at $10.10 and two years ago at $8.85.

Lambs Scarce and High

The meager supplies of native lambs offered on the Chicago market last week sold readily, the desirable flocks selling much lower, however, than a week earlier, while ordinary lots sold badly. The main trouble with the lamb market is the serious check given to the consumption of mutton because of its dearness. The southern lambs have been mostly marketed, and western range flocks have hardly started to move freely, the season being very late. A few feeding lambs sell at $11.75 to $13, and breeding ewes are taken as fast as offered at $5.50 to $10, yearlings going highest. The lamb market was firm at $9 to $15.75.

WHEAT

The weakness in the wheat market increased during the two weeks ending June 30 and prices declined. At Detroit the market closed 9c below what it was on the opening a fortnight before. During the last week at one time a firmer tone came because of the taking of a couple of million bushels for future export and for a short time it looked like an end of the long slump. Probably a majority of dealers favored higher prices and the little advance was well received only to prove a fizzle. There was not enough buying power behind the talk of strength to hold the advance let alone put prices higher. The market lacks investment buying and there is not enough demand to take care of the sales of new wheat from the southwest. Everything favors an easy market excepting the fact that prices are already too low to give the producer a profit on his work. New wheat is in the market competing with the carry-over from last year's crops and offerings are heavy. Other exporters are selling to Europe under American prices and the market lacks life. Dealers are greatly discouraged by the long slump and are afraid it may be a great deal longer. The new winter wheat crop is being harvested and threshed under favorable conditions while the spring crop is growing well with the best of weather. Some of the winter wheat is of fine quality, but the southwest will have a great deal of light grain according to recent reports from Kansas, Oklahoma and Nebraska. The new rules under which the grain trade is to operate have been published and appear to amount to nothing much aside from the fact that all dealings are to be reported and this is expected to make people a little more careful about speculating in case they do not wish their identity to be known.

Prices

Detroit—No. 2 red, $1.14; No. 2 white, $1.14; No. 2 mixed, $1.14.

Chicago—No. 2 hard, $1.05¼.

Prices one year ago—Detroit, No. 2 red, $1.19½; No. 2 white and No. 2 mixed, $1.17½.

CORN

Advances took place in the corn market during the week ending June 23rd and there was a steady tone to the market. The steady tone continued up to the closing days of last week and then the market weakened and prices declined leaving the prices at many points only slightly above what they were two weeks ago. Receipts seem to be on the increase while consumption is declining. Demand for the industries has been reduced considerably during the last week or two and several manufacturing plants have closed down claiming that they cannot make money with raw material so high.

Prices

Detroit—No. 2 yellow, 91c; No. 3, 90c; No. 4, 88c.

Chicago—No. 2 mixed, 79½@80¾c; No. 2 yellow, 81¾@82¼c.

Prices one year ago—Detroit, No. 2 yellow, 67½c; No. 3, 66c; No. 4, 64½c.

OATS

Oats followed the trend of corn and on the close of last week the prices at several points were higher than they were two weeks previous. Trade has not been large.

Prices

Detroit—No. 2 white, 48½c; No. 3, 47½c; No. 4, 46½c.

Chicago—No. 2 white, 42½@43c; No. 3, 41½@42½c; No. 4, 41¼c.

Prices one year ago—Detroit, No. 2 white, 41¼c; No. 3, 39½c; No. 4, 35½@37½c:

RYE

Regarding this market we have no further information than Mr. Foote has already given you in his letter in this issue. He has covered this market thoroughly and we would advise that you read again that part of his letter so as to be sure and get all the information contained in it.

Detroit—No. 2, 68c.

Chicago—No. 2, 62c.

Prices one year ago—Detroit, Cash No. 2, 88½c.

BEANS

The present market for beans is hard to understand. In spite of all indications that prices should go higher the Detroit market was continuously headed downward during the past two weeks and the total loss amounts to 90c. Conditions in the market are practically the same as they were two weeks ago. Importations continue to come in but they are not getting the attention they commanded a few months ago. Many of the large dealers of the state are of the opinion that Michigan beans at $7 or less per hundredweight are a good buy and state if price does not go above $7 the old crop will be well taken care of before the harvest this fall. If the price should go above, and stay above $7 per hundredweight for a time they anticipate a carry-over into the new crop. While we can not tell what the trend of the market will be for the next few weeks we feel that prices can not remain at the present low level for long and we hope to see them return to at least $7 in the near future.

Prices

Detroit—C. H. P., $6.10 per cwt.

Chicago—C. H. P., $7@7.50 per cwt.

Prices one year ago—Detroit, C. H. P., $9.00 per cwt.

POTATOES

Old potatoes are fast becoming extinct as far as the consumer is concerned, new stock being within reach at slightly higher prices. There was a slight advance in prices of old stock in the east during the past two weeks but new potatoes are getting practically all of the attention. The advance was due no doubt to reports on the new crop. Reports show that the crop is somewhat below normal and the yield reduced through drouth which has been prevailent in these sections for several weeks.

Prices

Detroit—Michigan, $1.07 @ $1.27 per cwt.

Prices one year ago—Detroit, Michigan, $2.83 per cwt.

HAY

The 1922 hay crop has been practically all marketed, according to a survey just completed by the United States Department of Agriculture. On June 15, 1923, the date of the survey, the reports indicate that about 90 per cent of the marketable surplus of the 1922 crop had been marketed, 98 per cent of the alfalfa, and 97 per cent of the prairie. The timothy surplus is slightly larger than at the corresponding time last year, while the amount of alfalfa and prairie is slightly less than remained unsold on June 15, 1922.

All of the important timothy producing States, with the exception of New York and Wisconsin, and possibly Michigan, will ship out practically all of the 1922 crop before the new crop arrives.

New York reports stocks of timothy yet to be marketed at 25 per cent of the surplus, and Wisconsin 15 per cent, while Michigan apparently will have a slightly larger carry-over than last year.

Remaining supplies of alfalfa hay in shippers' and producers' hands are unusually light, Colorado and Idaho being the only States reporting as much as 5 per cent of the 1922 crop yet to be disposed of. All the other important producing States have sold, or will sell, all of the old crop by the time the new hay is ready for market. The same condition applies to to prairie hay situation. Very little old hay remains unsold. Missouri reports about 8 per cent, while the surplus in the other important States ranges only from 2 per cent to 3 per cent.

Reports from the principal consuming areas indicate that dealers' stocks of hay are generally below normal for this season of the year. Considerable local forage is available in most sections but the amount probably is not so much as last year because of dry weather in some sections of the East and South. Commercial industries are reported to be slightly more active than last year, and southern consumers are said to be in a better financial condition on account of higher cotton prices than they were at the beginning of the 1922 crop year.

The quality of the 1923 crop, as reported by shippers throughout the United States, will be only fair, with the exception of a few of the important alfalfa producing States in the Southwest, where hay is produced almost entirely by irrigation.

Timothy hay will be short in many sections because of insufficient moisture, while in sections where the moisture has been excessive, it will be rather weedy.

Throughout Kansas, Nebraska, and Oklahoma the first cutting of alfalfa has been seriously damaged by wet weather, and most of the hay from this cutting will be of inferior quality. This excessive moisture, however, has been beneficial to the prairie hay in that territory, and reports indicate that an increased acreage to be harvested was reported as follows: Missouri, 5 per cent; Oklahoma, 10 per cent; Kansas, 10 per cent; and Nebraska, 20 per cent.

Prices

Detroit—No. 1 timothy, $17.50@18; standard, $16.50@17; No. 2 timothy, $15.50@16.50; No. 1 clover mixed $14@15; No. 1 clover, $12@14.

Chicago—No. 1 timothy, $23@24; light mixed, $20@22; No. 2 timothy, $19@22; No. 1 clover, $16@17.

New York—No. 1 timothy, $25@25; light mixed, $25@25; No. 2 timothy, $21@24.

Prices one year ago—Detroit, Standard, $19@20; No. 2 timothy, $18@19; Light mixed, $19@20; No. 1 clover, $15@16.

WOOL MARKET

Apathy still characterizes the wool situation in the West, according to reports received by the United States Department of Agriculture from its field representatives. During the two weeks ended June 23 only a few small sales have been reported in Montana, where producers apparently are holding firm or are making arrangements to consign. The same period has seen practically no sales of importance in California, either by growers or dealers, the former being unwilling to release holdings at the prices offered while the latter are not active.

Reports from Wyoming indicate the existance of a practical deadlock, with buyers offering around 43 cents while growers are holding for 45 cents and more. Advices from Texas report little trading at 40 to 45 cent offers. The various reports show that approximately 18 per cent of the Montana clip, 45 per cent of the Wyoming clip, 75 per cent of the California clip, and practically all of the Washington, Arizona and Utah clips have been sold or shipped.

WEEKLY MARKETGRAM

(U. S. Bureau of Agricultural Economics)

Washington, D. C.—For the week ending June 29, 1923.

FEED—Markets rather quiet with offerings and demand nearby shipments evenly balanced and prices a shade lower. Interior buyers showing little interest. South-western offerings wheat-feeds deferred shipments quite plentiful but Northwestern offerings not so heavy. Linseed meal holders asking higher prices. offerings good, demand fair. Cottonseed meal slightly easier and firm, bids under the market are accepted. Hominy feed quoted lower, demand and offerings light. Gluten feed prices steady, offerings by re-sellers good. Larger mills have withdrawn July-August offerings. Receipts and supplies good.

Quoted bran $20, middlings $25, flour middlings $29.50, rye middlings $24.50, Minneapolis; gluten feed $37.15 Chicago; 32 per cent linseed meal $38 Minneapolis, $39 Buffalo; 36 per cent cotton seed meal $36 Memphis; $36 Atlanta; white hominy feed $32.50 Chicago.

DAIRY PRODUCTS—Butter markets unsettled during the week and weak at the close. Approximately 8 million pounds have gone into storage in the 4 markets during the week but there is a lack of confidence attached to this class of trading. It is generally felt that production is close to peak for this season. Closing prices 92 score butter; New York 38c; Philadelphia 39c; Boston 39c; Chicago 38c. CHEESE markets dull following declines which occurred during the week. Some storing being done but it appears to be mostly temporary protection against loss, more New Zealand cheese and relatively heavy shipments reported as prospect. Prices at Wisconsin primary cheese markets June 28; flats 22¾c; twins 21¾c; daisies 22c; double daisies 21⅜c; Young Americas 21½c; twins 21¾c; square prints 22½c.

PRITCHARD'S
WEATHER
FORECAST
INTERPRETED BY THE STARS

Week of July 8

DURING Sunday, Monday and Tuesday of this week the weather is expected to be generally fair and the temperatures moderately cool for the season, especially during the nights and mornings.

About Wednesday or Thursday temperatures will again begin rising in Michigan which will be the signal that scattered showers and thunder storms will occur about Thursday and Friday.

Temperatures will again fall about Friday and by Saturday will be low for the month. The weather at end of this week will be fair.

Week of July 15

Fair weather during last part of last week will continue during the first half of this week. During this same period temperatures are not expected to be overly high for the season.

During last half of week temperatures will be rising, reaching the high point about Saturday of this week. No sudden changes in temperature are expected although readings will be above normal by end of week.

Scattered electrical storms and showers will occur in Michigan during last three days of this week, but there will be a noticeable lack of moisture.

During next three or four weeks temperatures in Michigan will average below the July normal. Rainfall for the same period will average a little above normal but do not believe this condition will become noticeable until first part of August.

MISCELLANEOUS MARKET QUOTATIONS

Detroit, Monday, uly 2nd.

BUTTER—Best creamery, in tubs, 25@27c per lb.

EGGS—Candled, firsts, 23@24c; current receipts, 20½@21½c per dozen.

CHERRIES—Early Richmond, $2.75@3 per 24-quart case.

PEACHES—Georgia, early rose, A, $4.50@4; B, $4@4.25 per bushel.

APPLES—Good, $3.25@4 per bushel; western boxes, $4@4.50.

HONEY—Comb, 23@25c per lb.

POPCORN—4@4½c; Little Buster, 7½@8c.

LETTUCE—50@60c per bushel; California iceburg, $5.50@6; Washington, $5@6 per case.

DRESSED CALVES—Best country dressed 14@15c per lb; ordinary grades, 12@13c; city dressed. 17@18c per lb.

CELERY—Kalamazoo, 75 @ 90c per doz; California, in the rough, $18@20 per case.

ASPARAGUS—Michigan, $2.75@3 per case.

LIVE POULTRY—Broilers, fancy rocks, 2 lbs up, 45@48c; leghorn broilers, 30@34c; stags, 13c; hens, 23@25c; leghorns, 17@19c; roosters, 13c; geese, 12c; small ducks, 18c; large ducks, 24@25s; spring ducks, 5 lbs and up, 28@30c per lb.

IN OKLAHOMA TOO!

(Continued from Page 13)

dent of the board is a party candidate elected by the people and must play the game in order to keep in good standing with the party workers. So whenever a new administration comes in the resulting political earthquake is felt to the uttermost confines of the appointive power.

There is a general feeling in Oklahoma, especially among the farmers, that all educational institutions should be taken out of politics. The thought is especially strong in regard to the agricultural college. But it cannot be done without amending the constitution. It is strictly within the law to make a political plaything out of the sacred job of educating the boys and girls.

The only remedy is an amendment to the constitution of the state of Oklahoma. It should provide that the governing boards of educational institutions shall be appointed for terms so long that a majority of the members will never go out of office during the administration of any one governor, that no governor shall have power to remove them except with the consent of the legislature itself, and that these board members shall have no job except that of making good schools.

The wording of the amendment is immaterial. Its purpose should be plainly to take the schools entirely out of politics and keep them out.

If such a result can come, the present upheaval in the administration of the state schools in Oklahoma will be thoroughly worth while.—The Oklahoma Farmer-Stockman.

AGRICULTURAL BULLETINS OF INTEREST DURING JULY

A SMALL list of Farmers' Bulletins and Circulars of general interest during July is believed to be of value to our readers. Copies may be obtained free by addressing the Division of Publications, United States Department of Agriculture, Washington, D. C., as long as the supply lasts. Specify number and name and whether Farmers' Bulletin or Department Circular.

Farmers' Bulletin 707, The Commercial Grading, Packing, and Shipping of Cantaloupes; 766, The Common Cabbage Worm; 825, Pit Silos; 842, Methods of Protection Against Lightning; 850, How to Make Cottage Cheese on the Farm; 871, Fresh Fruits and Vegetables as Conservers of Other Staple Foods; 900, Homemade Fruit Butters; 943, Haymaking; 959, The Spotted Garden Slug; 984, Farm and Home Drying of Fruits and Vegetables; 1007, The Control of the Onion Thrips; 1112, Culling for Eggs and Market; 1115, Selection and Preparation of Fowls for Exhibition; 1145, Handling and Transportation of Cantaloupes; 1211, Home Canning Fruits and Vegetables; 1217, The Green Bug or Spring Grain Aphis; 1225, The Potato Leafhopper and Its Control; 1246, The Peach Borer: How to Prevent or Lessen Its Ravages, 1258, Webworms Injurious to Cereal and Forage Crops and Their Control; 1266, Preparation of Peaches for Market; 1290, The Bulk Handling of Grain; 1310, The Corn Earworm.

Department Circular 98, The Installation of Dust Collecting Fans on Threshing Machines for Prevention of Explosions and Fires and Grain Cleaning; 217, Anthrachose of Muskmelons; 274, Dusting for the Cotton Boll Weevil.

Better Returns
from your
Produce---

YOU can market your produce more profitably through the
Farm Bureau Produce Exchange.

Many farmers and shippers are not receiving the best market prices. Increase your returns through the service of the

Farm Bureau "Mitten" Outlet

FOR BEST RESULTS ship through your local Co-operative Association. Your co-op. manager is kept thoroughly informed by us on WHEN and HOW to make shipments.

—SHIP NOW
ALL KINDS OF POULTRY
Especially Broilers, Hens and Ducks

Shipping tags and information gladly furnished on request.

Other Products Handled and Marketed

Asparagus, Strawberries, Goosberries, Raspberries, Celery, Potatoes and all kinds of fruits and vegetables, also eggs.

Producers unable to ship through a co-op. should write us for information on how this service may be obtained.

for Only 75¢ PER YEAR

NEWS of ONE DAY *Will you be Next?*

THE Business Farmer has made it possible for every single reader to carry $1,000 Accident Insurance for the trifling sum of 75c per year!

This is the total cost of the insurance policy here described and it is issued by the well-known North American Accident Insurance Company of Chicago.

There are no other costs if you are a paid-in-advance subscriber to The Business Farmer and you can secure a policy for every member of the family providing one member is a subscriber, at the same cost, 75c for each policy.

We Want Every Business Farmer Reader To Be Insured!

This is YOUR opportunity to do what you have been putting off so long.

There is no red tape—no medical examination—just sign the Application Blank in the corner of this page and send it in with the required amount—Seventy-Five Cents (75c) for each policy.

Just one requirement—ONE MEMBER OF YOUR FAMILY MUST BE A PAID-UP SUBSCRIBER TO JULY, 1924, or longer—and you must enclose the address label from this or any recent copy of The Business Farmer to prove it.

If your subscription is not paid-up to July, 1924, or longer, add SIXTY CENTS for a renewal to July, 1924, and send 75c for each policy desired.

Don't Put It Off---Your Accident May Be Right Around the Corner!

Only last month, Thomas Lynch, a farmer, and his wife Mary Lynch were riding to town in their automobile, when it was struck by a train. Both father and mother were killed and several children injured. BOTH MR. AND MRS. LYNCH HAD NORTH AMERICAN ACCIDENT POLICIES FOR WHICH THEY HAD PAID ONLY 75c EACH! Their children received $1,000 in cash from each policy or $2,000 to keep the wolf from the door!

Old As Well As New Subscribers May Secure This Policy!

Any or all members of a family from 16 to 70 years of age may secure this policy, providing they all live at one address, at which one member of the family is a paid-up subscriber to The Michigan Business Farmer.

READ WHAT THIS POLICY GIVES YOU AND THEN ACT! DELAY IS DANGEROUS!

What the Policy Gives You

It is only because The Business Farmer has contracted for thousands of these policies that we are able to offer them at this low price. It is a genuine travel accident policy that gives you the very protection you need. It may pay you or your family hundreds of dollars, it costs but 75c for a whole year's protection. Under the terms and conditions outlined in the policy it pays for death or injury of the insured sustained by the wrecking or disablement of any public or private vehicle while riding as a free or fare paying passenger.

FOR THE LOSS OF LIFE	$1,000.00
FOR THE LOSS OF BOTH HANDS	1,000.00
FOR THE LOSS OF BOTH FEET	1,000.00
FOR THE LOSS OF SIGHT OF BOTH EYES	1,000.00
FOR THE LOSS OF ONE HAND AND ONE FOOT	1,000.00
FOR THE LOSS OF ONE HAND AND SIGHT OF ONE EYE	1,000.00
FOR THE LOSS OF ONE FOOT AND SIGHT OF ONE EYE	1,000.00
FOR THE LOSS OF EITHER HAND	500.00
FOR THE LOSS OF EITHER FOOT	500.00
FOR THE LOSS OF EITHER EYE	500.00
DISABILITY, 13 WEEKS OR LESS	$10.00 Per Week
LOSS OF LIFE, BY BEING STRUCK, KNOCKED DOWN OR RUN OVER ON PUBLIC HIGHWAY BY VEHICLE	$250.00
EMERGENCY BENEFIT	100.00

$10.00 a week for 13 weeks for injuries received while riding in any kind of vehicle.

$100.00 for relief of policy holders if injured or taken sick away from home.

$250.00 for death of pedestrian under moving vehicle.

ORDER AND REGISTRATION FORM

The Michigan Business Farmer, Date........................1923
Insurance Department, Mt. Clemens, Mich.

I hereby apply for a $1000.00 TRAVEL ACCIDENT INSURANCE POLICY of the North American Accident Insurance Company, for which I enclose Seventy-five cents (75c) in check, money-order or registered letter.

☐ I also enclose my address label from a recent issue of The Business Farmer to prove that my subscription is paid-up to July 1924, or longer.

☐ I enclose SIXTY CENTS (60c) in addition ($1.35 in all) and my old address label, for which you are to mark my subscription paid-up to July 1924, or longer.

SIGNED.. Age...............

Post Office... R. F. D. No...........

State..................................... Occupation.............................

☞ In consideration of my subscription I may also wish to secure......... additional $1000.00 Travel Accident Policies for other members of my immediate family, send necessary Order and Registration forms with my policy.

Current Agricultural News

$70,000,000 IS VALUE OF 1922 MICHIGAN DAIRY

T. H. BROUGHTON, Director of the Bureau of Dairying of the State Department of Agriculture, has just completed compiling figures on the milk produced in Michigan in 1922.

His figures show that the total milk produced in Michigan in 1922 was 3,495,627,169 pounds, or an increase of 391,929,079 pounds over the 1921 production. His figures show the amount of milk used for each dairy purpose and indicates that there was an increase in the amount of milk consumed for every purpose except for cheese manufacture.

There was a marked increase in the quantity of creamery butter manufactured from Michigan milk, although the dairy butter dropped off. There was a marked reduction in the manufacture of brick cream cheese and farm made cheese although an increase in the amount of cottage cheese was reported. An increase of nearly 100 per cent in the amount of milk evaporated in the state is shown from 1921 to 1922. The amount of milk used for direct consumption and that used on farms for calf and swine feeding was also much larger in 1922 than 1921.

"Michigan is fortunate in being able to obtain these figures so accurately," says Mr. Broughton, who is authority for the statement that Michigan is the only state which has a system whereby they can check up on the milk used for every purpose by every creamery and milk peddler in the state. This is made possible through the state's licensing system which requires total reports from handlers and distributors of dairy products before licenses may be granted.

WALTON PETEET TO SPEAK AT POTATO MEET

THE Michigan Potato Growers' Exchange has secured Walton Peteet, head of the department of co-operative marketing, American Farm Bureau Federation, to speak at the fifth annual meeting, Wednesday afternoon, August 15th. George Wager, manager of the branch sales office at Edmore will also appear on the Wednesday program. When the banquet for delegates to the annual meeting of the Michigan Potato Growers' Exchange is held in Cadillac, Wednesday evening, August 15th, the Hon. Herbert F. Baker of Cheboygan will preside as toastmaster. Dr. Eben Mumford of the Michigan Agricultural College will be the leading speaker on the evening program.

MANY BREEDERS TOURS WITHIN THE NEXT TWO WEEKS

THERE will be a Hereford Tour and conducted by the Michigan Hereford Breeders' Association through the southwest part of the state July 24th and 25th, and ending at the Watkins Hereford sale near Manchester July 26th.

The Tuscola County Duroc Jersey Breeders are planning a tour about their county July 30th, and the Michigan Chester White Breeders' Association are going to tour the thumb district July 31st. Mrs. Levi P. Moore, representing the Chester White Swine Record Association will attend this tour. The Calhoun County Duroc Jersey Breeders' Association are planning to tour their county, August 1st.

The State Poland China Breeders tour that will cover southern and central Michigan has been planned for August 1st, 2nd, and 3rd. Mr. C. G. McChan, President of the Poland China Breed Promotion Committee, has promised to attend this tour. The tour will end with a general get-together meeting and potluck dinner near St. Louis, with the Central Michigan Poland China Breeders' Association acting as host.

The Lenawee County Duroc Jersey breeders are planning a tour about their county August 7th, Hillsdale county breeders August 8th and Branch County Breeders' August 9th. Mr. R. J. Evan. Secretary of the American Duroc Jersey Association has promised to be present at these tours and possibly another one the same week. Breeders and others interested are most cordially invited to attend any of these tours.—V. A. Freeman, Extension Specialist in Animal Husbandry, M. A. C.

ALFALFA AND DAIRY CAMPAIGN IN MIDLAND COUNTY

MIDLAND County farmers, twenty-five of 'em, including mother, father, son and daughter, June 27th, toured Bay, Saginaw and Midland counties in the interests of better dairying and alfalfa raising. They visited the farm of George Bergtold, Frank Trombley, James Wilder, T. F. Marston, and George H. Hicks for a study of modern dairy methods and the ideal dairy cow. Plots of alfalfa were pointed out on the return to Midland. It rained in the afternoon but such trival things could not dampen the ardor of the Midlanders. Jim Hayes and County Agent McMurtry sponsored the tour and followed it through to the end with any amount of enthusiasm and peppy speeches.

M. A. C. HORSES TO SHOW AT FAIRS

BLUE ribbon horses from M. A. C. will be shown this year at the live stock shows at Columbus, Ohio, and Syracuse, New York, for the first time, according to H. H. Halladay, secretary of the college. They will also form one of the feature exhibits in the big "style review" of live stock to be paraded before the crowd on Farmers' Day, July 27. The animals will be entered in the International Live Stock Exposition, at Chicago, and at the Michigan State Fair at Detroit, as usual,

FROM HERE AND THERE IN MICHIGAN

Alma—New $100,000 plant manufactures auto parts.

Spring Lake—$2,000 to be spent on new water system.

Detroit—Jewett automobile plant to build 500 cars daily.

St. Louis—Bollstrom plant to manufacture auto bodies.

Wayland—Construction of new school building to start soon.

Westphalia—Construction of new gravel road nearing completion.

Edmore—Roach & Company to make improvements at factory.

Manistee—New box factory considering location of plant in this city.

Ontonagon—Contract let for construction of new hall costing $70,000.

South Lyons—Detroit Panel and Plywood Company to erect factory here.

Zilwauzee—Work on Consumers Power Company's plant progressing rapidly.

Munising—$30,000 contract let for remodeling First National Bank building.

Flint—Plans made for construction of new $1,000,000 municipal building.

Cleveland—Contract let for improvements of First National Bank Building.

Manistique—City Fuel Company buys and will operate Indian Lake Blue Ice plant.

Ironwood—Work started on paving Tula Road between Gogebic and Copper counties.

Ann Arbor—Work on new library completed. $200,000 school building to be erected.

Adrian—Work started on resurfacing country roads. $31,375 building contracts issued last month.

Pontiac — Oakland Motor Car Company to build a Fisher Body Corporation factory, costing $2,000,000.

Lansing—Masonic order to build $600,000 temple. Contract awarded for construction of new addition to school for blind, costing $100,000.

Michigan was sixth on the list of states in the number of plants which in 1921 were engaged in manufacture of paper and wood pulp. Of the 726 establishments engaged in the business 39 were located in Michigan.

Muskegon—Brunswick tire plant to reopen and give employment to 200 men. Construction of addition to Hackly hospital under way. $2,000,000 improvement program inaugurated in northwestern region of Pennsylvania System.

Holland — Improvements nearing completion on Alpena beach road. $75,000 contract let for construction of Christian high school. Marine Rubber Corporation to move tire factory from Sparta to this city. New hard-surfaced road to be constructed to Jenison.

Saginaw—Work to start on dredging Saginaw river July 1, to cost $60,000. Plans made for remodeling Eagle lodge house. Repairing of P. M. Docks in progress. $600,000 contract awarded for paving city streets. Improvements on west side roads under way. Contract awarded for paving Prescott street.

Grand Rapids—Addition being erected at Grand Rapids Chair Company plant. $35,000 contract let for construction of new theatre. Comstock Park Lumber Company starts operation, capital $10,000. $125,000 contract let for building new dormitory at Calvin college. Plans made for improvement of entire river front. Widening of Fulton Street in progress. $4,575,000 building permits issued during last month.

Business Contact and Good Telephone Service

The Manager of your Telephone Exchange is responsible for a good business relationship between you and the Telephone Company.

He is responsible to you for the proper billing for your service. In spite of the many safeguards used throughout the telephone billing system, errors and misunderstandings sometimes occur, but when they do, the Manager wants to know about them and to correct them. You never will find him arbitrary.

In case of error, take your bill to the manager. If he is absent, there are in his department trained men and women who will receive you courteously and will adjust any misunderstanding.

Cooperation on your part will help the telephone people render efficient service. Bills paid promptly are dealt with easily and opportunity for error is greatly lessened.

The Telephone Manager and his representatives are anxious to maintain a good, clear-cut business relationship with all subscribers.

Beans to be Advertised by National Association

Michigan, New York and California Bean Interests will Push Sale of Navy Beans to Consumer on Same Plan as Citrus Fruit, Raisins and Prunes Growers Operate

ONCE a week every American family ought to pull up to the table for a good, old-fashioned pan of baked pork and beans! Every bean grower will agree to that statement without argument. As a matter of fact, if every family in America, baked a pan or opened a can of beans, every week, there wouldn't be half enough now grown and the price would be where it was when the boys were in uniforms. Telling people, through advertising, to eat more raisins, walnuts, oranges and various other farm products has doubled and trebled their old time market. Beans offer the greatest strength and body building food known to man and we welcome this practical plan to make this fact known to the hundred million folks in America alone.

MEMBERS of the New York State Bean Shippers' Association by a unanimous vote have agreed to underwrite its quota for a national advertising campaign to educate the buying public to demand domestic beans in preference to the inferior imported article, with which the American market has been flooded ever since war days. After the vote by every man present to support the campaign, 70 per cent of the New York quota of $5,805 was subscribed in written pledges. The national campaign calls for an expenditure of $51,210 in national magazine advertising.

Bean shippers in the states of California, Colorado, Michigan, New Mexico, Arizona and Idaho, the other principal bean growing states, are banding together with the New York men in similar action under the direction of the National Bean Shippers' Association. The campaign will be undertaken next fall, if the other states follow the lead.

Accuse Retailers of Mixing

Previous to the meeting all the large bean shippers of New York were determined that some action must be taken to stop the practice of unscrupulous importers and retailers of mixing inferior oriental beans, imported from Japan, China and Mongolia, with American-grown beans of recognized quality. According to food experts, the imported beans do not cook well and when mixed with domestic beans it is practically impossible to obtain a satisfactory dish. These mixed beans have been sold in many places as domestic grown.

Under the plan of the association, every bag of beans will be stamped with an American label and the name of the state in which they were produced. The association will guarantee each bag so marked to cook satisfactorily, a warranty which the importers of foreign beans have constantly refused to make under any circumstances, say the shippers.

O. L. Deming of the staff of the New York Commercial, a trade journal which has fostered the idea of advertising the bean industry, was present at the meeting and spoke to the shippers on "The Value of Advertising." Benjamin Gerks, who spoke recently before the Michigan Bean Jobbers' Association meeting in Flint, reviewed the work of that meeting and told of the enthusiasm of the California and Colorado jobbers for the advertising campaign.

Under the plan adopted, the shippers pledged themselves to pay $300 each toward the campaign with the understanding that the number of bag beans, purchased first hand from growers and shipped, is to be recorded and that each man is to pay nine-tenths of a cent towards advertising for each bag of beans he ships, which he purchased directly from the grower. At the end of six months the shippers either pay the difference between half of the $300 subscribed and the amount they owe on the basis of number of bags shipped, or if they have shipped less than the quota, the association refunds them the difference.

The known bean production of the several states for 1921 was taken, and the national quota worked out on the basis of nine-tenths of a cent per bag. The quota for each state was established by the amount of beans it produced during the same year.

Spread News of Success

Word of the success of the New York program was wired to the Michigan, California and Colorado associations. The campaign, if undertaken, will run for ten months from October, 1923, to August, 1924 The advertising copy will emphasize the value of the bean as a body and tissue-building food. According to statistics presented at the meeting, the bean represents a 23 per cent protein content, a ratio much higher than in almost all foods. In this connection, an effort will be made to demonstrate the value of getting beans of good quality

Michigan Member Expelled

That the bean industry intends to bring about merchandising reforms along with the advertising campaign is indicated in the announcement of the Michigan Bean Jobbers' Association that Hart Brothers of Saginaw, Mich., were expelled from the association on a charge of having shipped a carload of beans to Ragon Bros., Evansville, Ind., as Michigan grown beans which contained beans foreign to Michigan. The beans were personally inspected by the association's inspector, Burkhart, in the warehouse of Ragon Brothers, Evansville, and were found not to be Michigan grown. Samples were submitted to the arbitration committee, which has sustained Inspector Burkhart.

MICHIGAN FIRST IN NAVY BEAN PRODUCTION!

THE bean growers of Michigan ought to be proud of the fact that altho the various state and federal agencies have been handing the palm of first place in the production of navy beans to other states these past two or three years, when it came to passing the hat for contributions to the very commendable fund for national advertising and it was apportioned on the basis of 9-10 of one cent per hundred pounds, based on the 1921 crop estimates, Michigan won first place, to-wit:

1922 CROP—100 Pound Bags		
California (other than Limas)	1,480,000 bags	$13,320.00
California (Limas)	820,000 bags	7,380.00
Colorado, New Mexico, Arizona	745,000 bags	6,705.00
Idaho	200,000 bags	1,800.00
Michigan	1,800,000 bags	16,200.00
New York	645,000 bags	5,805.00
	5,690,000 bags	$51,000.00

President of Live Stock Producers Ass'n Tells What Happened to Market

IN recent interviews to the Press, Everett C. Brown, President of the National Live Stock Exchange, is quoted as saying that a large part of the blame for hogs being $1.00 under the cost of production is due to "co-operative selling agencies."

He further points out that while hogs are losing money, cattle and sheep are making money and that hog prices are high in Canada. Since the co-operative selling agencies have handled relatively few cattle and sheep as compared with hogs and since there are no "co-ops" in Canada, he concludes they are the cause for the low price of hogs, and urges them to return to the "old line" commission firms.

The absurd statement is made that the concentration of large numbers of stock in the hands of a co-operative selling agency acts as a club on the market. Such a statement is contrary to good business principles. Any trader knows that the man who controls a large percentage of any commodity on a market can do more to hold up prices than a man who controls only a small percentage of the supply of the commodity, and hence must engage in a peddling process in order to sell it.

Mr. Brown says in effect, that the business of his former customers is so successful that they cannot handle it as well as he or the firms he represents. His opinion regarding the present low hog market is wholly at variance with the facts he presumably had at hand.

Market statistics show that local cattle receipts for the month of June were the smallest since 1917. Light receipts make for higher prices. Likewise the receipt of sheep for June were the lightest in more than 30 years, so these good prices were due to sensationally light runs and not to the fact that the "co-ops" have not yet invaded those departments of the market as fully as they have the hog department.

The same market statistics show that more hogs were on the Chicago market this June than ever before in the history of June markets. A similar condition occurred in 1911, with similar effect, and that was long before co-operative marketing was thought of. Too many hogs for the entire market and not just too many hogs for the competitor of the National Live Stock Exchange, was the true cause of the break in prices. Canadian markets received only 50,000 hogs during June. Canadian bacon is always at a premium, hence the light runs caused good prices there.

Between last November and the last day of June, seven Western markets received 5,000,000 more hogs than in the same period in either of the two years just preceding. Hog shipments from eleven corn belt states to all markets increased 32.2 per cent this year as compared with the year preceding in the period from November 1st to June 1st.

The spokesman of the old line commission companies asserts in his interviews that most of the hog salesmen for the cooperative commission companies have not graduated from the farm. The truth is that cooperative salesmen have been chosen for their ability to sell stock regardless of where that training was received, be it with an old line commission firm, buying for the packers, or speculating for themselves. They are hired for the results they can obtain in making sales, and they are retained because they do obtain results. Practically every co-operative agency has in its files, applications from salesmen now with old line commission firms who wish to become members of cooperative selling staffs. If their selling talent is of the right standard and their co-operative spirit sincere, they will be called as needed. The success of co-operative live stock marketing has given financial independence. Funds are available to hire the best.

We who make up and manage the cooperative selling agencies have all been customers of some member of the National Live Stock Exchange. We are not unschooled in market practice. We raise live stock to sell, we sell it through our own organization at the terminal markets, and are pleased with our own handling of our own stock. We are returning this year, as high as 30c on every dollar that we have charged for commissions, so we have ample funds to hire the best selling talent, and have done so. Furthermore, we have proven to ourselves that controlling as we do, an enormous amount of live stock offered for sale, we stabalize the price much more than if we were 15 firms doing one-fifteenth of the business we now do. We handle from 10 per cent to 35 per cent of the total receipts in markets where we operate.

The National Live Stock Producers Ass'n. has yet much work to do. It is destined to play an important part in bringing about orderly marketing. The time is not far distant when it will be of the greatest assistance in diverting the shipments of live stock from crowded markets and putting them instead on a market that needs them, and will pay a good market price.—J. G. Brown.

Shall I Thresh From the Shock or the Stack?

Experience of Grain Growers of Iowa Show That It is More Profitable to Stack Small Grains and Thresh Later in Season Than to Haul Right to Machine From Field

By WALTER J. HUNT

OUT in Iowa there were many farmers asking this question which is no doubt uppermost in the minds of many of the farmers in our own state. A canvass was made of the veteran grain growers of Iowa to find out what their experiences had been and the Iowa Homestead published this article on the results. The veteran grain growers of that state in the great wheat belt have found that results are in favor of threshing from the stack. Every reader who raises much small grain should read this article with interest as the grain growers state in detail why they find it more profitable to stack their small grain. We would like to hear from any of our readers who have noted their experience over a period of years.

WHETHER stacking small grain and threshing later in the season is a better policy to follow than threshing from the shock is a question of much importance among many farmers in Iowa at the present time. It is true that a large number of farmers in the state rely too much on threshing from the shock when they do not have a machine of their own or are not certain of getting one within a reasonable length of time, according to "old-timers" who a few years back stacked almost entirely and threshed later in the year. With a large number of threshing machines used over the state which are propelled by steam, the uncertain outlook of the miners' strike at a time when coal reserves are low offers a strong argument for stacking as a more profitable means of taking care of Iowa's small grain this year, or even a factor which may save the crop.

The older farmers have proof for their faith in stacking over shocking and point out advantages which seem to prove it a more desirable way. M. L. Soeth, of Wallingford, Iowa, in Emmet county, who has farmed 1,360 acres for several years and now lives on 160 acres, says that the great advantage of stacking comes in wet weather such as we have seen recently. About an average Iowa acreage of grain is raised on the Soeth farm—50 acres having been seeded this year.

"When the grain is stacked we go ahead on our place hauling manure and getting the fall plowing started early," says Mr. Soeth. "The straw turns out better for feed and bedding when the grain goes through the 'sweat' in the stack and the grade of the grain after it is threshed is found to be improved. Provided the land is seeded to grass, the sooner the shocks are removed the better are conditions for the grass.

"We have not noticed much difference in the cost of shock and stack threshing, considering everything on our farm, and believe it would be nearly the same in both cases, with a chance that stacked grain would bring a better price on the market. But there is one thing about stacking, which may prove an eliminating factor for the method on some farms. This is that it seems to be a lost art. Too many men are not able to build a good stack. That is why shock threshing has gradually become more common."

Frank Erickson, a veteran farmer of Hamilton county, has operated his 120-acre place for over 30 years and has had experience with stack and shock threshing which leads him to be partial to the former. Mr. Erickson has raised on an average from 40 to 50 acres of grain per year. Farmers in his part of the state plan to stack for the most part, as far as he has been able to observe, a condition partly due to the coal shortage. "For farms where the grain acreage is around 100 acres or over, stacking is not desirable because a large number of stacks prove rather bothersome to handle both at threshing time and the time of putting them up,". says Mr. Erickson. "But for the average farm is the better plan. I have found that the grain threshed from the stack will weigh more and make better seed than the other. If it is allowed to 'sweat' in the stack there will be no trouble of heating in the bins and the presence of the straw during the 'sweating' will be beneficial. After stacks are made, of course, it is cheaper to thresh from them than from shocks. Many people say that two extra handlings necessary in the former method make it a more expensive proposition. However the latter requires about six or seven more men with wagons and about that many more pitchers in the field. Often it is necessary to help around the neighborhood for two weeks in changing work with the chance also of delay from bad weather, yet two or three farmers can go together and stack and later thresh with less expense. I have found the expense clear through with both ways to be about the same.

Even Well Built Shocks do Not Remain in Good Condition Indefinitely.

"It is true," asserts Mr. Erickson, "that stacking is a lost art. But there is no reason why the art should be difficult. Any farmer can learn how to construct a stack which will give ample protection against the weather by following a few plain instructions.

"I like to do it and would rather stack than do anything else on the farm I know. I use a fork and never walk on the outside tier of bundles, staying in the center and keeping the middle full. Any loose grain picked up can be cared for in the center. About eight loads of bundles should be set up in the form of a large shock beginning at the middle of the stack and setting them in regular order until the confines of the stack are reached. Beginning next at the edge, lay a double tier of bundles around the whole stack, the butts of the first row reaching the ground, with the butts of the second row just flush with those of the first row. A single row with the butts reaching just past the bands of the first should be placed next—continuing this method row after row until the middle is reached.

"The rows may be lapped a little more toward the middle of the stack in order to keep this part full, keeping a slope toward the edge, and lay the first row of bundles with the butts flush with the original first row or extend them a trifle and then work toward the center as before.

"Some people are of the opinion that a 'bulge' in a stack is for good looks, but its real purpose is for capacity. Stacks should be built to stand wind and rain and not made for appearance's sake. If the edges are kept level there will be sufficient slant from the middle when the stack settles to take care of water.

"The 'bulge' is started after four or five rows have been placed. One side of the butt end of most bundles will be found to be longer than the other, due to the way they sat in the shocks. These can be put either up or down to provide 'bulge' as well as to permit them to overlap the others for the effect. From the bulge the stack can be drawn in gradually to the top which will need to be well-capped."

In addition to being a farmer for several years, Mr. Erickson owned for a time a partnership in a threshing machine. "We found oftentimes that the bottom of stacks were very damp and were threshed with difficulty. To get away from this it would be well to plow the ground on which they are build, build them on old posts or a layer of straw.

"It is advisable, it seems, to take a view toward locating stacks with regard to the prevailing winds. Some threshers think they can do cleaner work by quartering the winds instead of setting the machine broadside to them or in their direct line. The location for stacks should be in a well drained area."

The sides of a finished stack should be raked down with a garden rake so that all loose material can be saved. This is placed in the bottom of the next stack to advantage. Fire and tornado insurance on the lot would be an expensive luxury. A safety ring plowed around the grain may prove valuable. Some farmers like to have a lightning rod on a tall pole near the group.

Besides what the two farmers have had to say about the advantages of shock and stack threshing the farm crops department of the Iowa State College offers some worth-while suggestions and considerations based upon their years of experimentation.

The department contends that the two additional handlings of grain necessary to stack cost about 1 cent per bushel more than the cost of shocking. On the other hand, additional labor to thresh from the shock costs about 1 cent per bushel more than that required to thresh from stacks.

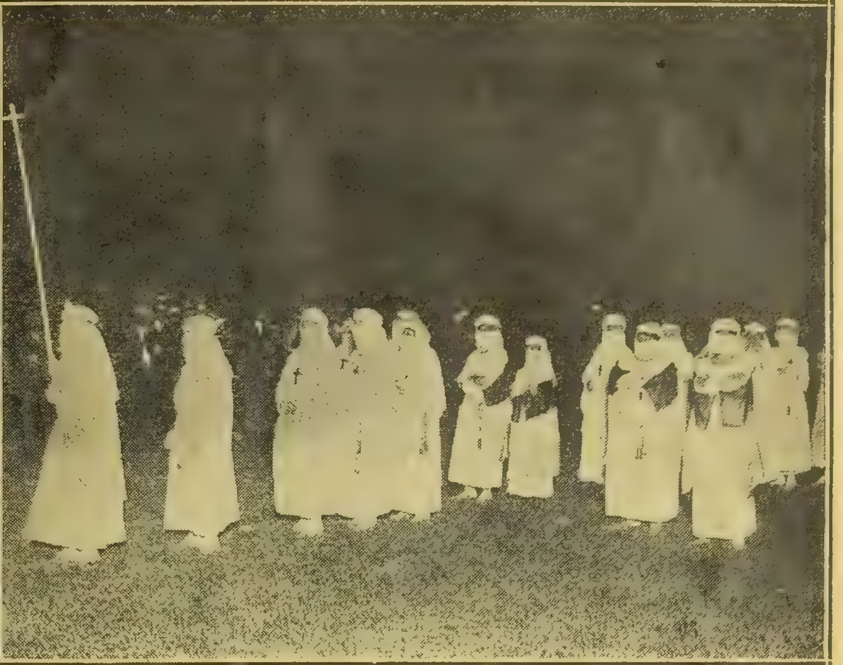
He Who Has Grain Stacked in This Fashion Need Not Worry About Wet Weather.

U. S. G. G. GOES AHEAD; BUREAU PLANS CO-OP.

THE U. S. Grain Growers, Inc., will fund its debts and proceed to set up sales agencies in the various terminal markets. The American Farm Bureau Federation will formulate a national grain marketing policy based on organization of producers by states, with long - term contracts, pooling by grades on the basis of milling values, corn to be handled separately. This is the net result of the action taken in Chicago on meeting of Mid-West Farm Bureau President and Secretaries, called to consider the grain marketing problem. The states of Ohio, Indiana, Michigan, Illinois, Iowa, Minnesota, Missouri, Nebraska, Kansas and North Dakota were represented, by their respective Farm Bureau executives.

PICTURES FROM FAR AND NEAR

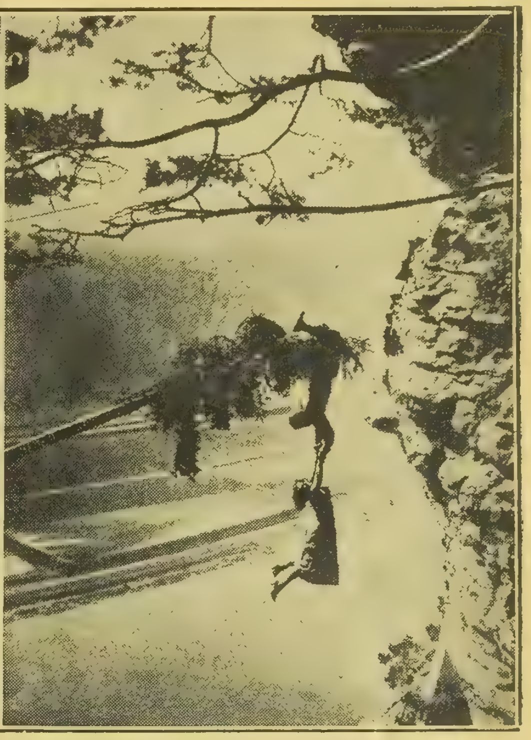
A PORTIA FOR POOR.—Mrs. Julia Morris Van Dernoot, who has joined the law firm of her husband in New York City in order to assist those who are without means of seeking legal redress. Mrs. Van Dernoot's admission to the bar is the consumation of an idea she thought out several years ago, namely to become a lawyer and give her services to the poor who might be deprived of their legal rights because they were without means to retain counsel. This will be her work exclusively.



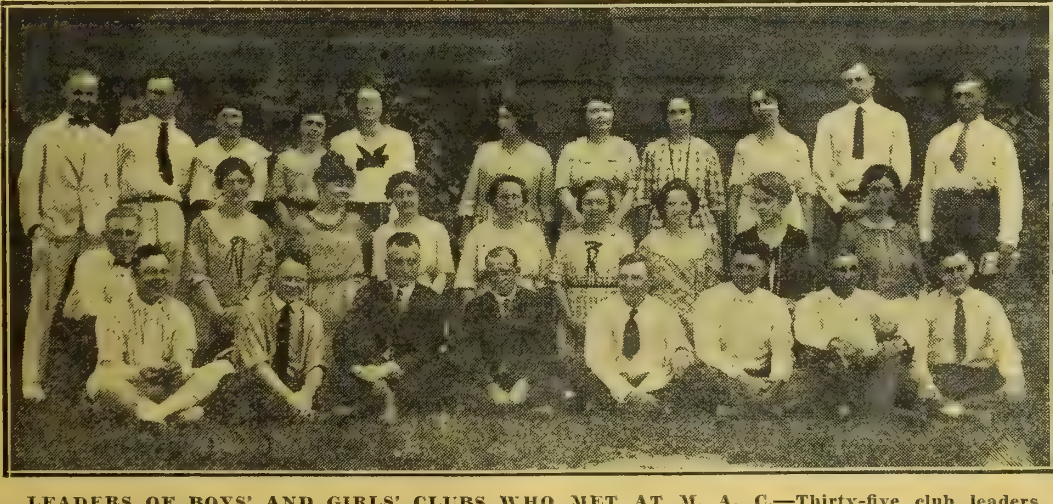
JERSEY WOMEN AID EAST'S FIRST PUBLIC KLAN INITIATION.—Residents of New Jersey were given a thrill they will not soon forget, when, for the first time in the east, the Ladies of the Invisible Empire and the Royal Riders of the Red Robe participated in a parade of the Ku Klux Klan thru the streets of Point Pleasant, New Jersey, preceding the "naturalization" of 300 candidates in a field adjoining Clark's Landing, on the Manasquan River. Fully 5,000 visitors witnessed the initiation ceremonies.

A NEW STUDY OF THE PONTIFF.—Pope Pius XI graciously allowed himself to be photographed in the gardens in the back of the Vatican in Rome in spite of the fact that he is really the most modest of men—and camera shy to boot. Photo shows the Pontiff, in his every day robes, taking a walk in the garden.

GIVES UP PLEASURES TO BECOME MISSIONARY TO LEPERS.—Miss Ethel Canary, a Tennessee girl, who is accompanying her lover, Arthur Tylee, of Worcester, Mass., on his trip to Paraguay, South America, where he will live and help the lepers. Miss Canary will wed her lover after they have lived two years amongst the lepers.



THE THRILL OF A LIFE TIME.—How would you like to change places with either of these dare-devils? The man, Lucieno Albertini, known as the "Fairbanks of Europe," is hanging by his feet, onto the branch of a tree suspended thousands of feet above the ground, while he holds up a girl with his hands. One slip, and their careers are ended.



LEADERS OF BOYS' AND GIRLS' CLUBS WHO MET AT M. A. C.—Thirty-five club leaders gathered at the Michigan Agricultural College, June 19-22, holding their annual conference under the direction of State Club Leader R. A. Turner. Mr. Turner is in the back row at the extreme left. There was much good accomplished at the meeting and many interesting facts brought out. Results of the club work, as given, shows that Michigan rates as follows: 3rd in number of clubs organized in U. S.; 4th in number of club members completing work in 33 north and western states; 12th in number of club members completing work in United States.

PRESIDENT RUNS TRACTOR IN KANSAS WHEAT FIELD.—While on his tour of the western states President Harding visited a wheat field near Hutchinson, Kansas, and showed the people that he had not forgotten how a tractor or binder operates. This photograph is furnished through the courtesy of the International Harvester Company.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

BACKING NOTE

Has the husband the right to back notes for other people without the consent of his wife or without even telling her about the transaction? Understand, we have all our property, insurance and everything, jointly. I am very much opposed to backing notes for anybody, particularly when I know they are not reliable parties. Can he legally do this without consent?—W. S., Bad Axe, Mich.

—The law does not require the wife's consent to enable the husband to indorse promissory notes for other people. However, in the event the husband becomes liable to pay the amount of the note, no real property which he holds jointly with his wife can be taken for the payment of the obligation.—Asst. Legal Editor.

TESTING STRENGTH OF BORDEAUX MIXTURE

Will you please tell me what acid is used to test Bordeaux mixture to determine if it is strong enough with time to prevent the burning of tree foliage?—G. C. K., Summit City, Michigan.

—I do not know of any acid which is used to test bordeaux mixture to determine if enough lime is present. Potassium ferrocyanide is used for this purpose. After the lime and copper sulphate are combined a few drops of this solution are dropped into the bordeaux and if a brown precipitate is formed, lime should be added to prevent the formation of the brown precipitate. I do not know what this bordeaux is to be used for but if it is for fruit trees the general practice now is to use a mixture containing considerable excess of lime so that there will be no need of testing for acidity.—N. C. Dutton, Research Associate, Dept. of Horticulture, M. A. C.

WIFE MUST SIGN OFF

A man has a common law wife. They have been living together over twenty years and have raised a family and are living together now. I bought 40 acres of land from the man but the common law wife didn't sign the deed. Is my deed any good?—J. B., Caspian, Mich.

—The wife would have to sign the conveyance in order to release her homestead and dower rights. The purchaser should procure a subsequent deed in which the wife joins the husband, or a subsequent deed executed by the wife alone, in which she should express her intent to bar her dower right.—Asst. Legal editor.

DID TREE BELONG TO B?

If A cuts timber along the line and B claims A has cut one of his trees and makes A pay for same and later A finds that B never owned this tree can A sue B and make B pay back after three years?—F. W. R., Hawks, Mich.

—If the tree actually belonged to A and he was coerced to pay B for it, I am of the opinion he could recover his money back from B. However, if B forced A to pay for the tree by suing him and obtaining judgment against him, A could not recover the money back after three years time had elapsed.—Asst. Legal Editor.

A FLY REPELLANT

We have a large horse fly here that bites or stings the horses so they are almost unable to work. Common fly dope does not keep them off. Do you know of anything that will keep them off?—A. G., Sigma, Michigan.

—The best fly dope with which I am familiar is: 12 oz. oil tar, 12 oz. turpentine, 12 oz. crude carbolic acid, 10 to 15 cents worth of tannin, Make up 5 gallons with kerosene and apply lightly with atomizer. It is not any too good of course but really there is no ideal fly repellant to use on live stock so far as I know.

It will interest you, however, to know that horse flies, all of them, breed in standing water over mud and even in pretty thick mud at times.. The eggs are laid on objects overhanging the water and the maggots drop into the water on hatching out.

Some twenty-five years ago Dr. Porchinsky of Russia discovered that the placing of kerosene oil on the surface of pools where these creatures breed not only killed the larvae as they drop down through the oil and as they came out to the surrounding dry land to pupate but also that it killed the adults which have a habit of hovering over the water just before dawn in the morning and dipping themselves on the surface, much as swallows will play over the water in the evening.

Dr. Porchinsky reports that the spreading of oil killed the horse flies when they indulged in this species of play and that he saw their bodies floating on the surface of the ponds in numbers as a result of the treatment.

I have not had an opportunity to test this out here but if horse flies are very common at Sigma, Michigan, it might be profitable to try out this method and see what comes of it—R. H. Pettit, Professor of Entomology, M. A. C.

HAVE RIGHT TO ACTION

A, a farmer of Osceola County decided to quit farming last spring, arranged with his banker, B, for his public auction on these terms: B to furnish the advertising, auctioneer, clerk and adjuster; to take all notes, cash, including what A may see fit to bid in, discounting the total 10 per cent, paying A cash for the balance, which was done, all but one cow, which C bought for $51.00. C, thinking he gave too much for his cow got A to write B that he, A, would take $40, cash, for the cow. As all notes were made to B, C gave B his note and kept the cow. The last A heard from the cow or $40 was a letter from B dated May 31st that led A to think that his money would soon be forthcoming.

A has written B several times since which B ignores. What is your advice to A. The date of the sale was April 26. The notes were given for 8 months.—W. H., Ann Arbor, Mich.

—It is my opinion that you would have a right of action against B on his agreement in which he was to take the notes, discount them and pay you the balance in cash.—Asst. Legal Editor.

CAN SELL REMEDY THROUGH MAILS

I have a medicine that is a sure cure for white scours in calves. I would like to advertise and sell through the mail with a money back guarantee if not satisfactory. I have used it for years and know it is all O. K. Is there any law to stop me selling through the mail?—R. P., Harrisville, Mich.

—There is no law prohibiting you from selling this kind of a remedy through the mails.—Asst. Legal Editor.

WOULD HAVE RIGHT TO TAX LAND

I want your opinion on taxing property direct on town and county ditches. Now I own the southeast quarter of section 27 and there has been five ditches dug and I had to pay a direct tax on all five. There are two on the north half running west and two on the south half running west, and one running east. Now they are digging one on the north half, eighty rods apart. Now this first ditch is 80 rods north of my north line and this one they are letting is 80 rods north of the first one. Now what I want to know is, can they tax me on this ditch, since I have paid two direct taxes on the eighty already.—E. C., AuGres.

—If your land would be benefited by the ditch, the county would have the right to levy a tax against your land for its construction. If you feel that the assessment against your land, made by the drain commissioner, is unjust, you may appeal to the probate court to have a board of review appointed to pass on your claim.—Asst. Legal Editor.

CAN ALL PROPERTY GO TO HUSBAND?

Will you please tell me if in a case where there are no children and there is no joint deed, and in case the wife dies first, if her relatives can claim the wife's share, if she doesn't leave a will? Kindly answer in the Business Farmer, and thank you.—Mrs. O. P. D., Stanton, Mich.

—If there are no children, nor the issue of a deceased child, then the residue of the estate after payment of debts and expenses of administration would be distributed as follows: One half to the husband and one half to the father, mother, brother, sister, nephew or niece of the wife. If neither of the above are living, then the entire estate would go to the husband.—Asst. Legal Editor.

SHIPPED MORE THAN ORDERED

In the fall of 1922 I ordered a half barrel of liquid Asbestos roofing. The pamphlet stated it was sold in one gallon, five gallon, half barrel and one barrel lots at so much per gallon. Thinking a half barrel would meet my need I ordered a half barrel and was sent forty gallons. Is that a legal half barrel? Will I have to pay for it all? I sent pay for 16½ gallons, the amount I supposed I had ordered.—C. W., Beulah, Michigan.

—You would not be required to pay for more asbestos than you ordered, provided you didn't accept the additional amount. Unless there was an understanding as to what would be considered a half barrel, the regulation half barrel, or 15¾, would be the proper amount.—Asst. Legal Editor.

IS HE ENTITLED TO ALL PRODUCE

When I pay cash rent, in the way of taxes, insurance and so much in money to make a certain amount same as cash, can I reap all the harvest such as wheat,, rye and speltz that was sown in the fall? This is heirship property owned by a number of heirs, of which I am one. My time of rent expired April 1st. 1923. And what about the straw from same? The heirs think they can get a share of the grain crop.—Mrs. J. W. B., Leonidas, Michigan.

—If you have an agreement with the other heirs, whereby you are to pay the taxes, insurance, etc., and an additional amount in money, as consideration for your right to use the farm, you would be entitled to all the produce you raise on said farm, the same as if you were renting the place on a usual money rent basis. —Asst. Legal Editor.

ANTS IN HOUSE

We are having considerable trouble with ants. They are in our house, they get into cupboards and on the food. Can you tell me how to get rid of them? Thank you.—Saginaw Reader, Saginaw, Mich.

—The ants that infect houses in Michigan may, for control purposes, be divided into two classes: those that like sweets and those that like grease, the latter being the very tiny red ants that love to collect on bacon rinds and on other greasy objects. The sweet-eating ants include the large carpenter ants, which are black, and several species of brown ants of varying size but all of them larger than the tiny grease-eating species.

In order to permanently rid a dwelling of these nuisances it is necessary that their nests be destroyed, and the easiest way to destroy these nests is to induce the ants themselves to do the work for you. A mixture of tarter emetic and extracted honey at the rate of one part of the poison to twenty of the honey seems about the right combination for the sweet loving ants, it kills the ants eventually but not quickly enough to hinder their getting back home and destroying their nests. We find that very thick honey is best, we even like to thicken it with powdered sugar and all mixing should be done without heat so as to keep the honey thick. The reason is that if the honey is thin the poison will settle out and the ants will not get it.

Get your druggist to mix up an ounce or so of this material and place it where nothing but the ants can get to it. I would invert an empty wooden box over the dish containing the poison or label it and put it away in some such manner that neither children nor any other creatures can get to it or mistake it for food. If it is impossible to take such precautions then it is better not to attempt to get rid of the ants in this manner. The ants will come to the poisoned honey and usually all that is necessary is to leave the poison-bait exposed for a few days or weeks until the ants have all had an opportunity to partake. Large ant-nests in the lawn may be treated in a similar manner. Place the poison-bait in a piece of tin or in a shallow dish on the nest and invert an empty wooden box over the dish and ant-hill, to prevent anything other than ants from getting at the poison.

Remember, that tartar emetic is a violent poison and extremely dangerous and just as effective against humans and pets as against insects. Take every precaution possible in its use and as soon as it has accomplished its purpose bury the remainder or take precautions which will prevent its being the cause of an accident later on.—R. H. Pettit, Prof. of Entomology, M. A. C.

HAS TOWNSHIP GOOD TITLE TO LAND?

A road is made on the line on A's land. The township has a deed of 66 feet of road on A's land. There is a fence on A's land, 33 ft. from the line, which was built 13 years ago. A agreed to give 33 ft. for road to the township; but the township made a deed of 66 ft. of road on A's land, without saying anything to A about it, which was recorded 12 years ago. Now the township wants to deed back to A 33 ft. What I want to know is: Must the deed go through the court before A should except it? In other words, must the deed go through the court before the township can deed back the 33 ft. to A?—A. M., Vulcan, Mich.

—If the township has a good title to the strip of land it could deed it to you, the same as one individual could deed land to another, and it would not have to go through the court.—Asst. Legal Editor.

FARM MECHANICS

TO KEEP WATER OUT OF CELLAR

I have a small cellar which has water in it every spring. It is part stone and part cement but has been plastered with cement but does not keep the water out. Is there a way to plaster it to keep water out? Cement will hold water in, why won't it keep it out?—H. C. O., Reed City, Mich.

—One difficulty which might occur in attempting to plaster a stone cellar to keep out water is that it is difficult to place the plaster to resist the pressure of water and also somewhat difficult to place the plaster so that it is really applied in single coat. It must be remembered that a job of this kind must be 100 per cent perfect to be made water-proof. One hole the size of a pin head is practically enough to render the work imperfect.

It is possible that, by cleaning the walls of the cellar with a solution of one part hydro-chloric acid and ten parts of water after which washing thoroughly with water then plastering with a mixture of one part cement to two parts sand with one pound of lime added to each ten pounds of cement, the cellar might prove effective. Increased insurance against water may be had by washing the additional coat with a wash of cement and water mixed to the consistency of cream and applied.

The only way to insure a job of this kind is by a method which would entail considerable expense. It is to first cover the floor and walls with two or three thicknesses of tar paper which has been painted with asphaltum. The material is lapped somewhat like the roofing on a house, after which the entire surface is painted with asphaltum or mopped with hot pitch. The surface coat of two inches to four inches of concrete is then placed over this to protect it. We then have a thin membrane of asphaltum or pitch between the original floor and the new floor.—H. H. Musselman, Professor of Farm Mechanics, M. A. C.

KEY

L.—Polarine Light.
M.—Polarine Medium
H.—Polarine Heavy
S.H.—Polarine Special Heavy.
E.H.—Polarine Extra Heavy.

N. B. For recommendations of grades of Polarine to use in automobiles and trucks consult chart at any Standard Oil Co. (Indiana) station.

ARE you sinning against your tractor by using a thinned out motor oil? If so, stop now—before the bearing surfaces are worn and cut. An oil of poor body and wrong viscosity thins out very quickly in summer. Thinned out motor oil means short life to the bearings and frequent renewal. It means an insufficient oil film between all metal surfaces, and a consequent leakage of power. Follow the chart.

Use

Polarine

THE PERFECT MOTOR OIL

Made in Five Grades

One of these grades—the one specified in the chart—is exactly right for your tractor. Experiment means risk. Don't tamper with the delicate lubrication system of your machine. Use Polarine and make sure of maximum service and truest economy by changing your motor oil frequently.

You will be delighted to find that Polarine lessens carbon deposit—lessens power waste—cuts cost of cleaning valves and spark-plugs—saves cylinders to longer life.

Trained chemists have co-operated with trained Lubricating Engineers to find just the grade of Polarine your tractor should have. That is why Polarine lubricates correctly every frictional surface under all mechanical and thermal conditions. Polarine is made from crude oils selected exclusively for their high lubricating values.

Demand for Polarine is increasing steadily and constantly. Farmers are finding that Polarine is the indispensable oil. Over 25,000,000 gallons of Polarine were sold in 10 Middle Western States in 1922.

Auction Off Your Money

THINK of your money as something for sale to the highest bidder. That's what it actually is.

And bidders are legion. Look through the advertisements and you will find them—every one. They shout, beckon or nod to you thru the medium of type and picture. Each seeks to outdo the others in the attractiveness of his offer. Each vies with the others for the privilege of your attention.

Competition is keen, if you only realized it. Each advertisement in this paper is an offer made directly to you. Each is worthy of your interest in some degree.

Read the advertisements. Know what is offered in return for your cash. Hear all the bids. Compare values. Check up on the offerings. Then you can be sure you are getting the most for your money.

What the Neighbors Say

DOES PROHIBITION WORK?

Am sending you a clipping from Farm and Fireside which accurately describes the liquor or booze situation in my section of Michigan and I will gamble that the situation is as bad everywhere in the United States as it is here, or perhaps worse. Prohibition just simply does not prohibit. I have been practically a teetotaler all my life and my vote helped to make it dry, but in voting to make it dry I made a terrible mistake, so did every one else who voted to make it dry. What has prohibition done for us? It has deprived us of a market for our rye and barley. It has deprived our government of the liquor tax which was an immense sum which went to help pay the cost of government.

Has prohibition done any good? No. It has done great harm. There is more booze in my territory and I believe everywhere else than there ever was under the open saloon. I think I am well within the truth in saying there are from two to four moonshine stills on every square mile in the country districts and there are barrels and barrels of moonshine being made in our cities, towns and villages, and it never can be stopped. The profits in making moonshine and bootlegging are so enormous there is a large class of our citizens who have and always will take a chance of making and selling it. Where one man gets pinched and imprisoned there are a dozen more ready to take his place.

Has prohibition removed the temptation to drink booze by our young men? No. It is worse than ever before. Let anyone who does not believe this go to our country resorts where they run dancing pavilions all night, and stay around a while and keep their eyes open and they will soon be convinced.

There are more people being killed and others being made physical wrecks from drinking booze at the present time than there ever was under the open saloon. The open saloons were all wrong. Had the prohibitionists closed the saloons and then quit, the booze situation would have been a million times better than it is today. Had we, today, the army we sent to France and commissioned it to make this country dry it (the army) couldn't do it. Every farmer who has kept his eyes open will say the same thing —A. A. Lambertson, Kent County.

WHAT ABOUT MARKETING YOUR CROP?

THE old marketing routine is something like this: Sell the crop to a local buyer or to the casual visiting buyer. If neither of these provide a market then trust that the Lord will take care of "nit wits" and fruit growers by dumping the crop when harvested into the nearest central market.

A fruit grower who consigns his crop in an indiscriminate way has himself trained to feast on air, water and landscape and will be fortunate it he gets more.

Now I fancy some of my grower friends are saying, "Don't worry yourself Mr. Townsend, we were "soaked" last year and the year before but we will not consign any more to the same people." Reminds me of two young farmers in Sauk county who had lost their father and were bewailing their misfortunes, recounting them to a visiting uncle.

"I tell you, Uncle John, it is something worse every year."

"That's too bad," says uncle John. "What all has hapened?"

"Well, four years ago the chickens all died, and I tell you Uncle John it is something worse every year."

"What happened worse the next year?"

"Three years ago the hogs all died of the hog cholera. It's something worse every year!"

"That's dreadful. What calamity happened next."

"Something worse every year. Last year Pa died and this year the bull."

There is a good chance in consigning to the central markets that it will be "something worse every year." Take a square look at what consigning involves. All consignees are honest. Always were honest and always will be honest, though my neighbor says there are two exceptions: they are all honest except week days and Sundays.

Of course consignees are efficient but if a buyer visits you from the central markets for goodness sakes don't give him any pre-Volstead cider. If you do he will possibly tell you how much better it is to sell out right to him, than consign because if there is a lot of stock in the market "they just slaughter things." Now we are all convinced that consignees are honest and efficient. What next?

The citrus growers were a plucky lot. They were more than that—They were both plucky and plucked and that too in a near innocent sort of a way. They shipped to Strausheimer on East River Street and Panatelli on West River Street. They were hustlers and had a variety of things to sell. Naturally they wanted to keep the retailers coming.

Mr. Retailer runs his truck down to Strausheimers to buy supplies but is looking for an "inducement." Now cutting prices on goods that are owned or handled at a fixed price is a sacrifice of profits but there is a way. You want some oranges and lemons. We can shade the list on those. The dealer who bought lemons at a shaded price on Tuesday visits Panatelli Wednesday and tells about the cut in price. Panatelli "sees" Strausheimers cut and goes him one better and so each consignee in the struggle to get business keeps cutting the price to meet some other distributor until the price scarcely pays the freight. If there is stock in competition consigning means price cutting at consignors expense and expense to all other growers—loss to all because of flat markets.

Produce and fruit merchants often have retail stores or are directly interested in such stores but of course they would never, never buy consigned goods for their own stores. If they bought of themselves they might cheat themselves and soon go broke but if there were no other stock quite as available it would really be an honor to the shopper to supply stock good enough for the jobbers own retail store.

Some jobbers as consignees might feel that if they paid eighty per cent of the value of a consignment and allowed themselves twenty per cent for the honor done the consignee by retailing his stock, that they had done quite well by the shipper.

A dealer must keep stock or go out of business. If the consigned supply is insufficient he must go out and buy stock to keep trade going. Suppose you consign a big lot just after the dealer has bought a large supply. Of course he will let his own stock rot, rot, rot, and hustle out and sell the consigned goods. There is a chance though, that you might consign to someone whose ethical sense had been paralyzed by spinal menigitis or something not quite so bad. In such cases the consigned stock would take second place in selling and may all spoil before the consignee can sell it.

Visible supply greatly affects markets. If a large number of cars are in the central markets at the same time buyers are apt to conclude that there will be lower prices and buy little and this furthur disturbs the market. If a considerable part of the crop was distributed to outlying markets the central markets would not be over stocked and the market would be stable.

Anyone who will allow his brain to function a little bit will see that commission merchants are probably as honorable as other business men but that no matter how honest the system is interwoven — fabricated — with vicious competition, irregular and often excessive supply, plus a number of other features that make it a ruinous marketing system.

The growers now have their own national organization and if they support it, distribution must improve and costs between the producer and the consumer reduced so that the outlet will be ample for any crop. —G. H. Townsend, Madison, Wis.

AMERICAN FARM PRODUCE AND EUROPEAN MARKET

IT is said if we would help Europe get on her feet she would furnish a market for our agricultural products and farmers would be able to sell their products at a good price. Now I believe as Europe approaches normal conditions she will become more self-supporting instead of less so as regards food supplies.

Trade between nations is a matter of exchange of goods. No nation can go on continually buying without selling. If this country with its vast wealth should buy $500,000,000 more goods than it sold and pay in money, in six or seven years its enormous gold supply would be exhausted.

This, of course, does not take into account the debit and credit situation. Before the war, Europe had investments in this country of approximately $5,000,000,000 with an annual interest charge of probably $250,000,000. This, of course, was paid in goods or agricultural products and made a market to that extent in excess of the regular exchange of goods. Now the position is reversed. Europe has borrowed from private sources in this country sums estimated from five billion to seven billion dollars with an interest charge of from two hundred and fifty to three hundred and fifty million dollars. This will be paid by imports in excess of the regular exchange of products.

Already, in March and April, imports in this country have exceeded exports. Aside from this, European countries owe this country eleven or twelve million dollars which we are pressing them for payment. One of our great unappreciated blessings is that Europe can't pay us either in goods or gold this vast sum. To do so would so disarrange our economical situation as to be disastrous.

As Europe gets back to normalcy she will require gold to back up her financial system. We have the gold and she will draw on us for gold in exchange for goods, enhancing the value of gold and lowering the price of goods. In all this I see little chance of any considerable or permanent rise in the price of agricultural products.

If this is so farmers are wasting time and energy in promoting legislation for the purpose of raising the price of agricultural products, as economic laws are much more powerful than legislative enactments. The farmer lost an opportunity last summer in not getting solidly behind the government in its attempt to settle the railroad and coal miners strikes.

It was supposed that as soon as railroad earnings permitted there would be a reduction in freight rates. Instead the railroads are now increasing the wages of the railroad men. This is natural as railroad workers are well organized and can make the railroads trouble, while the farmers are divided and a good share of them are backing railroad workers in their demands. Of course this will further postpone rate reduction.

As long as a considerable portion of farmers follow such leaders as La-Follette, Frazier, Brookhart, and our own Herbert Baker, they will play into the hands of those who are trying to prevent after-war readjustments.—K. S. W., Boyne City, Mich.

Book Review

(Books reviewed under this heading may be secured through The Michigan Business Farmer, and will be promptly shipped by parcel post on receipt of publisher's price stated.)

Gardening With Brains—By Henry T. Finck. "The best that has so far been written on garden subjects," the world's most famous gardener, Luther Burbank, wrote to the author of this book.

"You get the facts in such a pleasing, human way," Burbank added, "that they are irresistible. Your articles suggest to me the difference between living, moving, growing plant life, and the dead, dry, flat specimens which one sees in herbariums."

The important facts are all here, mingled with wise and witty remarks, and enlivened with anecdotes that open to you a whole world of delights to be found in your garden.—Harper & Brothers, ($2.50)

Bill Junior—"Pa, can we see sound?"
Bill Senior—"No, my son."
Bill Junior—"Then what did you mean by saying that mama's new hat looked like thunder?"
—Princeton Tiger.

THE FROWARD TONGUE

A SERMON BY REV. DAVID F. WARNER

TEXT: "If any man thinketh himself to be religious while he bridleth not his tongue, this man's religion is vain."—James 1:26.

WHETHER the Business Farmer readers liked the sermon on "The Secret of Simple Living" or no, we all can agree that greater emphasis should be placed on personal righteous living. Christ placed his emphasis here. And anent this, the apostle James says, "If any man thinketh himself to be religious and bridleth not his tongue, this man's religion is vain." O, yes, this means you, too, good sister.

What is there that seems to be more immaterial, more unsubstantial than speech? Yet, what reaction is attendant upon it. What a soft, weak member physically speaking, is the tongue. Yet, what power in life it commands. Said the wise man of the froward tongue, "That soft tongue breaketh the bone." And again, "There is that speaketh rashly like the piercings of a sword."

Words have to do with the current of others' lives as well as our own. We have learned that on the use of the tongue, many times, depend large issues in individual and community life. "The mouth of the fool is present destruction to the individual," but according to James, it also sets on fire the whole round of nature. Let us notice the effect of the disobedient tongue under three heads: first, free and idle criticisms; secondly, gossiping; and again, grudges.

Sometime ago, I approached an office door in one of our cities which had on it these words, "Come in without knocking and leave without knocking." Yet, coming or going, we have the chronic "knockers". In most communities there are habitual critics. "Honest criticism always benefits". But I am referring to those who indulge in free and idle criticism. To them, human frailty in others is an invitation to point out and emphasize the defects. And the temptation is so alluring that they continue until their own vision is so blurred they can scarcely see anything good. They become alert and sensitive and go after their victim like a cat leaps after its prey.

Now, anyone who does this is doing profound harm to himself. Reaction is heaviest upon him and "his religion is vain". The one criticised may be suppressed in the enthusiasms of life, but only temporarily. The springs of his life will come back to glorify virtue and truth. And yet the rippling criticism spreads and spreads until the whole neighborhood is affected. What parasitical tongues about us! But I insist that the one who delights in finding flaws in others, who feels a sense of elation in dealing in keen criticisms of others, has taken a deadly poison that has no known antidote save the spirit of Jesus Christ. The apostle says that no mere man can tame such tongue.

In the home the man is usually the critic. He prides himself in it. I suppose his coming by a kind of self-righeousness qualifies him for this lordly thing. His wife, fearing criticism, doesn't come to him with her plans as she used to. Does she, brother farmer? The children have a certain fear of dad's harshness. "Ye fathers, provoke not your children to wrath". But this is the tyranny of the male and the reaction makes for progressive crustiness. "If any man stumbleth not in tongue the same is a perfect man". And the community pastor must bare his bosom to the arrows of criticisms. His looks, dress, wife, children, finances; his sermons are too short or too long; he speaks truth too severely; and so on. Well, a community that freely indulges in this pastime is cultivating a spirit of mind and heart that makes it quite impossible to retain a wise, qualified preacher. This easy censuring will breed distrust and doubt. Certainly every church with such tendencies needs to have revived in it trust and loyalty to its chosen leader.

Now, what of gossiping? Well, this critical spirit encourages gossip. to express ones self about others' faults is soon taken up as idle talk. And here, the Gospel is keenly discriminating when it calls us to account for idle words. "They say" lives in every neighborhood. She throws on her shawl and drops into your home every now and then. Feignedly, it is but a neighborly borrowing of a cup of sugar. But her practice is her only reward "The words of a whisperer are as dainty morsels which go down into the chamber of the belly". But, socially, this keeping rumors playing on the tongue is a deep-dyed iniquity. "Rumor next—and Chance, and Tumult, and Confusion, all embroiled", says Milton. It pollutes the community, kindles passion, and drives out love. The Pentecostal fire can not settle down when and where a church and a community are set on fire by the tongue.

"There is so much good in the worst
 of us,
And so much bad in the best of us,
That it hardly behooves any of us
 To talk about the rest of us".

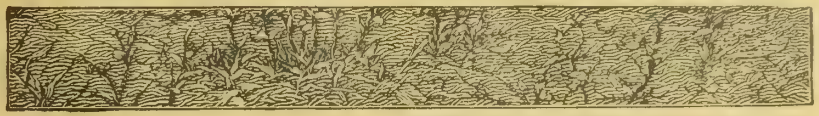
And grudges and offenses? Blighting as they are, they must needs come says the Book; but woe unto the one by whom they come. "It is profitable for him that a great mill stone be hanged about his neck and that he should be sunk in the depths of the sea". At least this is better than the final retribution that awaits this moral tripping-up of others. But where did this enmity start? You will remember you observed some passing attitude or remark you did not like. You criticised it audibly. It sounded so good to your titillating ears that you encored yourself. Then you found yourself really liking it and you harbored it so long that it hatched out in genuine grudge. And did you say that it was your nature to hold grudges? But the teaching from Above is, that if anyone be a Christian he has a new nature. And now, in our better moments, when we are looking in the right direction, we discover it would have been much better to have passed unnoticed the careless word or even the meant offense.

Surely, this occasions much stumbling. And the gravity of this sin but emphasizes the virtue of self-denial. After all, doesn't life everywhere need to enter into a new era of self-denial? And until it comes Jesus Christ will be pained and heart-broken. Not the conquering of the other fellow, but of yourself, makes you a militant victor in your moral life. And regarding all this, Christian teaching stays the foot as it stumbles over the occasion, the hand as it grasps it, the eye as it gloats over it,—all these are the agents of the inner life, and disclose its impure loves, and pleasures, and desires; and must be cut off that evil may not work through them. So, must we apply this rule to our tongue. This is rigorous means but the demand is stringent. Only this can bring about love and good-will in our community.

How happy we would be if we were not so sensitive and blundering; if we were able to see the good in others and love and forgive much! But our Savior did. And to let his love and mercy steal our hearts in all its largeness, is to make the slights and affronts of others seem small indeed. Friends, we shall find that grudging and hating are deep-seated in defective thinking about God and in a starved experience of his love. The Apostle says that with the same tongue we cannot bless the "Lord and Father" and curse men "who are made after the likeness of God".

The Chinese have a saying, "that an unlucky word dropped from the tongue cannot be brought back again by a coach and six horses". And now we are ready to accept the charge to bridle the tongue. When the baptism of fire sets upon it then it will be chastened and purified for the Master's use. This is well, for the purity of the home and the integrity of the community need guarding. And we need a host of folks who are set on disarming offenses and making peace. "If wisdom's ways you widely seek, five things observe with care: of whom you speak, to whom you speak, and how, and when, and where".

YOU WILL GET SERVICE FROM IT



Copyright 1923, by The Goodyear Tire & Rubber Co., Inc.

"My Goodyear Klingtite Belt has now given me three years of uninterrupted service, and it looks good for two or three seasons more. It shows no signs of wear."
—PETER ANDERSON, Springfield, Nebraska

BECAUSE it is especially designed and built for farm power duty, the Goodyear Klingtite Belt stands up to the heaviest work, year after year. It delivers the power, eliminates belt troubles, and outwears other belts. Needs no dressing; needs no breaking-in.

Goodyear Klingtite Belts are made in endless type for heavy duty and cut in lengths for lighter drives. They are sold by Goodyear Mechanical Goods Service Station Dealers and by many hardware dealers.

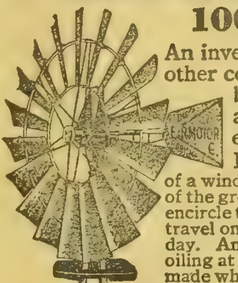
4 TIMES Around the World with ONE OILING
100,000 Miles Without Stopping for Oil



An inventor who could develop an automobile, a railroad car or any other conveyance on wheels which would perform such a feat would be considered a wonder. But such is the record of regular accomplishment by the Auto-oiled Aermotor during the past eight years in pumping water.

Did you ever stop to think how many revolutions the wheel of a windmill makes? If the wheel of an Aermotor should roll along the surface of the ground at the same speed that it makes when pumping water it would encircle the world in 90 days, or would go four times around in a year. It would travel on an average 275 miles per day or about 30 miles per hour for 9 hours each day. An automobile which keeps up that pace day after day needs a thorough oiling at least once a week. Isn't it marvelous, then, that a windmill has been made which will go 50 times as long as the best automobile with one oiling?

The **Auto-oiled Aermotor** after 8 full years of service in every part of the world has proven its ability to run and give the most reliable service with one oiling a year. The double gears, and all moving parts, are entirely enclosed and flooded with oil all the time. It gives more service with less attention than any other piece of machinery on the farm. To get everlasting wind-mill satisfaction buy the Auto-oiled Aermotor, the most efficient windmill that has ever been made.

The Hunted Woman

By James Oliver Curwood

Michigan's Own and America's Formost Author of the Great Northwest

Copyright by James Oliver Curwood

(Continued from July 7th issue)

ALDOUS knew that in these last hours MacDonald's judgment must be final, and he made no objection to an arrangement which seemed to place the old hunter under a more hazardous risk than his own. And he realized fully that these were the last hours. For the first time he had seen MacDonald fill his pockets with the finger-long cartridges for his rifle, and he had noted how carefully he had looked at the breech of that rifle. Without questioning, he had followed the mountaineer's example. There were fifty spare cartridges in his own pockets. His .303 was freshly cleaned and oiled. He had tested the mechanism of his automatic. MacDonald had watched him, and both understood what such preparations meant as they set out on this last day's journey into the North. They had not kept from Joanne the fact that they would reach the end before night, and as they rode the prescribed distance behind the old hunter Aldous wondered how much she knew. They had given her to understand that they were beating out the rival party, but he believed that in spite of all their efforts there was in Joanne's mind a comprehension which she did not reveal in voice or look. Today she was no different than yesterday, or the day before, except that her cheeks were not so deeply flushed, and there was an uneasy questing in her eyes. He believed that she had sensed the nearness of tragedy, that she was conscious of what they were now trying to hide from her, and that she did not speak because she knew that he and MacDonald did not want her to know. His heart throbbed with pride. Her courage inspired him. And he noticed that she rode closed to him—always at his side through the day.

Early in the afternoon MacDonald stopped on the crest of a swell in the valley and waited for them. When they came up he was facing the north. He did not look at them. For a few moments he did not speak. His hat was pulled low, and his beard was twitching.

They looked ahead. At their feet the valley broadened until it was a mile in width. Half a mile away a band of caribou were running for the cover of a parklike clump of timber. MacDonald did not seem to notice them. He was still looking steadily and he was gazing at a mountain. It was a tremendous mountain, perhaps three miles away. Aldous had never seen another like it. Its huge shoulders were of almost ebon blackness, and glistened in the sunlight as if smeared with oil. Between those two shoulders rose a cathedral-like spire of rock and snow that seemed to tip the white fleece of the clouds.

MacDonald did not turn when he spoke. His voice was deep and vibrant with an intense emotion. Yet he was not excited.

"I've been hunting for that mount'in for forty years, Johnny!"

"Mac!"

Aldous leaned over and laid a hand on the old mountaineer's shoulder. Still MacDonald did not look at him.

"Forty years," he repeated, as if speaking to himself. "I see how I missed it now, just as DeBar said. I hunted from the west, an' on that side the mount'in ain't black. We must have crossed this valley an' come in from the east forty years ago, Johnny——"

He turned now, and what Joanne and Aldous saw in his face was not grief; it was not the sorrow of one drawing near to his beloved dead, but a joy that had transfigured him. The fire and strength of the youth in which he had first looked upon this valley with Jane at his side burned again in the sunken eyes of Donald MacDonald. After forty years he had come into his own. Somewhere very near was the cavern with the soft white floor of sand, and for a moment Aldous fancied that he could hear the beating of MacDonald's heart, while from Joanne's tender bosom there rose a deep, sobbing breath of understanding.

And MacDonald, facing the mountain again, pointed with a long, gaunt arm, said:

"We're almost there, Johnny. God ha' mercy on them if they've beat us out!"

CHAPTER XXVI

THEY rode on into the Valley of Gold. Again MacDonald took the lead, and he rode straight into the face of the black mountain. Aldous no longer made an effort to keep Joanne in ignorance of what might be ahead of them. He put a sixth cartridge into the chamber of his rifle, and carried the weapon across the pommel of his saddle. He explained to her now why they were riding behind—that if their enemies were laying in wait for them, MacDonald, alone, could make a swift retreat. Joanne asked no questions. Her lips were set tight. She was pale.

At the end of three quarters of an hour it seemed to them that MacDonald was riding directly into the face of a wall of rock. Then he swung sharply to the left, and disappeared. When they came to the point where he had turned they found that he had entered a concealed break in the mountain—a chasm with walls that rose almost perpendicular for a thousand feet above their heads. A dark and solemn gloom pervaded this chasm, and Aldous drew nearer to MacDonald, his rifle held in readiness, and his bridle rein fastened to his saddle-horn. The chasm was short. Sunlight burst upon them suddenly, and a few minutes after MacDonald waited for them again.

Even Aldous could not restrain an exclamation of surprise when he rode up with Joanne. Under them was another valley, a wide-sweeping valley between two rugged ranges that ran to the southwest. Up out of it there came to their ears a steady, rumbling roar; the air was filled with that roar; the earth seemed to tremble with it under their feet—and yet it was not loud. It came sullenly, as if from a great distance.

And then they saw that MacDonald was not looking out over the sweep of the valley, but down. Half a mile under them there was a dip—a valley within a valley—and through it ran the silver sheen of a stream. MacDonald spoke no word now. He dismounted and levelled his long telescope at the little valley. Aldous helped Joanne from her horse, and they waited. A great breath came at last from the old hunter. Slowly he turned. He did not give the telescope to Aldous, but to Joanne. She looked. For a full minute she seemed scarcely to breathe. Her hands trembled when she turned to give the glass to Aldous.

"I see—log cabins!" she whispered.

MacDonald placed a detaining hand on her arm.

"Look ag'in—Joanne," he said in a low voice that had in it a curious quiver.

Again she raised the telescope to her eyes.

"You see the little cabin—nearest the river?" whispered Donald.

"Yes, I see it."

"That was our cabin—Jane's an' mine—forty years ago," he said, and now his voice was husky.

Joanne's breath broke sobbingly as she gave Aldous the glass. Something seemed to choke him as he looked down upon the scene of the grim tragedy in which Donald MacDonald and Jane had played their fatal part. He saw the cabins as they had stood for nearly half a century. There were four. Three of them were small, and the fourth was large. They might have been built yesterday, for all that he could see of ruin or decay. The doors and windows of the larger cabin and two of the smaller ones were closed. The roofs were unbroken. The walls appeared solid. Twice he looked at the fourth cabin, with its wide-open door and window, and twice he looked at the cabin nearest the stream, where had lived Donald MacDonald and Jane.

Donald had moved, and Joanne was watching him tensely, when he took the glass from his eyes. Mutely the old mountaineer held out a hand, and Aldous gave him the telescope. Crouching behind a rock he slowly swept the valley. For half an hour he looked through the glass, and in that time scarce a word was spoken. During the last five minutes of that half-hour both Joanne and Aldous knew that MacDonald was looking at the little cabin nearest the stream, and with hands clasped tightly they waited in silence.

At last old Donald rose, and his face and voice were filled with a wonderful calm.

"There ain't been no change," he said softly. "I can see the log in front o' the door that I used to cut kindling on. It was too tough for them to split an' burn after we left. An' I can see the tub I made out o' spruce for Jane. It's leaning next the door, where I put it the day before we went away. Forty years ain't very long, Johnny! It ain't very long!"

Joanne had turned from them, and Aldous knew that she was crying.

"An' we've beat 'em to it, Johnny—we've beat 'em to it!" exulted MacDonald. "There ain't a sign of life in the valley, and we sure could make it out from here if there was!"

He climbed into his saddle, and started down the slope of the mountain. Her eyes were blinded by tears.

"It's terrible, terrible," she whispered brokenly. "And it—it's beautiful, John. I feel as though I'd like to give my life—to bring Jane back!"

"You must not betray tears or grief to Donald," said Aldous, drawing her close in his arms for a moment. "Joanne—sweetheart—it is a wonderful thing that is happening with him! I dreaded this day—I have dreaded it for a long time. I thought that it would be terrible to witness the grief of a man with a heart like Donald's. But he is not filled with grief, Joanne. It is joy, a great happiness that perhaps neither you nor I can understand—that has come to him now. Don't you understand? He has found her. He has found their old home. To-day is the culmination of forty years of hope, and faith, and prayer. And it does not bring him sorrow, but gladness. We must rejoice with him. We must be happy with him. I love you above all else on earth or in heaven. Without you I would not want to live. And yet, Joanne, I believe that I am no happier today than is Donald MacDonald!"

With a sudden cry, Joanne flung her arms about his neck.

"John, is it that?" she cried, and joy shone through her tears. "Yes, yes, I understand now! His heart is not breaking. It is life returning into a heart that was empty. I understand—oh, I understand now! And we must be happy with him. We must be happy when we find the cavern—and Jane!"

"And when we go down there to the little cabin that was their home."

"Yes—yes!"

They followed behind MacDonald. After a little a spur of the mountain side shut out the little valley from them, and when they rounded this they found themselves very near to the cabins. They rode down a beautiful slope into the basin, and when he reached the log buildings old Donald stopped and dismounted. Again Aldous helped Joanne from her horse. Ahead of them MacDonald went to the cabin nearest the stream. At the door he paused and waited for them.

"Forty years!" he said, facing them. "An' there ain't been so very much change as I can see!"

Years had dropped from his shoulders in these last few minutes, and even Aldous could not keep quite out of his face his amazement and wonder. Very gently Donald put his hand to the latch, as though fearing to awaken some one within; and very gently he pressed down on it, and put a bit of his strength against the door. It moved inward, and when it had opened sufficiently he leaned forward so that his head and a half of his shoulders were inside; and he looked—a long time he looked, without a movement of his body or a breath that they could see.

And then he turned to them again, and his eyes were shining as they had never seen them shine before.

"I'll open the window," he said. "It's dark—dark inside."

He went to the window, which was closed with a sapling barricade that had swung on hinges; and when he swung it back the rusted hinges gave way, and the thing crashed down at his feet. And now through the

open window the sun poured in a warm radiance, and Donald entered the cabin, with Joanne and Aldous close behind him.

There was not much in the cabin, but what it held was earth, heaven, and all else to Donald MacDonald. A strange, glad cry surged from his chest as he looked about him, and now Joanne saw and understood what John Aldous had told her—for Donald MacDonald, after forty years, had come back to his home!

"Oh, my Gawd, Johnny, they didn't touch anything! They didn't touch anything!" he breathed in ecstasy. "I thought after we ran away they'd come in——"

He broke off, and his hat dropped from his hand, and he stood and stared; and what he was looking at, the sun fell upon in a great golden splash, and Joanne's hand gripped John's, and held to it tightly. Against the wall, hanging as they had hung for forty years, were a woman's garments; a hood, a shawl, a dress, and an apron that was half in tatters; and on the floor under these things were a pair of shoes. And as Donald MacDonald went to them, his arms reaching out, his lips moving, forgetful of all things but that he had come home, and Jane was here, Joanne drew Aldous softly to the door, and they went out into the day.

Joanne did not speak, and Aldous did not urge her. He saw her white throat throbbing as if there were a little heart beating there, and her eyes were big and dark and velvety, like the eyes of a fawn that had been frightened. There was a thickness in his own throat, and he found that it was difficult for him to see far out over the plain. They waited near the horses. Fifty yards from them ran the stream; a clear, beautiful stream which flowed in the direction from which the mysterious rumble of thunder seemed to come. This, Aldous knew, was the stream of gold. In the sand he saw wreckage which he knew were the ancient rockers; a shovel, thrust shaft-deep, still remained in the cabin. Then he came out. Very carefully he closed the door. His shoulders were thrown back. His head was held high. He looked like a monarch.

And his voice was calm.

"Everything is there, Johnny—everything but the gold," he said. "They took that."

Now he spoke to Joanne.

"You better not go with us into the other cabins," he said.

"Why?" she asked softly.

"Because—there's death in them all."

"I am going," she said.

From the window of the largest cabin MacDonald pulled the sapling shutter, and, like the other it fell to his feet. Then they opened the door, and entered; and here the sunlight revealed the cabin's ghastly tragedy. The first thing that they saw, because it was most terrible, was a rough table, half over which lay the shrunken thing that had once been a man. A part of its clothes still remained, but the head had broken from its column, and the white and fleshless skull lay facing them. Out of tattered and dust-crumbing sleeves reached the naked bones of hands and arms. And on the floor lay another of these things, in a crumpled and huddled heap, only the back of the skull showing, like the polished pate of a bald man. These things they saw first, and then two others; on the table were a heap of age-blackened and dusty sacks, and out of the back of the crumbling thing that guarded them stuck the long buckhorn hilt of a knife.

"They must ha' died fighting," said MacDonald. "An' there, Johnny, is their gold!"

White as death Joanne stood in the door and watched them. MacDonald and Aldous went to the sacks. They were of buckskin. The years had not aged them. When Aldous took one in his hands he found it was heavier than lead. With his knife MacDonald cut a slit in one of them, and the sun that came through the window flashed in a little golden stream that ran from the bag.

We'll take them out and put 'em in a pannier," said MacDonald. "The others won't be far behind us, Johnny."

Between them they carried out the seven sacks of gold. It was a load for their arms. They put it in one of the panniers, and then MacDonald nodded toward the cabin next the one that had been his own.

"I wouldn't go in there, Joanne," he said.

"I'm going," she whispered again.

"It was their cabin—the man an' his wife," persisted old Donald. "An' the men was beasts, Joanne! I don't know what happened in there—but I guess."

"I'm going," she said again.

MacDonald pulled down the barricade from the window—a window that also faced the south and west, and this time he had to thrust against the door with his shoulder. They entered, and a low cry came from Joanne's lips—a cry that had in it horror, disbelief, a woman's wrath. Against the wall was a pile of something, and on that pile was the searching first light of day that had fallen upon it for nearly half a century. The pile was a man crumpled down; across it, her skeleton arms thrown about it protectingly was a woman. This time Aldous did not go forward. MacDonald was alone, and Aldous took Joanne from the cabin, and held her while she swayed in his arms. Donald came out a little later, and there was a curious look of exultation and triumph in his face.

"She killed herself," he said. "That was her husband. I know him. I gave him the rock-nails he put in the soles of his boots—and the nails are still there."

He went alone into the remaining two cabins, while Aldous stood with Joanne. He did not stay long. From the fourth cabin he brought an armful of the little brown sacks. He returned, and brought a second armful.

"There's three more in that last cabin," he explained. "Two men, an' a woman. She must ha' been the wife of the man they killed. They were the last to live, an' they starved to death. An' now Johnny——"

He paused, and he drew a great breath.

He was looking to the west, where the sun was beginning to sink behind the mountains.

"An' now, Johnny, if you're ready, an' if Joanne is ready, we'll go," he said.

CHAPTER XXVII

AS THEY went up out of the basin into the broad meadows of the larger valley, MacDonald rode between Aldous and Joanne, and the pack-horses, led by Pinto, trailed behind.

Again old Donald said, as he searched the valley:

"We've beat 'em, Johnny. Quade an' Rann are coming up on the other side of the range, and I figger they're just about a day behind—mebby only hours, or an hour. You can't tell. There's more gold back there. We got about a hundred pounds in them fifteen sacks, an' there was twice that much. It's hid somewhere. Calkins used to keep his'n under the floor. So did Watts. We'll find it later. An' the river, an' the dry gulches on both sides of the valley—they're full of it! It's all gold, Johnny—gold everywhere!"

He pointed ahead to where the valley rose in a green slope between two mountains half a mile away.

"That's the break," he said. "It don't seem very far now, do it, Joanne?" His silence seemed to have dropped from him like a mantle, and there was joy in what he was telling. "But it was a distance that night—a turrible distance," he continued, before he could answer. "That was forty-one years ago, coming November. An' it was cold, an' the snow was deep. It was bitter cold—so cold it caught my Jane's lungs, an' that was what made her go a little later. The slope up there don't look steep now, but it was steep then—with two feet of snow to drag ourselves through. I don't think the cavern is more'n five or six miles away, Johnny, mebby less, an' it took us twenty hours to reach it. It snowed so heavy that night, an' the wind blowed so, that our trail was filled up or they might ha' followed."

Many times Aldous had been on the point of asking old Donald a question. For the first time he asked it now, even as his eyes slowly and searchingly swept over the valley for signs of Mortimer FitzHugh and Quade.

Guaranteed for Life!

McCormick-Deering Tractor Crankshaft and Main Bearings

THE crankshaft and the crankshaft ball bearings of the McCormick-Deering 10-20 and 15-30 tractors are guaranteed against breakage, not for a month or a year, but *during the entire life of the tractor.*

This guarantee covers breakage from any cause whatsoever, and in the case of the ball bearings guarantees them from wearing out or burning out during the life of the tractor.

Read this SPECIAL TRACTOR WARRANTY, which every purchaser gets in writing:

The seller agrees to replace free the TWO-BEARING CRANKSHAFT in any 10-20 or 15-30 McCormick-Deering tractor, should it break during the life of the tractor, provided the broken parts are promptly returned to the factory or one of the branch houses.

Further, the seller agrees to replace free any CRANKSHAFT BALL BEARING in the 10-20 or 15-30 McCormick-Deering tractor, which may break, wear out, or burn out during the life of the tractor, provided that the defective ball bearing is promptly returned to the factory or one of the branch houses.

BALL BEARING
BALL BEARING

THINK of it! Never before in the history of the automotive industry—with automobiles, motor trucks, engines, or tractors—has such a warranty been given. You have never before seen nor heard of so liberal a tractor guarantee. This is convincing proof of the indestructibility of the crankshaft and the crankshaft ball bearings in the McCormick-Deering tractors, and you will find the machines of uniform quality throughout.

In addition, the Company continues its policy of providing tractors with all necessary equipment—throttle governor, belt pulley, platform, fenders, brake, etc. No extras to buy.

Your McCormick-Deering dealer will show you the many valuable features of these tractors, such as ball and roller bearings at 28 points, unit frame, replaceable wearing parts, etc. He will show you the size of the guaranteed crankshaft and demonstrate how easily it runs in the guaranteed main ball bearings. When you buy a tractor, be sure this valuable guarantee is written into the contract!

"The Farm Paper of Service"

WHAT THE FARMER WANTS

THE July issue of the Locomotive Engineers Journal is devoted entirely to "What the Farmer Wants", and comes from the headquarters of one of the greatest labor unions in America. It covers every point of the "Farmers Revolt" excepting that it fails to mention that the one thing the farmer wants more than anything else is lower freight rates. It is a little hard for a farmer to hold the plow handles straight in a rocky field with the sun broiling down on the back of his neck, wondering whether or not the crop he is planting will come safely through and net him a few dollars profit, or whether possibly it will be a total loss, when he looks across the field at the locomotive engineer, in his upholstered cab, and realizes that the eigineer with no investment of capital draws about $1.00 an hour for his time, with time and a half for overtime and double time for holiday work!

It is rather interesting to see so powerful a labor union taking so considerate a view of the greatest industry in America. The farmer, however, is not one who forgets so easily the laws that were hurried through Washington during the very critical days of the war to satisfy the demands of the railway labor unions. The farmer does not forget that during the past two years when his crops have been selling at prices which did not pay for the actual cost of production, the labor unions have demanded the "last pound of flesh."

If the locomotive engineers want to know "what the farmer wants" and they will go to the actual working farmers in the fields and not the political leaders who claim to champion the farmer's cause but serve only to befog his issues, they will find that what the farmer wants most, is to know how they "put-it-over." So far the farmer seems to be a dismal failure in getting what he needs through organization. He gets what he "wants", or what the politicians think he wants, but far from what he needs, which is, as we see it, a guaranteed return on his investment like Capital gets and a guaranteed wage for his time like Labor gets.

GOOD-BYE FOREVER

THERE will be no wheels-of-chance on the Michigan State Fair Grounds this year. This announcement just made by George W. Dickinson, Secretary and Manager, will send a chill up the backs of thousands of city men and women who have apparently, heretofore, depended on "Lady Luck" for their food and raiment. We wonder how they will get along!

At former fairs it has been possible to take a chance on the wheel and win anything from a poor, little, wild yellow bird in a reed cage, to a basket of sawdust carefully camouflaged over the top with a layer of fruit. When you consider that there were from one to two hundred chances on the spin of a wheel, that each chance was sold for ten cents, and that the value of the prize was seldom more than a dollar, you can appreciate why there were nearly two city blocks of these stalls at the last State Fair, and why the space at $60 per foot for the ten days fair was sold immediately and at a profit to the fair which we understood to have been $29,000!

The passing of the wheel-of-chance marks one of the last steps in cleaning up the State Fair. Much credit for which should be given to Mr. Dickinson who has so ably managed and built up the wonderful exposition which the state acquired last season. It must be remembered that within the term of office of the present management a saloon was operated under the grandstand, and public betting on the horse races was allowed and the privilege sold. On the midway everything from the Egyptian dance to the snake eating wild-man was permitted, and the lemonade was only sweetened water with a drop of red paint in it.

The present board of managers of the State Fair are therefore to be credited with the mark of progress which they have made in doing away with one of the last of the objectionable features, even at the cost of $29,000 for a season. We predict that this money will be spent in other quarters or will increase the attractions of the fair in such a way that this amount will be made up.

The Business Farmer cannot help but feel that as the present plans of the management are consumated Michigan will, without doubt, have the finest exposition of its kind on the American continent, if it does not enjoy this position today.

Every indication points to the fact that this year's fair will be one of the greatest ever held in Michigan. It is easy to say "Bigger and Better" but we make the above assertion with a knowledge of only a few of the improvements which have been made for your approval this year. Better plan ahead now to bring the folks and spend one day at least at the State Fair. It is not too early to start planning to come and if you can come for a night or two there will be camping space with running water and all conveniences on the grounds. Tell the folks now you'll come and bring the whole family!

BETTER POTATO PRICES

THERE is a ray of hope, at least, for the potato growers of Michigan who have gambled again against the elements and the even worse effect that comes from a glutted market, in the statement just issued by the Michigan Potato Growers Exchange, which predicts a higher price for this years' potato crop.

Only three states, they point out; Maine, Ohio and Nebraska, have larger crops than last year, and only Maine is an important contender with Michigan in the production of this staple. All other states show a decrease in predicted production, and there is a shortage of over 47,000,000 bushels from the estimate of 1922 taken at this time.

It is not yet safe to predict but that conditions may change and produce an even greater shortage. We hope so for the sake of the potato growers of Michigan who have had the courage to gamble on this precarious crop.

The potato market suffers more from overproduction than it does from bugs and blight. The Agricultural College and other specialists ought for this reason to give potato marketing a greater share of their attention.

FEDERAL AID FOR STATE ROADS

ANNOUNCEMENT has just been made in Washington of the mileage of good roads which will be given federal aid under the existing bills for that purpose.

Michigan, with 4,582 miles leads her neighboring states in the mileage of good roads which we have available for federal aid. Ohio having 4,506 miles and Indiana, only 3,957 miles. This would indicate that Michigan has in reality made some progress in good roads since the fifty million dollar plan was undertaken.

The total mileage of good roads in the United States receiving federal aid, will approximate 187,406 miles, and will connect nearly every city in the country having a population of over five thousand. It has been stated that these roads comprise a network which will bring good roads within ten miles of 90% of the entire population of the country.

Good roads are expensive, but America with good roads is prosperous, while China which has no roads whatever, is a pauper country, with millions of people living shoulder to shoulder in closely congested cities, while millions of acres stretch toward the Great Wall, uncultivated and uninhabited.

If the difference between America and China is good roads, then the price we pay is of little consequence.

HOW OLD IS ANNE?

A SALT LAKE CITY chemist, Dr. Paul Baltinke, says that men and women ought to live to be a hundred and fifty years old, and will someday learn to live that long.

We meet a lot of folks that we would like to have on earth with us a hundred and fifty years, but once in a while we meet one that we would just as soon have pass on at the normal age.

Dr. Baltinke is serious, however, in his statement because he believes that better living conditions and social hygiene is changing the physical condition of the race. As men learn to live right they learn to live long.

FARM LABOR IS SCARCE

THERE is a shortage of farm labor all over the United States. It has been attracted to the city by the high prices being paid in the industrial plants.

There seems to be no remedy which can be offered for this situation. Like all other commodities, labor depends upon supply and demand. There is a greater demand in the metropolitan centers and the farmers cannot at the present selling price afford to pay anywhere near the amount that would be necessary for them to attract labor back to the farm where it belongs.

All of the investigations that can be made will only arrive back at this same conclusion, because there is a natural condition here to overcome which operates as surely as the laws of gravitation.

We have predicted that the shortage of labor would decrease the total of the crop production this year to a point where a farmer could get more for his products and thus meet some of the losses he has had to take during the past few years.

Indications seem to point to the fact that this will be a year of small production. The present low price of wheat does not indicate in any respect the possible production. It is, manipulation pure and simple, which may be due to the insistent demand from some quarters that the Government step in and control the price of wheat. If it were possible for the United States Government to control the production of wheat grown in the Argentine and Ukraine, we might be in a position to set the price of the world's market for wheat, but inasmuch as that is impractical, the control of world's wheat price is no less a "will-o-the-wisp!"

THE ROADSIDE MARKET

WITH the rapid development of Michigan as an industrial state a large proportion of our farms are in proximity to cities and towns or lie along the network of state highways so that thousands of automobiles pass their gates daily. This change has brought an opportunity for the individual farmer to sell the perishable and other products of his farm direct to the consumer and at a larger profit to himself. A recent investigation of this growing and profitable business points out two or three facts which should be brought to the attention of farmers who are thus fortunately located.

In the first place, our farmers must build for themselves a reputation for fair and square dealing. It is obvious that the farmer can make much more for himself and yet sell at a price slightly under the retailer in the city. For the farmer, therefore, to charge the same or a higher price is only defeating his own best interests. If the city customer buys strawberries at 25 cents a box from the farmer and finds they are selling for 20 cents at his corner grocery store he is not going back to the country. On the other hand, if the conditions are reversed, that farmer has secured for himself a steady cash customer who comes out to the farm and buys his products, not only for the slight saving that is made, but because the products purchased, direct from the farm are fresh, and therefore, more desirable.

Another weakness is the attempt on the part of some to combine with their sales of farm products the sale of "pop", candy, tobacco and "hot dogs." It is obvious that this small storekeeping is seldom done by legitimate farmers, and is usually attempted because a request is had once in a while for these articles. Our investigations show that this is seldom profitable to the farmer because his family uses up more of the knick-knacks which he buys for re-sale than he actually sells at a profit. While the better class of his legitimate customers for farm products pass his place by because it does not look like a real farm and they are not interested in trading at an imitation corner store.

We know of many farmers who are selling all of the green vegetables they can convenitnely raise direct from the roadside. The children like to do this and it gives them a good business training. It brings in ready cash for the household expenses and usually more than just "pin money." The automobile has made this new roadside market possible, and if our farmers will protect their own interests by fair and square dealing, offering the best they have at a fair price and keeping their premises clean and inviting, this business can be doubled with each passing year.

There are any number of by products of the farm such as cider, maple syrup, honey, vinegar, cottage cheese, etc., which can be made and sold at even larger prafits. It is also easy to build for the winter a parcel-post trade in butter, eggs and other products from these summer roadside customers. We would be glad to pass along to our readers any other ideas on the roadside market which any of you have found profitable.

PUBLISHER'S DESK

The Collection Box

The purpose of this department is to protect our subscribers from fraudulent dealings or unfair treatment by persons or concerns at a distance.

In every case we will do our best to make a satisfactory settlement or force action, for which no charge for our services will ever be made, providing:

1.—The claim is made by a paid-up subscriber to The Business Farmer.

2.—The claim is not more than 6 mos. old.

3.—The claim is not local or between people within easy distance of one another. These should be settled at first hand and not attempted by mail.

Address all letters, giving full particulars, amounts, dates, etc., enclosing also your address label from the front cover of any issue to prove that you are a paid-up subscriber.

THE BUSINESS FARMER, Collection Box
Mt. Clemens, Mich.

Report Ending July 16, 1923

Total number claims filed	2303
Amount involved	$22,268.82
Number of claims settled	838
Amount secured	$12,605.06

THE COLLECTION BOX GROWING

SUMMER time may bring some lull in the other departments of a farm paper but the Collection Box is busier than ever, if possible, trying to keep up with the complaints we receive.

The surprising thing is however, how few of the complaints which are registered with us we are not able to collect. Most mail-order houses acknowledge our claims within ten days and usually forward the amount direct to our reader. Some take longer. A few require many letters and sometimes a personal call from one of our representatives but where the claim is clear and unquestioned, we never let go until our subscribers claim is satisfied.

THE AUTO KNITTER

THERE is never an end to the letters regarding the auto knitter, which are advertised to lift the mortgage on the old homestead and make it possible for the woman to sit comfortably in her rocking chair and with a simple twist of the wrist turn out hosiery which finds a sale even before it is manufactured.

Somewhere, someday, we expect to find one fo these machines in successful operation. There seems to be no question but that in the hands of an expert they will work, but whether they can be made to produce profitably and are worth the $50 to $75 which they cost, is another question altogether, and we still contend that we could have to have some mighty conclusive evidence before we would care to recommend them for a widow lady or an invalid, and yet it is most often someone of this type who is interested in this so-called home money-making machine.

JONES OF OLNEY

EVERY month brings us several inquiries regarding a gentleman who signs himself "Jones, the real estate salesman, Olney, Illinois." We have before us his circular matter now, and he gives four bank references and letters from cashiers who says he lives up to his promises.

His agreement, however, consists only of promising to print 1000 circulars, send you 200, keep the other 800 for mailing to interested farm buyers, and printing an advertisement for you in the Farm Buyers Guide, in addition to which he will write personal letters to parties interested in farms for sale, and in other ways endeavor to aid you in selling your property." For this you are to send Mr. Jones $7.25 in advance, the balance of the commission $22.75, you are to pay him when the farm is sold. It is not easy to sell farms these days, and there are plenty of them for sale, so that Mr. Jones' business might be profitable even though he was not successful in selling any great proportion of those from whom he collected the $7.25.

He has been doing business in Michigan for several years. If any of our readers have had any dealings with him we would be glad to hear from them including those for whom he sold farms.

BUYING DETROIT REAL ESTATE

FROM recent letters I take it that the real estate operators have for some reason forsaken Detroit which is in the throes of a season of prosperity, the like of which has not been known for some years, and in the face of this have gone out to the farmers in the state selling subdivision lots.

The property adjacent to Michigan's metropolis, as far north as Saginaw Bay, south to Ohio line, somewhat west of Lansing and Jackson, to say nothing of lower Ontario, in subdivision lots, the value of which as farm land or resort proparty is unquestioned, but as home sites for Ford, Dodge and General Motors workers, we cannot be so enthusiastic. If conditions were reversed, and the farmers were highly prosperous, with city men out of work, we might understand why the country was being worked so thoroly, but under existing circumstances we certainly advise any farmer to look very, very carefully before he leaps into Detroit real estate (so-called).

MORE ABOUT McRAE

DEAR Mr. Slocum—We are much interested in the talks concerning Warren McRae, and we would like to tell our experience with him. We had a farm for sale so answered his ad. He wrote us the same as he did the others. Offered to take five dollars seeing we would not send ten. We asked for references before sending any money. He sent us the bank at that place. He probably thought he would fool us that way, but not so, We wrote the bank and they replied he had had a small account there at one time, further they knew nothing about him. So we kept our money thanks to our farm paper for its advice. We believe farmers appreciate having these things exposed thru The Business Farmer. We enjoy our paper very much. Yours truly, Mrs. S. C., Calhoun County, Mich.

The Week's Editorial

DO YOU LIKE MICHIGAN FRUIT?

WHEN the Michigan fruit-growers find themselves at a disadvantage in shipping and marketing their product everyone within the zone of that market and who eats fruit is concerned about it.

It is manifestly preposterous that it should cost more to bring fruit from the Michigan fruit belt to Detroit than from Kansas City to Detroit. Nor is is reasonable that it should cost more to ship Michigan grapes to California than to ship California grapes to Michigan. And there are other perplexities.

The situation has been met in other parts of the country, and doubtless similar processes will succeed here, by organization among the fruit growers on a district basis, working separately from the national organization. The immediate objective of such associations is twofold, first the railroads, and second efficiency among the growers in handling and shipping. Usually both these factors need close attention and constant watchfulness.

Michigan is particularly rich in its fruit. The Wenatchee and Yakima apples, large and rosy and highly polished, look like masterpieces, but their flavor does not match that of the Michigan product. When the first strawberries appear on the market everyone immediately rejoices, with the qualification, that when the Michigan strawberries appear, then will be tasted strawberries de luxe. And none can traverse that wonderful western shore district along the sand dunes without profound respect for the prolific supply of delicious fruits of all kinds.

Flavor is the highest point in Michigan fruit products and Michigan people, as a whole, prefer them to any other. It should be possible for the people of this state to get possession of them, for present eating and for preserving, at a price commensurate with proximity to the market. The public will watch the progress of the Michigan Fruit Growers, Incorporated, with a personal interest and a waiting supply of preserving jars.—Detroit News.

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS—I know everybody is busy these days canning, making jelly and jams for the winter, right now, and I am writing this article and running to my kitchen watching some current jelly that just had to be fixed this morning. It is a busy time for every woman keeping house. I do want you to read and notice how simple and inexpensive the new method of cold-pack canning can be made in every farm home. Read about our bobbed-hair girls and some one write me her opinion. This is a big subject and is going to be this summer more than ever. I am still looking for some more threshing letters. Hoping to hear from some of our readers upon these subjects, I am

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

THE SONG OF A FARMER'S WIFE

I'M A Farmer's wife!
It's a glorious life,
Wholesome and clean that I lead.
To help with the work,
And never to shirk;
This has become my creed.

Sights of ne'er ending toil.
And vast richness of soil,
Surround me and thrill me each day;
Stiring dreams in my heart
For a still greater part
In this battle of life to play.

In the twilights I sigh
O'er the beauties of sky,
And the sunsets I see o'er the hill.
While the dawn with its ray
Brings another glad day,
And I set to my task with a will.

* * *

So, work as you can
For it's God's own plan,
That our lives should come out of the soil.
No nobler task
Shall I ever ask,
Than to live and to love as I toil.

—Charlene Weathers Hopson.

IS IT WRONG TO HAVE BOBBED HAIR?

A GREAT deal has been said for and against bobbing the head of our girls. I have listened to so many of my younger girl friends pleading with their parents to consent to this cutting that I am wondering if the same problem has reached the girls on the farm. Is it wrong for them to have their hair cut? What have the morals or virtues of our girls got to do with bobbing? I have noticed that some of the girls say they will never go back to long unsanitary hair again. It is so comfortable that the freedom from doing up long hair is a thing of the past with the coming generation. Again I notice where one girl has the courage to bob she brings into the circle of bobbed heads all her friends and each one has a number of other girls that bob their heads and so all these families are upset until they get used to seeing their daughter and sister with her hair cut.

I can remember when I first wanted to wear a corset and my mother held up her hands in horror at the grown up idea I had on my mind. And oh how glad I was with that first pair. I got them on upside down and did not know it until my older sister laughed and told me. I am wondering if the same feelings come to the bobbed-haired girl. Does it make her move flippant and saucy or is it just an expression of freedom, no more corsets, no more hair. In the olden days we wore wigs and ruffles, silk stockings, garters, ribbons and laces. They have gradually brought their dressing down to a very simple and plain outfit that can be gotten into quickly. Are the girls of to-day trying for the same goal? I would like very much to get a few opinions about the bobbed head girl and see if our mothers on the farm feel as the city and town mothers do.

CLOTHES PIN APRON

I OFTEN see women out hanging up their washing, stooping over two or three times a minute to get the clothes pins out of a basket that they move along on the ground. If they only knew what a help a clothes pin apron is, they would never bend to the basket again.

The pocket is practically all there is to the apron. It goes clear across, is twelve inches deep, and comes to within an inch or two of the band. In this way I don't have to stoop to reach into the bottom of it.

Ticking or blue denim is best for one of these aprons if you are buying new material. They will wear for years. However, I usually use just something I have around the house. It may wear out in a year or two but the making is so simple that I don't mind if it does. An old pillow ticking can be used and, if you care to, bind the edges with a bright tape.

LETTUCE AS A BLOOD BUILDER

DO not forget the greens and fresh vegetables are our best friends in keeping our health all thru the summer months. Lettuce is one of the most cooling foods and purifier of our blood. It does not have a filling feeling but if we can form the habit of eating it at least twice a day with our meals, you will find a great improvement in clearing up the complexion. I try and have a fresh salad all during the summer and it just seems as tho our systems demand this sort of food.

When the hottest days come lettuce growing in the open gets tough and bitter. To overcome this plant some seed for mid-summer lettuce in the shade of a tree or plant it in the open and cover with a thin piece of cloth.

FLOWERS IN OUR HOMES

TRY putting a piece of blotting paper under the doily before setting vase of flowers upon it and you will find it can be put upon the choicest polished piece of furniture.

Keep the home supplied if possible with a vase or two of flowers. It makes a room look so cheerful with the bright colors.

HINTS FOR OUR FLOWER GARDEN

LET no seeds form and mature on sweet peas and nasturtiums. Pick at least every other day.

The Petunia is a most pleasing annual and gives so freely of blossoms until late fall. Keep the dead blossoms snipped off. I have my window boxes filled with pink and purple petunias with sweet Elysium between the plants and it makes a beautiful sight from the room inside and is beautiful from the lawn.

SERVING HOT WEATHER MEALS NICELY

DURING these warm days a good plan is to give the family all the vegetables growing but serve them attractively so they will be inviting to eat.

Beets can be cut in nice slices and served with butter, pepper and salt, or with vinegar, pepper and salt. To serve hot make a sour sauce.

Melt two tablespoons butter, add two tablespoons flour and pour on the beet juice that has formed from the beets having been cut in cubes. Add one-fourth cup, each, vinegar and cream, one teaspoon sugar, one-half teaspoon salt and a few grains pepper. Serve in a vegetable dish any of these ways of fixing beets and with a large serving spoon one can have them upon their dinner plates and save dishes.

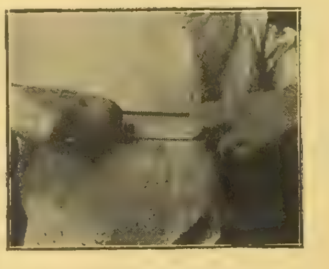
Peas can be served hot with just butter, pepper and salt. If you wish to cream them, add enough cream to suit taste and thicken with just a little flour. This should be served in small vegetable dishes.

FRUIT JUICES FOR WINTER USE

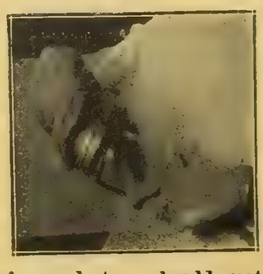
WITH sugar high in price, why not put away some fruit juices for winter use? Juices from the raspberry, blackberry and grape may easily be canned when the fruit is in season and stored for winter use. If preferred, the boiled juices may be made when required. The way to do this to to wash and stem the berries or grapes and place in a preserving kettle. Crush lightly with a wooden spoon, cover with water and cook very slowly for 30 minutes, stirring frequently. Remove from the fire and pour the juice through a moistened cloth (preserve the pulp for a butter or marmalade mixture).

Pour the strained juice into a clean kettle, boil for five minutes and skim. If the fruit juice is being prepared for a beverage add a cup of sugar to each quart of juice, boil five minutes. Pour into hot sterilized jars, filling the jars to overflowing. Close immediately and set inside to cool. Store in a dry, dark place. If currant juice is being prepared in this way use one-third as much sugar as juice.

Doing Your Canning By Cold Pack Method



A good rubber can be stretched without breaking



A good top should not permit thumb nail to be inserted

TOPS for screw-top jars must not be screwed on tightly during the processing. Screw the tops as tightly as possible, using only the thumb and little finger, or until juice does not run out when jar is inverted. Screw top tightly after jars are taken from the canner.

It is economy to buy the best rubbers obtainable. Rubbers should not be used a second year. The following tests should be applied to rubbers used for the cold pack method of canning:

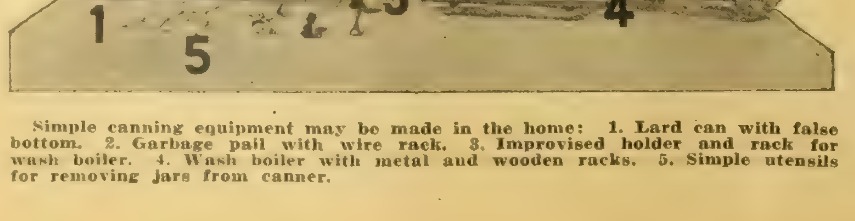
a. A rubber should stand a reasonable amount of stretching and pulling without breaking or permanently losing shape.

b. Rubbers should be about 1-12 of an inch thick. A pile of one dozen rings should measure one inch.

c. The inner diameter of the rubber ring should be 2¼ inches; the flange 5-16 of an inch. This does not blow out.

d. A rubber should stand pinching between the thumb and forefinger, and when pressure is removed should not show the effects.

e. The color of the rubber ring is no index to the quality. Good rings may be either red, white or black.



Simple canning equipment may be made in the home: 1. Lard can with false bottom. 2. Garbage pail with wire rack. 3. Improvised holder and rack for wash boiler. 4. Wash boiler with metal and wooden racks. 5. Simple utensils for removing jars from canner.

FRUIT BUTTERS

Fruit butters are made from fruit cooked to a smooth consistency. It is frequently found to be cheaper to make fruit butters from fruit pulp left after the first extraction of the pectin in jelly-making.

General rules for butters:

1. Put the pulp of the cooked fruit through a sieve; remove seeds and skins.
2. Use half as much sugar as pulp.
3. Cook altogether, slowly, until thick.
4. Store as for jelly or canned fruit.

CONSERVES

Conserves are cooked like jam, but raisins or nuts, sometimes both, are added, together with oranges cut in small sections.

General rules for making conserves:

1. Cook rapidly.
2. Add nuts about five minutes before removing conserves.
3. Store as for jelly or canned fruit.

Plum Conserve

6 pounds plums; 2 oranges sliced; 1½ pounds large table raisins, seeded; ½ pound nut meats; 3 pounds sugar.

Prepare the oranges as for marmalade, let stand in water to cover over night. Cook the plums without water till soft and press the pulp through sieve. Cook oranges till tender, add with raisins to the plums and sugar and let cook till the mixture is like marmalade. Add the nuts near the end of the cooking.

MARMALADE

To each pound of fruit add one-half pound of sugar. Boil from one to three hours, or until the jelly stage is reached. Pour into hot glasses and seal at once.

Carrot Marmalade

2 cups ground carrot, 1½ cups sugar, 2 lemons, 2 tp, ground ginger root.

Cook carrot until tender. Add the sugar and lemons, quartered and cut in thin slices. Cook slowly until thick. Pack in hot jars and process. The ginger root may be omitted if desired. This marmalade does not have the jelly-like consistency of orange marmalade.

PRESERVES

A preserved fruit is one which has been cooked in a cane sugar syrup until it is clear, tender and transparent. It will keep its form and plumpness and be crisp.

Preserved Spiced Peaches

1 peck peaches, peeled and cut in half, 3 pints cider vinegar, 3½ lbs. brown sugar, 1 oz. cloves, ½ oz. nutmeg, 1 oz. cinnamon (spices tied in a cloth and boiled with the peaches.).

When the vinegar, spices and sugar are boiling, add the peaches. When transparent, seal in fruit jars. Serve one-half peach with juice for dessert.

Preserved Ginger Apples

4 lbs. apples, pared, cored and sliced thin; 4 lbs. sugar; 1 cup water; 4 lemons, sliced; 2 oz. ginger root.

Boil altogether until as thick as marmalade. Skim out the ginger root, and pack as you would jelly or jam.

Preserved Ginger Pears

Substitute pears for apples in recipe given above.

Mothers Problems

THE BABY IN THE FAMILY

ADORABLE as the baby in the family always is it is not right to make of him, or of her, a little tyrant. It is neither good for the baby, nor good for the elder children, if Baby's every wish has to be granted. At the same time a generous spirit toward the weaker, younger member of the family must be encouraged. Between this spirit of generosity and the habit of indulgence, it is often hard to draw a line.

Certainly, however, it is unwise indulgence that allows a mother to let the baby play with Big Sister's Christmas doll until she breaks it, or tear down the toy radio Big Brother has so painstakingly constructed, and then scold the older brother and sister if they are angry because the baby did it! When Baby is allowed such liberties, it is little wonder if the older children express the wish that a baby had never come to their house!

Sometimes, of course, a baby will get away from Mother's watchful eye and accidentally destroy some treasured possession of an older brother or sister. Then must the older children learn a hard lesson. They must learn to forgive the little child who couldn't understand that he was doing wrong. The mother must calm them, and guide them along the paths of patience and forgiveness.

"Give it to Baby;" "Let Baby have that;" "Baby wants that;" are commands heard all too frequently in many families. Baby soon learns if he can order the household around; if he finds he can, he proceeds to run things with a high hand.

Be careful in issuing such commands as the above. Consider the baby's welfare and consider the older children's rights. A child does not have to be very old to have a sense of injustice.

TEACH HUMANENESS TO YOUR CHILDREN

CONTRARY to an altogether too commonly accepted idea, just because a child is a boy is no excuse or reason for him being cruel. Cruelty has no place in God's scheme of things. Though Man has been given dominion over the birds of the air and the beasts of the field, he has not been given license to practice cruelties upon them.

Boy nature and girl nature are two distinct types. A little girl is the embryo mother. Her mission in life is to give life, not to take life: therefore, if she be a normal little girl, she shrinks from doing anything that hurts or kills. Little boys, on the other hand, are incipient husbands and fathers—providers, in other words—and in their blood there runs a trace of the blood of their ancesters who, to provide food for their family, must first go forth and kill it. Taking life to them has no horrors. And, since they can contemplate killing without a qualm, it is only to be expected that they lack the finer sensibilities of their sisters when it comes to hurting dumb creatures.

The trouble is, when a boy practices cruelty on birds or animals, that he has never been taught to feel for them. A little girl seldom needs training along that line; a little boy practically always does.

A boy's training in humaneness should begin as soon as he is able to creep. A love for all living creatures must be taught, an interest in their life and habits must be aroused and in their hearts must be instilled the knowledge that all living creatures suffer pain just as we humans do.

Until children have reached an age of understanding, keep them away from the slaughter-pen. The early years of life are highly impressionable; let not the sight of beasts suffering make its mark on the child-mind. It is not effeminate for a boy to be humane, unwilling to inflict needless suffering; it is an ideal manliness. If your boy is cruel, there is someone to blame. Is that someone you?

The Runner's Bible

(Copyright by Houghton-Mifflin Co.)

Put on therefore*humbleness of mind. Col. 3:12. Before honor is humility. Prov. 15:33.** It is of utmost importance to possess humility. It means that one is receptive, teachable; growth and achievement follow naturally. Without humility the world lags, even retrogrades. The lack of this divine attribute accounts for the commonplaceness of the world in general. One who hugs his precious opinions to himself clips his own wings. The great ones of the earth are humble. Greatness tho, knocks at every door, but the door is usually barred, and double barred by old beliefs, pride or opinion, or selfish contentment. Real humility values nothing as it does the truth, and is ever ready to receive it. 34. **The reward of humility and the fear of the Lord is riches, and honor and life. Prov. 22:4.**

Personal Column

Red Stain from Lavender Dress—Could you tell me how to take a red stain that has gotten into a lavender dress from a red dress. It is a good dress and I hate to have it spoiled.—M. I., Brown City.
—Maybe some reader has had a similar accident and I would appreciate hearing from her.

Raising Flowers for Market—Would you please send me the address of some good place where I may obtain books on raising flowers for market. I have been a reader of The Business Farmer for some time but have not found anything along this line.—Mrs. M. G., Fruitport, Michigan.

—The book called "Garden Guide" by T. A. De LaMarl is about as fine a text book for information regarding the making of our grounds more beautiful, and it tells how to grow and care for nearly every flower, plant and shrub that is not a freak specimen. It costs seventy-five cents.

RECIPES

Cocoa Cake—One and one-half cup brown sugar; one cup sour milk; two eggs; two tablespoons cocoa; piece of butter size of an egg; cinnamon; cloves and nutmeg to suit taste; one teaspoon soda; one teaspoon baking powder; two cups sifted flour. This makes a delicious cake and can be baked in a sheet or in layers.—Mrs. E. B., Ionia County, Mich.

Spice Cake—One cup butter or lard; four cups brown sugar; one cup milk; eight eggs; two teaspoons cinnamon; one teaspoon cloves; one teaspoon nutmeg; two teaspoons baking powder and one and one-half teaspoon salt. Flour to make as stiff as you like.—Mrs. J. W. H.

Molasses Cookies—Two eggs; two cups molasses; one cup sugar; one cup lard; one cup sour milk; four level teaspoons soda; one teaspoon ginger and one teaspoon salt. Flour to make stiff enough batter to roll out. May be made without eggs.—Mrs. J. W. H.

Spanish Pickles—Four heads of cauliflower; dozen large green cucumbers; six bunches of celery; one gallon vinegar; one tablespoon tumeric; one-half pound ground mustard; one tablespoon whole cloves; one peck tomatoes; one-half dozen large sweet peppers; one quart small pickling onions; five pounds brown sugar; one-half cup white mustard seed one-half cup wheat flour and one tablespoon ground cinnamon. Coarsely dice vegetables, leaving onions whole. Soak for 12 hours in brine made up of one gallon of water and one and one-half cups salt. Drain. Boil vegetables and vinegar and sugar for one-half hour. Then make a paste of spices, mustard, flour and a little vinegar; add to boiling vegetables, boil for five minutes, stirring carefully until all is thickened. Seal hot in clean, hot jars.

Sweet Pickled Peaches—one-half peck peaches; two pounds brown sugar; one ounce stick cinnamon; a few cloves and one pint of vinegar. Remove skins from peaches. Stick cloves into peaches, make a syrup by boiling the sugar, vinegar and cinnamon for twenty minutes. Add only one-half of the peaches at the beginning and cook until soft. Remove and put into jars and repeat for the other half of the peaches. Fill the jars with hot vinegar and seal.

Hot Water Dumplings—May be used with chicken or beef stock. Take enough flour to make what you need for a meal. Say one quart of flour, one teaspoonful of salt in a dish having your teakettle boiling hard, pour right on flour and salt and roll out and put in stock while hot. They are always flaky and good.—Mrs. J. W. H.

Chili Sauce—Twelve ripe tomatoes; one red pepper; one green pepper; one large onion; two cups vinegar; one cup brown sugar; one tablespoon salt; one teaspoon whole allspice; one teaspoon cinnamon; one teaspoon ground nutmeg and one teaspoon ground ginger. Remove skins from tomatoes and chop with the peppers and onions. Add the vinegar and spices and bring to a boil. Stir to prevent burning. Boil until sauce begins to thicken (about one hour.) Pour the chili sauce into hot jars and seal at once.

Corn Relish—Eighteen ears corn; one pepper, ground or chopped; three teaspoons mustard; one quart vinegar; three--fourths cup sugar; four onions, ground and one cabbage, sliced very thin. Cut corn from cob, mix with other ingredients and cook thirty minutes.

—if you are well bred!

When one is at the table eating it is not necessary to keep the hands busy every minute. Rest awhile and chew what one has in one's mouth before struggling with utensils to keep putting more food into the mouth. Elbows should not be on the table. Rest one hand in your lap while using fork or spoon in the other in conveying food to mouth.

THE SIGN For Your ROWENA OF QUALITY Protection

"Make Me a Child Again, Just for Tonight"

Can't you remember how wonderful a slice of bread tasted when you were a child? Maybe it was piled high with brown sugar! An in-between meal smack! Perhaps it was swimming in fresh maple syrup—the kind with the flavor running clear back to the tree.

Even now bread tastes just as good—if you use the Lily White flour in baking. Even when you were a child with your bread and butter after school, Lily White was satisfying thousands of the best cooks who knew what the flour would do.

And through all these years Lily White quality has never varied Always high grade, always regarded as the very best for all baking Lily White today is a standard household necessity in many thousands of homes.

Lily White

"The Flour the Best Cooks Use"

Our Guarantee

We Guarantee you will like Lily White Flour, "the flour the best cooks use" better than any flour you ever used for every requirement of home baking.

If for any reason whatsoever you do not, your dealer will refund the purchase price. He is so instructed.

HOW TO MAKE MILK BREAD

Three quarts of Lily White Flour, 3 pints of lukewarm milk, 1 cake of Fleischmann's yeast. Set in morning in warm place and rise until light. 3 teaspoons of salt, 1 tablespoon of sugar, 1 tablespoon of melted butter or lard. Mix with Lily White Flour until stiff, or from 20 to 25 minutes. Set in warm place and let rise until light. Make in loaves and work each loaf from six to eight minutes. Set in warm place until light. When light take warm milk and sugar and put over top. Keep good fire and bake slow one hour and when baked wash over again to make nice smooth brown crust.

Lily White will Surprise You--Delightfully.

4432

The model 4434 to be used for a corset is very fine for the average woman of 125 to 145 pounds weight. I use them entirely now and find so much comfort. I never have a backache. It seems to strengthen all the muscles that ordinarily a corset would support. Nearly all the younger girls in or out of school are wearing this type of corset and they have a big sale in the Detroit stores.

Colored bands folded around the crown of a hat are very smart for our mid-summer wear. Such combinations of silk or georgette, of pale pink or lavender, blues and yellows make a very striking color scheme.

4434. A Comfortable Practical Model—Here is a "corset" style that affords ease and comfort to the wearer. It may be made of jean, muslin, linen, brocaded silk or mercerized materials, satin or drill. Gussets set in at the sides give freedom in movement. These may be of elastic webbing. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 1⅛ yard of 36 inch material. For gussets of elastic or webbing ⅜ yard 9 inches wide or wider is required.

4447. An Up-To-Date Frock—Mustard color linen was chosen for this pretty model, the collar and cuffs are edged with white bias banding. This is a good model for taffeta, silk, gingham or ratine. The sleeve may be finished with a turned back cuff as in the large view, or, the peasant portion may be added. The Pattern is cut in 4 Sizes: 6, 8, 10, and 12 years. A 10 year size requires 2⅞ yards of 32 inch material.

4432. A Stylish Blouse—The model has the new hip band finish, and the popular "front drape" in cascade effect. The Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size requires 2½ yards of 40 inch material.

4441. A Pretty Undergarment—Nainsook, cambric or crepe may be used for this style. The Pattern is cut in 5 Sizes: 2, 4, 6, 8 and 10 years. A 10 year size requires 1¾ yard of 36 inch material.

4420. A Pretty Apron Model—Figured percale edged with rick rack braid is here portrayed. The Pattern is cut in 4 Sizes: Small, Medium, Large and Extra Large. A Medium size requires 4 yards of 27 inch material.

4425. An Attractive Negligee—Foulard is here portrayed with girdle and bindings of satin in a contrasting color. This model is good also for crepe, printed voile or crepe de chine. The Pattern is cut in 4 Sizes: Small 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A medium size requires 4¼ yards of 40 inch material. The width at the foot is 2⅝ yards.

The Children's Hour

THE BOASTFUL PIGS

ONCE the horses and the cattle, the aristocrats of the farmyard, took a democratic turn and invited the pigs to a New Year feast. But, when the pigs came, they treated them haughtily.

The pigs protested at this treatment, and said,

"You claim to be important! But are you? The master of the farmyard lets you find your own food in the fields and makes you work until you are old. But the master sends us our food every day and his servants clean out the places where we live. We do not have to work. We play all day. See how fat we are."

So the pigs had the best of the argument. But the master, who had heard it all, said,

"If the pigs knew what happened after they were fattened, they would not be so ready to boast."

Those who grow fat and do not work are like pigs. And—do they know what will happen to them?

OUR BOYS AND GIRLS

Dear Uncle Ned:—I have been reading the Children's Hour in the Michigan Business Farmer so I decided to write a letter. I am a farmer girl between the ages of 11 and 17. Whoever guesses my age right will receive a letter or card from me. I have brown hair, gray eyes, and I am about five feet and one and one-half inches high. I am light complexioned. I passed the eighth grade this year. I was sick with scarlet fever last year, and couldn't take the eighth grade examinations. I have five brothers and two sisters, and my mother and father are both living. My brother and I have been having the measles. The baby is sick and I think that she is coming down with them. I can tat, crochet, knit, embroider and sew. I wish some of the cousins that can crochet, would send me some new patterns. If they would I would send them some. We have a Ford car that I can drive and I like to drive very much. We have a lot of cattle, a truck, tractor, Overland touring car, and a lot of other things that I will not name. As I have written quite a lot I will close. I would like to correspond with some of the cousins. Someone put this riddle in the paper. What walks like a cat, looks like a cat, and acts like a cat? I think that the answer is a cat. She said that she would write a letter to the ones that guessed it right, so I will hope that I get it right, as I like to get letters. Your niece.—Evelyn Soper, R. F. D. No. 1, Gregory, Michigan.

—I am sure many of the girls will be glad to exchange patterns with you as many of them are real experts at crocheting and have a great variety of patterns or designs.

Dear Uncle Ned:—I don't suppose there is much use in writing because just as sure as you or I are living it will land in the waste paper basket. But what's the difference? I can say I have written to you again any way. I wrote to you some time ago and believe me I was surprised to see my letter printed. I received a lot of letters, from cousins too, they just poured in. I had almost forty correspondents in all during the first week. Then some stopped writing for unknown reasons so that at the present time I only have seven correspondents. I love to write letters don't you, Uncle Ned? I like to receive them, too. You must receive a lot in one day. I wish I might help you read them. Some of the other cousins are "cordially invited" to write to me. It's quite lonesome in the summer time and you have'nt anything to do. In the winter time there is a lot to do, for instance school work. Your niece, Halcetia Currier, Algonac, Michigan.

—This is the time you got fooled; your letter is printed after all. Well, I like to write letters but like better to receive them. Yes, I receive a great many letters every day and every one is welcome. I read them all with a great deal of interest and hope some day that we can spare space enough to print them all.

Dear Uncle Ned:—Oh my, the weather is warm. We certainly would welcome a rain at the present. The crops are sorely in need of rain too. I live in a small town, or rather a railroad junction and the population is about three hundred. The South Shore and St. Paul railroads cross here. About the only work going on in the summer is the work on the section; but in the winter there is plenty in the camps around here. We have some very beautiful lakes around here. South of Sidnaw is a lake called Norway. It certainly is a pretty lake. It is in the midst of Norway pines. You can imagine how nice it is to sit around a camp fire and listen to the whispering among the pines. We camp fire girls went for a two weeks camping trip out there about two years ago. My folks own a one hundred and eighty acre farm north of Sidnaw, so you see I know what it is to be a farmer's daughter. I suppose I should give a sketch of myself. I am seventeen years of age. I have dark hair and eyes and have a dark complexion. I will be a senior next year. It has always been my plans to take up teaching and go out west to teach. I would like to hear from both boys and girls of my age. I will ring off. Your loving niece,—Marie Powell, Sidnaw, Michigan.

—You may find it lonesome at present but shortly after the nieces and nephews read this they will begin to write letters to you and you will be so busy answering them all that you will forget all about being lonesome. Write again.

Dear Uncle Ned:—I wrote to you and the letter was in the M. B. F. last week. I put in some riddles for the boys and girls to answer and I received 27 letters and one card and I am so busy on the farm that I can't write to them all so I will thank them all for trying to answer the riddles. Out of the 27 letters there was only one that got them right and that was Ruby E. Fletcher, R. 1, Pellston, Michigan. I will give the address so if any one wants to know what she received they may write and ask her. Our crops are coming dandy. My brother is cutting hay. A friend of mine wants some girls to write to him, and also some boys. His address is William Grant, R. F. D. No. 3, Tawas City, Mich. I thank the girls and boys for trying to answer the riddles. Say Uncle Ned you put my age wrong I will be 16, March the 3rd, 1924. Well Uncle Ned I will send you the picture of the quarry. Good-bye, Harry Rescoe, Alabaster, Michigan.

—It was fine of you to send me the picture of the quarry. Thank you. No that picture on your letter does not look like me.

Dear Uucle Ned:—May I join your merry circle. I have been a reader of the Children's Hour for nearly a year. When we first took the M. B. F. we lived at Oxford, Michigan, but we moved a year ago last may. Some move! We live about a half mile from Saginaw Bay. The water is fine. I was 15 years of age the 29th of last January. Have I a twin? Will the girls and boys write to me? I will gladly answer all letters. I am 5 feet and ½ inch tall, have medium brown bobbed hair and brown eyes. Your niece,—Gladys Classman, R. 1, Sebewaing, Michigan.

Dear Uncle Ned:—I have never written to the Childrens' Hour before but I have often thought I would like to belong to your merry circle. I am 13 years old. I am in the eighth grade. I go to a consolidated school. I have three miles to ride. We have a nice bus to ride in I am the youngest of the family. I have blue eyes and brown hair. I live on a forty acre farm. I am glad we did not put in any pickles this year as I don't like to pick them and I never did. The answer to Harry Rescoe's riddles are as follows: 1st, 11 pans; 2nd, a duck; 3rd, a wheelbarrow; 4th, a churn; 5th, a flat iron and 6th, a bottle. I will close with some riddles. Black upon black, black upon brown, four legs up and six legs down. As I was going across a bridge I met my Susie Anne. I pulled off her head and drank her blood and let her body stand. Your niece,—Eva Ruth Soper, R. 1, Copemesh, Michigan.

—So you are glad that you do not have to pick pickles this year. I do not blame you, I never liked to do such work when I lived on the farm. If you were picking strawberries it would be different, wouldnt it? You could eat some of the berries but one does not care for the pickles as they come from the vines.

Dear Uncle Ned:—May I join your merry circle? I have been a reader of the M. B. F. for some time, and have especially enjoyed the Children's Hour page. My father has taken the M. B. F. for several years. I will describe myself now. I am five feet in height. I have light brown hair, and dark blue eyes. I am sixteen years of age. I live on a farm of 210 acres near the Muskegon river. We girls, and boys are going to raise pickles this summer, and we are to receive two-thirds of the crop. Say, would not some of your cousins enjoy helping pick them?. I think I have written quite enough for the first time, so I will close with a riddle, and whoever guesses the answer will receive a card or letter from me. A duck, a frog and a skunk went to the fair. The duck and frog got in but the skunk did not. Why didn't the skunk get in? I hope to hear from some of the girls and boys.—Lovingly, your niece,—Alice Kempton, R. 1, Box 63, Grant, Michigan.

—I'll bet I can guess the answer to your riddle. He left his (s)cent at home and he could not pay his admission. Am I right? I hope that the crop of pickles is large and you receive lots of money for your share.

Dear Uncle Ned:—How are you these fine days? I am just fine, I have not written to the Children's Hour for a year, so I thought I would write a few lines. It is raining here today so it is pretty wet. Well Uncle Ned, the cherries are getting ripe down here. Do you like cherries? Come down here and you can get all you want. There are acres and acres of cherry orchards around here. There is also a canning factory near Northport where the cherries are canned, and shipped to other places. It is interesting to see when the factory is running. My sister is going to work there this summer. I will describe myself. I have brown, bobbed hair, blue eyes and weigh about eighty-five pounds. I am eleven years old. My birthday is on October tenth. Have I a twin? If I have, write to me, and I will answer. I think Dorothy Postma's age is about thirteen. Did I guess right? Will close with a riddle: Spell blind pig with two letters. With love to Uncle Ned and all the cousins.—Gladys Carlson, Box 49, Omena, Michigan.

—I should say it has been a long time since you wrote to the Children's Hour. Aren't you ashamed to neglect us so long? If I could find the time to get away from my office I would come up and help you pick and eat cherries. Do you like cherry pie or cherry pudding? I do, very much.

Dear Uncle Ned:—This is the first time I have ever written to you. We are having pretty warm weather out here. I live on a farm of 117 acres. We have five cows, one calf, three horses and fifty chickens. For pets I have a dog, two rabbits, and ten little ones and one kitten. I am 12 years old and weigh 113 pounds. I have brown hair and eyes and am five feet and three inches tall. I am in the seventh grade at school. We have two lakes on our farm. The largest lake is Potter. It is a summer resort. The other lake is marshy and has no bottom. It has a high bank around it which is very pleasant. It has a nice woods about 30 feet from it. Potter lake is about 4 rods from it. We have geese that live on the lake most of the time. The one that guesses this riddle will receive a card from me. As round as an apple as deep as a cup and all the king's horses can't pull it up. Your friend,—Miss Doris Margaret Scott, R. F. D. No. 3, Davison, Michigan, Box 144.

—We too are having warm weather. I do not like it to be too warm, do you?

Dear Uncle Ned:—I would like to join your merry circle. My father has taken the M. B. F. for several years. I live on an 80-acre farm one mile from town on the stone road. I am 14 years old. My birthday is the 17th of May. I am in the seventh grade. I have bobbed hair, blue eyes and am not very fleshy. I have three sisters and three brothers. We have 7 cows, 6 calves, 50 chickens, 8 little pigs, 1 old pig and two horses. For pets I have a cat and a dog. Will close for this time. Will some of the nieces and nephews write to me. I will end with a few riddles. When may a pocket be empty and yet have something in it? What must you add to nine to make it six?—Etta Bannister, Box 404, Hale, Michigan.

Dear Uncle Ned:—I did not know what to do tonight so I thought I would write my first letter to the M. B. F. May I join the merry circle? I have been reading the Children's Hour and like it very much. Will you please have the drawing contest? I just love to draw and I will send some of my drawings when we have the contest.—Helen Herbert, Box 33, Port Austin, Michigan.

—Watch our page and read it each week so you will not miss the announcement of our drawing contest. I expect to announce it shortly.

Dear Uncle Ned:—As I am feeling sort of lonesome I happened to think of you and thought that maybe if I'd write you a letter it may get printed and bring me some correspondence. I sure am yearning for correspondence, as I am a lover of writing. I sure would answer every letter sent to me. I am 16 years old and will be 17 on the 28th of next month. I am 5 feet 4½ inches tall and weigh about 180 pounds. Altho I am stout, I sure am full of fun. I am here in Rose City taking my vacation, but my home town is Bay City. I have written you before and I did appreciate it very much as my letter was printed. I have no mother but my dad was married last month so I got a step-mother now, but I cannot get used to calling her mother as it seems impossible for me to do so. I would like to have correspondence from nieces and nephews of the age of 16 or over. Your niece.—Miss Meta Miller, 205 N. Linn St., Bay City, Michigan.

—I can not tell you how sorry I am that your mother is no longer on earth. I do not wonder that you are lonesome but hope that in time you will learn to love your step-mother enough to call her mother. Write when ever you feel like it.

Dear Uncle Ned:—I saw my letter in print and am delighted to know you have permitted me to join your merry circle. It is rather warm out here. The sun is shining bright and the green grass and the beautfiul trees are a wonderful sight to look at. Uncle Ned I love the birds and the flowers and everything thats beautiful. In the evening I love to sit out in the swing and hear the whip-poor-will singing. Uncle Ned I, saw in the last issue of your magazine that a girl from Cadillac, Michigan by the name of Trecel Sweeney, writing you that I wrote a very interesting letter. I want to thank her for her compliment. I will close with a few riddles: What is the longest and yet the shortest thing in the world; the swiftest and the most slow; the most divisible and the most extended; the least valued, and the most regretted; without which nothing can be done, which devours everything however small and yet gives life and spirit to all things however great.—Stella Violet Nowak, Temperance, Michigan.

Uncle Rube Spinach Says:

THE "GLORIOUS FOURTH"

AN' TODAY is the Fourth of July! Everybody seems to be havin' a high ol' time, noise is everywhere an' firecrackers an' such is more so. An' what is it all about? How many of our folks know why we celebrate this one day more'n any other day?

Well, there's a whole lot'a folks, mebbe they don't know why we celebrate but they know we do an' they are the ones what sell fireworks. Oh no, they aint the only ones either. Our big politicians know its a great day with our folks an' they scramble out an' make a few speeches, many speeches if I may be allowed to say so, an' they try to tell us why we have saved the country, by jest puttin' them in office.

An' now comes Mr. Couzens, our latest senator, or one of the latest, appointed to fill the vacancy of a man elected—well mebbe without without qualifications 'ceptin' money Anyway Senator Couzens sez "The Volstead Act is ridiculous an' the folks that passed that law are back numbers," or words to that effect.

Well now we've always kinder admired Mr. Couzens. As manager of the Ford business, mayor of Detroit an' a few little things like that, Mr. Couzens was quite a feller. Mebbe he did as well at that as anybody could do. But when our Senator Couzens sez 'at 5 per cent beer aint an intoxicatin' drink, when he sez any drink containin' 5 per cent alcohol aint intoxicatin', then it goes to show 'at our new senator aint never had much experience with 5 per cent beer or else he's tryin' to hoodwink somebody. Mebbe the big beer interests have whispered to our new senator, mebbe he likes 5 per cent beer. No matter which way he thinks, no matter what he does or is, good friends, any law that permits 5 per cent beer, light wines or any other 5 per cent stuff, is jest an openin' wedge for all the drinks 'at we've ever had.

Mr. Volstead might'a been out of his head a little when he got the law passed shuttin' out all the stuff men an' women had been usin'—mebbe he wuz a little wild at that time, but good folks, there aint hardly a man, woman or child today but'll say its a good law. Oh, excuse me, there are a lot of 'em 'at sez it aint, but what an' who are they? Lickker sellers—well they don't like the law so much—drunkards, old hard shells 'at thought 'at they had to have it—oh my sakes they like the law alright; most of 'em are now workin' an' savin' money. Who then aside from the new senator wants 5 per cent beer an' any other 5 per cent stuff? Oh hol'on a minute an' I'll tell you. The big beer interests, an' that includes all likker interests; the casual drinkers, an' that includes many of our best church members; the bum who doesn't care what happens if he can get his hootch; an' the one who would like the privilege of sellin' all these 5 per cent drinks, he could add a little 40, 60 or 90 per cent stuff an' nobody would be any the wiser.

Mr. Couzens may be an awful nice man—he probably is—but if he ever tries the 5 per cent stunt in Congress—well, Mr. Couzens can be a private cit'zen as nicely as anybody else. Cordially yours,—UNCLE RUBE.

Crops Benefited by Recent Rains

OUR county correspondents write us that the Michigan hay crop is about all taken care of and the crop averages from light to good, with a fair average for the state. The wheat harvest is under way and a fairly good yield is expected. Corn and oats are looking good. Beans, taking the state as a whole, look fine while the stand of potatoes averages fair. Rains during the last three weeks have helped crops in most sections according to reports. The following reports were sent to us by our correspondents under date of July 13th:

OGEMAW—Farmers have no potatoes or corn to sell. Hay light, wheat not good but other crops looking fine.—James Anderson.

CALHOUN—Ideal harvest weather. Plenty of rain. Crops looking good. Wheat half cut, lots of straw but going to be a disappointing yield and quality. Lots of short oats.—Geo. Rundle.

CLINTON—Hay short crop. Large acreage of beans. Oats short, 70% of average crop. Corn acreage same as last year, stand is fairly good. Wheat acreage is smaller than last year, crop is about 70% of normal.—Theo. Bengel.

LAPEER—Crops as a rule are looking good. Wheat is fair, corn and beans are looking fine, oats are short but are growing good now. Has been too dry until now. Haying is delayed on account of rain.—Callan Bryant.

GRAND TRAVERSE—Crops look good considering late planting. Grasshoppers are bad in some localities. We need more rain. Small fruit looks fair. Quite a lot of hay and it is a fair crop.—Chas. Button.

TUSCOLA—Hay very short and light crop. Weather bad to put up. Beans and corn looking good considering how late they were planted. Oats are poor, too dry forepart of the spring. Wheat and rye good.—Robt. B. Chambers.

BRANCH—Corn is looking fine. Oats good. Hay poor to fair. Wheat good. Rye fair. Fruit good. Alfalfa mostly good. Crops in general are fairly good. We have had some good rains lately. It was quite dry before the 4th. Some road work being done.—W. W. Cook.

MISSAUKEE—Haying nicely begun, good weather and good crop. Most corn looking good. Potatoes small, a poor stand and plenty of bugs. Oats very poor. Fruit falling, caused by the hot dry weather. Pastures are drying up.—H. E. Nowlin.

INGHAM—All crops coming fine. The wheat harvest is going on where ground is not too soft. The heavy rains softened the ground many places too much for binder. Corn and oats good. Beans fine, large acreage. Hay crop fair. Work of haying, harvesting and cultivating all coming together and help scarce and high priced.—C. I. Miller.

ST. CLAIR—Hay on old meadows light, new good. Wheat is a heavy crop and filling fine, about ready to cut. Oats only fair on account of weather being dry and cold the forepart of season. Corn is looking fine, will be a good crop. Beans are looking good but not far enough along to say much about. Sugar beets are a little late but growing.—Isaac Justin.

MONTCALM—The weather is quite dry, with hot days and cool nights. Farmers very busy, some planting, others cultivating and others working in hay. Grain almost ready to harvest. The crop will be light in most places. Cultivated crops looking none too well on account of late spring. Plenty of most kinds of fruit.—Geo. B. Wilson.

SANILAC—Crops are looking very good in most places. Farmers are busy haying. The new seeding from 1922 is a fair crop, older meadows are not so good. The wheat on most farms is looking very good. Beans and corn on the low land are looking very good. Have had a few local showers. In some localities there seems to be just enough rain and not enough in others.—Aaron Bartley.

JACKSON—Weather warm. Crops have been helped by last Saturday's rain. farmers are finishing up haying. Hay crop is very light and many farmers will dispose of their young stock before winter. No help. Farmers are harvesting their wheat which is fair to good crop this year. Oats light on account of dry weather. Big crops of huckle berries. Apples and pears scattered.—G. S.

ST. JOSEPH—Crops are looking fine. Plenty of rain to make them so. Hay is about all made and was very light. Wheat is a fairly good crop and rye good. Potatoes are looking fine so far. Corn is as high as the fences. Some loss of stock from lightning. Plenty of work for all who want to work, only the farmer has to go it alone on account of low prices for his produce.—W. Wyant.

CRAWFORD—Rains have been enjoyed here and there throughout the county and were needed too. Everyone is working at hay and the crop is fair. Potatoes seem to be in good condition but corn is not what it should be for this time of year.—A. H.

OAKLAND—Having lots of rain lately. Haying going slow and a very light crop excepting alfalfa which is good. Wheat is about ready to cut and there is some very good wheat. Oats will be short but are improving. Corn is doing well. There is about the usual amount planted. The same with potatoes, which are coming up and look like a good stand. No beans planted in this locality. Pastures are poor.—E. Foster.

BAY (C)—Farmers have their hay crop secured, which is a good crop this year. Wheat harvest has begun. Cherry picking is at full blast now. Growers are getting 5 and 6 cents per pound. Corn is very good, also beans. In many localities the stand of late potatoes is light owing to excessive hot and dry weather at planting time.—Fred Andrews.

BAY (S. E.)—The weather is fine now. We had some nice rains. Caught some hay but other crops benefited. All crops have gained wonderfully during the last month. Haying going on. Wheat and barley nearly ripe. Wheat looking fine. All farmers are working short handed and have more work than they can do. Can not get help at any price. Road building taking all extra labor.—J. C. Armour.

BERRIEN—Weather fine with plenty of rain. Hay about one-half a crop. Corn looking good. Fruit farmers harvesting an enormous raspberry crop. The strawberry crop scarcely paid expenses and the raspberry crop promises to do the same. Oats are short. Grapes promise a good yield.—O. C. Y.

(Editor's Note—We would be pleased to hear from any of our readers who would care to send us a report every two weeks of conditions in their territory. Let us hear from you and we will send you report cards by return mail.)

THE HUNTED WOMAN

(Continued from Page 11)

"I've often wondered why you ran away with Jane," he said. "I know what threatened her—a thing worse than death. But why did you run? Why didn't you stay and fight?"

A low growl rumbled in MacDonald's beard.

"Johnny, Johnny, if I only ha' could!" he groaned. "There was five of them left when I ran into the cabin an' barricaded myself there with Jane. I stuck my gun out of the window an' they was afraid to rush the cabin. They was afraid, Johnny, all that afternoon—an' I didn't have a cartridge left to fire! That's why we went just as soon as we could crawl out in the dark. I knew they'd come that night. I might ha' killed one or two hand to hand, for I was big an' strong in them days, Johnny, but I knew I couldn't beat 'em all. So we went."

"After all, death isn't so very terrible," said Joanne softly, and she was riding so close that for a moment she laid one of her warm hands on Donald MacDonald's.

"No, it's sometimes—wunnerful—an' beautiful," replied Donald, a little brokenly, and with that he rode ahead, and Joanne and Aldous waited until the pack-horses had passed them.

"He's going to see that all is clear at the summit," explained Aldous.

They seemed to be riding now right into the face of that mysterious rumble and roar of the mountains. It was an hour before they all stood together at the top of the break, and here MacDonald swung sharply to the right, and came soon to the rock-strewn bed of a dried-up stream that in ages past had been a wide and rushing torrent. Steadily, as they progressed down this, the rumble and roar grew nearer. It seemed that it was almost under their feet, when again MacDonald turned, and a quarter of an hour later they found themselves at the edge of a small plain and now all about them were cold and towering mountains that shut out the sun; a hundred yards to their right was a great dark cleft in the floor of the plain, and up out of this came the rumble and roar that was like the sullen anger of monster beasts imprisoned deep down in the bowels of the earth.

MacDonald got off his horse, and Aldous and Joanne rode up to him. In the old man's face was a look of joy and triumph.

"It weren't so far as I thought it was, Johnny!" he cried. "Oh, it must ha' been a turrible night—a turrible night when Jane an' I come this way! It took us twenty hours, Johnny!"

"We are near the cavern?" breathed Joanne.

(Continued in August 4th issue)

Sunday School Teacher: "Ernest, who defeated the Philistines?"

Ernest (roused from day-dreams): "Dunno. I don't follow none o' them bush league teams."
—The Passing Show (London).

MORE PROFITS

The promotion of agriculture, which means certain increase in profits for the farmer, is the big idea back of the Michigan State Fair.

This great exposition is the clearing house of agricultural knowledge. Here the state and federal governments, agricultural institutions, practical farmers display their latest discoveries.

The great yearly growth of the fair during its 74 years of life is powerful testimony to its value as an educational institution.

$50,000 Free Shows!

This year will see probably the greatest program of entertainment ever witnessed.

A $50,000 free attraction scheduled is one of the "eye-openers."

Auto races and horse races. The world's greatest trotter, Peter Manning.

Two stupendous fireworks spectacles, "The Burning of Smryna" and "India." Educational and inspiring!

Half a dozen groups of the most skilled and daring acrobats.

Balloonists will race from the clouds in parachutes. Every dive a thrill.

A girl will ride a horse in a daring 40-foot dive.

Three famous bands and many other big acts.

Many Other Features!

Police dogs running down "criminals" will be one of the startling features of the all-breed dog show.

A great Better Babies Contest, in which every baby will be given a thorough medical examination.

The lecturers at the art exhibit will tell you how to make your home and yard beautiful. There you will see how artists work from living models in their studios.

Twenty-two great shows on the "Midway." Clean, attractive and packed full of fun.

And scores of other activities any one of which is worth coming many miles to see.

INWOOD BROS., Romeo, Mich.

DAIRY and LIVESTOCK

DAIRY INDUSTRY SHOWS RAPID GROWTH

FROM the time the first cows were brought to this country by the early settlers, there has been a steady , and at times a rapid, increase in the dairy business, until there are now more than 30,000,000 dairy cattle in the United States, producing indispensable food products which form a large and important part of the diet of our entire population and for which consumers pay more than $[illegible],000,000,000 a year, or about $30 per person. The vital importance of the dairy industry and its relation to the prosperity and health of the American people have been reviewed by the United States Department of Agriculture in the 1922 Yearbook.

While there were more beef cattle in the United States in 1920 than dairy cattle, the latter led in value all classes of livestock; and the farm value of dairy products in 1921 represented 45.1 per cent of the total value of all animal products. Dairy production is important for a number of reasons, but chiefly because of its favorable relation to the production of crops, the maintenance of soil fertility, and the seasonal distribution of labor; because of its large total income from the sale of products; because of its stabilizing effect on agriculture in general; because of the large part of our meat that is supplied as a by-product of dairying; and because milk and its products are so important in the proper nourishment of our people.

Dairy products form an important part of the diet of the American people, and records show a noticeable increase in consumption during recent years. The per capita consumption of milk alone in the United States has increased from 42 gallons in 1914 to 49 gallons in 1921. Dietary studies made by the department show that of the total amount of money paid for food, a little more than one-fifth—or, to be exact, 20.7 per cent—was spent for dairy products. Of this nearly one-third was for butter, and the remainder principally for milk, with a little for cream and cheese.

The consumption of butter has been increasing. For the year 1921 the consumption was 16.1 pounds per capita, which is a 10 per cent increase over the previous year.

Compared with Europeans, the American people are small consumers of cheese, the amount used per person being approximately 3.8 pounds, while in some European countries the consumption is 4 or 5 times this amount. Increasing the consumption of cheese offers large opportunities for development of the dairy industry. If the people of this country would consume as much cheese per capita as the Dane, the Englishman, the Hollander, the German, or the Frenchman, or half as much as the Swiss, it would create a market for 9,000,000,000 pounds of milk more than is required at the present time.

In discussing the development of the dairy industry in the United States it is shown that there has been a steady increase in the total production and value of dairy products, the number of dairy cows has not kept pace with the growth in population. In 1850, there were 275 cows per 1,000 population, while in 1920 there were only 215 per 1,000 persons.

The period of 20 years from 1870 to 1890, however, was one of rapid development in the dairy industry in the United States. Scientific methods were applied to all branches of dairying. The use of the thermometer became general. The centrifugal separator was invented in Sweden and brought to the United States in 1882. Large numbers of dairy organizations were started. The Babcock test for measuring the quantity of fat in milk was given to the world in 1890. Silos were first constructed in 1873 in the United States, and refrigerator cars were first used in 1875.

The average number of dairy cows per farm varies greatly. Wisconsin has 13.6 per farm, Vermont 11.3 per farm, followed by New York with 8.9, Minnesota 8.3, California and South Dakota each with 7.6. The average decreases to 1.6 cows per farm in South Carolina.

The efficient dairy herd must be composed of high-producing cows. A study of yearly butterfat and income records of 18,014 cow-testing association cows showed rapid and almost uniform increase in income over cost of feed as production increased. These records showed that the cows giving 100 pounds of butterfat a year produced an average income for the farmers above feed cost of about $10; at 200 pounds of butterfat a year the income above feed cost averaged about $42; at 300 pounds a year the income averaged about $72; and at 400 pounds of butterfat the average income over cost of feed was about $106 a year per cow.

From these records and others the conclusion drawn is that in the economical production of milk and butterfat, the largest gains are to be obtained through the culling out of those cows that produce less than 4,000 pounds of milk containing less than 160 pounds of butterfat. This figure has been estimated as the yearly production of the average dairy cow in this country. Selection, feeding, and breeding could double this low average. With double the present average production, fewer cows would furnish the present supply of dairy products at much less cost.

In spite of the general recognition of the value of purebred dairy cattle and their efficiency in breeding up a herd for greater production, they constitute only 2.92 per cent of the dairy cattle reported on farms in 1920. These purebred cattle are widely distributed over the United States, there being very few states that do not have representatives of all five of the breeds. There would be a tremendous economic gain to the dairy industry if more of our grade cattle could be replaced by purebreds. The scrub and grade cattle are, however, being gradually though slowly improved by the use of purebred bulls.

In 1921 there were less than 80,000 purebred bull calves registered by the breed associations. But there were probably as many more born that were not registered for various reasons, many of which were slaughtered because their breeders were not able to market them profitably. This is because the average farmer is not yet convinced of the advantages to be derived from the use of purebred sires. If every purebred bull calf born in this country were raised, it would take a three or four years' crop of calves to replace the 600,000 scrub and grade bulls now being used in dairy herds.

HOLSTEIN TOURS ROUNDING INTO SHAPE

COUNTY Agents in the twenty-five Holstein Counties in which the tours are to be staged, as mentioned in a recent issue, are arranging for the line of march and for the noon meetings.

Roy W. Weinberg, County Agent of Hillsdale, was the first man to send in his schedule. He writes:

"For the combined Holstein Breeders and Calf Club Tour to be held July 31st, Mr. Matthias and I have decided on five places to call, as follows:

"8:30 a. m., Leave Court House, Hillsdale; 9:30 a. m., B. S. McFate, 1 mile south, 2 west of Prattville; 10:30 a. m., Eli Bennett & Son, East of Prattville; 11:30 a. m., Picnic Dinner on Bailey Lawn, Elisha Bailey, Pittsford. Talk by Earl Cooper, Calf Club Leader for National Holstein Ass'n., D. D. Aitken, Ex-Pres. National Holstein Association. 2:15 p. m., Wm. McCully, East Bason St.; 3:15 p. m., Glenn Benedict."

Eaton County, R. W. Tenny, Co. Agent, bobs up next with a program for his day—July 30th. Tenny writes as follows: "The plan, tentatively outlined in my own mind, would start us from Charlotte about 8 o'clock in the morning and hit Claude Reeder's about 7 miles southwest of Charlotte; thence to Noble & Sons, east of Eaton Rapids; thence to Mr. C. E. Burk's, north of Eaton Rapids; thence to Balduf's and Warren's, north of Diamondale; thence to the picnic ground at Grand Ledge.

After the stuffing contest and the hot air wind and dance we can traverse to Pardee's west of the Ledge; thence to J. T. Chaplin's, southwest of the Ledge; thence to C. I. Brunger's and John Strang's, south of the Ledge and wind up at Loucks & Sons on the Lansing Road just out of Charlotte."

The old bus will surely have to be hitting on all four to follow Tenny on a race such as he has planned!

The dates for the tours arranged by the State Holstein Association cooperating with the Dairy Department of M. A. C., and the County Agents and local Holstein breeders in the several counties, are as follows:

July 23, Macomb; July 24, Washtenaw; July 25, Wayne; July 26, Monroe; July 28, Ingham.

July 30, Eaton; July 31, Hillsdale;; Aug. 1, Lenawee; Aug. 2, Oakland; Aug. 3, Livingston.

July 31, Jackson; Aug. 1, Barry; Aug. 2, Calhoun; Aug. 3, Allegan; Aug. 4, Ottawa.

Aug. 7, Gratiot; Aug 8, Saginaw; Aug 9, Tuscola; Aug. 10, Sanilac.

Aug. 7, Shiawassee; Aug. 9, Clinton; Aug. 9, Ionia; Aug. 10, Kent; Aug. 11, Genesee—Grand Round-up at farm of D. D. Aitken, Ex-Pres. National Hol. Ass'n.

SPECIAL SWINE REPORT

AN increase of nine tenths of one per cent in number of pigs saved from farrowings in the six months ended June 1, 1923, as compared with the number saved during the same period last year, is indicated in reports gathered by rural mail carriers of the Post Office Department for the United States Department of Agriculture, from 140,000 hog raisers in all parts of the country.

For fall pigs, hog raisers have expressed an intention to breed 28.3 per cent more sows than farrowed last fall. For the corn belt states the increase is indicated as 25.5 per cent. The Department points out, however, that last year the actual farrowings ran less than the intentions to breed. Producers in the corn belt states last June (1922) expressed an intention to increase fall breeding 49.3 per cent, but the actual increase in farrowings was 27.8 per cent. In December, they expressed an intention to breed 15.6 per cent more sows for spring pigs, but the actual increase in sows farrowing in the spring was 8 per cent. For the United States the December intention was 13.1 per cent, but the actual farrowings were 3.9 per cent greater.

The present survey shows a probable continuance this year of the tendency to increase fall breeding proportionately more than spring breeding. This tendency has been evidenced both by the market receipts and farm reports for the past two years, especially in the corn belt, and is making for a more uniform monthly distribution of market receipts throughout the year.

NATIONAL MILK WEEK OR DAIRY WEEK

WHY not a National Milk Week or Dairy Week? It's not a new idea by any means and enough has been done in some localities to show that it is possible to interest the public generally in dairy products. In St. Paul the fourth Thursday of every month is that city's official Dairy Day, and although it is as yet a new venture, it has been pronounced a success. The St. Paul newspapers carry front page material featuring the food value of dairy products and boosting dairying generally. One paper conducts a recipe contest. The hotels and restaurants draw attraction to the significance of the day on their menu cards and serve special dairy dishes. The large department stores cooperate by carrying a reference to Dairy Day in their advertisements. One of their window displays featured the preparation of dairy dishes. The crowd that gathered on one occasion to see a domestic science expert pull off a demonstration blocked the traffic several times during the day.

A National Dairy Week beginning on the opening of the National Dairy Exposition, wherever it might be held, has been offered as a suggestion. During this week, individual cities could celebrate their local Dairy Days in a manner to suit their own local interests. The effect of such a National Dairy Week would be to concentrate the public mind upon the food value of milk and to bring appreciation of a great source of our national wealth. The public would be benefited and the dairy industry would profit from its enterprise.

This year the Exposition will be held at Syracuse, New York, from October 5th to 13th. Why not make the week of October 8th, National Dairy Week, and then invoke every means and method to acquaint the public with the value of milk and its products and pay homage to the dairy cow in a manner fitting her high station in our scheme of life?

While the nation would be celebrating its National Dairy Week, the dairy cow, unperturbed, would chew her cud and deliver her usual output of milk which last year averaged 270,000,000 lbs. per day.

MICHIGAN JERSEY COW WINS A. J. C. C. SILVER MEDAL

PANSY'S Bogis Lassie 525188 owned by J. K. Hatfield, Remus, Michigan, has broken into the list of Silver Medal winners. This Jersey started test at 2 years 8 months of age and in one year produced 10132 lbs. of milk and 600.29 lbs. of butter fat exceeding the required yield for a medal by a wide margin. Her sire, Pansy's Pogis of Riverside 174549 is a grandson of the great Gold and Silver Medal bull, Pogis 99th of Hood Farm 94502; and her dam is Hero's Buttercup 508859.

HEIFERS UNDER SIZE

I purchased three Jersey heifers at a registered Jersey sale. They are now twenty months old and they have just freshened. When would be the best time to have them bred back? These heifers are too small to suit me and how can I get a better growth in body before they freshen again and not injuring them as cows?—R. P. F., Vicksburg, Mich.

—I would suggest that these heifers be allowed to milk a full twelve months with their first calf and then breed them so that they will calve about 15 months from the date they freshened the last time. If they have just freshened, this would mean that they be bred so as to have their calves a year from this fall. In this way they will have an opportunity to grow, but after they have been stunted as calves you can never expect them to get the full growth they would have had otherwise.—O. E. Reed, Professor of Dairy Husbandry, M. A. C.

MICHIGAN CROPS

CROP FOR BURNED OVER LAND

I have some land that was burned over last fall. Will it raise corn or buckwheat? Would it be best to plow it or disk? I put five acres in oats and it is coming up nice now. I also sowed some clover seed and it is up.—J. W. B., Homer, Mich.

—You do not state whether your burned over soil is sand, sandy loam, or muck, consequently it is impossible to give a very definate answer to your question. If muck, it probably would not pay to plow for corn. If the soil is low in fertility buckwheat would be more likely to prove successful.—C. R. Megee, Farm Crops Dept., M. A. C.

HOW 40 OHIO FARMERS RAISED 100 BUSHELS OF CORN PER ACRE

EXTENSION specialists at Ohio State University have compiled the experience of the 40 Ohio farmers who in the past six years have succeeded in growing 100 or more bushels of corn to the acre on 10 acres.

The tabulation shows that of all those who have made the "Hundred Bushel Club", 68 per cent have planted corn following clover; 48 per cent have manured the land; 65 per cent have used mixed fertilizer; 48 per cent have used acid phosphate; and 35 per cent have used acid phosphate and manure.

55 per cent of the successful contestants planted their corn in checks, and 45 per cent in hills; 65 per cent planted yellow corn, and 35 per cent planted white varieties.

"Rather sad about that friend of yours who was killed in an auto acciddent."

"Very. He allowed his life insurance policy to lapse in order to have enough money to buy the car."—Judge.

TOM LYNCH AND WIFE BOTH KILLED!

Only last month, Thomas Lynch, a farmer, and his wife, Mary Lynch, were riding to town in their automobile, when it was struck by a train. Both father and mother were killed and several children injured. Both Mr. and Mrs. Lynch had North American Accident Policies for which they had paid only 75c each! Their children received $1,000 in cash from each policy or $2,000 to keep the wolf from the door!

We Want Every Business Farmer Reader To Be Insured!

THE Business Farmer has made is possible for every single reader to carry $1,000 Accident Insurance for the trifling sum of 75c per year!

This is the total cost of the insurance policy here described and it is issued by the well-known North American Accident Insurance Company of Chicago.

There are no other costs if you are a paid-in-advance subscriber to The Business Farmer and you can secure a policy for every member of the family providing one member is a subscriber, at the same cost, 75c for each policy.

This is YOUR opportunity to do what you have been putting off so long.

There is no red tape—no medical examination—just sign the Application Blank in the corner of this page and send it in with the required amount—Seventy-Five Cents (75c) for each policy.

Just one requirement—ONE MEMBER OF YOUR FAMILY MUST BE A PAID-UP SUBSCRIBER TO JULY, 1924, or longer—and you must enclose the address label from this or any recent copy of The Business Farmer to prove it.

If your subscription is not paid-up to July, 1924, or longer, add SIXTY CENTS for a renewal to July, 1924, and send 75c for each policy desired.

OLD AS WELL AS NEW SUBSCRIBERS MAY SECURE THIS POLICY!

Any or all members of a family from 16 to 70 years of age may secure this policy, providing they live at one address, at which one member of the family is a paid-up subscriber to The Michigan Business Farmer.

What the Policy Gives You

It is only because The Business Farmer has contracted for thousands of these policies that we are able to offer them at this low price. It is a genuine travel accident policy that gives you the very protection you need. It may pay you or your family hundreds of dollars, it costs but 75c for a whole year's protection. Under the terms and conditions outlined in this policy it pays for death or injury of the insured sustained by the wrecking or disablement of any public or private vehicle while riding as a free or fare paying passenger.

FOR THE LOSS OF LIFE	$1,000.00

☛ In consideration of my subscription I may also wish to secure............... additional $1,000.00 Travel Accident Policies for other members of my immediate family, send necessary Order and Registration forms with my policy.

CHANGING TIMES

By JOHN T. BARTLETT

THE CONDITION OF COUNTRY NEIGHBORLINESS

BUT is it so? We hear this assertion wherever we go—"Neighbors are not what they used to be." In olden times—not so very old, either—neighbors were neighbors. They rejoiced with one another in prosperity, and gave sympathy and support to one another in misfortune. There was always time for a pleasant social evening together. Every farmer "changed work" with his neighbor.

And the community gatherings—the barnraisings—the cornhuskings—the old-time country fair. Ah! those were the happy days.

Yes, those were happy days. But what of ours today?

There is one great fundamental difference between olden times and 1923 times. That is transportation. First, it was the steam locomotive. Now, it is the automobile.

When transportation facilities were much less favorable than they are now, communities were thrown together within themselves much more. Each neighborhood was a world unto itself. There was no escape. Contact was close by compulsion — whether one liked the contact or not. And since human nature was human nature, then as now, occasionally, one can't help but surmise, this contact was not wholly pleasant or desirable in its consequences. Farm feuds such as were common in the old days are far less common today.

"The way to have good neighbors is to be one." There is no place anywhere which less forgets or better remembers that great truism than the country.

Contact in the country is still close enough to lend itself to the development of real neighborliness. And yet there is always, today, some escape from the little world. The married daughter upstate is seen several times a year; in olden times she might have been seen only once in several years. The stimulating, rejuvenating influence of contact with new people, new scenes, is easily obtained.

Coming back from an auto trip away, who says it isn't easier rather than harder to be a good neighbor?

SPENDING MONEY TO MAKE MONEY

WE can see old Grandmother now, thrifty, shrewd 85-year-old, as she claimed, "I knew it! I knew Ham Brown would end in debt and failure." And the rest of us didn't press her for her explanation. We knew what it was. Ham Brown had adopted progressive modern dairying practices. He was the first in the township to "grain." As events worked out, poor management in other things had put Ham down and out.

Grandmother didn't believe in graining. She was a type, some of whom, among the very old, are still found in farming communities. Plenty of good well-cured hay and fodder—yes. Grain? Only when you are fattening for slaughter.

It is hard for the present generation to realize the widespread farm prejudice against "graining" for milk which existed for years after that practice was first introduced. Many of the thriftiest and the shrewdest held out against it. And there was a reason for it—an inground farm trait which today still holds a great many farmers back.

Feeding grain to cattle for milk was a form of spending money to make money. That was why it came hard—it was spending. The race of farmers had learned this secret of accumulation: Do without. Spend as little as possible. Save as much as you can.

To open up and spend freely seemed in conflict with a fundamental law of thrift. True, there was a chance of greater profit, but why abandon a sure thing for a chance?

Economic conditions in recent years have changed. The man who has made the most money is the man who has spent money to make money. He has been thrifty, too—careful, cautious, in his spending. But he has been willing to spend, realizing what far greater profit possibilities there were in the economic instruments and agencies which money could buy than in the money put in savings bank at 4 per cent.

One of these days we hope the agricultural colleges will introduce a course in "farm spending." Successful spending has a heap to do with successful farming!

THE EXPERIENCE POOL

Bring your everyday problems in and get the experience of other farmers. Questions addressed to this department are published here and answered by you, our readers, who are graduates of the School of Hard Knocks and who have their diplomas from the College of Experience. If you don't want our editor's advice or an expert's advice, but just plain, everyday business farmers' advice, send in your question here. We will publish one each week. If you can answer the other fellow's question, please do so, he may answer one of yours some day! Address Experience Pool, care The Business Farmer, Mt. Clemens, Mich.

SLIME IN SEPARATOR

IN THE issue of June 23rd, W. S., of Morley, Mich., asks the cause of slime in the cream separator. Will you please pardon me if I answer that question for them as Professor Lucas did not answer just to my satisfaction. If W. S. is very careful to thoroughly rinse each part of the separator in plenty of warm (not hot) water before putting it in the water containing any soap or soap powder then wash and scald as usual, I know they will have no further trouble. I know from experience. The milk and the cows are perfectly all right as far as the slime is concerned. The trouble lies in the method of washing separator.—Mrs. L. S., Milford, Mich.

MUSINGS OF A PLAIN FARMER

THERE was only two families remained home June 21st in Sanilac county. The whole population turned out to the annual farm bureau picnic at Sanilac Park on the shores of Lake Huron.

I understand the members of these two unfortunate households were quarantined or they too would have been present.

Someone said there was eight t—housand people there but I happen to know they were wrong because I counted ten thousand cars and surely every car would have to have a driver.

But anyway we all set the table under the trees and satisfied the inner man.

I drank 2 quarts of cold tea flavored with lemon and ate ½ pound of picnic ham besides a liberal helping of salad, pie, cake, etc. I was short of breath all the afternoon.

Crowding, I believe the doctors call it.

The band played "Hail! Hail! The gang's all here!" And we gathered around the platform.

"Honest" Dare Knight made the address of welcome, and introduced the speakers.

County Agent J. D. Martin outlined the progress the bureau has made and said he was tickled to see us.

Then came Mr. Quame of the Federal Farm Loan Board of St. Paul. Mr. Quame gave a splendid talk and farmers should not miss an opportunity to hear him.

He was followed by our state representative, Philip O'Connell, who gave an instructive talk on taxation problems.

Then came our old standby, Dr. Mumford. The mosquitos swarmed on my back in mass formation, but I stayed and heard Doc out. I lost some blood but was well paid for it.

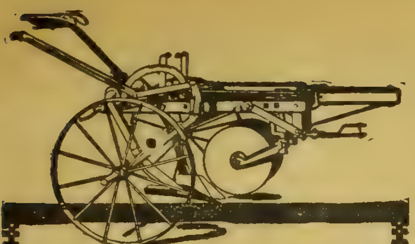
The picnic was a gala affair all through. Good speaking, lots of water,; plenty of heat and everything.

I would write more about it but that old cuss of a black cow is making the wire squeak. The other sixteen are waiting for her to make a road.

I'll have to chase them down the lane, and in the morning chase them back up again.—A. P. Ballard.

A TRIP ON A MERRY-GO-ROUND

A colored gentleman at a county fair had spent all his money on the merry-go-round. When he alighted from his last ride, his thrifty wife confronted him with: "Now you spent yoh money, niggah, wha's you bin?"—Everybody's.



Saves Money Harvesting Beets

Fewer beets are damaged, fewer are left in the field, the work is done much easier and quicker and it is easier to retain hired help when you use a

JOHN DEERE
No. 20 Riding Beet Lifter

Lifting blades, shaped so as not to cut or damage the beets, run along the row and lift the beets a short distance, leaving them upright and loose, so that they are easily handled for topping. The beets are protected so that frost does not damage them, and the sun does not dry them out. Remember—you sell beets by their weight.

Only two wheels—easy to operate—no heavy tongue truck to drag over the tops of the beets or to lift at ends of rows.

Pivoted-pole, foot dodge, detachable chilled points.

Sold by John Deere dealers.

FREE BOOK describes the No. 20 Beet Lifter. Write today, address John Deere, Moline, Ill., and ask for Booklet IC-6 33

DOCTOR DISCOVERS NEW RUPTURE REMEDY

Akron, Ohio—A prominent Ohio physician has discovered a wonderful new method, which is completely revolutionizing the treatment of rupture. This remedy is totally different from any other—no operation—no cutting, and nothing to "rub on." Anyone can use it without pain or danger and without losing an hour from work.

Relief is felt almost immediately and recovery is usually so rapid as to seem miraculous. Anyone who is ruptured may obtain full information regarding this remarkable discovery, by writing E. H. Scott, Hernia Specialist, Suite 605T, Scott Bldg., Akron, Ohio, who will send interesting booklet in plain sealed wrapper.

Poultry for Profit

MANY DISEASES IN FLOCK

I wish to ask a little advice about my hens. There are so many of them that the feathers come out or break off their backs. (They are Rhode Island Reds.) They seem to be healthy. A while ago two hens started dumping and they had diarrhea and their combs turned purple, and they died—one did and I killed the other one. Now there are several seem to be all right, combs red, but they get big bunches on their feet between their toes and they break and matter comes out, one is a little lame but the rest are not. I feed good corn and oats, lots of fresh water and they run out and get all the green stuff and gravel they want.—H. S., Caro, Mich.

—Evidently you have a number of unrelated symptoms in your poultry flock that are causing these various troubles. The loss of feathers over the back is a common occurrance in the breeding pen and may be due, either to the presence of male birds in the flock during the breeding season or to wearing out the feathers in gaining entrance to the nests. The former trouble, however, is very common. There is no cure for this complaint. The birds will usually moult and lose their feathers during the regular moulting period. The two birds that were lost undoubtedly died of apoplexy. This is a common trouble during the spring and summer, especially among large fat hens. The fact that the combs turned purple indicates a congested circulation, possibly due to the accumulation of internal fat. Severe culling and proper feeding is the only method to eliminate losses among this particular type of fowl. The appearance of so-called bunches on the feet and between the toes of the fowl is known as bumble foot. This is supposed to be due to hens flying from high roosts or in case of shallow coops, the hens jumping directly to the floor. Some hens are more sensitive in this respect and develop bumble foot very readily. These bunches should be lanced, releasing the pus after which any good disinfectant could be used. The trouble is not considered very serious and it will affect only one or two individuals.—E. C. Foreman, Associate Professor of Poultry Husbandry, M. A. C.

BABY CHICK MEN TO HOLD ANNUAL MEET IN WASHINGTON

THE eighth annual convention of the International Baby Chick Association will be held in Washington, D. C., Wednesday, Thursday, and Friday, August 8th, 9th, and 10th. The following is the tentative program as arranged. You will note especially that the dates have been changed from the 1st, 2d, and 3rd to the 8th, 9th, and 10th, in order to bring the International Baby Chick Association and the American Poultry Association conventions on adjoining weeks and thus facilitate the joint attendance of persons at both conventions.

On Tuesday, the day preceding the convention, there will be a meeting of the Welfare Committee and the Board of Directors, Wednesday will be devoted to the business of the convention, reports of important committees, Boards, and the President's address, and, in the evening, a most important address by Edward Brown of England on the subject "The Poultry Outlook in Europe." Thursday morning will be devoted to a discussion followed by addresses covering some of the most important problems which are facing the baby chick producer today. The afternoon will be given over to a business session followed by a banquet with informal discussion of the transportation problem at which representatives of the Post Office Department will be present. Friday afternoon one of the features will be a sail on the Potomac River and a trip to Mount Vernon. On Saturday special arrangements are being made with the Bureau of Animal Industry for a trip to the Government Poultry Farms at Beltsville.

FRUIT AND ORCHARD

Edited by FRANK D. WELLS

THE BERRY MENACE

THIS is the time to look for raspberry diseases. Afflicted plants can usually be detected without much difficulty and should be removed at once.

Orange rust is frequently found on wild raspberries and blackberries, from which it is transmitted to cultivated plants. It is easily recognized by the orange colored spores on the leaves and young growth. Plants thus affected are weakened and in a year or two die. There is no cure. The plants should be promptly dug out.

Mosaic and blue stem are apparently the same. The disease is not yet well understood, but it is evidently something that should receive prompt treatment. Affected plants should be cut out at once as the disease spreads rapidly. If a cone has dark leaves with light green spots it is to be looked upon with suspicion. If the leaves, or some of them, curl downward and are undersized, while the new cones are bluish near the base, the whole plant having a sickly look, it is best to dig it out.

Leaf curl is not confined to red raspberries, but is not frequent on others. The foliage is dark and, as may be inferred from the name, curly. It is causing much damage to Cuthberts and some other kinds, while Kings are not often afflicted. The fruit of diseased plants is small and crumbly.

There is no remedy for either the mosaic or the leaf curl, but much can be done to prevent the spread of the diseases by cutting out all weak and sickly plants as soon as noticed. Care should also be taken to secure stock from healthy cones when setting new fields.

Hundreds of acres of raspberries will be grubbed up this year, not only in Michigan but in Ohio and New York, where the growers have become considerably alarmed over the situation. An effort is being made to get rid of the trouble by the states mentioned, but at present it looks like trying to lock the door after the horse has been stolen.

TO MAKE TREES BEAR

I have a Siberian crabapple tree ten years old that has never had a blossom. Can you tell me what to do, if anything?—N. B., Grandville.

Try girdling. Select a limb, if you do not wish to risk the whole tree, remove a narrow ring of bark completely around it, as narrow as you can, but be sure that you go entirely through the bark, so as to sever the connection between the bark above and that below the ring. Do this between the latter part of June and the middle of July. The wound will close up and next year there should be fruit.

This treatment should induce bearing if anything will. Even a Spy has been made to bear at seven or eight years old, though ordinarily it does not produce fruit till ten or twelve. If you try this we shall be pleased to hear about it next year.

NO NOURISHMENT IN SUCKING GLASS

An old darky from Georgia was sent to a hospital in Charleston. One of the nurses put a thermometer in his mouth to take his temperature. Presently, when one of the doctors made his rounds, he asked,

"Well, Nathan, how do you feel?"

"I feel right tol'ble, boss."

"Have you had any nourishment?"

"Yassir."

"What did you have?"

"A lady done gimme a piece of glass ter suck boss."—Everybody's.

More and Cheaper Silage—Less Labor

THE "powerful compression" Automatic-feed of the 1923 Papec takes the place of an extra man at the feeding table. It handles heavy corn and crooked stalks. It will cut your silo-filling cost and enable you to fill with a smaller crew.

No more heaving and pushing—no more "riding the bundles" with the Papec—use your extra man to throw bundles from the wagon—you won't need him at the feed table.

You can buy this improved cutter, backed by the Papec guarantee, at a *price in line with farm products.* Simple design, tremendous production and specialized machinery makes this possible. Ask your dealer to quote you on the size you need.

MARKET FLASHES

MARKET SUMMARY

Bullish crop news checks price declines in wheat market. Corn wanted. Oats dull. Beans easy after recent declines. Butter and eggs in demand and receipts under requirements. Potatoes firm. Vegetable market active. Cattle market active. Hogs and sheep slump.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Diversify Your Crops

THIS is what many wise farmers are going to do more than ever, it being the part of prudence at a time when some farm products make so much betters returns than others. Some farmers say they intend to cease growing wheat, but this does not seem generally advisable, although lowering the wheat acreage might be a good thing. It is true, wheat has sunk to an unremunerative price, but perhaps next year prices will go much higher because of lowered acreage. Hogs have had an enormous fall in prices, and it does not pay out to feed the present high-priced corn after the pigs reach a moderate size, but men who have prospered for a long period of years by feeding hogs are not going out of business, even if they do breed fewer sows. A discouraging feature of the farming industry is found in the boom in wages paid to helpers, but this is met in part at least by reducing the acreage to what one man can handle, harvest time excepted, and then quite a number of farmers are increasing the yield per acre by using more manure and other fertilizers. Many men who paid extreme prices for farms during the inflated war period now regret doing so, and the farmer who owns clear of mortgage a nice little farm and raises a little of everthing is not going to fail. Most Michigan farmers do not need to be reminded that a small flock of sheep is a handy thing to own, the manure alone being a valuable article, and some cattle, with hogs following them in the pasture, are well worth owning. Of course, a silo is indispensible for stock feed, and the farmer's wife can be trusted to see that there are plenty of hens, while a vegetable garden, orchards and grape vines help out a lot. In the territory near Chicago more farmers than ever before are keeping hives of bees, and many of them cultivate flowers to encourage them to manufacture honey, while stands holding honey are offered for sale to the thousands of automobilists traveling through the farming districts.

Enlarged Corn Acreage

The Department of Agriculture in its July crop report states that the hay crop of the United States is only 94,000,000 tons, comparing with 113,000,000 tons raised last year. The corn acreage is placed at 103,310,000 acres, comparing with 102,428,000 acres in 1922; and while it is early to talk definitely about the crop, it estimates the yield at 2,877,000,000 bushels, which compares with 2,891,000,000 bushels harvested last year. A year ago the coming corn crop was estimated at 2,860,000,000 bushels. Corn was planted about two weeks later than usual in a large part of the corn belt but it has been shooting ahead rapidly under hot, forcing weather, with fair rainfalls. The report indicates a promise of plenty of all grains for home consumption, as well as for export, there being a promise of 5,249,000,000 bushels, or 6,000,000 bushels over the finals returns in 1922. The wheat crop is estimated at 821,000,000 bushels, or 41,000,000 bushels less than the final returns last year. The spring wheat crop of the four northwestern states is placed at 167,000,000 bushels, comparing with 220,000,000 bushels harvested last year. The oats crop is estimated at 1,284,000,000 bushels, or 83,000,000 bushels more than that of 1922. The rye crop is estimated at 69,000,000 bushels, being less than last year; while the barley crop is estimated at 198,000,000 bushels, or 12,000,000 bushels ahead of 1922. On the first of July the farmers of the United States held, it was estimated, 35,684,000 bushels of wheat, comparing with 32,359,000 bushels a year ago.

Wheat Sells Below $1

The July government crop report was a help in putting prices for wheat still lower, sales being made below $1, and there was not much confidence on the part of holders, with a much smaller export trade in wheat and flour of late than a year ago and no large buying of wheat by American millers. The United States visable wheat supply exceeds that of a year ago, but it is not extremely large, being about 25,000,000 bushels. In striking contrast, the visible corn stocks are down to the insignificant amount of about 3,000,000 bushels, comparing with 28,779,000 bushels a year ago, and so much corn has been converted into lard and meats that there is going to be a shortage in all probability before the growing crop can be harvested.

Obviously, corn is in a strong position, prices still tending upward and ruling far higher than in recent summers. Corn, as well as oats, is in much smaller export demand than a year ago, but considerable rye and barley are being shipped to European countries. The visable oat supply is down to about 7,000,000 bushels, comparing with 42,400,000 bushels a year earlier; while the visible rye supply aggregates 15,450,000 bushels, comparing with only 1,195,000 bushels a year ago. Speculative interest centers in wheat, and expansion in the wheat area of the principal exporting countries and the decreased buying power of western Europe have caused present low wheat prices, according to a report by a committee of economists and statisticians who had assembled at the invitation of Secretary of Commerce Wilson. It was recommended that American wheat growers take steps during the coming autumn to lower the winter wheat acreage, now about 14,000,000 acres above the pre-war average. It was pointed out that a corn shortage may develope by the summer of 1924, a heavy hog production having wiped out large corn surpluses. July wheat sells in the Chicago market at 99½ cents, comparing with $1.15½ a year ago; Juy corn at 84 cents, comparing with 62¾ cents last year; July oats at 38¾ cents, comparing with 34⅜ cents last year; and July rye at 63½ cents, comparing with 84¾ cents a year ago.

People Are Eating Beef

Much has been said of late about advocating eating more meats, but it would appear that beef is already a popular article of food, for large marketings of beef cattle are going into consumption rapidly, and prices for all good to prime beeves have held up surprisingly well, with reactions following weak spots when supplies happen to be unusually liberal. Cattle are selling at much higher prices than one and two years ago, and good profits are being returned to men who understand the game. Prices are far below the inflated war figures, but all fat cattle are selling far higher than in pre-war times, and turning back to 1913, it is recalled that common to prime steers were selling at $3.60 to $7.85, these prices comparing with $6.75 to $11.50 paid in the Chicago market recently. The bulk of the steers have been selling at $9 to $11, with good lots taken at $10.25 and upward and choice beeves at $11 and upward. Middling kinds sold at $9 and over, with sales down to $6.75 to $8.75 for common to fair light steers. The best yearlings were not any too numerous and sold at $11 to $11.25, with too large a percentage of poorly finished yearlings and light weight cattle. Limited numbers of inferior little steers sold at $5 to to $6.50. Butcher stock that graded well sold high, with not any over large supplies, heifers that graded well fetching $8.25 to $10.25, but less attractive heifers brought $5.50 to $7.50, while plenty of cows sold at $3.35 to $5.25. Canner and cutter cows brought $2 to $3.50, bulls $4 to $8 and calves $5 to $12,50, while there was a small trade in stockers and feeders at $4 to $8.25, mainly at $5.25 to $7.25. Last week's Chicago cattle receipts were much smaller than a year ago, and prices were well maintained. Large numbers of prime weighty steers brought $11.50. A year ago common to prime steers brought $6.80 to $10.60 and two years ago at $5.50 to $9.50.

Hogs Marketed Liberally

The hogs are in the country, and they are moving to market rapidly, owners not caring to hold after they are in fair marketable condition. At times, as happened in Fourth of July week, supplies are held back, but the following week saw a high record for a July day, the Chicago receipts for Monday mounting up to 86,714 hogs, causing a drop of about 40 cents per 100 pounds. Later in the week, however, large supplies were well taken at advanced prices. buyers of the better class of hogs, and their operations helped to steady prices. Many grassy sows were marketed, and prices have widened out materially, the bulk of the transactions covering a range of over $1. Prime light hogs sell highest, with the best heavy butchers about 20 cents below them. The domestic consumption of fresh pork products and cured meats and lard continues extremely large, but lard exports are running much short of a year ago. According to the recent government report, the spring pig crop was as large as last year in the corn belt, when the number exceeded all past records. Last week's Chicago hog receipts reached unusually large proportions, and at the close sales were made of common to prime grades at $5.70 to $7.55, comparing with $6.20 to $8.05 a week ago and $8 to $11.05 a year ago. At this time in 1915 hogs sold at $6.50 to $7.85. Receipts in twenty markets for the year aggregate 23,164,000 hogs, comparing with 18,092,000 a year ago and 18,718,000 two years ago.

Larger Lamb Supplies

The Chicago market has been receiving much larger supplies of lambs, free shipments being made from the ranges of Idaho and Washington, and much lower prices were paid than a short time ago or one and two years ago. Prices are far below war values, but they are far above pre-war times, the best lambs having brought $8.20 eight years ago and $7.55 twelve years ago. An active demand exists for feeders and breeding ewes, but very few are offered, and good lots sell high, Within a week lambs have sold off as much as $1 per 100 pounds, buyers paying $8.50 to $15.25, with feeder lambs at $12 to $13. Ewes sold at $1.50 to $7, wethers at $5 to $8, bucks at $2.50 to $3 and breeding ewes at $5.50 to $9.50. A year ago the best lambs sold at $13.85, two years ago at $11.75 eight years ago at $8.20 and twelve years ago at $7.55.

WHEAT

There is a growing belief that the recent decline in the wheat market has gone far enough, that the broadcasting of bearish conditions has been overdone, that there is no oversupply of wheat, at least, there will be no oversupply a little later, that the world can easily consume the world's supply. This feeling is growing and the number of bulls increasing although they have not yet enough courage to do any active buying. They say the returns are all in on the bear side of the market. The Armour Grain Co. has issued a circular showing only a normal carryover at the end of the wheat year and expressing a belief that prices are low enough.

Those who believe they see the end of the slump in wheat prices and probably an advance to a higher level are basing their faith on less favorable crop conditions. They think rust is doing some harm, that returns will be disappointing. Nebraska reports wheat not turning out well and it is scarcely to be expected that both winter and spring wheat will turn out first class crops. They believe export demand must improve because European supplies are low, and should the Ruhr trouble be settled it is believed demands will increase, although it is reported that Russia is ready to fill the needs of Germany at very low prices.

The market lacks speculation. Buyers who usually invest in wheat when it begins to move are finding some other employment for their money this season. Millers report a moderate increase in the domestic flour trade and there is active demand for all the feedingstuffs the mills can produce.

Prices

Detroit—Cash No. 2 red, No. 2 white and No. 2 mixed, $1.12½.

Chicago—Cash No. 2 red, $1.05½; No. white and No. 2 mixed, $1.01.

Prices one year ago—Detroit, Cash No. 2 red, $1.16; No. 2 white and No. 2 mixed, $1.14.

CORN

Prices in the corn market were affected some by the slump in the wheat market at Chicago but by the end of last week there was considerable firmness to the tone of the market and prices closed the week at Detroit higher than they were two weeks previous. Hot and dry weather over Texas and Oklahoma for some weeks past has lent a bullish note to the trend of the market as dealers feel that the yield will be very small in that section. Country offerings to arrive show a decline while receipts at many points increased. Demand is fair to good and the market firm at most terminals.

Prices

Detroit—Cash No. 2 yellow, 93c; No. 3, 92c; No. 4, 90c.

Chicago—Cash No. 2 yellow, 90c; No. 3, 84c.

Prices one year ago—Detroit, Cash No. 2 yellow, 71c; No. 3, 69½c; No. 4, 68c.

OATS

The oat market has just passed through one of the dullest seasons in the year. Price changes were limited to a very narrow range and selling was very scattered. Domestic shipping demand was fair during the past fortnight and country offerings to arrive were at a standstill. Crop news was favorable.

Prices

Detroit—Cash No. 2 white, 47c; No. 3, 46c; No. 4, 45c.

Chicago—Cash No. 2 white, 45c; No. 3, 40½c.

Prices one year ago—Detroit, No. 2 white, 41½c; No. 3, 39½c; No. 4, 35½@37½c.

RYE

Rye experienced an increase in demand on the Detroit market during the early part of last week but by the closing day there was a decline of ½c and the market was easier. This left the price at Detroit ½c higher than it was two weeks previous.

Prices

Detroit—Cash No. 2, 68½c.

Chicago—Cash No. 2, 65c.

Prices one year ago—Detroit, Cash No. 2, 85c.

BEANS

The bears seem to have the bean market completely under their control at the present time and prices continue their way downward. The Detroit market declined 35c week before last and last week the total was 25c, or 60c lower in the two weeks. It is plainly evident that the present market is not controlled by the law of supply and demand; prices would not be going downward as they are if it was.

Prices

Detriot—C. H. P. $5.50 per cwt.

Chicago—C. H. P. $5.85@6.25 per cwt.

Prices one year ago—Detroit, C. H. P. $8.80 per cwt.

POTATOES

Chicago reports a dull market and declining while Detroit and points east have a firm and active market. Receipts are of good size and dealers who have a supply on hand are ready sellers.

Prices

Detroit — Michigan, $1.00@1.08 per cwt.

Chicago — Early Ohios, $2.25@2.50 per cwt.

Prices one year ago—Detroit, Michigan, $2.50 per cwt.

HAY

Markets generally are strong on good hay but are slow and irregular on the poorer sorts. Farm work is curtailing country shipments and some reports show that not enough hay arrives to test the market. As a whole, markets are steady to firm, especially for good hay. New hay is reported as generally fair quality.

Prices

Detroit—No. 1 timothy, $17.50@18; standard, $17@17.50; No. 2 timothy, $15.60@16.60; light clover mixed, $17@17.50; No. 1 clover mixed, $15@16; No. 1 clover, $13@14.

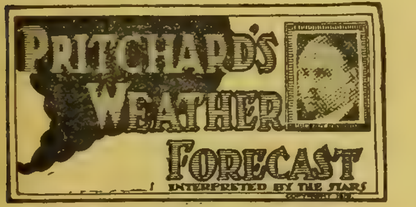
Chicago—No. 1 timothy, $23@24; No. 2 timothy, $19@20; light clover mixed, $21@23; No. 1 clover, 17@18; No. 2 clover, $14@16.

New York—No. 1 timothy, $27@28; standard, $15@18; No. 2 timothy, $25@26; light clover mixed, $27@28.

Prices one year ago—Detroit, Standard timothy, $19@20; No, 2 timothy, $18@19; light mixed, $19@20; No. 1 clover, $15@16.

WOOL

The wool market feeling is a little better than during the past few weeks. Inquiry has increased, especially in the east, and some sales have been made fully up to the quoted basis. The market in general is steady to firm, with trade just fair, but many holders optimistic as to future trend, and inclined to hold for steady to higher bids.



Week of July 22

IMMEDIATELY after the first part of this week storminess will increase in Michigan with very strong winds and locally heavy rains.

About Thursday it is expected that the temperatures will fall for a brief spell but will change to much warmer before the end of the week has arrived.

These warm temperatures will be the forerunner to series of thunder storms that will continue into next week.

Week of July 29

The average temperature for this week will be below normal and cool weather will remain until about Friday or Saturday.

During the entire week we are expecting little or no rainfall in this state but generally pleasant sunshiny days and comfortable, moonlight nights.

Not until the end of this or beginning of next week will the sky become seriously overcast and threatening. At this time some general showers may be expected.

Warm and Dry in August

We do not look for any storm to carry a general rain period into this state until about or after the 10th of August. The first six or seven days of August will average warmer than normal but rainfall will be below normal. This will probably prove to be a critical time for the growth of corn and as we see the conditions, do not believe the Michigan corn crop will be a full one.

OFFICIAL U. S. MARKETGRAM

(U. S. Bureau of Agricultural Economics)

Washington, D. C. for the week ending July 13, 1923.

FEED—Markets quiet. Interior demand slow, prices hold fairly steady, as mill offerings for future deliveries are light. Hominy feed offerings small, demand slow, prices easier. Gluten feed quiet, prices unchanged. Demand and offering light. Quoted Minneapolis, bran $19, middlings $24, flour middlings $28, red-dog $30. Gluten feed Chicago $37.15, white hominy feed St. Louis $31, Chicago $32. 32 per cent linseed meal Minneapolis $38, Buffalo $39.

FRUITS AND VEGETABLES—Virginia Irish cobbler potatoes irregular leading markets for the week; slightly weaker at shipping points. South Central bliss triumphs tend lower. Watermelon markets decline. Georgia Hiley peaches generally steady. Cantaloupes show an upward tendency in most leading markets. Prices reported July 12: Georgia Tom Watson watermelons, medium sizes $200-$475 bulk per car, top of $650 in New York, 22-30 lb. average $100-$375 f.o.b. cash track to growers. Labelled stock $225-$400. South Carolina melons $275-$650 eastern markets, $175-$400 f.o.b. Texas Tom Watson melons 28-30 lb. average $400-$450 in Chicago and Kansas City, $75-85 f.o.b. usual terms at shipping points. Georgia peaches, Hileys $2-$3 per 6-basket carrier leading cities. Belles $1.60-$2.50, top of $3 in New York, $1.40-$1.65 f.o.b. usual terms. Virginia and Maryland, Eastern Shore cobbler potatoes mostly $5.50-$6.75 per bbl. eastern markets, Norfolk section stock $4.50-$6 consuming centers, $5.50 to $5.75 f.o.b. Kansas Early Ohio $2.25-$2.60 sacked per 100-lbs. in Chicago and Kansas City, $1.60-$1.75 f.o.b. South Central bliss triumphs $2.25-$2.75 midwestern markets. South Carolina green meats, standards 45's $1-$1.25 in Baltimore. California salmon tints standards 45's $2.25-$3.50 eastern markets. Arizona stock $3.-$3.50.

DAIRY PRODUCTS—While butter gained strength most of the week and price advances occurred, the tone at the close was barely steady to weak, poor quality due to hot weather defects has had the effect of cutting down the percentage of top grades, causing a scarcity of these and some accumulation of undergrades.

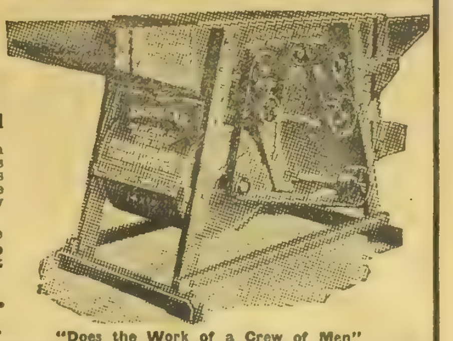
Closing prices of 92 score butter—New York 39; Chicago 38; Philadelphia 40; Boston 39¼. Cheese markets fairly firm and active following advances of around 1c in Wisconsin on Monday which placed trading generally on a higher price level. Considerable quantities have been bought for storage. Rains and cooler weather in some of the principal producing sections resulted in quality showing considerable improvement during the week. Cheese prices in Wisconsin Primary Markets July 12—flats 22c; twins 21½c; single daisies 22c; double daisies 21½c; Young Americas, longhorns and square prints 22¾c.

BETTER BOOK-KEEPING REQUIRED

In order to encourage greater attention to good book-keeping methods among the local marketing associations, the directors of the Michigan Potato Growers' Exchange have recently ruled that no credit will be extended and no loans made to locals unless a monthly financial statement is made and filed with the Exchange accounting department.

A YEAR-AROUND BUSINESS

According to records in the office of the Michigan Potato Growers' Exchange at Cadillac that organization sold late crop potatoes during every month for the past year. Fourteen cars were sold during the last week of August, 1922, and twenty-eight cars have been sold during the first two weeks of July, 1923.



"THE BEAN and PEA FARMER'S FRIEND"

The American
Double Cylinder
Bean and Pea Threshers

The Bean and Pea Farmer's Friend

Built in three sizes—14x14 inch, 20x20 inch and 26x26 inch cylinders, to meet the demands of all. Threshes and cleans all varieties of beans and peas, and shreds their vines, as they come direct from the field, in one operation. Capacity and perfect separation guaranteed.

PRICE When you learn the price of these threshers you will be surprised. Write today for catalog, full particulars and prices. Just drop us a card.

FARM AND LANDS

40 ACRES WITH GROWING CROPS, 350 poultry, 6 cows, only $5,000. On improved road convenient fine Michigan R. R. town, splendid markets; all tillable level loam; wire fences; 22 fruit trees; excellent 2-story 10-room house, 50-foot hip-roofed barn, granary, poultry house. Only $5,000 and if taken soon aged owner includes 3 acres potatoes, 2 acres beans, 4 acres oats, 12 acres corn, 5 acres rye, 9 acres new seeding, 3 horses, 6 cows, hogs, 350 poultry, cream separator, incubator, implements, tools. Details page 98 Illus. Catalog Bargains—many states. Copy free. STROUT FARM AGENCY, 427KJ Marquette Bldg., Chicago, Ill.

HAVING LOST MY HUSBAND I OFFER MY 88 acre farm for sale. Ogemaw county, situated 4 miles south of West Branch. Buildings consisting of ten room house, full basement; frame barn, 46x72, full basement. Flowing well at house and barn. Well fenced. Bearing orchard. All under cultivation except 7 acres. Easy terms. MRS. THERESIA SCHEELE, 118 Hector Street, Flint, Michigan.

FOR SALE—POULTRY AND SMALL FRUIT farm, 1½ acres with new six room bungalow and garage. Write J. NORMAN RAGAN, 146 E. 16th Street, Traverse City, Mich.

HELP WANTED

YOUNG OR MIDDLE AGED WOMAN wanted for house work in small family in new home near Detroit. No washing or ironings. Highest wages. Address, MRS. HARLEY D. WARNER, Farmington, Michigan.

CORN HARVESTER

CORN HARVESTER CUTS AND PILES ON harvester or windrows. Men and horse cuts and shocks equal Corn Binder. Sold in Every state. Only $25 with fodder tying attachment. Testimonials and catalog FREE showing picture of harvestor. PROCESS HARVESTER CO., Salina, Kansas.

GENERAL

GOVERNMENT NEEDS RAILWAY MAIL Clerks, $133 to $192 month. Write for free specimen questions. COLUMBUS INSTITUTE, 0-4. Columbus, Ohio.

FOR SALE—J. I. CASE THRESHING Machine, in good condition. Will sell cheap. Inquire at RAY J. MILLIGAN'S, R. 2, Onaway, Michigan.

FOR SALE CHEAP—CASE ENGINE, CASE Separator, Huber Beaner, in good condition. EDW. LITWILLER, R. 2, Ithaca.

FORDSON TRACTOR, NEW CHEAP. LOUIS BOOTHBY, R. 1, Elmira, Michigan.

The Old Swimmin'-Hole

By James Whitcomb Riley

Oh! the old swimmin'-hole! whare the crick so still and deep
Looked like a baby-river that was laying half asleep,
And the gurgle of the worter round the drift jest below
Sounded like the laugh of something we onc't ust to know
Before we could remember anything but the eyes
Of the angels lookin' out as we left Paradise;
But the merry days of youth is beyond our controle,
And it's hard to part ferever with the old swimmin'-hole.

Oh! the old swimmin'-hole! In the happy days of yore,
When I ust to lean above it on the sickamore,
Oh! it showed me a face in its warm sunny tide
That gazed back at me so gay and glorified,
It made me love myself, as I leaped to caress
My shadder smilin' up at me with such tenderness,
But them days is past and gone, and old Time's tuck his toll
From the old man come back to the old swimmin'-hole.

Oh! the old swimmin'-hole in the long, lazy days
When the hum-drum of school made so many run-a-ways,
How pleasant was the journey down the old dusty lane,
Whare the tracks of our bare feet was all printed so plane
You could tell by the dent of the heel and the sole
They was lots o' fun on hands at the old swimmin'-hole.
But the lost joys is past! Let your tears in sorrow roll
Like the rain that ust to dapple up the old swimmin'-hole.

Thare the bullrushes growed, and the cattails so tall,
And the sunshine and shadder fell over it all;
And it nottled the worter with amber and gold
Tel the glad lillies rocked in the ripple that rolled;
And the snake-feeder's four gauzy wings fluttered by
Like the ghost of a daisy dropped out of the sky,
Or a wounded apple-blossom in the breeze's controle
As it cut ocrost some orchud to'rds the old swimmin'-hole.

Oh! the old swimmin'-hole! When I last saw the place,
The scenes was all changed, like the change in my face;
The bridge of the railroad now crosses the spot
Whare the old divin'-log lays sunk and forgot.
And I stray down the banks whare the trees ust to be—
But never again will theyr shade shelter me!
And I wish in my sorrow I could strip to the soul,
And dive off in my grave like the old swimmin'-hole.

Current Agricultural News

REDUCE WHEAT ACREAGE SAY GROWERS AT CONFERENCE

REDUCTION of acreage, diversified farming and co-operative marketing are the keynotes of the resolutions adopted by the Wheat Producers Conference of the Southwest at Wichita, July 16. The Southwestern wheat growers have put an organization into the field that is going to work for immediate results, they declare, as well as for methods to prevent distress to wheat growers in future years. At the close of the sessions it was stated that vigorous carrying out of the conference's program would go a long way toward putting the wheat industry on a sound basis "before snow flies this year."

The Wheat Producers Conference of the Southwest is composed of representatives from the hard wheat states of Kansas, Colorado, Missouri, Texas, Nebraska and Oklahoma. These states represent 8,236,000 acres now in wheat in excess of the acreage of 1913, or eight elevenths of the total acreage of the United States in excess of that of 1913.

No mention of government price fixing is made in the resolutions. As one delegate pointed out, "The subject of political action was not mentioned in the debate. The hard wheat men know that their only salvation is by economic means." The features that stood out most prominently in the discussions were, summer fallowing in the hard wheat states, reduced acreage, improved cultural methods on the reduced acreage, diversified crops and raising of home food necessities, and recognition that the increasing world output of wheat meant disappearance of a world market for American wheat at a profitable price.

In the order of their adoption, the resolutions state that present wheat prices make future "normal" production impossible. Farmers, bankers and millers are called on to cooperate to solve the problem. Fifty to one hundred percent increase in taxes and other production costs are cited. Use of rural credits and the federal warehouse act are urged to prevent dumping of the wheat crop. Feeding to stock of low grade wheat in place of dollar corn is recommended. Grading of wheat by protein content is recommended.

Speedy curtailment of acreage, diversified farming, dairy and stock raising and growing of feed crops for their maintenance are adopted as basic principles. Organization of wheat growers into co-operative units governed by "valid, long term marketing agreements" is declared essential. The organization was made permanent with a board of not less than ten directors representing the farm organizations and the state board of agriculture of the member states.

Unconditional endorsement of the resolutions of the southwestern conference was given by Grovenor Dawe, executive vice-president of the Wheat Council of the United States, who attended the conference as a delegate.

E. E. Frizzell of Larned, Kas., was made president of the permanent organization of the Wheat Producers Conference of the Southwest. L. Gould of Amarillo, Tex., is secretary.

STATE POULTRY MEN LAUNCH ASSOCIATION

THE Michigan Poultry Producers' Association, an organization devoted to the interests of the poultry breeders of the state, was organized and launched upon its career on July 13, when 150 representatives of the industry in the state met at M. A. C., and completed preliminary organization steps. The new association will plan eventually to get into the co-operative marketing field, it is understood. An effort will be made to help stabilize poultry commodities. Eventual grading of eggs will be one of the definite goals toward which the organization will work.

BETTER SEEDS POPULAR IN MICHIGAN

PEDIGREED seed from improved farm crops varieties was sown on thousands of acres of Michigan farm land this year, according to a report just issued by H. C. Rather, secretary of the Michigan Crop Improvement association and extension specialist at M. A. C.

The certified seed is grown by members of the crop improvement association from varieties developed by the M. A. C. experiment station. Many of the varieties included in the list of Michigan certified grains have won fame throughout the entire country by their winnings at national shows and exhibits. Rosen Rye, first released from the M. A. C. station in 1912, is probably the best known of these pure strains, while Red Rock wheat, Worthy and Wolverine oats, Robust beans, and corn varieties are rapidly winning a national reputation for Michigan growers.

MAKES FINE 30-DAY BUTTER RECORD

WE take great pleasure in writing you in regard to a splendid 30-day butter record made by our junior 2-year-old heifer. Charlevoix Ormsby Zwelle No. 681455, by Sir Pieterje Ormsby Mercedes 40th, out of Maple Lane Zwelle Riblet.

Our great son of Sir Pietertje Ormsby Mercedes is proving his prepotency beyond the shadow of a doubt, and we will have a large number of his daughters to freshen this fall and next spring, all of which makes the future look very bright.

Charlevoix Ormsby Zwelle made 25.15 pounds of butter in 7 days from 327.9 pounds of milk, which lacks only about one pound of the state record. Zwelle shattered the 30-day state butter record as follows: 103.013 pounds of butter from 1,842.2 pounds milk. (The former state record was 100.566 pounds of butter).—Loeb Farms.

TOO MANY ACRES WHEAT BLAMED FOR LOW PRICES

"WHAT'S behind the big slump in the wheat markets?" This is the all important question which is being asked by wheat growers everywhere as they face the prospect of selling their 1923 crop at prices well below the dollar mark.

Considerable interest attacks, therefore, to the recently announced report of the committee of 12 economists and statisticians selected by Secretary Wallace to study this and similar problems.

In their report they declare, "The expansion in the wheat area of the chief exporting countries, coupled with the decreased buying power of Western Europe, is responsible for the price situation which now prevails." They go on to show that the five chief wheat exporting nations are now growing 28,000,000 acres of wheat more than the pre-war average, and declare that there is no buying power in the world capable of absorbing this tremendous surplus, which in the United States alone amounts to some 14,000,000 additional acres.

The report concludes that only drastic reductions in the wheat acreage in all the chief wheat exporting countries can bring relief to the present world wheat situation.

TO DEVELOPE A "MICHIGAN'S OWN" SUGAR BEET

DEVELOPMENT of a "Michigan's Own" sugar beet variety—a strain which will be better adapted to conditions in the state than those now grown, is the goal toward which extensive experiments started this year at M. A. C., in co-operation with the recently transferred U. S. Department of Agriculture beet station, is aimed.

"While most of the sugar beet companies feel that it does not now pay to raise our own seed here in Michigan, because foreign seed can be bought so cheaply, the price of the seed would be but a comparatively small matter if a variety could be developed which would increase the tonnage production of sugar per acre," explains E. E. Down, research assistant in charge of suger beet work at the M. A. C. station, in commenting on the experimental program which he and the government men have started. "It is the aim of our work to develop such a variety."

GRATIOT PIG AND CALF CLUB PICNIC AUG. 4

BOYS and girls of Gratiot county, who are conducting pig and calf club projects, will have a big picnic and school of instruction at the Gratiot County Fair Grounds, August 4. Mr. Nevels Pearson, state Live Stock club leader, will be present and have charge of the program which will include judging instruction, fitting and showing and other live stock work. Some time will be devoted to games and forms of recreation and each member is to bring along eats for the noonday luncheon. It will be a full day program.

FOUR MICHIGAN COUNTIES FREED OF T. B.

AMENDMENT of the federal cattle tuberculosis eradication regulations, as announced by the department of agriculture, provides for classification of counties, where a complete test of all cattle shows less than one half of one per cent to be affected with tuberculosis as modified-accredited areas.

These areas will be recognized and freed from certain inhibitions which are necessary in other territory. No cattle may be taken in unless from an accredited herd if they have passed a satisfactory tuberculosis test except for slaughter or feeding and grazing under certain conditions.

Counties classified as modified-accredited areas included:

Michigan — Hillsdale, Charlevoix, Antrim, Emmet.

INTERNATIONAL EGG LAYING CONTEST

A GENERAL decline in production is noticed in the report for the week ending July 24, when all groups show a decrease in production.

Production for the week amounted to 3,639 eggs making a total to date of 119,482.

The pens have held up remarkably well however, and the contest management had looked for this slump to take place even early this summer. Some of the pens are showing some moult and others considerable broodiness.

In the Barred Rock section the standing remains the same as last week, Brummers' Poultry Farm, Mrs. Chilson holding first and second place and tieing for weekly production.

The Wyandottes have dropped in production and no changes occur in their standing.

In the Ancona section Beckwith's pen with 48 eggs leads, followed by Van Bree with 46 for the week.

Mr. Shaw's pen of W. Leghorns are continuing to keep up their good work, finishing this week with 53 eggs for the week and 1,765 to date.

FROM HERE AND THERE IN MICHIGAN

Holland—New Masonic temple to be completed August 4.

Iron Mountain—Work to start soon on new Ford dock.
building progressing rapidly.

Grandville—$12,000 to be spent on boulevard lighting system.

Grand Rapids—Abattoir company plans location on old Wallin tannery site.

Manistique—New 75-ft. lookout fire tower to be erected in this township.

Ionia — Contract awarded for Ypsilanti reed warehouse to be erected soon.

Houghton—Old copper tailings dumps to be worked over in Calumet & Hecla section.

Flint—20,000 skilled employes of Buick Motor Company turn out 17,000 cars monthly.

Ypsilanti—Paving of Washtenaw avenue road and Whitmore Lake road to begin soon.

Pontiac—Fisher automobile body plant being created in this city at cost of $2,000,000.

Laignsburg — Consumers Power Company given franchise, substation to be erected at Ovid.

Marysville—Wills motor plant to be operated as Wills Sts. Claire Motor Company, Inc., capital $15,000,000, production to be increased.

Manistee—Work on local prospective oil well to continue day and night within a short time. Paving of 5½ miles Ludington-Scottville to be completed September 1.

Saginaw — Washington avenne Presbyterian church to be enlarged by $5,000 addition. Construction of new Board of Commerce building well under way. 50,000 gals. oil to be used on roads in this vicinity.

Detroit—Belle Isle bridge over Detroit river to be completed August 24. Cadillac Motor Car Company ready to start construction of 3 large groups of factory buildings. Ford Motor Company distributing $1,000,000 to 30,000 employes.

Lansing—Contract let for paving 30 miles of state trunk line highway. Durant Motors to erect two large additions to local factory at cost of $350,000, to increase production from 400 to 550 cars a day. 75 miles of state highway authorized built at cost of $1,000,000.

Urges U. S. Advance Cash On Farmers' Wheat

American Farm Bureau Urges Secretary Wallace to Take Advantage of Recent Credit Legislation and Allow Farmers to Warehouse their Own Wheat and Other Products

FARM BUREAU PLAN WOULD ENABLE FARMER TO HOLD WHEAT OFF MARKET

A PLAN to withdraw 200,000,000 bushels of wheat from the market and store it on farms is outlined by the American Farm Bureau Federation in an official statement signed by President O. E. Bradfute. Under the new Intermediate Credit Act and the amended Warehouse Act the Farm Bureau proposes that the grower borrow three-fourths of the market price of his wheat and hold it for a satisfactory price. It is estimated that $150,000,000 of Intermediate Credit would be ample to enable the farmer to store 200,000,000 bushels of wheat and thereby remove it from the present below-a-dollar market.

The Farm Bureau plan would have the Secretary of Agriculture designate sound farm wheat bins as government-bonded warehouses, and would provide for the issuance of the usual bonded warehouse receipts against such wheat stored on the farm. The grower could borrow through the Intermediate Credit System with the warehouse receipt as collateral. This would enable him to hold his wheat until prices advanced.

The Wichita, Kansas, Intermediate Credit Bank is already advancing $100,000 a day to growers under this plan, and the prospects are for applications totalling a daily peak of $2,000,000. This money is available at 5½ percent.

It is believed that the withdrawal of 200,000,000 bushels of wheat from the market and locking it up under government seal in farm warehouses will have an immediate and tremendous effect on the price.

The official statement, signed by President O. E. Bradfute of the American Farm Bureau Federation and detailing the storage plan is printed herewith.

WHEAT selling below $1 per bushel is a national tragedy in America. It is tragedy not only to the farmer who grows the wheat at a loss, but also to the consumer—the business man and the laborer—who must ultimately depend on that farmer's wheat dollar for their continued prosperity and happiness.

The American Farm Bureau Federation believes that co-operative marketing is the ultimate solution to the national wheat price problem. We are now at work on a national co-operative grain marketing policy, being formulated upon instructions from our members. Under this plan the growers of the nation will in effect place their grain in a common bin and will merchandise it in an orderly way over the consumptive period, instead of dumping it on an already overloaded market during the four months following harvest. Co-operative marketing of wheat will unquestionably solve the price problem to the benefit of both producer and consumer. But except in a few sections, the southwest and northwest, co-operative marketing is not ready to meet the present wheat crisis.

USE NEW CREDIT ACT

Fortunately we have ready at hand the machinery which, if permitted to function, will enable our farmers to store their wheat and hold it for orderly distribution. We refer to the new Intermediate Farm Credit, provided by the last session of Congress at the insistance of the Farm Bureau and the Farm Bloc, to be used in conjunction with the amended U. S. Warehouse Act.

Under the Warehouse law the Secretary of Agricultlure may rule if he sees fit that a proper farm storehouse, a wheat granary in this case, be designated as a U. S. bonded warehouse. The Department of Agriculture, cooperating with the Colleges of Agriculture and the Farm Bureaus, has a representative in every county. He is known as the county agricultural agent or farm advisor. The county agent or some other official representative of the Department of Agriculture may properly be delegated to the task of inspecting storehouses. The farmer may then put his wheat in a bonded bin on his own farm, lock it, and deliver the key to the county agent, who can serve as the official warehouseman and give the farmer a lawful bonded warehouse receipt for his grain. These farm warehouses, together with terminal and line warehouses, have sufficient capacity to store the crop.

NO BETTER SECURITY

Is there any better security for borrowed money than wheat in the bin? The soundness of this particular collateral is proverbial.

Under the Intermediate Credits Law, 12 intermediate credit banks are set up on conjunction with the 12 Federal Land Banks, at Springfield, Mass.; Baltimore, Md.; Columbia, S. C.; Louisville, Ky.; New Orleans, La.; St. Louis, Mo.; St. Paul, Minn.; Omaha, Nebr.; Wichita, Kans.; Houston, Tex.; Berkeley, Cal.; and Spokane, Wash. The United States Treasury is authorized to advance each of these banks a capital of $5,000,000 or a total of $60,000,000. Each of the Intermediate Credit Banks is authorized to loan to farmers on proper security, such as bonded warehouse receipts, a total of 10 times its capital or $600,000,000. This money is obtained through the sale of debentures, which are tax-free and which have back of them the wheat in bonded bins. This provides a total of $660,000,000 to enable the farmer to remove any farm surpluses as they develop as price-breaking factors and feed them gradually into the market. Assume 200,000,000 bushels of wheat was stored and financed on farms in this way. Suppose the farmer borrowed the legal limit as prescribed by law of the market price on this bonded wheat to carry on his business. This would require not more than $150,000,000. The money is available, the law is on the statute books, and the plan is capable of meeting the present situation. All we need is the proper regulations from the Department of Agriculture and the Federal Farm Loan Board, and the prompt administration of the Intermediate Credit and Warehouse Act.

Now, therefore, the American Farm Bureau Federation calls upon all banks, farm organizations, co-operative marketing associations, and individual farmers to make full and free use of the Intermediate Credit Act so as to prevent the dumping of the wheat crop and to retain its control in the hands of the grower himself rather than in the hands of the speculator.

The American Farm Bureau Federation urges the Secretary of Agriculture under the powers conferred upon him by the amended Warehouse Act to designate proper warehouses on farms as government-bonded warehouses, and to set up machinery at once to provide proper inspection and warehouse administration. The U. S. Warehouse Act and the corresponding state warehouse laws should be used by the commodity organizations and individual farmers to the end that storage of the wheat crop may be made under grower control, either on the farms, in the country elevators, or in terminal warehouses.

The American Farm Bureau Federation believes that such action on the part of the organized farmers of the nation would demonstrate that there is nothing in the wheat situation on the supply side of the market which can justify the present disasterous price. Recent reports have emphasized acreage instead of output. Additional acres that are now put into wheat are the poorer acres and production does not increase at a corresponding rate.

Output of wheat in the United States has increased since prewar at the same rate as population. World surpluses for the postwar years average only 7 million bushels more than for the average of five prewar years. This means that the other exporting nations have only filled the gap left by Russia. European wheat importing countries are producing at least 200 million bushels less than before the war. These facts in regard to domestic and world wheat supply should be supporting factors in the market. The only possible explanation for falling prices must be found in demand.

There are more people than before the war to eat wheat in all the importing countries as well as in the present exporting countries. In both Europe and the United States there has been a decline in the per capita consumption. Europe, however, took 26 per cent of our wheat in the year ending June 30, 1923, at an average price to the farmer of 98 cents. There is no reason to believe that Europe's buying power will be substantially less in the coming year. Consumption in the United States increased 12 per cent in the fiscal year just ended over the previous year. With industrial activity and employment at a high level there is good promise that our consumption will continue to expand, possible equal to prewar. Exports to the extent of 20 per cent of the crop and per capita consumption on the basis of prewar would equal 1923 production as now forecasted.

PURCHASING FOR EXPORT

One major reason that demand for wheat is not now properly sustained is the changed method of purchasing for export. Before the war purchases for foreign account were made in large volume at harvest and immediately thereafter. Due to the weakened financial situation abroad and the uncertainty concerning the prices of foreign drafts, foreign buying is now largely on a hand to mount basis.

This emphasizes the necessity for American agriculture to press to a conclusion its program of orderly marketing over the crop year. Orderly marketing instead of dumping can turn the wheat crop from the loss which now threatens into a profit.

Producers themselves have the major responsibility in avoiding such situations as now confront the wheat growers. In intelligently planning production and in providing adequate storage facilities for orderly financing and cooperatively marketing can be found the key to the permanent solution of the wheat situation.

Six Thousand Attend Annual Farmers' Day

By R. C. GROESBECK

(Special to Business Farmer)

THOUSANDS of farmers from every section of the state gathered at the Michigan Agricultural College, July 27, for the sixth annual summer Farmers' Day. The crowd, estimated by college officials to number 6,000, was slightly larger than that of last year in spite of a steady drizzle of rain which fell throughout the day.

O. E. Bradfute, president of the American Farm Bureau Federation, was the principal speaker at the big afternoon meeting held in the college gymnazium. He made a strong plea for greater organization and co-operation among the farmers of the nation in order that they might play a more important part in the solution of the problems that are facing the country at this time. Mr. Bradfute said that transportation and marketing are the two greatest problems before the farmers today, pointing out that they pay fifty-five per cent of the nation's transportation costs.

Close co-operation between federal and state agricultural extension forces and local county farm organizations was urged. Mr. Bradfute pointed out the closely allied aims of all agricultural agencies and organizations, and urged that any measure which served to bring about closer business and social bonds should be fostered.

Prof. Eben Mumford followed Mr. Bradfute on the speaking program giving an inspiring and forceful talk on the important things of farm life.

A long line of pure bred livestock owned by the college was exhibited to the vistiors in the annual livestock parade. State and national prize winners as well as several blue ribbon winners at the International Livestock Exposition were shown in the parade, which included dairy cattle, beef cattle, horses, sheep, hogs, and poultry.

The farmers were taken on tours of inspection over the experimental plats covering 150 acres, the college orchards, the forestry nurseries, and the college farms. Special exhibits on timely agricultural subjects were displayed in outdoor booths.

College specialists in all branches of agriculture met with the farmers throughout the day for individual conferences on the crop and farm problems which confronted them.

Making Church Biggest Thing in Farm Community

Members of Country Church in Illinois Form Clubs to Improve Crops and Back Boys' and Girls' Club Work, as Well as Put On Plays, Stage Athletic Contests and Hold Parties

YOU can take your automobile and drive any direction into the country and you will see churches with windows covered with boards, doors locked and nailed shut, and weeds nearly waist high in the yard as though man had not entered them for years. No doubt you have one in your own community. If you have many of you can remember when a few years ago you and you family, or maybe you and your girl, attended the services and Sunday school. But for some reason interest in the church seemed to decline and there was not enough money to continue hiring a minister so finally it was decided to close the church until there was more interest and financial assistance. And, in many cases, the church is still closed. In Illinois, in a little rural community known as Ontario Corners, the same thing took place and the church remained closed for seven years. But three years ago it was reopened and the parish has shown a steady growth since that time. These farmers made the church the biggest thing in their community and now they would be lost without it. You and your neighbors can make your church of great value to your community. Why not try it?

DOWN in Ontario county, Illinois, only a few years ago the farmers were experiencing the same thing that many other communities are today—a lack of interest in the church. The early settlers built two churches and parsonages on what is known as Ontario Corners, a Congregational church and a Baptist church, and both of them drew large crowds every Sunday for many years as religion was a large part of the make-up of these early settlers. But as the older leaders moved away or died and the younger generation took their places there was a decline in the attendance, the type of work being done by the churches not appealing to the younger people. Finally, it was decided that one place of worship was enough for the community and the Baptist church was moved to a nearby town. Interest continued to decline until in 1912 regular services were discontinued and over seven years passed before sufficient interest was taken to continue weekly services.

During the entire period, however, a few members of the community held Sunday school and occasionally had a sermon. Each year saw a slight increase in the interest but it was not until 1920 that any real progressive steps were taken. One evening in June of that year eight farmers and their wives held a meeting at the home of one of the members to discuss the matter of securing the services of a minister and holding regular services again. After a general discussion it was decided to resume activity and a committee was appointed to look over the parsonage to see if it was inhabitable. The committee declared it was not, so the old one was torn down and work was started a short time later on a new one.

The men and women of Ontario had visions of greater things than the common little country church. They wanted to see the church made the big thing in the community, not just a place of worship that you visited on Sunday, and with a clear vision of the work to be done they started out to secure a leader who would help them realize their vision. Due largely to their viewpoint in this matter they succeeded in securing Rev. M. Guy Van Buskirk, who at the time of the call was engaged in interdenominational religious work in the capacity of the young people's superintendent for West Virginia. Since his coming, Sept. 1, 1921, pastor and people have met the needs of the community in such a way that today the church at Ontario Corners is again wielding a most welcome influence in the community. In fact, the influence is extending far beyond the borders of Ontario parish.

After several months of services the congregation felt that the old church building should be remodeled, not only to increase the seating capacity but especially to enable the building to more nearly serve the needs of the community.

The church was raised, a basement dug and later equipped with committee rooms, kitchen and dining room, which could also be used for other purposes. The main auditorium was enlarged and decorated. Some members were doubtful about the wisdom of enlarging the auditorium, because, as one remarked, "the church never has been full and perhaps never will be." The first Sunday night in the remodeled building, however, found not only a crowded house but about 50 people were unable to get in.

The need of a new light plant was apparent and the members of the Women's league agreed to purchase this. Here again we see the vigor with which a proposition is pushed when all are agreed that a certain thing should be done. The decision to order a light plant was reached late Monday afternoon; immediately the plant was ordered by wire to be shipped by express from Ohio. On Thursday evening of the same week the plant was installed and the electric lights burning.

A moving picture plant will be installed in the near future. The money for this was raised by means of a combination sale; the pastor saved expenses by crying the sale himself. It might be added in this connection that he has performed a similar service at a purebred sale held in the community.

Many factors have contributed to the splendid success of the work at Ontario parish. The pastor, of course deserves a full share of credit, because the gospel which he has been preaching has reached down into the hearts and lives of his parishioners in such a way that their daily lives are indeed fuller and richer.

A well-rounded program of work, which includes the men and women, the young people, and last, but not least, the boys and girls, is also a contributing factor of vital importance.

Men Have Club

The men, for instance, have their Men's club. This club sponsors the movie plant project, and last year conducted an intensive experimental plot on corn diseases in co-operation with the United States department of agriculture and the Knox County Farm Bureau.

It is interesting to know that every farmer, either land owner or tenant, who is a member of the church is also a member of the farm bureau. The Men's club during the past two years has conducted the largest local corn shows in Knox county.

In 1921 the pastor was a strong contender for first honors, and last year succeeded in getting the blue ribbon in a contest with about 40 other samples. Just now the Men's club is financing the Boys' and Girls' club work, especially the sow and litter project.

The women have regular semi-monthly meetings of their league. One of their number is superintendent of the Sunday school, which reaches 80 to 85 per cent of the people living in the community. The Sunday school is very closely graded and the aim throughout is to keep the instruction at least up to the standard of public school instruction. Quarterly reports dealing with department interest and progress in the work are sent to parents.

No one who has watched the work at Ontario Corners will question the fact that the women have made a distinct contribution toward the success of the church; as all too frequently happens, a woman has been one of the leaders in keeping up the religious interest in the community This woman, Mrs. J. J. Clearwater, who is also superintendent of the Sunday school gives her conception of the importance of a church in a rural community in the statement which follows:

Creed for Broad Service

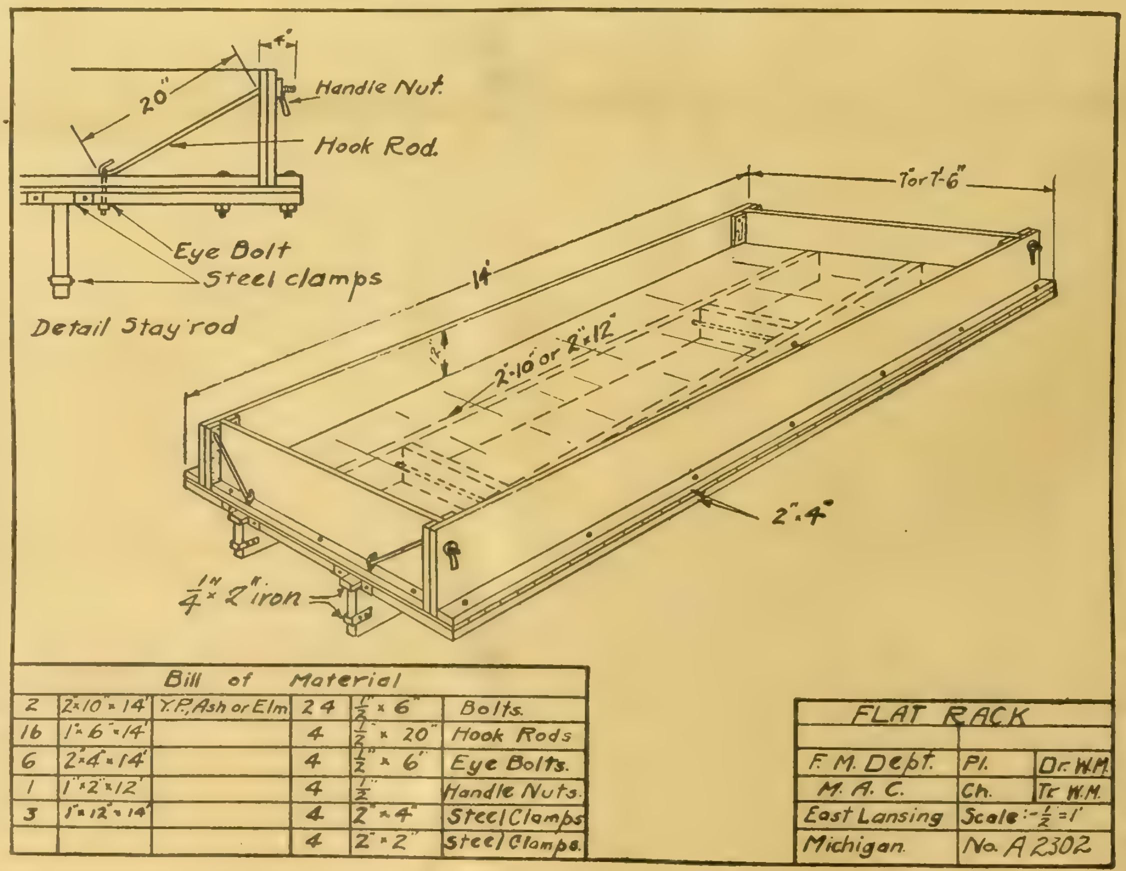
"Religious workers today are stressing the Christian life as the fourfold life, touching the physical, mental, social and religious life of

(Continued on page 19)

The Flat Rack is Easily Made and Has Many Uses on the Farm

By H. H. MUSSELMAN, Prof. of Farm Mechan ics, M. A. C.

THE flat rack serves so many purposes on the farm that it is scarcely possible to say which it serves best. For loading hay, with the hay loader, it gives the man on the load a sense of security because there are no openings in the floor through which he can slip. For grain bundles it gives an excellent base on which to build a load in which the corners will not slip, provided end standards with cross pieces extending the width of the rack and spaced a few inches apart are used. For grains or seed which shatter in hauling it will save a considerable percentage of the grain. For hauling threshed grain, it may be made tight by using matched lumber, or a canvass or tarpaulin may be used to cover the floor and sides. In hauling coal, wood, corn, sugarbeets, and miscellaneous loads, the loads are both easily loaded and unloaded. For much of this work, the sideboards are necessary and easily put on and removed. By providing a stock crate, one may also carry animals on this rack. For hogs and sheep the sides and ends can be built up on the order of fencing.



Bill of Material

2	2"x10"x14'	Y.P., Ash or Elm	24	1/2"x6"	Bolts.
16	1"x6"x14'		4	1/2"x20"	Hook Rods
6	2"x4"x14'		4	1/2"x6"	Eye Bolts.
1	1"x2"x12'		4	1/2"	Handle Nuts.
3	1"x12"x14'		4	2"x4"	Steel Clamps
			4	2"x2"	Steel Clamps.

In building this rack, use only strong timbers for bed pieces. Southern pine and elm are excellent. If purchased, they may be bought in the full two-inch width, or in the rough. In this form they have considerably more strength than when dressed to the standard 1¾ inch thick .

The floor should be of a material which will stand both wear and weather. Southern pine is good but somewhat heavy. The floor may be laid matched, with the joints between the boards filled with white lead for preservation if desired. Six inch flooring is generally used where matched joints are desired.

The bed pieces may be laid parallel or brought closer together at the front end to allow room for the front wheels to make short turns. The floor may be nailed directly to the bed pieces, which makes for simple construction.

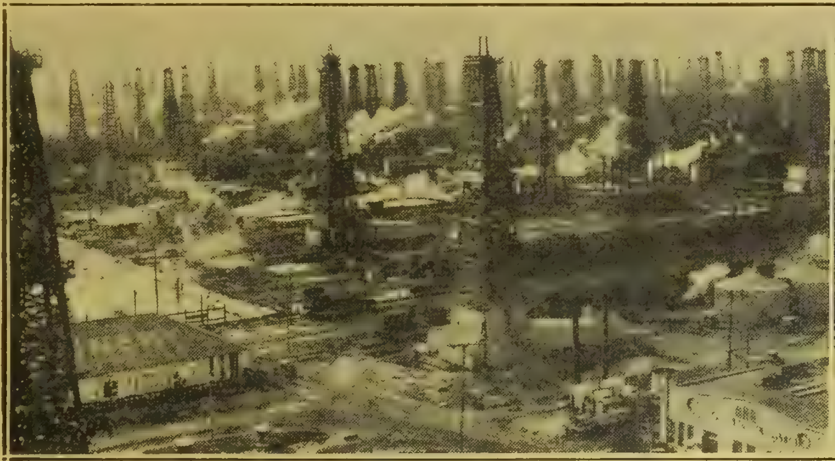
Care should be taken to obtain firm, standard supports. In loading both hay and grain these are highly stressed. Round poles make excellent standards or stakes. If these are used, the iron clamps or sockets should, of course, be made to receive them.

PICTURES FROM FAR AND NEAR

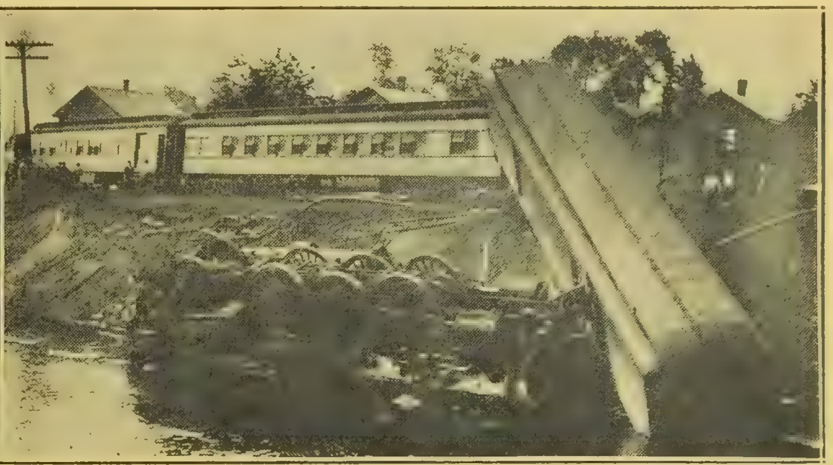
IS YOUR'S THERE?—Joseph F. Mikulac, 45, and a native of Croatia, who is not a mere globe-trotter. On his various travels he carries this book with him and it holds the signature of nearly every prominent person in the world. The book contains 2896 pages and weighs nearly 40 pounds. There are several signatures to each page and it is nearly filled with the autographs of world-famous persons.

HONORS "T. R." AS ROUGH RIDER.—James Earle Fraser, sculptor, at work on the bust of Theodore Roosevelt, which is to be placed on a granite pedestal in the vicinity of San Juan Hill to commemorate the Colonel's participation in the battle. Roosevelt said he regarded the day he led the charge as the greatest in his life. The monument will be unveiled early next January.

SAW "ELIZA WHO CROSSED THE ICE"—Mrs Meeky B. Coffin, aged 83, living in Cincinnati, Ohio, confirms the fact that the "Eliza who crossed the ice" is no myth. Mrs. Coffin states that when first married she lived with her father-in-law, Levi Coffin, famous abolitionist, and that Eliza and her baby came to this house to hide. Later Eliza escaped by crossing the ice on the Ohio River.



A CITY OF OIL WELLS.—It may not be lovely but it is productive of the greatest wealth of this country. Here is a view of the Santa Fe oil fields in Los Angeles county, California, where the precious fluid is taken out day and night. This is one of the richest oil fields in California and fortunes are made here daily.



FAST EXPRESS WRECKED.—The crack flyer on the Central Railroad of New Jersey, running between Philadelphia and Scranton, Pa., was derailed half a mile from the latter city. One man was killed when the engine and mail car plunged down a forty foot embankment into the Lackawanna River. The engineer was perhaps fatally injured while the fireman was slightly hurt.

NO WONDER CLAM DIGGING IS SO POPULAR IN JAPAN.—With pretty bare-legged girls of this type wading in the water for the clams, it is no wonder that clam digging is very popular at the seaport section in Cherry Blossom Land. At the coast, women fishers and clam diggers are the rule and young girls, like this one, are to be seen every morning fishing for the clams.

SOCIETY WEDDING MARKED BY EXTREME SIMPLICITY.—The bride, groom and guest of honor, left to right: Mr. and Mrs. William Painter Meeker and William Jennings Bryan, snapped at the wedding which took place at the bride's home in Cape May, N. J. The ceremony, attended by Bryan and other notables, was marked by extreme simplicity. The bridal couple are popular favorites in social circles of several cities and the groom is a Yale student.

FORMER CROWN PRINCE MAY RUN FOR PRESIDENCY.—Ex-Crown Prince Frederick William of Germany, who is expected to run for the presidency at the coming election. It is believed that there is nothing in the German Constitution to keep him out of the presidential race, but an awkward situation might arise in the refusal of the Allies to permit him to return to Germany. He is still in exile.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

DEED LAND TO ONE SON

Please answer this in your paper. I gave my oldest son a deed to my forty acres of land and gave deed to our banker, and at my death he shall give it to oldest son, upon payment of $1000.00 each to my other two sons, who live in Detroit. I only have the three sons, wife is dead. I have no debts. I want the oldest son to have old home. Will my deed stand in law after I am dead?—W. H. L., Vicksburg, Mich.

—What you want to do is to deed this property to your banker in trust for your son, but in order for such a trust to be valid, the deed must prescribe some duty to be performed by the trustee other than merely to convey the land to the son. Passive trusts, that is, trusts in which the trustee has no duty to perform except to merely convey the property to the beneficiary at the appointed time, are abolished in Michigan. If you do not want the property conveyed to your son until your death, you could make a will in which you devise this farm to your oldest son, upon condition that it should not vest in him until he has given to each of the other sons $1000.00.—Asst. Legal Editor.

CAN HE SELL OR REMOVE SHANTY?

As I am a subscriber to the M. B. F. I would like to ask one question. B buys a farm from A. A reserves all wood. A hires wood cutters to cut this wood and tells them he will furnish lumber for a shanty. They can build shanty and live there while they are cutting the wood, so they did. A did not ask permission to put the shanty on B's farm or take it away. Now can A move or sell this shanty?—N. F. C., Covert, Mich.

—A's reservation of all wood gives him an implied license to enter upon the land and do all things reasonably necessary in the cutting and hauling away of the wood. If the building of the shanty for the workers' is a reasonable means of doing this work, he would have the right to erect such a shanty, and could sell it or remove it upon completion of the work.—Asst. Legal Editor.

FARMERS SUGAR COMPANY

What do you know about the Farmers Sugar Company, Defiance, Ohio?—E. A., Macomb County, Mich.

—We are organized under the corporation laws of the State of Ohio. It is strictly a farmer's company in that our stockholders are farmers. We sold $1,000,000 worth of stock to 1200 farmers. We started building in 1921, but the panic of that year forced us to stop building. We would not go in debt consequently are alive and as soon as our stockholders are able to meet their notes we will go on with the enterprise.

We soon discovered we had something else to think about besides building. The question soon came forcibly to our attention whether our farmers were going to have the opportunity to grow beets. The opposition to the American sugar industry is well organized, rich and influential. I attended the Farm conference in January, 1923, and it did not take me long to realize that if the farmers of America, not only in Ohio and Michigan, but all over the United States were to have the opportunity to grow this important crop they would have to fight and fight hard.—C. H. Allen, President.

HOLD "A" LIABLE

I am writing for advice about a deal I made. I sold timber to a party and gave him two years to cut and haul timber, and A let another party B handle said timber which they were to buy and haul away so A has turned the deed over to B, but my contract is made with A. B hired men and teams to cut and skid said timber and has not paid for the help. Now what I want to know is, do I have to pay for cutting said timber when the contract is made between A and myself and B sends men to cut the timber. I had nothing to do with cutting the timber. I was to get paid for it on the stump. That is, they were to do all cutting and hauling and I was to get $16.00 per M log measure. Some of the men put a laborers lien on the timber. Can they sell the timber for their pay without me getting my pay for the timber? A came and made the contract with me and B took out the property and sent the men to work. I hope you can give me some information on this.—F. Y., Kinde, Michigan.

—If A entered into a contract with you to buy timber and afterwards sold the timber, or assigned the contract to B without your consent, you could still hold A liable on his contract, for the amount he agreed to pay. If you did not agree to cut the timber, you would not be required to do so hor pay anyone else to cut it. The workmen would have a lien on the logs which would have priority over your claim, and they could sell the logs for payment of their wages. This would not prevent you from recovering from A the price of the logs, out of other property he may have. If, instead of assigning the contract, A brought B would be liable to you for into an entirely new agreement, then B would be liable to you to for for the logs according to the terms of such agreement.—Asst. Legal Editor.

WOULD NOT BE HOUSEHOLDER

As I am a subscriber to your paper I would like to ask you a question in regard to the taxation of personal property. I think the law reads like this—"Personal property owned and used by an householder in connection with his business is exempt from taxation to the value of two hundred dollars." Our supervisor did not give me the two hundred dollar exemption for he said I was not a householder. So I will state the conditions and ask you if he was right. For the past eight years I have worked a farm and had as my housekeeper, my sister, for I am single, but the past year I have been alone. I worked the farm the same having the same amount of livestock and poultry. Everything is done the same except that I drive over to my father's, about ¾ mile away for nearly all meals and stay there ninety per cent of the time nights.

Should I have the two hundred dollar exemption or not?—X. Y., Kalamazoo County.

—Your question is not one of law, but one of fact, as to whether or not you are a householder under the circumstances. If you take all your meals away from home, and spend most of your nights away from what you call home, you would not, in my opinion, be considered a householder.—Asst. Legal Editor.

HAS NO DEED TO LAND

Suppose S owns eighty acres along side of W, also 40 acres at the back of W's place. There is no building on this 40 acres of S's. S was granted the privilege of a corner to get to his 40 acres but there was no writing to show that he owns this corner. Now S is saying that it is outlawed and that he rightfully owns this corner for a roadway into this 40 acres. Said opening was made seven years ago. Please let me know what you think about it.—W. W. R., Imlay City, Mich.

—If S has never received a deed to this strip of land, he could not gain title to it, except by adverse possession. In order to obtain title by adverse possession he would have to hold it for 15 years, and his possession would have to be adverse, or hostile, to that of the owner. Obviously this could not be true if W gave his permission to use it. So long as S is using this corner of land with W's permission, he could never gain title by adverse possession.—Asst. Legal Editor.

COW REACTS TO T. B. TEST

On May 5th we had an auction sale and sold everything we had, including our cattle. We had some fine looking cows that had all freshened within a few weeks before the sale. The cows were far and as nice looking as any cows you run across. They were not thoroughbreds but we had bred them up and they were nearly full blooded Shorthorns. Among the people that bid on the cows was a fellow thet called himself a string butcher. He bought a cow with the notion of selling her again and making a good profit. The man he was to sell her to wanted her tested for T. B. They tested her and she reacted. Now the butcher comes back and says we have to give him one-half what he paid for the cow. Now they never tested cows around here and there was nothing said at the sale if they were tested cows or not. We told him it was a public auction sale and he took his chance. He says the cow is ours yet and we are obliged to take her back six months after the sale. He paid and took the cow the night of the sale. There was nothing said at the sale about if the cows weren't any good we were to take them back. We were selling out.—Mrs. L. E., Honor, Mich.

—If the buyer had reasonable opportunity to inspect the cow, and you made no false representations regarding her condition, he would have no right to a refund of one half of the purchase price. You would not be liable to the purchaser in any way on account of the cow's condition.—Asst. Legal Editor.

EACH MUST GIVE HALF ROAD

We take the M. B. F. and would like to ask one question in reguard to road law. If A driving a car and going east meets a team going west (said team is on A's side of the road), does A have to give road to B because he has a load?—Mrs. G. M., Lake Odessa, Mich.

—The State Road Law stipulates that when two vehicles meet on the road, each shall turn to the right of the middle of the road, so as to allow the other to pass, and makes no exception to heavily loaded vehicles. However, if any damages result to either because of the failure of the other to do so, the fact that one is heavily loaded would bear on the question of negilgence.—Asst. Legal Editor.

WIFE'S PERSONAL PROPERTY NOT LIABLE

I see so many letters in the M. B. F. and all wanting help so I thought I would come and ask for help also. First let me say will find enclosed 60c for a year's subscription. We feel as though we can not get along without the M. B. F. and we know you can not put the paper out without money. Now I wish to explain. A rented a farm from B. B has a lien on the produce. Now A's personal property is all in his wife's name. Can they take that if A can not make the rent? About 18 months after the farm was rented by A from B, B's daughter got A's wife to sign the contract. Does that make it any more binding and can B make A sign notes to the amount of the rent? Now if one give a second chattel mortgage is it any good after the first chattle mortgage is paid? Or will it have to be renewed before it is good?

Can a lawyer collect fees from a man where everything is in his wife's name and all covered by mortgage? If not what can he do?—A. V. A., Corunna, Mich.

—The wife's personal property would not be liable for the payment of the rent, even if she signed the contract with her husband. However, if the husband purchases property after the rent, or any other debt accrues, and has title vested in his wife, for the purpose of avoiding his obligations, such property would be subject to the payment of the debt. B could not compel A to sign notes for the payment of the rent. A second mortgage is good after the first is discharged, and may be foreclosed against the property after the first is satisfied. A lawyer could not collect his fee for services rendered the husband, out of the wife's personal property. There are a number of things he might do to collect his fee, depending on the circumstances, and if anyone is trying to avoid paying a just attorney's fee, I would advise him not to wait to find out what the attorney can do to collect what is due him.—Asst. Legal Editor.

CROPS NOT SUBJECT TO LEVY

Own 40 acres of land, a team of horses, 2 cows, have a wife and family. Now can a certain company, come and take any of those things mentioned above such as cattle, land or garnishee my wages? I hold a note against a man without any endorser only his name. Him and his wife are owners of a small place with a joint deed, no personal to speak of. Could I sue and get a judgement and take away crops raised on the place?—C. A. D., Ionia County, Mich.

—The estate of a husband and wife, holding land under a joint deed is known in law as an estate by the entireties, and in such case, crops raised on the land are not subject to levy upon execution for any debt of the husband.—Asst. Legal Editor.

Subsoiling and Erosion Control

WHERE level farm land is underlaid by an impervious stratum of cemented gravel, clay or hardpan, which in turn rests on loose gravel or more or less open sand, wonderful results are obtained by firing small charges of dynamite in the impervious stratum to break it up so that drainage of the top soil is established during the rainy season, and moisture is stored in the lower strata to be available in times of drought. In some parts of the country the farming land is, on a large scale, like a few inches of soil in a china dish left out of doors. It is either too wet or too dry. Subsoiling corrects this condition by allowing the rain to run down into the subsoil instead of being held up by it and ruining the crops, and to form a reserve of the moisture under the hardpan for nourishment of the plant roots in dry seasons. Subsoiling is one of the least spectacular blasting operations. The method is somewhat as follows:

The land is laid off in fifteen foot squares and at each intersection a hole is bored by means of a dirt auger half way through the hardpan, cemented gravel or impervious stratum. In the bottom of each hole is placed a half stick or a whole stick of 20 per cent low freezing ammonia dynamite primed with a cap and a piece of fuse. If the impervious stratum is under eighteen inches in diameter, a half cartridge is ordinarily sufficient to break it up thoroughly. If this is more than eighteen inches thick, it may require as much as a cartridge in each hole. The fuse should be cut long enough to extend at least two inches above the surface of the ground. The holes should be well tamped with sand, loam or clay to confine the charge. The explosion is very mild, ordinarily blowing up only a small hump and not throwing any material more than a few inches.

The best results are obtained when subsoiling is done in the dry season, especially when the impervious material is clay, as dry clay pulverizes and shatters much better than wet clay. Do not be too economical in the use of dynamite and space the holes too far apart. I have seen meadow land which had been subsoiled on thirty-foot centers and afterwards sown to buckwheat where the buckwheat when mature stood up twice as high at the points where the shots were fired as it did half way between. Subsoiling is of no particular value in well drained, loose mellow soil.

In rolling countries where a heavy rain fall results in washing away a quantity of the top soil, making gullies and small ravines after very heavy rain, and especially where the crops are sown in terraces, great benefit has been secured by subsoiling these terraces. This causes the rain water to sink into the soil as into a sponge instead of running off as it would from an inverted dish. Not only are better crops obtained by supplying more moisture to the roots in the dry season, but the surface erosion is very much lessened and the formation of gullies largely eliminated. The method of blasting is similar to that described above, but the holes should be placed about eight feet apart. Experiments made several years ago in the control of surface erosion by subsoiling terraces showed in every case a decided improvement in both the growth of the crops and the prevention of the washing away of the top soil.—By Arthur La Motte, Manager Technical Section, Explosives Dept., E. I. Du Pont de Nemours & Co.

The Guardian of the Accolade

A Complete Short Story by O. HENRY America's Greatest Short Story Writer

Copyrighted, 1920, by Doubleday, Page & Co.; published by special arrangement with the Wheeler Syndicate, Inc.

NOT the least important of the force of the Weymouth Bank was Uncle Bushrod. Sixty years had Uncle Bushrod given of faithful service to the house of Weymouth as chattel, servitor, and friend. Of the color of mahogany bank furniture was Uncle Bushrod—thus dark was he externally; white as the uninked pages of the bank ledgers was his soul. Eminently pleasing to Uncle Bushrod would the comparison have been; for to him the only institution in existence worth considering was the Weymouth Bank, of which he was something between porter and generalissimo-in-charge.

Weymouth lay, dreamy and umbrageous, among the low foothills along the brow of a Southern valley. Three banks were in Weymouth-ville. Two were hopeless, misguided enterprises, lacking the presence and prestige of a Weymouth to give them glory. The third was The Bank, managed by the Weymouths—and Uncle Bushrod. In the old Weymouth homestead—the red brick, white porticoed mansion, the first to your right as you crossed Elder Creek, coming into town—lived Mr. Robert Weymouth (the president of the bank), his widowed daughter, Mrs. Vesey—called "Miss Letty" by every one—and her two children, Nan and Guy. There, also in a cottage on the grounds, resided Uncle Bushrod and Aunt Mandy, his wife. Mr. William Weymouth (the cashier of the bank) lived in a modern, fine house on the principal avenue.

Mr. Robert was a large, stout man, sixty-two years of age, with a smooth, plump face, long iron-gray hair and fiery blue eyes. He was high-tempered, kind, and generous, with a youthful smile and a formidable, stern voice that did not always mean what it sounded like. Mr. William was a milder man, correct in deportment and absorbed in business. The Weymouths formed The Family of Weymouthville, and were looked up to as was their right of heritage.

Uncle Bushrod was the bank's trusted porter, messenger, vassal and guardian. He carried the key to the vault, just as Mr. Robert and Mr. William did. Sometimes there was ten, fifteen, or twenty thousand dollars in sacked silver stacked on the vault floor. It was safe with Uncle Bushrod. He was a Weymouth in heart, honesty, and pride.

Of late Uncle Bushrod had not been without worry. It was on account of Marse Robert. For nearly a year Mr. Robert had been known to indulge in too much drink. Not enough, understand, to become tipsy, but the habit was getting a hold upon him, and every one was beginning to notice it. Half a dozen times a day he would leave the bank and step around to the Merchants and Plants' Hotel and take a drink. Mr. Robert's usual keen judgment and business capacity became a little impaired. Mr. William, a Weymouth, but not so rich in experience, tried to dam the inevitable backflow of the tide, but with incomplete success. The deposits in the Weymouth Bank dropped from six figures to five. Past-due paper began to accumulate, owing to injudicious loans. No one cared to address Mr. Robert on the subject of temperance. Many of his friends said that the cause of it had been the death of his wife some two years before. Others hesitated on account of Mr. Robert's quick temper, which was extremely apt to resent personal interference of such a nature. Miss Letty and the children noticed the change and greived about it. Uncle Bushrod also worried, but he was one of those who would not have dared to remonstrate, although he and Marse Robert had been raised almost as companions. But there was a heavier shock coming to Uncle Bushrod than that caused by the bank president's toddies and juleps.

Mr. Robert had a passion for fishing, which he usually indulged whenever the season and business permitted. One day, when reports had been coming in relating to the bass and perch, he announced his intention of making a two or three day's visit to the lakes. He was going down, he said, to Reedy Lake with Judge Archinard, an old friend.

Now, Uncle Bushrod was treasurer of the Sons and Daughters of the Burning Bush. Every association he belonged to made him treasurer without hesitation. He stood AA1 in colored circles. He was understood among them to be Mr. Bushrod Weymouth, of the Weymouth Bank.

The night following the day on which Mr. Robert mentioned his intended fishing-trip the old man woke up and rose from his bed at twelve o'clock, declaring he must go down to the bank and fetch the pass-book of the Sons and Daughters, which he had forgotten to bring home. The bookkeeper had balanced it for him that day, put the cancelled checks in it, and snapped two elastic bands around it. He put but one band around other pass-books.

Aunt Mandy objected to the mission at so late an hour, denouncing it as foolish and unnecessary, but Uncle Bushrod was not to be deflected from duty.

"I done told Sister Adaline Hoskins," he said, "to come by here for dat book tomorrer mawnin' at sebin o'clock, for to kyar' it to de meetin' of de bo'd of 'rangements, and dat book gwine to be here when she come."

So, Uncle Bushrod put on his old brown suit, got his thick hickory stick, and meandered through the almost deserted streets of Weymouthville. He entered the bank, unlocking the side door, and found the pass-book where he had left it, in the little back room used for private consultations, where he always hung his coat. Looking about casually, he saw that everything was as he had left it, and was about to start for home when he was brought to a standstill by the sudden rattle of a key in the front door. Some one came quickly in, closed the door softly, and entered the counting-room through the door in the iron railing.

That division of the bank's space was connected with the back room by a narrow passageway, now in deep darkness.

Uncle Bushrod, firmly gripping his hickory stick, tiptoed gently up this passage until he could see the midnight intruder into the sacred precincts of the Weymouth Bank. One dim gas-jet burned there, but even in its nebulous light he percieved at once that the prowler was the bank's president.

Wondering, fearful, undecided what to do, the old colored man stood motionless in the gloomy strip of hallway, and waited developments.

The vault, with its big iron door, was opposite him. Inside that was the safe, holding the papers of value, the gold and currency of the bank. On the floor of the vault was, perhaps, eighteen thousand dollars in silver.

The president took his key from his pocket, opened the vault and went inside, nearly closing the door behind him. Uncle Bushrod saw, through the narrow aperture, the flicker of a candle. In a minute or two—it seemed an hour to the watcher—Mr. Robert came out, bringing with him a large hand-satchel, handling it in a careful but hurried manner, as if fearful that he might be observed. With one hand he closed and locked the vault door.

With the reluctant theory forming itself beneath his wool. Uncle Bushrod waited and watched, shaking in his concealing shadow.

Mr. Robert set the satchel softly upon a desk, and turned his coat collar up about his neck and ears. He was dressed in a rough suit of gray, as if for traveling. He glanced with frowning intentness at the big office clock above the burning gas-jet, and then looked lingeringly about the bank—lingeringly and fondly, Uncle Bushrod thought, as one who bids farewell to dear and familiar scenes.

Now he caught up his burden again and moved promptly and softly out of the bank by the way he had come, locking the front door behind him.

For a moment or longer Uncle Bushrod was as stone in his tracks. Had that midnight rifler of safes and vaults been any other on earth than the man he was, the old retainer would have rushed upon him and struck to save the Weymouth property. But now the watcher's soul was tortured by the poignant dread of something worse than mere robbery. He was seized by an accusing terror that said the Weymouth name and the Weymouth honor were about to be lost. Marse Robert robbing the bank! What else could it mean? The hour of the night, the stealthy visit to the vault, the satchel brought forth full and with expedition and silence, the prowler's rough dress, hissolicitous reading of the clock, and noiseless departure—what else could it mean?

And then to the turmoil of Uncle Bushrod's thoughts came the corroborating recollection of preceeding events—Mr. Robert's increasing intemperance and consequent many moods of royal high spirits and stern tempers; the casual talk he had heard in the bank of the decrease of business and difficulty in collecting loans. What else could it mean but that Mr. Robert Weymouth was an absconder—was about to fly with the bank's remaining funds, leaving Mr. William, Miss Letty, little Nan, Guy, and Uncle Bushrod to bear the disgrace?

During one minute Uncle Bushrod considered these things, and then he awoke to sudden determination and action.

"Lawd! Lawd!" he moaned aloud, as he hobbled hastily toward the side door. "Sech a come-off after all dese here years of big doin's and fine doin's. Scanlous sights upon de yearth when de Weymouth family done turn out robbers and 'bezzlers! Time for Uncle Bushrod to clean out somebody's chicken-coop and eben matters up. Oh, Lawd! Marse Robert, you ain't gwine do dat. 'N Miss Letty an' dem chillum so proud and talkin' Weymouth, Weymouth,' all de time! I'm gwine to stop you ef I can. 'Spec you shoot Mr. Nigger's head off ef he fool wid you, but I'm gwine stop you ef I can."

Uncle Bushrod, aided by his hcikory stick, impeded by his rheumatism, hurried down the street toward the railroad station, where the two lines touching Weymouthville met. As he expected and feared there Mr. Robert, standing in the shadow of the building, waiting for the train. He held the satchel in his hand.

When Uncle Bushrod came within twenty yards of the bank president, standing like a huge, gray ghost by the station wall, sudden perturbation seized him. The rashness and audacity of the thing he had come to do had struck him fully. He would have been happy could he have turned and fled from the possibilities of the famous Weymouth wrath. But again he saw, in his fancy, the white, reproachful face of Miss Letty, and the distressed looks of Nan and Guy, should he fail in his duty and they question him as to his stewardship.

Braced by the thought, he approached in a straight line, clearing his throat and pounding with his stick so that he might be early recognized. Thus he might avoid the likely danger of too suddenly surprising the sometimes hasty Mr. Robert.

"Is that you, Bushrod?" called the clamant, clear voice of the gray ghost.

"Yes, suh, Marse Robert."

"What in the devil are you doing out at this time of night?"

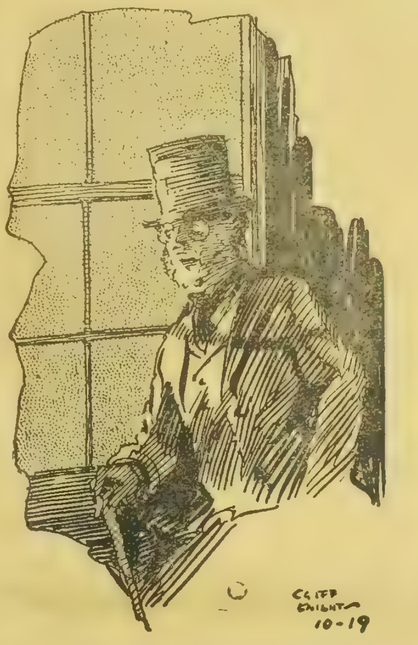
For the first time in his life, Uncle Bushrod told Marse Robert a falsehood. He could not repress it. He would have to circumlocute a little. His nerve was not equal to a direct attack.

"I done been down, suh, to see ol' Aunt M'ria Patterson. She taken sick in de night, and I kyar'ed her a bottle of M'lindy's medercine. "Yes, Suh."

"Humph!" said Robert. "You better get home out of the night air. It's damp. You'll hardly be worth killing tomorrow on account of your rheumatism. Think it'll be a clear day, Bushrod?"

"I 'low it will, suh. De sun sot red las' night."

Mr. Robert lit a cigar in the shadow, and the smoke looked like his gray ghost expanding and escaping into the night air. Somehow, Uncle Bushrod could barely force his reluctant tongue to the dreadful subject. He stood, awkward, shambling, with his feet upon the gravel and fumbling with his stick. But then, afar off—three miles away, at the Jimtown switch—he heard the faint whistle of the coming train, the one that was to transport the Weymouth name into regions of dishonor and shame. All fear left him. He took off his hat and faced the chief of the clan he served, the great, royal, kind, lofty, terrible Weymouth—he bearded him there at the brink of the awful thing that was about to happen.



The old colored man stood motionless in the gloomy strip of hallway.

"Marse Robert," he began, his voice quavering a little with the stress of his feelings, "you 'member de day dey-all rode de tunnament at Oak Lawn? De day, suh dat you win in de ridin', and you crown Miss Lucy de queen?"

"Tournament?" said Mr. Robert, taking his cigar from his mouth. "Yes, I remember very well the—but what the deuce are you talking about tournaments here at midnight for? Go 'long home, Bushrod. I believe you're sleep-walking."

"Miss Lucy tech you on de shoulder," continued the old man, never heeding, "wid a s'ord, and say: 'I mek you a knight, Suh Robert—rise up, pure and fearless and widout reproach.' Dat what Miss Lucy say. Dat's been a long time ago, but me nor you ain't forgot it. And den dar's another time we ain't forgot—de time when Miss Lucy lay on her las' bed. She sent for Uncle Bushrod, and she say: Uncle Bushrod, when I die, I want you to take good care of Mr. Robert. Seem like'—so Miss Lucy say—'he listen to you mo' dan to anybody else. He apt to be mighty fractious sometimes, and maybe he cuss you when you try to 'suade him but he need somebody what understand him to be 'round wid him. He am like a little child sometimes'—so Miss Lucy say, wid her eyes shinin' in her po', thin face—'but he always been'—dem was her words—'my knight, pure and fearless and widout reproach.' "

Mr. Robert began to mask, as was his habit, a tendency to soft-heartedness with a spurious anger.

"You—you old windbag!" he growled through a cloud of swirling cigar smoke. "I believe you are crazy. I told you to go home, Bushrod. Miss Lucy said that, did she? Well, we haven't kept the scutcheon very clear. Two years ago last week, wasn't it, Bushrod when she died? Confound it! Are you going to stand there all night gabbing like a coffee-colored gander?"

The train whistled again. Now it was at the water tank, a mile away.

"Marse Robert," said Uncle Bushrod, laying his hand on the satchel that the banked held. "For Gawd's sake, don' take dis wid you. I knows what's in it. I knows where you git it in de bank. Don' kyar' it wid you. Dey's big troubles in dat walise for Miss Lucy and Miss Lucy's child's chillun. Hit's bound to destroy de name of Weymouth and bow down dem dat own it wid shame and triberlation. Marse Robert, you can kill dis ole nigger ef you wil, but don't take away his er valise. If I ever crosses over de Jordan, what I gwine to say to Miss Lucy when she ax me: 'Uncle Bushrod, wharfo' didn' you take good care of Mr. Robert?"

Mr. Robert Weymouth threw away his cigar and shook free one arm with that peculiar gesture that always preceded his outbursts of irascabilitl. Uncle Bushrod bowed his head to the expected storm, but he did not flinch. If the house of Weymouth was to fall, he would fall with it. The banker spoke, and Uncle Bushrod blinked with surprise. The storm was there, but it was suppressed to the quietness of a summer breeze.

"Bushrod," said Mr. Robert, in a lower voice than he usually employed, "you have overstepped all bounds. You have presumed upon the leniency with which you have been treated to meddle-unpardonably. So you know what is in this satchel! Your long and faithful service is some excuse, but—go home Bushrod—not another word!"

But Bushrod grasped the satchel with a firmer hand. The headlight of the train now lightening the shadow about the station. The roar was increasing, and folks were stirring about at the track side.

"Marse Robert, gimme dis 'er' valise. I got a right, suh, to talk to you dis 'er' way. I slaved for you and 'tended to you from a child up. I went th'ough de war as yo' body-servant tell we whipped de Yankees and sent 'em back to de No'th. I was at yo' weddin', and I was n' fur away when yo' Miss Letty was bawn. And Miss Letty's chillun, dey watches today for Uncle Bushrod when he come home ever' evenin'. I been a Weymouth, all 'cept in color and entitlements Both of us is old, Marse Robert. 'Tain't goin' to be long tell we gwine to see Miss Lucy and and has to give an account of our doin's. De ole nigger man won't be 'spected to say much mo' dan he done all he could by de fambly dat owned him. But de Weymouths, dey must sey dey been livin' pure and fearless and widout reproach. Gimme dis valise, Marse Robert—I'm gwine to hab it. I'm gwine to take it back to the bank and lock it up in de vault. I'm gwine to do Miss Lucy's biddin'. Turn 'er loose, Marse Robert."

The train was standing at the station. Some men were pushing trucks along the side. Two or three sleepy passengers got off and wandered away into the night. The conductor stepped to the gravel, swung his lantern and called: "Hello, Frank!" at some one invisible. The bell clanged, the brakes hissed, the conductor drawled: "All aboard!"

Mr. Robert released his hold on the satchel. Uncle Bushrod hugged it to his breast with both arms, as a lover clasps his first beloved.

"Take it back with you, Bushrod," said Mr. Robert, thrusting his hands into his pockets. "And let the subject drop—now mind! You've said quite enough. I'm going to take this train. Tell Mr. William I will be back on Saturday. Good night."

The banker climbed the steps of the moving train and disappeared in a coach. Uncle Bushrod stood motionless, still embracing the precious satchel. His eyes were closed and his lips were moving in thanks to the Master above for the salvation of the Weymouth honor. He knew Mr. Robert would return when he said he would. The Weymouths never lied. Nor now, thank the Lord! Could it be said they embezzled the money in banks.

Then awake to the necessity for further guardianship of Weymouth trust funds, the old man started for the bank with the redeemed satchel.

* * * * *

Three hours from Weymouthville, in the gray dawn, Mr. Robert alighted from the train at a lonely flag-station. Dimly he could see the figure of a man waiting on the platform and the shape of a spring-wagon, team and driver. Half a dozen lengthy bamboo fishing-poles projected from the wagon's rear.

"You're here, Bob," said Judge Archinard, Mr. Robert's old friend and schoolmate. "It's going to be a royal day for fishing. I thought you said—why, didn't you bring along the stuff?"

The president of the Weymouth Bank took off his hat and rumpled his gray locks.

"Well, Ben, to tell you the truth, there is an infernally presumptious old nigger

What the Neighbors Say

FARMER MUST JOIN LABORER

OUR farmer friend asks if someone would tell what to raise. This question reminds me of the pioneer time of Iosco County. After the Civil War settlers were coming from all directions assuming they had found the promised land. A large portion of Ioso county consisted of plains land covered with huckleberry brush, many of the home seekers could start plowing as there was nothing in their way. Timber fields were found along the stream, game was abundant and lumbering was started at full blast. But this did not last long. When the settlers started to leave again a Canadian settler we call him Joe, pulled stakes to leave. When he struck town many a friends ask him, "Could you not raise enough to make a living on your new farm?" Joe replied, " I raised good corn, I raised good beans, I raised good potatoes and last of all I raised —— and left."

Many of our farmers today can not raise a disturbance and must leave. High taxes and interest drive them off the farm. There will be no relief. The only salvation is for the farmer and laboring man to join hands at the ballot box, the only lawful weapon at our command, to meet his management, corrupt politics, profiteering and graft. China is always considered to be in the rear in progress and civilization, but it appears they have some very good laws. If a Chinese is found guilty of profiteering he must stand in front of his place of business and ring a bell and hold a banner in one hand which tells the crime he committed.. If such a law be enacted in our country and enforced we could not hear oneself for all the jingle of bells. They also have a banking law which seems to cover their whole banking system. If a banker fails he is beheaded and it seems to prove good. Only one bank failed in 400 years. How many headless bankers could we show up with such a law enforced. We have too many laws and should petition for a full session of our legislature to repeal laws in place of making more.

Why is there always high rewards offered for bank and train robbers? And at no time a single dollar offered to bring the coal or sugar trust or any other profiteering corporation to justice? Is it because the safe crackers don't steal enough? Who can give a definate answer?—C. H., Tawas City, Michigan.

GAS TAX UNJUST

I MOST heartily support your fearless policy of "hewing to the line" even if I don't always agree with you on all points of discussion. Your most commendable editorial on the Michigan state highway situation entitled "The Weakest Link" in the June 9th issue is mighty good with one exception, taking a farmer tax-payer's view of the subject, that is the following statement: That the farmers were right when they asked for a gasoline tax and the Governor was wrong when he vetoed it. I have never been a supporter either at the polls or much of anywhere else of Gov. Groesbeck, but that does not mean that when he does come across with a policy of merit that I should not give him due credit for the same. I think the gasoline tax bill that passed both houses of the legislature was the most unjust form of taxation ever attempted upon the farmers of this state. You say that the farmers were strong for it (or words to that effect) which seems to be a fact, but for what reason it is beyond my power of comprehension. The farmers are one and all kicking like the proverbial bay steer about high taxes and justly so too. But for these same voters to stand practically solid for a measure that will increase the taxes they are already paying a tidy sum, is sure the limit. To begin with our present license law is unjust inasmuch as the neighbor who drives a super six pays less than twice the fee on a $1400 car that I pay on a $400 lizzie. Why not correct the old law rather than enact a new one that will increase the taxation at about the same ratio. For instance, he says he gets from 10 to 12 miles per gallon of gas with the $1400 car while I get from 15 to 20 miles per gallon with my $400 lizzie. Now then suppose I do average twice the miles per gallon of gas as he; he is paying only twice the tax that I would and it would be upon property worth three and one half times what mine is. Is that justice? If so it sure is a new brand. The gas-taxers say I should pay at that rate because I use the highway more per gallon than he. If that be the case let us suppose again, that he owns a fine driving horse worth $200 with a $50 harness and a $150 carriage a total worth of $400. I own a $25 horse, a $10 harness and a $15 carriage, a total of $50. Bought for the purpose of my daughter and son to drive five miles to high school five days a week for ten months of the year or a total of 2,000 miles, while he drives his outfit an average of 10 per week for twelve months or 520 miles. At the gas tax ratio I should pay practically twice the tax on a $50 valuation as he would on a $400 valuation or sixteen times as high a tax rate as he, for the simple reason that my property uses the highway more than his at the rate of 4 to 1. In other words a 16 to 1 tax rate for a 4 to 1 service. Of course no fair minded person of average intelligence would consider anything of the kind as just but that is just about what the majority of the farmers of Michigan wanted when they supported the gasoline tax of two cents per gallon. Then on top of that every time the little engine pumps water, does the family washing, makes juice for light, sprays the orchard and milks the cows, or friend wife uses a little gasoline to clean my Sunday breeches or the tractor gets cold feet in the winter and refuses to pop with kerosene in the tank when we saw wood or grind feed, we would pay the same little two cents per gallon for using the highway.

But what highway? As I understand it all this money would go only to the state reward roads. If that is so the township in which I reside sure would get a whole lot out of the gasoline tax as there is not a mile of state reward road within its boundry lines, although a state road does lie on the eastern boundry for a distance of some five miles which is very seldom used by at least four-fifths of the residents or taxpayers of said township. A gasoline tax of two cents per gallon would increase the taxes of this farm from $25 to $30 per year as we have a lizzie, a one-ton truck, a tractor and two small engines which we use as the occasion demands, while none of them travel an average of 150 miles on state reward road per year.

How in the name of common sense a taxpayer can support such a measure just to make the city man pay more taxes is absolutely beyond any sane thinking that my brain can master.

Take the case of R. F. D. carrier that drives from our post office. A two cent gas tax last year would have caused him to dig over fourteen dollars and the roads on his route are none too good either, and would not have been benefited one cents worth. Is that justice? Our mail carriers are as good friends and faithful servants as we have too. I can see no reason why our present license law could not be corrected in such a way so that the man that can afford an expensive car would have to pay a tax in proportion to its valuation, rather than penalize the poor neighbor who cannot afford the big car, or if he had one, he could not afford the gas and tires to keep it going. The measure would not have been quite so bad if it contained a referendum clause so the voters could have studied the question more thoroughly and voted upon it. To sum the whole thing up, it looks like this to me: Our governor is the shrewdest politician that ever filled the office, I am sure. And we have about the biggest bunch of genuine boobs in the legislature that Michigan every elected I don't have any idea what the governor's motive was in vetoing the gas tax measure and supporting the weight tax measure, unless it was to gain more power. We all know he wants and always has got it. He knew he could kill the gas tax bill which he did and I am mighty glad of it. He also could be very sure that the legislature would not pass the weight tax bill and he guessed right again. He also knew that if he could keep them running in a circle like a puppy chasing its tail, that they would eventually get dizzy and while staggering, so to speak—at least according to the press report, while the house was throwing paper and acting like a bunch of kids instead of looking after the welfare of the folks back home (that is supposed to be what are elected for)—he could put one over which he did as we all know, in the form of a joker giving him just what he was after; absolute control of the state highway department. If our members of the state legislature had used just common ordinary business judgement and had had confidence in the voters by referring the gas tax measure back to them the highway funds might have been in different shape and the power would have been where it should be with the voters of Michigan rather than in the hands of the shrewdest of politicians Michigan ever produced.—Ralph H. Jones, Shiawassee County, Mich.

FRUIT and ORCHARD

EDITED BY FRANK D. WELLS

BLIGHT IN APPLE TREES

When the twigs die during the summer it is something that should receive attention. The disease can be stopped if it receives prompt attention, otherwise it may keep spreading till it kills the tree. Cut back from 6 inches to a foot beyond the blighted portion, dipping the knife in some disinfectant every time it is used. It is also advisable to apply the disinfectant to the wound, using a brush or swab. Copper sulphate solution is good for the purpose. A teaspoonful to a quart of water is strong enough. A weak solution of carbolic acid is good, so is formalin. Unless the knife is treated there is danger that the disease may be transferred from an affected limb to healthy bark, so doing more harm than good by the pruning.

OUR BOOK REVIEW

(Books reviewed under this heading may be secured through The Michigan Business Farmer, and will be promptly shipped by parcel post on receipt of publisher's price stated.)

"The Tyranny of Power" by D. Thomas Curtin. A novel of force and absorbing interest, having the West Virginia coal fields for its background. This is the story of a man's supreme effort against destructive powers to live down the stigma of a criminal record and to carry out the spirit of the brotherhood of man instilled in him by the one whose name he has taken.

"The Tyranny of Power" has more substance than most novels. It is a story of the times, with strong characterization and ample love interest. ($2). Little, Brown and Company.

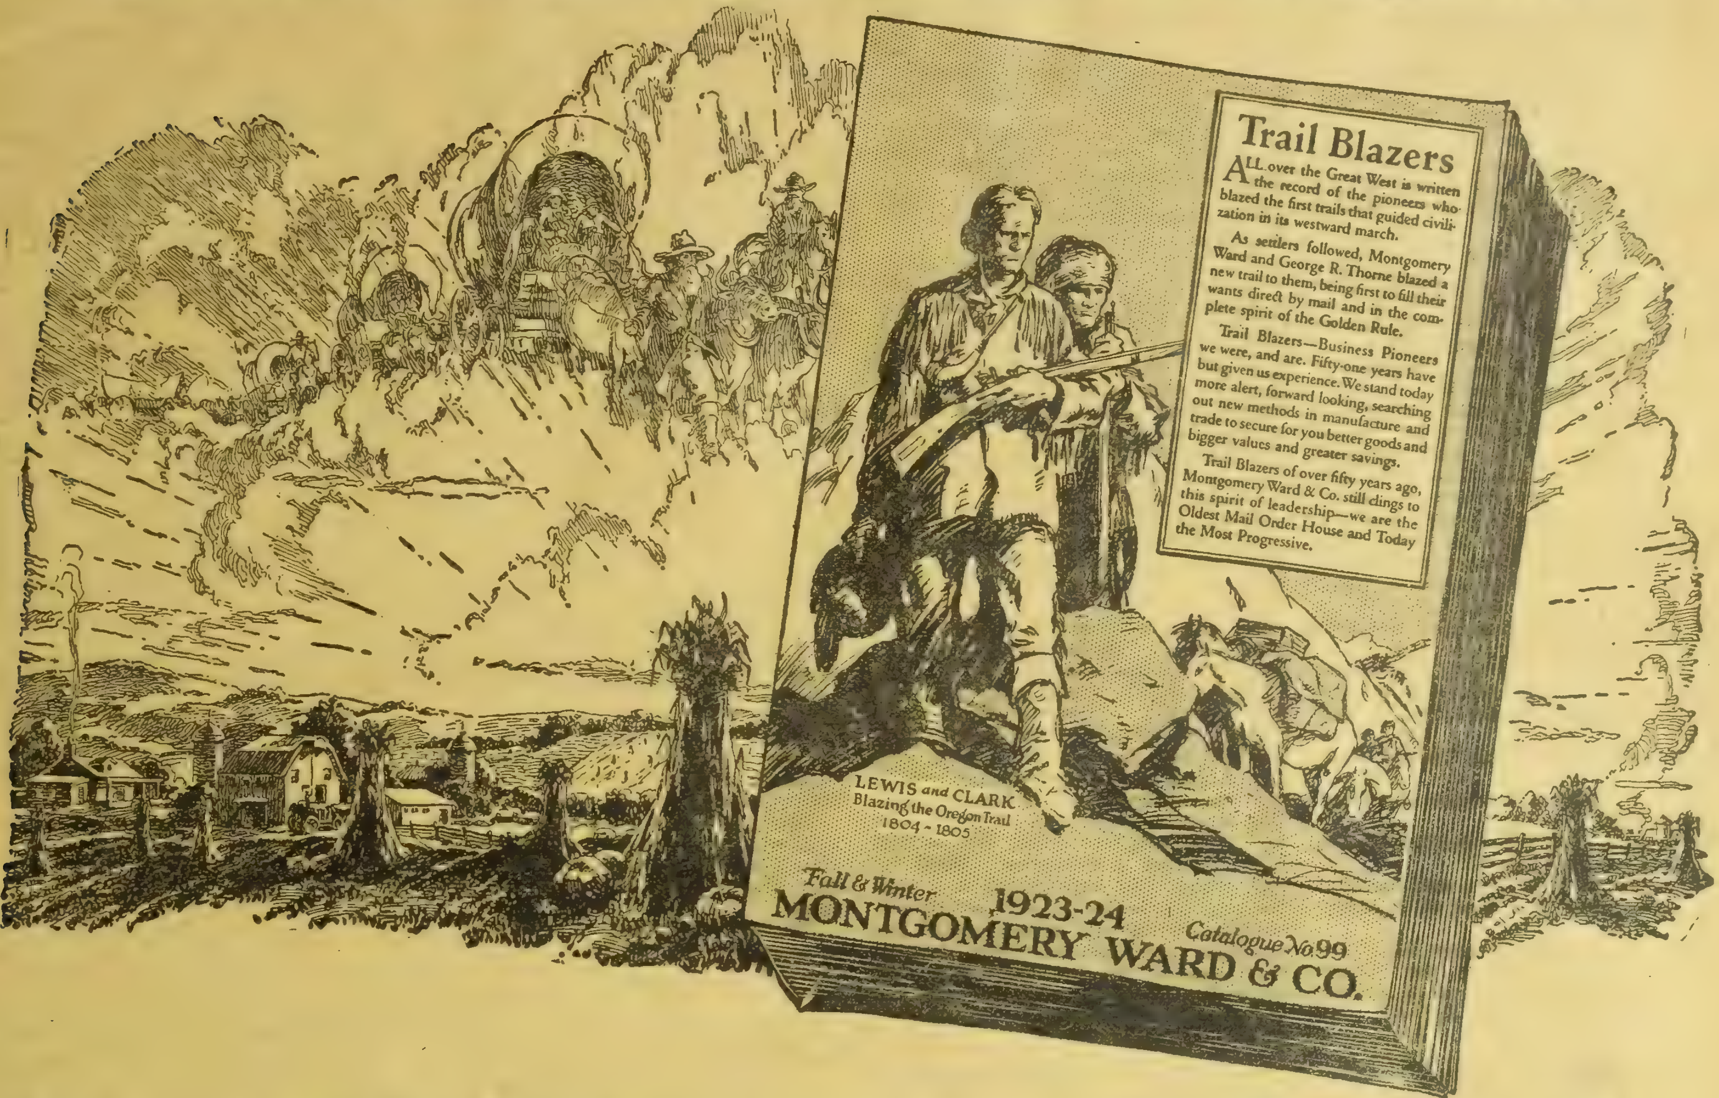
GOVERNMENT BULLETINS OF INTEREST IN AUGUST

A SMALL list of Farmers' Bulletins and Circulars of general interest during August is believed to be of value to our readers. Copies may be obtained free by addressing the Division of Publication, United States Department of Agriculture, Washington, D. C., as long as the supply lasts. Specify number and name and whether Farmers' Bulletin or Department Circular.

Farmers' Bulletins 766, The Common Cabbage Worm; 834, Hog Cholera; 900, Homemade Fruit Butters; 943, Haymaking; 959, The Spotted Garden Slug; 970, Sweet Potato Storage; 991, Efficient Operation of Threshing Machines; 1049, Baling Hay; 1073, Growing Beef on the Farm; 1075, Unfermented Grape Juice—How to Make It; 1080, Preparation of Barreled Apples for Market; 1120, Control of Apple Powdery Mildew; 1145, Handling and Transportation of Cantaloupes; 1159, Fermented Pickles; 1160, Diseases of Apples in Storage; 1175, Better Seed Corn; 1176, Root, Stalk, and Ear Rot Diseases of Corn; 1250, Green Manuring; 1264, Farm Manufacture of Unfermented Apple Juice; 1265, Business Methods of Marketing Hay; 1266, Preparation of Peaches for Market; 1290, The Bulk Handling of Grain; 1310, The Corn Earworm. Department Circulars 74, Points for Egg Breakers: How to Break Eggs for Freezing; 217, Anthracnose of Muskmelons; 238, U. S. Grades for Potatoes Recommended by the United States Department of Agriculture.

Montgomery Ward & Co.

The Oldest Mail Order House is Today the Most Progressive



Trail Blazers

All over the Great West is written the record of the pioneers who blazed the first trails that guided civilization in its westward march.

As settlers followed, Montgomery Ward and George R. Thorne blazed a new trail to them, being first to fill their wants direct by mail and in the complete spirit of the Golden Rule.

Trail Blazers—Business Pioneers we were, and are. Fifty-one years have but given us experience. We stand today more alert, forward looking, searching out new methods in manufacture and trade to secure for you better goods and bigger values and greater savings.

Trail Blazers of over fifty years ago, Montgomery Ward & Co. still clings to this spirit of leadership—we are the Oldest Mail Order House and Today the Most Progressive.

This new Fall and Winter Catalogue—Is Yours Free

The new, complete Fall and Winter Catalogue is now ready and will be sent you free. You need merely fill in the coupon below.

You may just as well profit by the saving this big book offers you.

In your home, this book will be a price guide and a shopping pleasure. You, too, may as well know the right price to pay, and you may as well save money on nearly everything you buy.

This Book Offers You a Saving of $50 this Season

Over *forty million dollars'* worth of goods have been bought at the lowest prices especially for this book—to make possible this saving for *you*.

So if you write for this book, if you use this book, and if your family uses this book, there will be a saving of over $50 in cash for you this season.

But this book offers you more than a saving—more than low prices. It offers you the satisfaction and the economy of always getting *dependable and serviceable goods.*

Ward Quality and Right Prices

For over fifty years Montgomery Ward & Co. has tried, first of all, to sell only *serviceable* goods that stand inspection and use.

We take great pride in Ward Quality. We always quote the lowest possible price. But we try always to have *our quality a little higher.*

So to write for this book, to use this book every week, not only means a saving in cash, but satisfaction with everything you buy and the saving that long service always brings.

Everything for the Home, the Farm and the Family

FOR WOMEN: This book shows *the best* New York Fashions, selected in New York by our own New York Fashion Experts. And everything is sold without the usual "fashion profits." This book will be a delight, a matter of style news, and a saving to every American woman.

FOR THE HOME: Carpets, furniture, bedding, electrical devices, everything new for home use, everything used in decoration and to make the home modern and complete. And the prices always mean a saving.

FOR THE MEN AND THE FARM: Everything a man uses or wears, from tools and hardware and famous Riverside Tires, to virgin wool suits—often one-third less than prices you are paying.

The coupon below brings this new, complete Fall and Winter Catalogue to you and your family—entirely free.

You, too, may as well profit by its saving. You need simply fill in this coupon and all the saving and satisfaction and pleasure this book brings will come into your home for you and your family.

Your Order will be Shipped in Less than 48 Hours

Our new perfected system of filling orders is now over a year old.

And our records prove that during the past year nearly all orders were shipped in less than 48 hours.

48 hour service is our promise to you. But we do better than our promise—because *a large percentage of our orders are actually shipped within 24 hours.*

So you can order from Montgomery Ward & Co. and feel sure that nearly every time your order will be shipped in less than 48 hours, and frequently within 24 hours.

This Coupon brings this new Catalogue Free

The Hunted Woman

By James Oliver Curwood

Michigan's Own and America's Formost Author of the Great Northwest

Copyright by James Oliver Curwood

(Continued from July 21st Issue)

"IT ain't more'n half a mile farther on, I guess. But we'll camp here. We're pretty well hid. They can't find us. An' from that summit up there we can keep watch in both valleys."

Knowing the thoughts that were in MacDonald's mind, and how full his heart was with a great desire, Aldous went to him when they dismounted.

"You go on alone if there is time to-night, Mac," he said, knowing that the other would understand him. "I will make camp."

"There ain't no one in the valley," mused the old man, a little doubtfully at first. "It would be safe—quite safe, Johnny."

"Yes, it will be safe."

"And I will stand guard while John is working," said Joanne, who had come to them. "No one can approach us without being seen."

For another moment MacDonald hesitated. Then he said:

"Do you see that break over there across the plain? It's the open to a gorge. Johnny, it do seem onreasonable—it do seem as though I must ha' been dreamin'—when I think that it took us twenty hours! But the snow was to my waist in this plain, an' it was slow work—turrible slow work! I think the cavern—ain't on'y a little way up that gorge."

"You can make it before the sun is quite gone."

"An I could hear you shout, or your gun. I could ride back in five minutes—an' I wouldn't be gone an hour."

"There is no danger," urged Aldous.

A deep breath came from old Donald's breast.

"I guess—I'll go, Johnny, if you an' Joanne don't mind."

He looked about him, and then he pointed toward the face of a great rock.

"Put the tepee up near that," he said. "Pile the saddles, an' blankets, an the panniers around it, so it'll look like a real camp, Johnny. But it won't be a real camp. It'll be a dummy. See them thick spruce an' cedar over there? Build Joanne a shelter of boughs in there, an' take in some grub, an' blankets, an' the gold. See the point, Johnny? If anything should happen——"

"They'd tackle the bogus camp!" cried Aldous with elation. "It's a splendid idea!"

He set at once about unpacking the horses, and Joanne followed close at his side to help him. MacDonald mounted his horse and rode at a trot in the direction of the break in the mountain.

The sun had disappeared, but its reflection was still on the peaks; and after he had stripped and hobbled the horses Aldous took advantage of the last of day to scrutinize the plain and the mountain slopes through the telescope. After that he found enough dry poles with which to set up the tepee, and about this he scattered the saddles and panniers, as MacDonald had suggested. Then he cleared a space in the thick spruce, and brought to it what was required for their hidden camp.

It was almost dark when he completed the spruce and cedar lean-to for Joanne. He knew that to-night they must build no fire, not even for tea; and when they had laid out the materials for their cold supper, which consisted of beans, canned beef and tongue, peach marmalade, bread, bannock, and pickles and cheese, he went with Joanne for water to a small creek they had crossed a hundred yards away. In both hands, ready for instant action, he carried his rifle. Joanne carried the pail. Her eyes were big and bright and searching in that thick-growing dusk of night. She walked very close to Aldous, and she said:

"John, I know how careful you and Donald have been in this journey into the North. I know what you have feared. Culver Rann and Quade are after the gold and they are near. But why does Donald talk as though we are surely going to be attacked by them, or are surely going to attack them? I don't understand it, John. If you don't care for the gold so much, as you told me once, and if we find Jane to-morrow, or to-night, why do we remain to have trouble with Quade and Culver Rann? Tell me, John."

He could not see her face fully in the gloom, and he was glad that she could not see his.

"If we can get away without fighting, we will, Joanne," he lied. And he knew that she would have known that he was lying if it had not been for the darkness.

"You won't fight—over the gold?" she asked, pressing his arm. "Will you promise me that, John?"

"Yes, I promise that. I swear it!" he cried, and so forcefully that she gave a glad little laugh.

"Then if they don't find us to-morrow, we'll go back home?" she trembled, and he knew that her heart was filled with a sudden lightness. "And I don't believe they will find us. They won't come beyond that terrible place and the gold! Why should they, John? Why should they follow us—if we leave them everything? Oh-h-h!" She shuddered and whispered: "I wish we had not brought the gold, John. I wish we had left it behind!"

"What we have is worth thirty or forty thousand dollars," he said reassuringly, as he filed his pail with water and they began to return. "We can do a great deal of good with with that. Endowments, for instance," he laughed.

As he spoke, they both stopped, and listened. Plainly they heard the approaching thud of hoofs. MacDonald had been gone nearer two hours than one, and believing that it was him, Aldous gave the owl signal. The signal floated back to them softly. Five minutes later MacDonald rode up and dismounted. Until he had taken the saddle off, and had hobbled his horse, he did not speak. Neither Joanne nor Aldous asked the question that was in their hearts. But even in the darkness they felt something. It was as if not only the torrent rushing through the chasm, but MacDonald's heart as well, was charging the air with a strange and subdued excitement. And when MacDonald spoke, that which they had felt was in his voice.

"You ain't seen or heard anything, Johnny?"

"Nothing. And you—Donald?"

In the darkness, Joanne went to the old man, and her hand found one of his and clasped it tightly; and she found that Donald MacDonald's big hand was trembling in a strange and curious way, and she could feel him quivering.

"You found Jane?" she whispered.

"Yes, I found her, little Joanne."

She did not let go of his hand until they entered the open space which Aldous had made in the spruce. Then she remembered what Aldous had said to her earlier in the day, and cheerfully she lighted the two candles they had set out, and forced Aldous down first upon the ground and then MacDonald, and began to help them to beans and meat and bannock, while all the time her heart was crying out to know about the cavern—and Jane. The candle-glow told her a great deal, for in it Donald MacDonald's face was very calm, and filled with a great peace, despite the trembling she had felt. Her woman's sympathy told her that his heart was too full on this night for speech, and when he ate but little she did not urge him to eat more; and when he rose and went silently and alone out into the darkness she held Aldous back; and when, still a little later, she went into her nest for the night, she whispered softly to him:

"I know that he found Jane as he wanted to find her, and he is happy. I think he has gone out there alone—to cry." And for a time after that, as he sat in the gloom, John Aldous knew that Joanne was sobbing like a little child in the spruce and cedar shelter he had built for her.

CHAPTER XXVIII

IF MacDONALD slept at all that night Aldous did not know it. The old mountaineer watched until a little after twelve in the deep shadow of a rock between the two camps.

"I can't sleep," he protested, when Aldous urged him to take his rest. "I might take a little stroll up the plain, Johnny—but I can't sleep."

The plain lay in a brilliant starlight at this hour; they could see the gleam of the snow peaks—the light was almost like the glow of the moon.

"There'll be plenty of sleep after to-morrow," added MacDonald, and there was a finality in his voice and words which set the other's blood stirring.

"You think they will show up tomorrow?"

"Yes. This is the same valley the cabins are in, Johnny. That big mountain runs out an' splits it, an' it curves like a horseshoe. From that mount'in we can see them, no matter which way they come. They'll go straight to the cabins. There's a deep little run under the slope. You didn't see it when we came out, but it'll take us within a hundred yards of 'em. An' at a hundred yards—"

He shrugged his shoulders suggestively in the starlight, and there was a smile on his face.

"It seems almost like murder," shuddered Aldous.

"But it ain't," replied MacDonald quickly. "It's self defense! If we don't do it, Johnny—if we don't draw on them first, what happened there forty years ago is goin' to happen again—with Joanne!"

A hundred yards," breathed Aldous, his jaws setting hard. "And there are five!"

"They'll go into the cabins," said MacDonald. "At some time there will be two or three outside, an' we'll take them first. At the sound of the shots the others will run out, and it will be easy. Yo' can't very well miss a man at a hundred yards, Johnny?"

"No, I won't miss."

MacDonald rose.

"I'm going to take a little stroll, Johnny."

For two hours after that Aldous was alone. He knew why old Donald could not sleep, and where he had gone and he pictured him sitting before the little old cabin in the starlit valley communing with the spirit of Jane. And during those two hours he steeled himself for the last time to the thing that was going to happen when the day came.

It was nearly three o'clock when MacDonald returned. It was four o'clock before he aroused Joanne; and it was five o'clock when they had eaten their breakfast, and Mac-Donald prepared to leave for the mountain with his telescope. Aldous had observed Joanne talking to him for several minutes alone, and he had also observed that her eyes were very bright, and that there was an unusual eagerness in her manner of listening to what the old man was saying. The significance of this did not occur to him when she urged him to accompany MacDonald.

"Two pairs of eyes are better than one, John," she said, "and I cannot possibly be in danger here. I can see you all the time, and you can see me—if I don't run away, or hide." And she laughed a little breathlessly. "There is no danger, is there, Donald?"

The old hunter shook his head.

"There's no danger, but—you might be lonesome," he said.

Joanne put her pretty mouth close to Aldous' ear.

"I want to be alone for a little while, dear," she whispered, and there was that mystery in her voice which kept him from questioning her, and made him go with MacDonald.

In three-quarters of an hour they had reached the spur of the mountain from which MacDonald had said they could see up the valley, and also the break through which they had come the preceding afternoon. The morning mists still hung low, but as these melted away under the sun mile after mile of a marvellous panorama spread out swiftly under them, and as the distance of their vision grew, the deeper became the disappointment in MacDonald's face. For half an hour after the mists had gone he neither spoke nor lowered the telescope from his eyes. A mile away Aldous saw three caribou crossing the valley. A little later, on a green slope, he discerned a moving hulk that he knew was a bear. He did not speak until old Donald lowered the glass.

"I can see for eight miles up the valley, an' there ain't a soul in sight,' said MacDonald in answer to his question. "I figgered they'd be along about now, Johnny."

A dozen times Aldous had looked back at the camp. Twice he had seen Joanne. He looked throught the telescope. She was nowhere in sight. A bit nervously he returned the telescope to MacDonald.

"And I can't see Joanne," he said.

MacDonald looked. For five minutes he levelled the glass steadily at the camp. Then he shifted it slowly westward, and a low exclamation broke from his lips as he lowered the glass, and looked at Aldous.

"Johnny, she's just goin' into the gorge! She was just disappearin' when I caught her!"

"Going into—the gorge!" gasped Aldous, jumping to his feet. Mac——'

MadDonald rose and stood at his side. There was something reassuring in the rumbling laugh that came from deep in his chest.

"She's beat us! he chuckled. "Bless her, she's beat us! I didn't guess why she was askin' me all them questions. An' I told her, Johnny—told her just where the cavern was up there in the gorge, an' how you wouldn t hardly miss it if you tried. An' she asked me how long it would take to walk there, an' I told her half an hour. An' she's going to the cavern, Johnny!"

He was telescoping his long glass as he spoke, and while Aldous was still staring toward the gorge in wonderment and a little fear, he added:

"We'd better follow. Quade an' Rann can't get here inside o' two or three hours, an' we'll be back before then." Again he rumbled with that curious chuckling laugh. "She beat us, Johnny, she beat us fair! An' she's got spirrit, a wunnerful spirrit, to go up there alone!"

Aldous wanted to run, but held himself down to MacDonald's stride. His heart trembled apprehensively as they hurriedly descended the mountain and cut across the plain. He could not quite bring himself to MacDonald's point of assurance regarding Quade and Mortimer FitzHugh. The old mountaineer was positive that the other party was behind them. Aldous asked himself if it were not possible that Quade and FitzHugh were ahead of them, and already waiting and watching for their opportunity. He had suggested that they might have swung farther to the west, with the plan of descending upon the valley from the north, and MacDonald had pointed out how unlikely this was. In spite of this Aldous was not in a comfortable frame of mind as they hurried after Joanne. She had half an hour's start of them when they reached the mouth of the gorge, and not until they had travelled another half-hour up the rough bed of the break between the two mountains, and

---

TO THE FARMER BOY

AND so you are an American farm boy? This is a distinction that you should fully appreciate.

For the American farm boy enjoys advantages that no other youth in all the wide world possesses.

His daily diet, in nine times out of ten, is fit to grace the table of a king.

He breathes an atmosphere that develops growth of the brawniest type and takes exercise of a variety that produces a symmetry that an athlete would covet.

His schooling is of the most practical sort, for his teachers are usually true-hearted ladies and gentlemen of simple taste and worthy ambition, hence his mind is filled with useful knowledge, knowledge that is imparted to the few rather than to the many.

He is not taught that schooling is simply an opportunity to grasp a few facts that will enable him to meet the world with a weapon of defense or agressiveness.

Out of school, the farm boy is taught to find pleasure in helping the world along. When he takes a horseback ride, he probably carries a message to some neighbor or possibly a jug of water to the man in the field.

He reads of the farmer boys that have gone to congress or even become presidents and he has faith in himself and somehow or other the world soon learns that he can be trusted and has faith in him, for here is a type that early learns responsibility.

Independence, manliness, honor and integrity are so thoroughly and close-fitted into his nature that his splendid physical body is a fit temple for his wonderful mind.

He sees the corn put forth a tiny blade in the early spring and watches it until it reaches a lusty prime.

He sees the young colt start out on its weak, crooked legs and in a few months becomes a being of superb form and wonderful strength.

He is encouraged by these lessons and is not surprised that he grows swiftly into successful manhood that has been his anticipation. The world knows his opportunities as she has never known them before. She realizes his ambitions and makes room for his achievements.

Boys, do not be in a hurry to leave the farm. It is conducive to a happy, useful present and wonderful future.—From Western Farmer.

MacDonald pointed ahead, and said: "There's the cavern!" did he breathe easier.

They could see the mouth of the cavern when they were yet a couple of hundred yards from it. It was a wide, low cleft in the north face of the chasm wall, and in front of it, spreading out like a flowing stream, was a great spatter of white sand, like a huge rug that had been spread out in a space cleared of its choatic litter of rock and broken slate. At first glance Aldous guessed that the cavern had once been the exit of a subterranean stream. The sand deadened the sound of their footsteps as they approached. At the mouth of the cave they paused. It was perhaps forty or fifty feet deep, and as high as a nine-foot room. Inside it was quite light. Halfway to the back of it, upon her knees, and with her face turned from them, was Joanne.

They were very close to her before she heard them. With a startled cry she sprang to her feet, and Aldous and MacDonald saw what she had been doing. Over a long mound in the white sand still rose the sapling stake which Donald had planted there forty years before; and about this, and scattered over the grave, were dozens of wild asters and purple hyacinths which Joanne had brought from the plain. Aldous did not speak, but he took her hand, and looked down with her on the grave. And then something caught his eyes among the flowers, and Joanne drew him a step nearer, her eyes shining like velvet stars, while his heart beat faster when he saw what the object was. It was a book, open in the middle, and it lay face downward on the grave. It was old, and it looked as though it might have fallen into dust at the touch of his finger. Joanne's voice was low and filled with a whispering awe.

"It was her Bible, John!"

He turned a little, and noticed that Donald had gone to the mouth of the cavern, and was looking toward the mountain.

"It was her Bible," he heard Joanne repeating; and then MacDonald turned toward them, and he saw in his face a look that seemed strange and out of place in this home of his dead. He went to him, and Joanne followed.

MacDonald had turned again—was listening—and holding his breath. Then he said, still with his face toward the mountain and the valley:

"I may be mistaken, Johnny, but I think I heard—a rifle-shot!"

For a full minute they listened.

"It seemed off there," said MacDonald, pointing to the south. "I guess we'd better get back to camp, Johnny."

He started ahead of them, and Aldous followed as swiftly as he could with Joanne. She was panting with excitement, but she asked no questions. MacDonald began to spring more quickly from rock to rock; over the level spaces he began to run. He reached the edge of the plain four or five-hundred yards in advance of them, and was scanning the valley through his telescope when they came up,

"They're not on this side," he said. "They're comin' up the other leg of the valley, Johnny. We've got to get to the mountain before we can see them."

He closed his glass with a snap and swung it over his shoulder. Then he pointed toward the camp.

"Take Joanne down there," he commanded. "Watch the break we came through , an' wait for me. I'm goin' up on the mount'in an' take a look!"

The last words came back over his shoulders as he started on a trot down the slope. Only once before had Aldous seen MacDonald employ greater haste, and that was on the night of the attack on Joanne. He was convinced there was no doubt in Donald's mind about the rifle-shot, and that the shot could mean but one thing—the nearness of Mortimer FitzHugh and Quade. Why they should reveal their presence in that way he did not ask himself as he hurried down into the plain with Joanne. By the time they reached the camp old Donald had covered two thirds of the distance to the mountain. Aldous looked at his watch and a curious thrill shot through him. Only a little more than an hour had passed since they had left the mountain to follow Joanne, and in that time it would have been impossible for their enemies to have covered more than a third of the eight-mile stretch of valley which they had found empty of human life under the searching scrutiny of the telescope! He was right—and MacDonald was wrong! The sound of the shot, if there had been a shot, must have come from the other direction!

He wanted to shout his warning to MacDonald, but already too great a distance separated them. Besides, if he was right, MacDonald would run into no danger in that direction. Their menace was to the north—beyond the chasm out of which came the rumble and roar of the stream. When Donald had disappeared up the slope he looked more closely at the rugged walls of rock that shut them in on that side. He could see no break in them. His eyes followed the dark streak in the floor of the plain, which was the chasm. It was two hundred yards below where they were standing; and a hundred yards beyond the tepee he saw where it came out of a great rent in the mountain. He looked at Joanne. She had been watching him, and was breathing quickly.

"While Donald is taking his look from the mountain, I'm going to investigate the chasm," he said.

She followed him, a few steps behind. The roar grew in their ears as they advanced. After a little solid rock replaced the earth under their feet, and twenty paces from the precipice Aldous took Joanne by the hand. They went to the edge and looked over. Fifty feet below them the stream was caught in the narrow space between the two chasm walls, and above the rush and roar of it Aldous heard the startled cry that came from Joanne. She clutched his hand fiercely. Fascinated she gazed down. The water, speeding like a millrace, was a lather of foam; and up through this foam there shot the crests of great rocks, as though huge monsters of some kind were at play, whipping the torrent into greater fury, and bellowing forth thunderous voices. Downstream Aldous could see the tumult grew less, from the rent in the mountain came the deeper, more distant-rolling thunder that they had heard on the other side of the range. And then, as he looked, a sharper cry broke from Joanne, and she dragged him back from the ledge, and pointed toward the tepee.

Out from among the rocks had appeared a human figure. It was a woman. Her hair was streaming wildly about her, and in the sun it was as black as a crow's wing. She rushed to the tepee, opened the flap, and looked in. Then she turned, and a cry that was almost a scream rang from her lips. In another moment she had seen Aldous and Joanne, and was running toward them. They advanced to meet her. Suddenly Aldous stopped, and with a sharp warning to Joanne he threw his rifle to his shoulder, and faced the rocks from which the speeding figure had come. In that same instant they both recognized her. It was Marie, the woman who had ridden the bear at Tete Jaune, and with whom Mortimer FitzHugh had bought Joe DeBar!

She staggered up to them, panting, exhausted, her breath coming in gulps and sobs. For a moment she could not speak. Her dress was torn; her waist was ripped so that it exposed her throat and shoulder; and the front of her waist and her face were stained with blood. Her black eyes shone like a madwoman's. Fiercely she fought to get her breath, and all the time clung to Joanne, and looked at Aldous. She pointed toward the rocks—the choatic upheaval that lay between the tepee and the chasm—and words broke gaspingly from her lips.

"They're coming!—coming!" she cried. "They killed Joe—murdered him—and they're coming—to kill you!" She clutched a hand to her breast, and then pointed with it to the mountain where MacDonald had gone. "They saw him go—and they sent two men to kill him; and the rest are coming through the rocks!" She turned sobbingly to Joanne. "They killed Joe!" she moaned. "They killed Joe, and they're coming—for you!"

The emphasis on that final word struck like a blow in the ears of John Aldous.

"Run for the spruce!" he commanded. "Joanne, run!"

Marie had crumpled down in a moaning heap at Joanne's feet, and sat swaying with her face in her hands.

"They killed him—they murdered my Joe!" she was sobbing. "And it was my fault! I trapped him! I sold him! And, oh, my God, I loved him—I loved him!"

"Run Joanne" commanded Aldous a second time. "Run for the spruce!"

Instead of obeying him, Joanne knelt down beside Marie.

He went to speak again, but there came an interruption—a thing that was like the cold touch of lead in his own heart. From up on the mountain where the old mountaineer had walked into the face of death there came the sharp, splitting report of a rifle; and in that same instant it was followed by another and still a third—quick, stinging, whiplike reports—and he knew that not one of them had come from the gun of Donald MacDonald!

And then he saw that the rocks behind the tepee had become suddenly alive with men!

BEFORE YOU BUY A WINDMILL

Carefully consider the following facts: *A year's supply of oil is sent with every Aermotor*

The Auto-oiled Aermotor is the Genuiue Self-oiling Windmill, with every moving part fully and constantly oiled.

The Auto-oiled Aermotor has behind it 8 years of wonderful success. It is not an experiment. The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet. Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

You do not have to try an experiment to get a windmill which will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine. Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production. The Auto-oiled Aermotor is so thoroughly oiled that it runs in the lightest breeze. It gives more service for the money invested than any other piece of machinery on the farm. The Aermotor is made by a responsible company which has been specializing in steel windmills for more than 30 years.

RELIABLE ADVERTISERS

We will not knowingly accept the advertising of any person or firm who we do not believe to be thoroughly honest and reliable. Should any reader have any cause for complaint against any advertiser in these columns, the publisher would appreciate an immediate letter bringing all facts to light. In every case when writing say: "I saw your advertisement in The Michigan Business Farmer!" It will guarantee honest dealing.

"The Farm Paper of Service"

"COME ON, LOOSEN UP!"

IN the last issue of The Business Farmer we told the story of the plan to advertise Michigan beans and increase the consumer demand for this staple article of diet which should be on the working man's table at least once a day, and in every home one or more days each week.

This plan fostered by New York, California, and Michigan bean interests, proposes a fund of fifty thousand dollars to be expended in advertising beans, the same as the products of California, oranges, prunes, raisins, etc., are advertised so efficiently and with such amazing results.

On very good authority, we learn that some of the bean jobbers in Michigan have refused to put their name "on the dotted line," although the amount required is only one tenth of one cent per hundred pounds of beans. In other words these jobbers or elevators are going to try to get the benefit of this advertising without doing their share toward paying for it.

The Business Farmer has advocated an advertising campaign for beans a great many years. We know that there is no product grown in our state which will lend itself so readily to an increase of sales from a campaign of intensive advertising such as is now proposed. This is the first time that a practical attempt has been started with every indication that it will be carried through, and for any short-sighted bean interests in Michigan to stand out at this time is well worthy of the attention of our bean growers.

We believe that the rank and file of the bean growers in our state are of sufficient caliber to recognize the value of this proposed campaign, and that there are none among them so narrow as to not be willing to contribute their mite toward the accomplishment of the goal. In this they show more breadth and depth than some of the jobbers who have been waxing fat off the products which they raise, and we sincerely hope that the business farmers of our state will stand to a man in condemning any miserly group of jobbers or dealers who will not contribute their share toward this campaign.

We promise that we will print in our columns a list of those who have contributed, or have not, as the occasion may require, so that the bean growers of Michigan can give due credit to those who are cooperating with them in this campaign. In the meantime we hope you will talk it over with the man to whom you have been selling your beans. Perhaps he is one of those who are holding out.

WHY NOT?

MANY opulent citizens of Michigan's Metropolis, are much wrought up over the fact that Detroit will this year, according to their figures, pay 40% of the state taxes, although this is really a decrease from 1922, when Detroit paid 42% of the state tax.

We have not seen the figures compiled, but we feel safe in saying that even though Detroit (which by the way includes Hantramck, Highland Park, Dearborn, and Springwells) is paying 40% of the state tax, it is paying only its just share, and has been able to shave off a margin of what should rightly be charged to it.

Detroit enjoys the benefits of a state which supplies it with a large part of its raw materials, food products, dairy products, not to mention the brains of the young men from up-state who rise to leadership and control its destiny.

Detroit is a great city, and every citizen of Michigan is proud of it. The prosperity of Detroit is represented in the prosperity of the state, and as one prospers, so must the other: It would appear therefore, that those who are becoming unduly excited over the facts as they exist on the tax records have the regular channels through which they can go to secure a reduction if the present tax appraisement is unfair.

We are reminded of the remark of the man on the street "that he wouldn't mind how much his income tax was if he were only making more money." It is a fact that Detroit is in the midst of a wave of prosperity, the like of which it has never seen before, even during war times. Detroit is one of the most prosperous cities in the country, and it ought to pay the state tax without batting so much as an eyelash.

TEN MILLION DOLLAR FARM CREDIT

REPORTS from Washington say that the Farm Credit Plan is already beginning to function, and the first ten million dollars of the sixty million dollars in debentures of the new Intermediate Credit Bonds has been sold.

The Farm Loan Board has been asked by agricultural leaders to loan this money on warehouse certificates covering grain stored in the farmers own warehuoses. The board has stated that they are under the advisement of the Department of Agriculture and would be guided by their instructions.

It is to be hoped, that this vast amount of money which could do so much good if used to hold a surplus crop for orderly marketing, will go directly to the farmers who need it. If so, this credit legislation will be of great value, but if it is to be used to the advantage of the established line of elevators and the other old-line warehouses, it will not directly benefit the independent farmer, and it will fall far short of the mark which was set for it to accomplish.

The wheat growing states are facing a serious condition. More serious than here in Michigan where wheat is only one of our major crops, but it is no less true that a part of this money should go to farmers who diversify their crops as do the farmers in Michigan, and would be particularly acceptable in the case of beans and potatoes in this state.

Our farmers will of course, be obliged to furnish suitable warehouse facilities on their farms. Their grain bins must be dry and well ventilated to be accepted by representatives of the board before any money would be loaned on the products to be stored therein.

If the benefits of the credit legislation, for which so much credit has been taken, will come directly to the farmer it will be a long step in the right direction, but if as we have said, it is to be scattered over the old system of marketing, it will do the individual farmer little good.

A PLAN, SO SIMPLE IT MIGHT WORK.

JUST before sailing from New York this week for Europe, where he will make a complete study of reforestation, Senator James Couzens, made the following statement:

"I believe that the government very properly could control and regulate all stock exchanges and produce exchanges throughout the country. Of course there is a need in our civilization of these instrumentalities, but government regulation would eliminate the opportunities for gambling, and therein is there evil.

The farmer suffers greatly from this. The government during the war limited the profit of the middlemen in coal to 25 cents a ton. The government should limit the commission of the man handling the products of the farm.

Then we would have abolished the motive for the self-interest that now causes the manipulators of these products to depress prices before the crops are harvested, thus gouging the farmer and boosting prices after the crops are in, thereby robbing the consumer."

So far as we know this is an original idea, and it is the first time a man in public life has advanced the theory that the actual commission paid to the broker in farm products should be limited, the same as it was during the period of the coal shortage. This idea which our new Senator is advancing in behalf of the farmers of Michigan and other states will not be expected to make him any more popular with a certain class of market speculators but we believe most farmers will agree with him.

The least that can be said about Senator Couzens is that he is a fighter who is not afraid to express his own convictions and to stand by them in the face of what would appear to be an attempt at political suicide. If, as the Senator suggests, the commission man will be allowed to add only a percentage above the net amount paid the farmer, it is pretty safe to assume that the buyer would see that the price paid the farmer was as high as possible so as to enhance his own profits.

All in all, it sounds like a sensible suggestion, and with the backing of the farmers of the country, it might be possible for our Senator to make a name for himself as the originator of a practical solution to the farmers marketing problem, which is unique largely because it is so simple any of us can understand it.

"REPAIR—REBUILD—REROOF NOW!"

IN Michigan during August comes a period when the good business farmer will take an inventory of the condition of his buildings, because preceding the heavier work of harvest and the coming of early fall rain, it behooves him to make preparations for winter.

If there is a leak in the roof of the house, barns or other buildings, now is the time to repair them. If there are odd jobbs outside, now is the time to get the work out of the way.

The job that is put off adds something to its own cost of doing it later. Old fence posts for instance, rot away, letting stock into a field of growing grain where the destruction caused by the animals in one night, would cost many times what rebuilding the fence would.

Sometimes it does us good to be jarred into doing something by a suggestion from the outside, and this is our reason for appealing to your better judgement to repair, rebuild and reroof now!

MICHIGAN ELEVATOR EXCHANGE

WE feel that the men behind the Michigan Elevator Exchange should have some word of approval from the farmers of this state for the excellent report which they made at their third annual meeting, July 17th.

The Elevator Exchange reported a strong financial surplus and during the past year it has marketed 4450 cars of grain, hay and beans, for 107 local elevators representing 25,000 grain growing farmer members.

This would mean to give the lie to the man who says that cooperation among farmers is impractical and cannot be carried out successfully. The past two years have been very trying ones and that the officers of this association should have been able to so direct its operations and its policy that they have come through with a substantial surplus and report a large increase of business each year is certainly to their credit.

We believe that flowers are often more appreciated when handed to the living, and this may be a suggestion for some of you the next time you happen to meet the manager of your local exchange elevator.

17 STATES HAVE GAS TAX

TOURISTS, commercial truck and transportation companies and all automobilists in 17 states are paying a gasoline tax and are doing their share to pay for the construction and maintenance of good roads. In these states farmers are being relieved of the injustice of keeping up the roads almost single handed for a travel which is very often two-thirds commercial and pleasure cars from the cities. The following states now have gasoline taxes, with a maximum of two cents a gallon:

Alabama
Colorado
Connecticut
Delaware
Indiana
Maine
West Virginia
Massachusetts
New Hampshire
N. Dakota
Oklahoma
Oregon
S. Dakota
Tennessee
Utah
Vermont
Washington

Similar statutes are pending in California and Illinois. A gasoline tax law was defeated in Michigan by Governor Groesbeck's veto after both Houses in the Legislature had passed the bill by an overwhelming vote, but the farmers say that is far from being the end of the gas tax in Michigan.

If the highway financing burden in Michigan were distributed among the 700,000 automobile owners, in proportion to the amount which they used their autos, as is automatically done through a gas tax, no one would feel the tax burden, and the present injustice to farmers and other general property owners would be removed.

Yesterday we saw a shocking picture! It was of a young lady, climbing rapidly over a split-rail fence, parasol in hand, her huge red picture hat carelessly tilted to one side in her excitement, as an ugly bull could be seen pawing the earth in the background. Her ankle was exposed two inches above her dainty slippers. It was copyrighted 1898. The world sure do move!

No fight is ever lost if it is made in the right spirit, for if the fight itself goes against one, the fighting has been worth while and has made the heart stronger and the spirit cleaner.

Senator James Couzens says 5% beer will defeat the boot-legger! Maybe so, or maybe it might defeat the senator! Who knows?

The trouble is that when you let tomorrow take care of itself, it may not take of you.

Steve says: Henry Ford never started anything yet that didn't kick up an awful commotion.

PUBLISHER'S DESK

ON THE BANKS OF THE WABASH —THE NILE CO.

"Can you tell me if the Nile Art Company, 2207 Spy Run, Ft. Wayne, Indiana, is reliable? They wish me to send them $7.75 for their New Art Coloring Process and material to work on and instructions for the work. Then a two year contract will be signed stating that the prices stated in payment for my work painting will not decline, that I am to be shown by mail any part that I do not understand in the instructions without any further charge, and that I will be kept supplied with materials. I would greatly appreciate any information you might be able to give me concerning the reliability of this company. Respectfully."

NO, my dear young Beaverton reader, I do not know anything of the Nile Art Company of Ft. Wayne, Indiana, but from your description of their proposition I certainly could not advise you to go into it until I had talked or written to some of their satisfied students.

It is a pretty safe rule to follow that when money is asked in advance for an employment proposition that there is something wrong with it. There is usually a good market for labor, and any institution which can profitably employ labor is always on the lookout for it, and good employees cost them something to secure, so if this company had a proposition in which they needed home labor, it would be possible for them to send out their outfit and instructions and take the chance of finding persons with sufficient talent to furnish them with a supply of the finished material which they need. If any of our readers have had experience with this company, I would be glad to hear from them, so that we can advise our inquiring friend. In the meantime I can only advise her to make a thorough investigation before she sends the seven-seventy-five.

THE TRADE ACCEPTANCE

"Thanking you for information concerning the asbestos company. I wish to explain why we are interested and ask a further question. My husband took an agency for them from their agent, Mr. ——, signing a trade acceptance which when I read it seemed to me to be nothing more than a negotiable note for $272.00. They were to send on an expert roofer and send the literature for advertising to the list of possible purchasers which we would send in. All this expense has fallen on my husband contrary to agreement. Freight an liquid asbestos and all. So far no experienced salesman has arrived. Note is due in 60 days from June 19th. If they do not live up to agreement will we have to pay this note? What is a trade acceptance? Gratefully yours, ——— ——."

A TRADE-ACCEPTANCE, is to all intent and purpose a note and is considered practically the same in law. My opinion is that if the company does not live up to their agreement you will not have to pay the note. On the other hand you will find that they have deposited this note in one of your local banks. I would suggest you see a local attorney so you may be protected in this matter.

HEIRS WANTED!

"Heirs to estates here and abroad can obtain valuable information by writing for free bulletin.—Claim Agency, Pa., U. S. A. (adv.)

THE above advertisement was received by us the other day. The company sending it offered to pay for its insertion at our regular advertising rate. We are inserting the above without charge, because we want Business Farmer readers to be warned against sending money to concerns which advertise for lost heirs, and make a charge for sending a list of these persons. This is one of the oldest schemes worked on the unsuspecting public. In Europe it is very common, and even on this side you often see an advertisement like the above signed by some foreign concern, usually from England.

They play on the human emotion which rises in every individual that some time or other some unknown relative may die and leave us a fortune. It is nice to read about in fiction, but seldom happens in real life. Usually where an estate of this kind is left, it is not difficult to locate the rightful heirs, as few persons are lost so completely to their relatives that they cannot be traced by one means or another. It is of course, possible for a claim agency like the above to secure a list of unclaimed estates which may, or may not be authentic, or of any value, and sell these lists to gullible persons at a great profit to themselves. We would gamble that the amount they collect from this source is more than they have ever secured for rightful heirs.

MAILING MUSIC

EVERY few days I receive an inquiry regarding the American Music Publishing Company, 1658 Broadway, N. Y., and I have before me now their proposition in which they offer to pay 10 cents each for mailing circulars and music, that is, if you will send then $2.00 in advance for their material.

I receive so many inquiries regarding this company that many of our readers must have had some experience with them, and I would be glad to know what it has been, good or bad? Please let me hear from some of you who have sent them the two dollars which they seem so anxious to get.

OUR INSURANCE POLICY

EVERY day we are issuing an increasing number of accident policies through our arrangement with the North American Accident Insurance Company, which makes it possible for us to furnish any reader of The Business Farmer with a $1,000 accident policy for 75 cents in addition to the subscription price of our paper.

Two questions have been asked by a great number of persons, which we evidently did not answer in our announcement. One is whether the policy is limited in the location of the accident; in other words, does the policy protect outside of Michigan? The answer is, that it does cover the insured anywhere in the United States and would pay the benefits to the insured if he lived or if his estate if he died.

The second question asked is whether the company is a mutual company or the insured can be assessed any more than the original cost. The answer is "No", the company is a stock company, and the policies are non-assessable. The 75 cents covers the full cost of all the insurance guaranteed in the policy for the period of one year, and may renewed at the end of the year at the same price and will then give one hundred dollars additional insurance up to the fifth year, or a total of $1500. I will be glad to send a sample policy to any reader who will write me, and enough blanks to cover each member of your family. Any one between the ages of 16 and 70 can be covered by this insurance and we will issue as many policies as there are members of your family providing, you are a paid up subscriber to The Business Farmer.

I received my money back from the —— Shoe Co. and thank you for your kind assistance in this matter. I am sure I never could have got a settlement with them without your help.—F. L., Gowen, Mich.

The Collection Box

The purpose of this department is to protect our subscribers from fraudulent dealings or unfair treatment by persons or concerns at a distance.

In every case we will do our best to make a satisfactory settlement or force action, for which no charge for our services will ever be made, providing:

1.—The claim is made by a paid-up subscriber to The Business Farmer.

2.—The claim is not more than 6 mos. old.

3.—The claim is not local or between people within easy distance of one another. These should be settled at first hand and not attempted by mail.

Address all letters, giving full particulars, amounts, dates, etc., enclosing also your address label from the front cover of any issue to prove that you are a paid-up subscriber.

HELP WANTED

YOUNG OR MIDDLE AGED WOMAN wanted for house work in small family in new home near Detroit. No washing or ironings. Highest wages. Address, MRS. HARLEY D. WARNER, Farmington, Michigan.

CORN HARVESTER

CORN HARVESTER CUTS AND PILES ON harvester or windrows. Men and horse cuts and shocks equal Corn Binder. Sold in Every state. Only $25 with fodder tying attachment. Testimonials and catalog FREE showing picture of harvestor. PROCESS HARVESTER CO., Salina, Kansas.

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS—State Fair time is here and with it all the year's labor and the feeling that your work is well done. I cannot tell you in words how much I feel the State Fair has for us all. Every detail is worked out to the best advantage for us by the folks in charge.

I would just love to have all my readers send in to get all the information possible and send in your work, whether it is sewing, cooking, or raising some special product. Remember this is your Fair and we all want to come down. Make it a lark and just treat yourself to the vacation of one or two or more days. There will be so much for you to take home in knowledge gained by seeing what others have accomplished.

I want to thank our many readers who have so generously responded to the helping of our deaf reader.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

A MIDSUMMER SONG

O, Father's gone to market-town, he was up before the day.
And Jamie's after robins, and the man is making hay,
And whistling down the hollow goes the boy that minds the mill,
While mother from the kitchen-door is calling with a will:
"Polly—Polly—The cows are in the corn,
O, where's Polly?"

From all the misty morning air there comes a summer sound—
A murmur as of waters from skies and trees and ground,
The birds they sing upon the wing, the pigeons bill and coo,
And over hill and hollow rings again the loud halloo:
"Polly—Polly—The cows are in the corn,
O, where's Polly?"

Above the trees the honey-bees swarm by with buzz and boom,
And in the field and garden a thousand blossoms bloom,
Within the farmer's meadow a brown-eyed daisy blows,
And down at the edge of the hollow a red and thorny rose.
"But Polly—Polly—The cows are in the corn,
O, where's Polly?"

How strange at such a time of day the mill should stop its clatter,
The farmer's wife is listening now and wonders what's the matter.
O, wild the birds are singing in the woods and on the hill,
While whistling up the hollow goes the boy that minds the mill.
"But Polly—Polly—The cows are in the corn,
O, where's Polly?"

—Richard Watson Gilder.

THRESHING LETTER

The following letter is just full of ideas and suggestions and although the threshers have been in some of our counties, some are just starting and others are still at it. I took a trip thru the southern part of our state and it made me so happy to see all the crops so plentiful and the threshing going on. I thot of our letters and realized how busy every one of my readers were. I think Mrs. Jewett has sent in a nice long newsy and practical letter:

I HAVE read the Home Department of the Business Farmer for a long time with great interest, and as we are now asked to write our experience in simplifying the work of the threshing season, I will suggest a few little things which I have found helpful.

If threshers are known to be on the way, bake cookies and doughnuts the day before. They will keep nicely in the cellar. Also bake bread if possible, although if one lives near a town the bread may be bought. It is a little more expensive but a considerable saving of labor. Also have a good big mess of beans looked over and ready to cook. Then on the day the threshers come one can put the beans over to cook the first thing after breakfast, and at the same time start a roast, or a boiled ham. Ham may be easier to get if one lives some distance from market as it will not spoil as easily as fresh meat. Then clear away the kitchen work and set both kitchen and dinning room in order. There will then remain little to prepare except pies and potatoes. Even pies may be prepared the day before if made of mince or some material which does not soak the crust.

In setting the table place a cup and saucer and a glass by the side of each plate, and put the plates around so that food may be passed and coffee or tea, and water distributed with the fewest possible motions. sometimes in hot weather the men enjoy cold tea, which of course must be started in the morning and if this is served only glasses are needed which saves on the dishwashing.

Do not serve many things which require individual dishes, but sometimes when there is little time to prepare, a rice pudding will take the place of pie.

Place in large pan about 1½ cups of rice, or 2 cups if the cups are small. Cook in hot salted water until tender. Fill the pan with milk, sweeten and flavor to taste, add a cupful of raisins, stir well and bake slowly 2 or 3 hours or until of the consistency of thick cream. This is hearty, and the only trouble I have ever had is in getting enough of it. If one has been able to bake the day before their pies and fried cakes will be pastry enough for dinner and cookies and friedcakes for supper, or one may use cookies for supper and add a sheet of fresh gingerbread baked during the afternoon.

If there has been no notice, a rice pudding and a sheet of gingerbread will make a quick and satisfactory dinner dessert. Cook enough potatoes at noon so that you can warm them over for supper.

Creamed potatoes are nice; also have enough ready for breakfast if you are to have the men over night. The cold baked beans left from dinner are also acceptable for supper and breakfast, as I have found that the men do not require a great variety, or fussy food but they do want a reasonable number of good hearty dishes—well cooked and enough of it. A sour cream cake may take the place of gingerbred—made by mixing together 1 egg, 1 cup thick sour cream, one cup sugar, 1 teaspoon soda (level), one teaspoon ginger or nutmeg, stir rather thick with flour. This is quick and good.

For ordinary meals cook things in the same kettle as much as possible—for example: a head of cabbage and a piece of salt pork boiled together is an easy dish that the men like.

Hoping some one may find in this long letter some little thing that will help, I am, Mrs. Alton L. Jewett.

SHORT CUTS FOR THRESHING DAY

I ALMOST always include baked beans in my menus for threshers. We find in our neighborhood that the men always prefer them to other vegetables. There is no need to stand over the stove so many hours making fancy dishes. A well-balanced wholesome meal is always relished most. Here is one of my favorite dinner menus. Mashed potatoes, beef loaf, baked beans, bread, butter, coffee, cottage cheese, cold sliced tomatoes, sliced cucumbers, jam or jelly, apple pie.

Here is my favorite cake receipt: 1 egg, 1 cup brown sugar, 1 cup sour cream, 1 teaspoon soda dissolved in cold water, 2 cups flour. Season with spices according to taste. I use a little nutmeg. When cake is baked and cool enough frost with brown sugar frosting made with 1 cup brown sugar with enough cream to dissolve. Let boil until it will make a soft ball when a little is dropped in cold water. Take from fire and beat until right consistency to spread on cake. Cake stays moist a long time.—Mrs. LeRoy Thrush.

Mothers Problems

BE POLITE TO THE CHILDREN

JUST because a child ought to shut the door when he is told to, or ought to run up stairs after a handkerchief, or ought to do every one of a dozen of things he is asked to do in the course of a day, is no excuse for the parents to neglect to say, "Please" and "Thank you" to him. Nine times out of ten the very parents who are issuing orders all day long without the polite prefix, "Please" or the courteous, "Thank you," are the ones who are most insistent that their children speak politely to them!

The time may have been when children were expected to bow to the will of the parents, like slaves before their masters, but that attitude is no longer taken. Children, nowadays, have rights, just as grown-ups have. If courtesy demands that children say "Please" and "Thank you" to their elders, it also demands that the fathers and mothers use the same terms to their children.

Then, too, there is no greater teacher than Example. If father and mother speak politely to each other and to the children, it will come natural to the children to reply in kind. Away from home they will still retain those little courtesies of speech which it has become almost second nature for them to use. On the other hand, the child forced to speak politely to parents who never speak politely to him will quickly forget to be gracious and courteous when the parents are out of hearing.

"Please" and "Thank you" are but little words, yet they can matterially lighten the heaviest tasks. Even a little two-year-old will glow warmly if thanked for the performance of some tiny task, and the hardest-headed man will experience a tiny thrill if genuinely thanked for some performance of duty.

We all delight in polite children: we take pleasure in their very presence. But politeness is not reserved for them alone. It is right for you to be polite for them: also it is good example.

TEACH CHILDREN TO BE CAREFUL

TEACH your children early the need of being careful. Accidental deaths are the hardest in the world to bear, not so much because of the horribleness of them as because of the needlessness of most of them. By far the larger percentage of such deaths are the result of ignorance or carelessness. We cannot always prevent the carelessness, but we can prevent the ignorance.

Accident prevention should be taught by example at home. Are you, yourself, careful? For the sake of the children, learn to be, if you are not. When you strike a match, be careful not to strike it near some flimsy drapery or clothing, and when you are through with it, blow it OUT, and then throw it in the stove or metal receptacle made especially for burned matches. Bright little eyes are always watching and unconsciously absorbing your ways of doing things.

Occasionally let the children light matches for you: it will satisfy their craving to handle fire, and at the same time, under your guidance, it will accustom them to the handling of it.

If you refuse to start fires with coal oil, telling your children how dangerous you consider such a practice, they will not be tempted sometime when you are away to hurry up a slow fire in this way.

Be careful with scissors, knives and other sharp implements. Have a safe place to keep them and return them to it when not in use. If firearms are handled use every precaution to avoid accidents and explain the reason for your carefulness.

Boys must be boys: they must climb trees, chop wood and go in swimming. To curb those impulses is to kill something vital in the boys make-up. A wise mother will not forbid, but, with all the wisdom of her years she will endeavor to teach her children to be careful—and she will begin when her children are but little tots first getting their taste aroused for fire and water, sharp

Personal Column

Are the Bobbed Heads Alright?—I am giving you two of our readers ideas on bobbed heads and I feel they are right on this subject. If anyone feels differently I would like to hear from them.

Dear Mrs. Taylor:—As to bobbed haired girls. Now I'm practically an old woman in looks, but I do not feel old or act old in my work, out of doors or in, but I'm not old enough but that I can realize that times are just as good morally among our girls and boys as they were 25 years ago. I am dull tho in not being able to see why there is such a howl about bobbed hair for the young people. After a good swim, the hair is soon dried, which also applies to a shampoo, tangles are scarce, and on dress ocassions the hair that was cut off and made into a switch or puffs, etc., can be used to help out in dressing the hair as pre-bob, if we were accustomed to that style, or would make up our minds to look at the motive for the act of bobbing their wouldn't be so many bad (?) girls. And knickers is another awful (?) style. Men used to wear long flowery garments. Why did they discard them? Is a person a criminal because he or she wants to dress for comfort?—Mrs. Lillie Smith.

Dear Mrs. Taylor:—What's all this controversey about bobbed heads? Surely bobbed hair does not contribute to immorality. Would we want little girls scarcely in their teens to have skirts reaching nearly to their ankles, long sleeves, (as it was considered immodest to show their elbows,) as they dressed years ago?

Now with the sanitary dress reform, why not let them have their hair bobbed, if they prefer it, and it is so much easier to take care of it, besides it adds a more youthful appearance. And who knows more than a mother, that one gets old soon enough. But wait maybe they will allow us to bob ours too.

Why can't comfort, freedom and modesty be combined, to make the girls happier? And surely they feel happier if they don't have to look different from the rest. I have three growing girls and with their moral and spiritual welfare in mind, have no fear, they would be any more indescreet in thought or action, than with long unsanitary locks. I do know that since bobbing eleven year old daughter's hair two weeks ago, she is able to take care of it, without any assistance from me, and considering the help it is when getting ready to go away, I would not change for anything. Her hair is very fine and snarls easily and the daily task of caring for it, wasn't a joy by any means.

Let us hear from other mothers.

Now just a word for the Woman' Department. Its the best ever, and touches on nearly every subject of interest to the busy housewife.—Mrs. E. L. Johnson.

Suggestions For The Home.—I always turn eagerly to the Farm Home page of the Business Farmer. There it seems is always one full page. So many helpful things in it. I like its atmosphere, its christian spirit. Of course it is selfish to be always taking from it and never giving so I'm going to try to help it on. I'm enclosing some ideas I would like to pass on and hope they will be worthy of publication.

On hot days when the busy housewife wants as little heat as possible in the house, set a clean tub out in the sun and fill with water you wish to use for washing dishes. If set out in the morning it will be warm enough to wash both dinner and supper dishes. It will then take only one burner to heat the scalding water to rinse with. In summer when windows need to be washed so often I find it a great help to use an old piece of gingham cloth (or any kind that has no lint) to wash with. When windows are clean I wring the cloth as dry as possible and wipe them off. Be sure to change the water often so that the windows will not be streaked. This saves the labor of wiping with a dry cloth and polishing so long. You would be surprised how nice the windows look when dry. Youngsters always wear the seat and legs of underwear and panties out first before the tops. To save making buttonholes cut off lower parts well above worn places and make new bottoms and attach to old uppers. The uppers will wear as long as both lower parts. Mrs. LeRoy Thrush.

A Reader Expresses Appreciation of Home Department.—Truly we enjoy the M. B. F. very much. I think the Home Department real interesting. Where we have the chance to discuss our ideas. I like to read the letters from the sisters in regard to our homes which I feel we need so much these days, on how we bring up our children. Of course I love to see them have good times but have it in the right way and in the right company. I feel we mothers ought to be one of them in their plans of pleasure as well as work. I do not believe in bringing up children in idleness, see that they have an amount of work to do, for the children can save so many steps which helps mother so much. I will close with a real good bun recipe:

One cup of can yeast, one scant cup of sugar, one-half cup of lard, two cups of warm water, pinch of salt. Stir this all together in the morning and add enough flour to mix a stiff loaf. Let this raise till evening then roll out on a board as tools and speed.

you would biscuit, one-half inch thick, cut the same and place in greased pans free from each other. Let raise until morning then brush the tops with sweet milk before baking. This will make thirty buns and are very good for lunches.—Mrs. T. V. W.

Cottage Cheese For Marketing.—I wish to make cottage cheese at home to sell. Will you be kind enough to send me a recipe for making and how to prepare it for market? What should I charge for it?—Mrs. L., Cedar Springs, Mich.

—To make cottage cheese take one quart of thick sour milk, two teaspoonfuls of butter, one-fourth teaspoon salt. Heat the milk in a stew pan or double boiler; as soon as the curd separates from the whey, strain the milk through a cloth. Squeeze the curd in the cloth until rather dry. Put in a bowl and with a fork mix it to a smooth paste with the butter, salt and cream. Cheese should not be cooked long enough to make it tough but should have a smooth feeling when pinched with the fingers. I would suggest that you make it the day before or early the morning you take it to town and the cheese should be kept very moist. One of the chief reasons for buying cheese from the creamery is because they keep their cheese so moist. It sells for ten cents a pound.

Please Send Stocking Pattern.—We would like stocking pattern, Mrs. D. Mc., that you mentioned in your letter telling about the cap for large ears. All these practical suggestions are needed by our readers.

The Runner's Bible

(Copyright by Houghton-Mifflin Co.)

Agree with thine adversary quickly, while thou art in the way with him; lest at any time the adversary deliver thee to the judge, and the judge deliver thee to the officer, and then be cast in prison. Verily I say unto thee, thou shalt by no means come out thence, till thou hast paid the uttermose farthing.—Matt. 5;25-26.

When any difference arises between another and yourself, if possible agree with him at once, surrendering, if necessary and at all consistent, your claims. It is important that you do not offend him. The value you put upon some material condition may become a stumbling block in his pathway to higher things. Show him instead, that your faith in God tell you that man cannot take away from you anything which God cannot give; and that peace of mind is really the one most desirable possession upon earth. If, on the contrary, you do strive merely for the sake of gaining your own point, you will pay a very dear price for it in the end.

RECIPES

One Good Turn Deserves Another.—As I have got so many of my best recipes from the M. B. F. it is hard to pick any to send you but here are some which I have found good elsewhere.

Cup Cakes.—Break two eggs in a cup finish filling cup with sweet milk. Into a bowl sift one cup flour, one cup sugar, one rounding teaspoon baking powder, then pour contents of cup into dry mixture and beat hard then add two tablespoons lard or butter and beat well.

Apple Sauce Cake.—One cup granulated sugar, one cup apple sauce, one-half teaspoon cinnamon, allspice and cloves, one-half cup shortening, one egg, one teaspoon soda, one-half cup nuts, one-half cup raisins, one and three-fourths cups flour. Cream the butter, add sugar and apple sauce, mix spices, and soda with flour. Add raisins and nuts which have been floured to first mixture. Then add dry ingredients.

Coffee Jelly.—One pint coffee, three tablespoonfuls sugar, bring to boiling point together. Add three tablespoonfuls powdered gelatine. Strain, put in molds and serve with whipped cream.

Chocolate Cake.—Yolk of one egg, one-fourth cake of unsweetened chocolate, one-half cup milk, cook until thickens over water, then cool and add one cup sugar, one tablespoonful butter (cold), one-half cup milk, one small teaspoon soda, one teaspoon vanilla, one and two-thirds cups of flour and one teaspoon baking powder. This makes fine loaf cake for any occasion.

Hermits.—One cup sugar, two-thirds cup lard, one cup cream not too rich, one cup raisins, two cups flour, two cups oatmeal, 1 tablespoon salt, soda, cinnamon, nutmeg, two eggs. Drop with spoon, pat out with fork.

Layer Cake.—Three eggs, beat white very light, butter size of large egg, beat yolks together, one large cup of sugar, ten tablespoonfuls cold water, add beaten whites, two tablespoonfuls baking powder, flour enough for medium dough. For center layer add two tablespoonfuls of molasses, a pinch of soda, one tablespoonful sour milk and a little flour.

Macaroni Salad.—Three cups of cooked macaroni, one bottle olives or a few cucumber pickles cut fine, three hard boiled eggs. Mix lightly with salad dressing. Garnish with lettuce or parsley.

Salad Dressing.—One teaspoonful salt, one teaspoonful mustard, one tablespoonful sugar, one tablespoonful flour, a little cayanne or paprika, yolks of two eggs, one and one-half tablespoonfuls melted butter, one-fourth cup vinegar, three-fourths cup of milk. Mix dry ingredients, then add yolks and butter. Stir thoroly, then add milk and vinegar. Cook over hot water.—Helena M. Sutphen.

Pear Butter.—Pare and core pears, cook until tender in a very little water. Strain through a colander. To each gallon of pulp add about two pounds sugar, one scant teaspoon ginger, and two lemons cut in small pieces, and the rind of one lemon, boiled separately until tender, also the water in which it is boiled. The lemon rind should be cut in small pieces. Stir well, and place in a common stone crock. Bake slowly until thick. Can and seal while hot being careful to have all air bubbles out of the can.

Eggless Cookies.—One cup butter, one cup lard, two and one-half cups white sugar. Cream together. Add two cups buttermilk (or sour milk), two level teaspoons soda, and one rounding teaspoon baking powder. Mix to a soft dough. They may be varied by the addition of chopped raisins or nuts.—Mrs. Alton L. Jewett.

Fruit Cookies.—Four eggs, two cups brown sugar, scant one-half cup butter, one cup raisins, one cup currants, one teaspoon each of cinnamon, nutmeg, soda, pinch of salt, three cups flour. Mix and drop in small teaspoonfuls. Cream sugar and butter together. Mix in dry ingredients, beat eggs light and stir in last. This makes about thirty-six medium cookies.

Curing Salt Pork.—This is a good recipe for curing pork. Everyone says the fat is as good as the lean. Ten pounds salt to each one hundred pounds of pork, 3 pounds sugar, two ounces of salt petre, two ounces black pepper. Boil all together except pepper stirring often, skim and add pepper. Pour on meat boiling hot. We rub each piece of pork lightly with salt before packing in barrel and we also smoke barrel with corn cobs. This adds to the flavor.

For Pears, Peaches or Sweet Apples.—Take ten pounds fruit, five pounds brown sugar, two quarts vinegar slightly weakened, two tablespoons cinnamon, one tablespoon cloves. Tie in muslin bag. Boil vinegar and sugar with spices until sugar is dissolved. Then put in fruit and cook until transparent being careful not to cook too soft. Seal in jars.

Cucumber Relish.—Twelve large green cucumbers chopped fine and drain over night in one-half cup salt, four large onions, four green peppers, one-half cup grated horseradish, one tablespoon white mustard seed, one teaspoon celery seed, one cup sugar, cover with vinegar and seal.—Mrs. C. T. M.

GRANDMOTHERS DISHES

I would like to see printed in the very good Business Farmer some good recipes for mothers' and grandmothers' days so I will begin by sending you a few used in our childhood days.

Farmers Rice.—Heat to boiling point one and one-half quarts of sweet milk in which have been added salt, pepper, and a small piece of butter. Have ready one and one-half cups of flour, in which one egg has been stirred till it is in small particles, add to milk, let boil up once, and it is ready to eat. Can add some sugar, which improves it.

Pap.—One quart sweet milk, one tablespoon sugar, salt and pepper to taste. Bring to boiling point. Have ready one level cup flour in which one cup sweet milk has been stirred to make smooth batter. Stir in boiling milk, boil one minute and serve. Can be eaten with milk and sugar or as it is.—Mrs. M. A. K., Kalamazoo, Michigan.

DISH FOR HOT WEATHER

I'm sending a recipe for the hot weather days which needs no fire and we think very good:

Apple Salad.—Pare as many apples as required and slice. Then dice in small pieces with cutter, add enough vanilla and sugar to suit taste. In another bowl make a thickening of flour and cream as for gravies. With apples, dates and nut meats are fine. Over apples, dates and nuts pour your thickening and stir thoroughly. After add whipped cream if desired. This may be served at once, to be eaten with other vegetables. For two I use from five to six apples, about two teaspoons vanilla, one-fourth cup of sugar (more if sour apples are used) snow apples preferred, 4 tablespoon flour and cream enough for thin batter. We like your paper very much and look forward to its coming. Love to all.—Mrs. P. C. K.

—if you are well bred!

Christening Ceremonies.—Formerly the persons who called to congratulate the happy possessor of the new boy or girl were offered mulled wine and plum cake. But now-adays one can have light refreshments for any callers. A plate of cookies or lemonade, or cider in the fall.

A baby should have at least one godfather and one godmother and these be chosen with care as it is considered a great compliment to be asked to hold this position.

In old countries this relationship lost thru life, kindly help and counsel being given to the child by the godfather—even to adoption in many instances, should the parent die.

THE SIGN For Your ROWENA OF QUALITY Protection

Famous for Flavor

Poor bread for dinner won't help out Friend Husband's disposition after a hard day at the office. Neither will medium good bread. But an excellent bread, a bread that is delicious to the taste, good to eat, and satisfying all the way through brings forth a smile where only a grouch grew before.

Lily White is the finest flour you can buy. It is made from superior wheat and milled by a most careful and extensive process. It is clean. It has wonderful flavor. It will please you better. You'll be delighted with your baking triumphs and you'll please the whole family. Just see!

Lily White

"The Flour the Best Cooks Use"

A GOOD RECIPE FOR NUT BREAD

1 egg, 1 cup sugar, 1 cup sweet milk, 1 teaspoon salt, 1 cup nuts, 4½ cups Lily White Flour, 4 level teaspoons baking powder. Mix well and let stand twenty minutes in two pans nine inches long, four and three-quarters inches wide, three inches deep. This amount just fills these two pans. Grease pans and over top of loaves with melted butter; bake in moderate oven until done. (Use one-half cup of flour to knead in soft dough.)

OUR GUARANTEE

We Guarantee you will like Lily White Flour, "the flour the best cooks use" better than any flour you ever used for every requirement of home baking.

If for any reason whatsoever you do not, your dealer will refund the purchase price. He is so instructed.

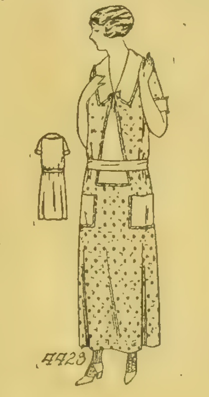
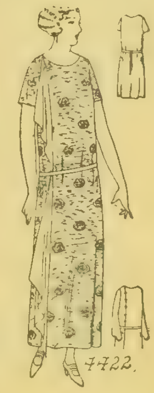
AIDS TO GOOD DRESSING



4428



4422

4426. A Popular House Dress Model (with Inserted Pockets.)—The slenderizing features of this style, will appeal to the stout woman, while the practical points will make the style attractive to all figures. Figured percale with trimming of mercerized poplin is here shown. Gingham, with an edging of rick rack would be good—or, damask, with organdy for collar and cuffs.

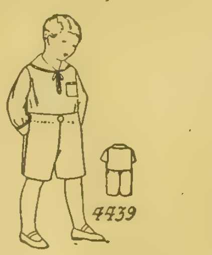
The Pattern is cut in 7 Sizes: 36, 38, 40, 42, 44, 46, and 48 inches bust measure. A 38 inch size requires 5 yards of 32 inch material. To trim with contrasting material as illustrated requires ⅝ yard. The width of the skirt at the foot is 2½ yards.

4422. A Pretty and Becoming Frock.—Embroidered voile, or crepe could be used for this model. The drapery may be of self or contrasting material. As here shown figured foulard was used, with georgette for the drapery. The sleeve may be in wrist length, or short as illustrated in the large view.

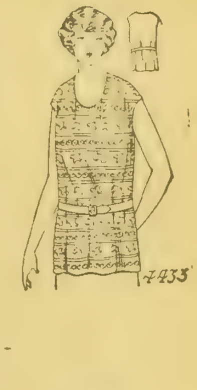
The Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. A 38 inch size requires 5 yards of 40 inch material. To make the drapery of contrasting material requires 1¼ yard. The width at the foot is 2½ yards.

4428. A Pretty Frock for House or Porch.—This is a simple one piece model with centre closing under the plastron. Percale with trimming of linene would be attractive for this style. Gingham too could be used, or crepe.

The Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. A 38 inch size requires 5 yards of 36 inch material. To trim as illustrated requires 1 yard. The width at the foot is 2¼ yards.



4439



4433

4444. A Dainty Frock for A Little Miss.—Grace and attractive lines are here portrayed. This is a good style for linen, jersey cloth, silk, or voile.

The Pattern is cut in 4 Sizes: 4, 6, 8, and 10 years. A 6 year size requires 1⅞ yard of 36 inch material. A pleasing development would be mustard color jersey cloth with embroidery in green yarn. Or white linen or crepe with cross-stitching in blue.

4439. A Good Play Suit for a Small Boy.—To be comfortably dressed, adds much to the joy of your boys playtime. This suit is easy to develop, and is suitable for flannel, linen, gingham and khaki. For warm weather, pongee or lineue would be attractive.

The Pattern is cut in 3 Sizes: 2, 4, and 6 years. A 4 year size requires 2⅜ yards of 32 inch material.

4433. A Popular Style.—This is a splendid sports model. It lends itself well to jersey weaves, and to silk, or linen.

The Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. A 38 inch size requires 2⅛ yards of 32 inch material.

The Children's Hour

A FEW RIDDLES AND THEIR ANSWERS

What does a marble do when it stops rolling?—Looks 'round.

How does the water get into the watermelon?—By its being planted in the spring.

Where did the cock crow where all the people in the world could see him?—In Noah's Ark.—Golden.

Where was Washington when he blew the candle out?—In the dark.

Where did Noah strike the first nail in the Ark?—On the head. (I wonder!)

What tree catches cold?—The ho(a)rse chestnut.

Why is an island like the letter "T"?—Because it is in the middle of "water,"

If you threw a man out of a window, what would he be certain to fall against?—His will.

Who whistled the first tune and what was it?—The wind whistled "Over the Hills and Far Away."

If a barrel weighs 10 pounds empty, what can you fill it with to make it weigh seven?—Holes.

Why are hogs like trees?—They root for a living.

Dear Uncle Ned:—May I join your merry circle of happy boys and girls? I have been a reader of the Children's Hour for three years, and at last I have decided to write. My father takes the M. B. F. and likes it real well. Daddy and two of my brothers are working our two farms and pasturing cattle on another. We have twelve acres of potatoes this year. Uncle Ned have you ever been to Florida? Mother and father went there once to spend the winter. Daddy got dreadfully sick on account of the change of climate. I guess Michigan beats all other states for being healthy. Don't you think so Uncle Ned? There are six of us children in the family, three boys and three girls. My oldest brother is eighteen, his name is Ralph. Next is Edna, she is sixteen years old, she is spending the summer at Bert Lake. She stays with grandma. Next is myself, I am twelve years old and will be thirteen the second of August. Warren is eight, Corlista ten, and Ferris eight. We have twenty-seven head of cattle, six head of horses, some pigs and some pet pigeons. We have a large red barn and a five-room bungalow. Uncle Ned and cousins excuse my selfishness for taking up so much space, but I tried to get all in one letter. I will write and tell you the rest sometime if Uncle Ned doesn't mind. I would like to hear from some of the boys and girls.—Ruth Kilpatrick, R. F. D. No. 1, Severing, Michigan, in care of Nathan Kilpatrick.

—Florida is one state where I have never been. But from what traveling I have done I am sure Michigan is the best state in the Union.

Dear Uncle Ned:—Was just reading the Children's Hour and thought I would write. I am corresponding with another girl who is also 16 years of age and her birthday is on the 15th of April as mine is. Aren't the woods beautiful now, Uncle Ned? I think they are lovely. I went for a drive through the forest today and enjoyed the trip very much. We have two pairs of canaries and one pair of mocking birds in our yard. They are always singing early in the morning. I love most kinds of birds and also there are some I hate too. Harry Rescoe, I will try and answer your riddles, the 1st, Eleven hung, the man's name was; 2nd, egg in side of duck; 3rd, the wind; 4th, a bell; 5th, an old-fashioned flat iron. I always watch the children's Hour for riddles and ask the family. That is if I get the paper first. How many cousins like nature? As soon as the snow goes off I get spring fever and nothing will help but to get out to the woods with Mother Nature and her butterflies and birds.—Elsie L. Mahler, R. 1, Harbor Springs, Michigan.

—I too love nature and enjoy nothing better than a stroll through the woods, especially when a stream flows through. Write often.

Dear Uncle Ned:—May I join your merry circle? I have been a silent reader of the M. B. F. for some time, so I thought I would write. I will describe myself: I am 16 years old, four feet and eleven inches tall, dark complexioned, gray eyes and medium brown hair. I live on a sixty-acre farm. We will be three years this coming December. We have sixteen head of cattle, two horses, one sheep, five pigs, two cats, one hundred and fifty chickens, nineteen turkeys and seventeen ducks. For a pet I have a sheep named Betty. I have five brothers and two sisters. I must close. Your neice,—Maxilla Riggs, R. 1, Box 53, Lake Ann, Michigan.

Dear Uncle Ned:—May I join your merry circle? I have been a silent reader of the M. B. F. for a long time. I am 4 feet 10 inches tall, have light brown hair and brown eyes. My hair is bobbed but I am letting it grow out. I will be 14 years old on the 22nd of October. Have I a twin? If I have I wish they would write to me. I am in the 8th grade at school. I live on a 120 acre farm in Northern Michigan. We have 7 head of cattle, 4 head of horses. We have about 10 acres of oats, they stand 4 feet tall in some places. We have clover that is 3 feet tall. It is raining. This season we have Wintergreen berries. Won't you come up and help me eat them, Uncle Ned? I have 6 sisters and 2 brothers. They are all married except one. I will close with some riddles. Who guesses these riddles will receive a card. What must you add to nine to make it six? Why is a room full of married people like an empty room? I believe the answer to Phyllis Gibson's riddle is "Yet" is a man's name. Will close hoping to hear from some of the cousins. Your neice,—Edith Merritt, R, 3, Harrison, Michigan.

—I would like to help you eat those wintergreen berries but as you live quite a ways from here I am afraid I will have to decline your invitation, but I thank you for it. Can you eat some for me?

Dear Uncle Ned:—I have written before, but I thought Uncle Ned would not care if I wrote again. Do you Uncle Ned? I am visiting my aunt and uncle for a while. I have been here since Sunday. I am going home tonight. I have been driving my uncle's car. I am going to drive it home tonight. Next week I am going to have company from Grand Rapids for a week and then my sister and I are going home with them for a week and then they are going on a long trip. Uncle Ned, where are you going on your vacation this summer? The last time I wrote there was two girls wrote to me. Their names were: Jane Mark and Mildred Nailure. I have written to Jane but not to Mildred because I lost her address. Will somebody please write and tell me her address? I would be very pleased to receive it. Before I close I will describe myself. I have light brown bobbed hair and have a light complexion and blue eyes. I am 12 years old and in the 7th grade. Well I will have to close now hoping some of the girls and boys will write to me. Your neice.—Ruth Nelson, R. 2, Grant Michigan.

—I am glad to hear from you again and hope you will write whenever you are in the mood for writing letters. I have not decided where I will spend my vacation this year.

Dear Uncle Ned:—I've written twice before and saw one of my letters in print. Although I have been a silent reader for sometime, that drawing contest that you intend to start interests me very much as I like to draw. I not only draw but also paint. I give most of my pictures away though. My teacher receives most of them for I feel as though I owe him very much. I always see so many interesting letters printed that I feel like writing to the writers but I'm always too tired at night as that is about the ouly time I get a chance. I haven't described myself and don't care to do so. If anybody is interested in me why not write me. I'm waiting impatiently for those apples to ripen. We were blueberry picking this week and had a most delightful drive through the woods. In the evening we went wading. I tried to swim and hit my foot against a stone that I did not see. Also stepped in poison ivy, but even so I'd like to go again. Hoping now that the drawing contest will soon be started I remain, A sincere friend,—Hedwig Bucholz, Elkton, Michigan.

—I had no idea that there were so many young artists who were members of the Children's Hour. We must have the contest soon. In the meantime you can all send in drawings to me if you wish, I will enjoy looking at them.

Dear Uncle Ned:—May I join your merry circle? I have been a silent reader for some time, so thought I would write. I will describe myself: I have light brown hair, am eleven years old and in the sixth grade. We live two miles from school and it is a pleasant walk in the summer time. I think the answer to Gladys Harris' riddle is a news paper. I live on a farm of 160-acres. For pets I have a dog named Bud, a cat named Nig and a pony. We have lots of fun with the pony. Will some of the boys and girls write to me? I will answer all letters. Your neice,—Marion Cox, Kinde, Michigan.

Dear Uncle Ned:—I have been a silent reader of the M. B. F. for a long time. May I join your merry circle? We are having nice weather aren't we? All kinds of flowers are in bloom. I like to go flowering. I think it is lots of fun. I live on a 160-acre farm, about two miles from Temple. I have about one mile to go to school. I am between 12 and 17 years old, the one that guesses my age will receive a long letter from me. I have four brothers and two sisters. For pets I have one cat named Tim, and one dog named Shep. Will close with love to all. Your neice.—Mary Schneide, R. R. No. 1, Harrison, Michigan.

Dear Uncle Ned:—I have been a silent reader for several years, so I think it is time I wrote, don't you think so? May I join your merry circle? Myrtle Taylor, Watronzville, Michigan, suggested having a drawing contest. That would be lots of fun. I for one sure would try. I would like to live up by Virginia Lehmann, R. 2, East Jordan, Mich., I would be in swimming all the time. I think I could live in the water. I'm like a fish. I am not going to write much this time. The Club song is just fine. I think Dorothy Postma, R. 1, Rudyard, Mich., is 13 years old. If I guess it right, don't forget, Dorothy Postma, be sure and write me a long letter. I would like to have some of the boys and girls write to me. I will answer all letters I get.—Edna McIntyre, R. 1, Kawkawlin, Michigan.

—We are going to have a drawing contest sometime soon.

Dear Uncle Ned:—May I join your merry circle? I am a farmers girl. My father takes the M. B. F. I like to read it. As soon as the paper comes I read the Children's Hour. I live on an 80 acre farm. We have 7 cows, 2 horses and a colt, 41 chicks, 29 big hens, and for pets I have 2 cats and a kitten. I like to have pets. My brother had two pigeons and the cats killed one, and the other one went away. It would always sleep with the chickens. I am thirteen years old and I have dark brown eyes and hair. Have I a twin? I wish some of the girls and boys would write to me. Well I will close now. Your neice,—Annie Stimac, Box 101, Engadine, Mich.

Dear Uncle Ned:—Hello! May I come in? I have written once or twice but did not see my letter in print. I wrote on the examination the 17th and 18th of May, and believe me I certainly was glad when I received my diploma. I will describe myself. I have medium brown hair, blue eyes, and I am 14 years old. My birthday is August 6th. Have I a twin? If I have, please write to me and I will answer. We went to Flint the 26th of June and then over to Corona. We drove through with a car. I just read in the M. B. F. the letter Harry Rescoe wrote. He said the one that could answer the most of the riddles he put in would get a present so I thought I would try. The first is, 12 left hanging because there were 12 pair, and they just took one of each pair. The answer to the next is water. The next is a wheel barrow, I think. The next is an old fashioned well. The next is an old fashioned flat iron. The last one is a violin, I think. How many have I right, Harry? Well I suppose I will have to go to supper. My brother went and got some strawberries for a short cake for supper. I wish you and cousins were here to have supper with me. I suppose you all like strawberry short cake. I will close with love and best regards, your neice and cousin,—Leona Green, R. No. 1, Prescott, Michigan.

—You bet I like strawberry short cake. And I am sure the one you made was very good.

Dear Uncle Ned:—May I join your merry circle. I have been a silent reader ever since my father subscribed last fall, and as I have never seen a letter in the M. B. F. from out here I thought I would try. I have often read that letters quite often hit the waste paper basket, but I hope this one escapes. Perhaps you would like to know something about my appearance. Well, I am 15 years old, and my birthday is May 11th. Have I a twin? I have brown hair, blue eyes and am 5 feet 5 inches tall, and weigh 114 pounds. Well how many of our cousins have already picked huckleberries? I have picked 16 quarts and we have forty-eight quarts of them canned, and my mother and sisters are out again today. Well I was just playing "Star of the East" on the organ, and remembered that Iris Arnold wanted the words so I'll close with a few riddles, and then copy the song. Write four nines so as to equal 100. When was beef the highest? Well I will close, I am your neice,—Cora Spartons, McBaine, Michigan, Box 48, R. 2. P. S.—The answer to Gladys Harris' riddle is a news paper.

—Thank you so much for sending the words to "Star of the East" to forward to Iris Arnold, but she has already received them from another cousin. I will hold them and maybe some other cousin will want them.

Dear Uncle Ned:—I have started to write two or three letters to you before, but they all reached my waste paper basket before they could find yours. I would like to become a member of the Children's Hour. I am fourteen years old and my birthday is the eleventh of May. Have I a twin? I wish some of the boys and girls would write to me. I live on a seventy-five acre farm. I have nine little chicks. We have a small patch of strawberries, and my but they taste good. I will close with a riddle. A man rode over London bridge, and yet, he walked. The one who guesses this riddle will receive a letter from me. From a would-be neice,—Olive Sanderson, Applegate, Michigan.

Dear Uncle Ned:—I am another reader of your paper who would like to join your merry circle. I am a farmer boy 13 years old, and have passed the eighth grade this year. I am very busy now while we are getting our hay in. We have 14 acres of corn, 6½ acres of potatoes, 19 acres of oats, 6 acres of wheat, and 4 acres of beans, so don't you think we have something to do? I do like to live on the farm where you can have all the good milk you want. You can have all the breeze there is on a hot day, while in the city you are cooped up in a factory all day long. In the country you can have fun feeding all animals and see how fast you can make them grow. Your nephew,—Harold Van Kampen, Remus, R. 1, Michigan.

—You certainly must be busy alright with all that farm work to do. However. I hope you find time every now and then to let us know how you are getting along with it.

Uncle Rube Spinach Says:

EQUAL RIGHTS FOR WOMEN

MRS. Sabila Nitti Crudelle is in the Chicago jail waitin' to be hanged October 12. Anna Buzzi, another woman, is in Auburn prison waintin' to be electrocuted when the state gits ready to snuff out her light.

Both women were found guilty of murder in the first degree. They are both supposed to pay the same penalty that a man pays for the same crime. An' yet from all over the U. S. goes out protests against the takin, the lives of these two women jest because they are women. Nobody doubts their guilt—there is no question 'bout that—but 'cause they are women they should not have their lives takin' from 'em.

'Course their victims are jest as dead as though they had been killed by men, an' they'll stay dead jest as long, but their murderers happened to be women. One wanted to marry and did marry the man who helped kill her husband. The other one killed in a spirit of revenge. No matter what the motive was, these women are murders jest the same, and why should women share a diff'rent fate than men convicted of the same crime?

Now I've got jest as much respect for women as any man could possibly have. I love 'em an' respect 'em for the womanhood an' motherhood that's born into 'em. They are the greatest mark of God's own hand, but, dear friends, when they so far forget their womanhood that they take the life of another human bein,' why should they not suffer the same penalty a man suffers for the same thing?

It's gettin' altogether too frequent that a woman snuffs out the life of a man jest to make her self free to marry some other man or to satisfy a spirit of revenge for some real or fancied wrong and then trust to a jury of weak minded or sentimental men an' women to let 'em go free.

After a few women have been put to death for murder—when the dear creatures learn that they can an' will be convicted of such awful crime, jest take it from me—there'll be less of shootin' an' poisonin' goin' on.

Women don't like hangin' any more'n men do—nobody likes to have it happen to 'em more'n once, but you an' I know how its been in the past. A woman could shoot a man into kingdom come an' go into court an' a jury would say "Not guilty" an' they come to look on murderin' a man as a sort of pasttime. Almost every daily paper tells us of some man bein' killed by some woman. We read of it at breakfast an' we read of it at supper, but how many women are ever punished for it?

Now I don't believe in takin' human life in any way. Don't believe the state has any more right than the individual to do it, but if it has the law to do it, then I sez serve 'em all alike—hang 'em all or else hang none. It's said that Mrs. Crudelle is a very homely woman an' a foreigner—too bad for her—mebbe if she'd been nice lookin,' the jury would have freed her—so much for bad looks. Nevertheless she is a woman an' if women are to go free for murder she should go the same as the good lookin' ones. If she is hanged, then every woman that commits murder in Illinois should hang also regardless of looks, or any other consideration. Now folks what do you think about the matter? Cordially yours, UNCLE RUBE.

THE LOGIC OF THE HEART

A SERMON BY REV. DAVID F. WARNER

TEXT: "Having the eyes of your heart enlightened."—Ephesians 1:18 a.

THE Revolutionary War was on. There lived than one Peter Miller, a Baptist minister. This man walked sixty miles to the city of Philadelphia to ask from General Washington the life of a man who had been sentenced to death for treason. But his plea seemed unavailing. Washington said he was sorry he could not pardon his friend. "My friend," exclaimed Peter Miller, "I have not a worse enemy in the world." And Washington asked in amazement, "Tell me why you walked sixty miles to plead for your enemy's life?" The minister said, "I am trying to carry out my Savior's commands." The general was so impressed with this genuine Christian spirit that he wrote out the prisoner's release and handed it to the suppliant When Mr. Miller put the release into his enemy's hands and he learned how it had been done, he broke down and shed tears like a child. The reasoning of the head failed, but the logic of the heart conquered the "Father of our country" and broke down the foe in penitential tears.

Looking at our scriptural context, we find St. Paul in prayer. How different from his Galatian letter! There, there is righteous vindictiveness. Here is mellowness, tenderness, sympathy. Why? Well, he writes from a Roman prison, chained and alone. When the deepest sorrows and shadows of life settle down upon us, then we have our profoundest reasonings and revelations. Longfellow was travelling in Europe when his young wife died. Soon after, he gave to the world his "Psalm of Life" and "The Reaper and the Flowers." In prison the great apostle is mystical, contemplative, brooding. Perhaps tear drops are wetting his manuscript as he writes, and hallowing it as a sacred missile to the churches. The inward, self-conscious Paul, the heart of Paul, is over at Ephesus praying.

"I cease not to make mention of you in my prayers," says this man of God. Why? But why do you pray for mother, YOUR mother? And why are her letters so welcome though written by a wrinkled and unsteady hand? The answer does not come from the head but out of the enlightenment of the heart. There is a heart intimacy with mother in faith and love. So there was between the apostle and these Ephesian saints: a quality of faith that made them one in sympathy and purpose, and a "love for all the saints." That is, not partial and selective, but a social love.

But what does Paul pray for? Not freedom from the prevailing persecution nor to have any material desire granted. But, that they might have the eyes of their heart opened. The sacred writer had come by a "spirit of wisdom and revelation" in the prophecies and mysteries of Christ and he would have others to see the "granduer and wealth of their religion." And all this inspiration must work "in the knowledge of God." The materialistic philosophy of Paul's day said "Know thyself," but the apostle was dealing in a philosophy which said "Know God." Without this, life is nil; life is hell. This knowledge will open up the eyes of the heart.

The other day a united church wrote into their covenant this declaration: "We believe that God has revealed himself in nature, in history, and in the heart." Certainly the knowledge of God in nature is fine inspiration. Some time ago, with some friends, I was motored over our Eastern mountains by way of the National Highway. We were rolled along over mountain tops and into lowland depths. Such a panorma of nature I had not seen before. Those great hills bounding the quiet valleys! Sometimes there were frowning chasms and then great warning rocks. Here and there were gentle slopes of green embroidered with herbage and laurel. And then, away below, were sleek cows feeding in luscious grass by cool, clear-water brooks, all unconscious of the granduer and divinity of those magnificient hills the eyes of my heart were feasting upon.

And so the poet hies away to the hills to muse, and the painter to paint. Here they get inspiration. Here there descend upon their souls visions of splendor and beauty, which are put into verse and placed on the canvas to bless future generations. The eyes of their heart are enlightened and there is given to them the spirit of wisdom and revelation of God in nature. The inspiring painting, "The Birth of the Prince of Peace" was done in the hills of old Bethlehem.

Now, it is our knowledge of a thing, what we put our soul into, that inspires us; even some of the most ordinary things. James Whitcomb Riley had the happy faculty of imparting the imaginative, poetic touch to the most common of things. Some years ago William Hawley Smith was reading some of Riley's poems to an Illinois audience. A typical American farmer, with his trousers in his boots and coat on his arm came into the well-filled hall and took a front seat. Smith read Riley's farm ballad, entitled "Clover." And the old farmer, forgetting himself and his surroundings, exclaimed "My God." Why? The divinity of his heart was stirred. So yours will be. Here is the poem:

"Some sings of the lily, and daisy, and rose
And the pansies and pinks that summertime throws
In the green, grassy lap of the medder that lays
Blinkin' up at the sky through the sunshiny days;
But what is the lily and all the rest
Of the flowers, to a man with a heart in his breast
That was dipped brimmin' full of the honey and dew
Of the sweet clover blossoms his boyhood knew?

I never set eyes on a clover field now,
Er fool 'round a stable, er climb in a mow,
But my childhood comes back just as clear and as plain
As the smell of the clover I am sniffin' again;
And I wunder away in a barefooted dream,
Where I tangle my toes in the blossoms that gleam
With the dew of the dawn of the morning of love
Ere it wept o'er the graves I'm weepin' above.

And so I love clover—it seems like a part
Of the sacredest sorrows and joys of my heart;
And wherever it blossoms, O, there, let me bow
And thank the good God as I'm thanking him now;
And I pray to him still for the strength when I die,
To go out in the clover and tell it good-bye,
And lovin'ly nestle my face in its bloom
While my soul slips away on a breath of perfume."

Now, isn't it true, that some hearts are tuned to see just things, and other hearts, the Creator of things.

But our hearts need also to see that God is in all history; markedly, the great crises. Yet, some men read failure in the signs of the times. They see in history only a long series of calamities. In the World War they see rivers red with blood, hear the cries of the oppressed, see the sufferings of the innocent and the destruction of the pure and good, and say, "Where is God?"

But Faith says that Christ has his eye on the human slaughterings of history. He has seen the gore of all the world's battlefields. His ear has been sensitive to the groanings of the ages as they carried their burden of suffering. He has seen the rejection and cruel treatment of his prophets. And yet he believed that God is near. And we must believe, that the world is standing at all today, is due to the Father's

TOM LYNCH AND WIFE BOTH KILLED!

Only last month, Thomas Lynch, a farmer, and his wife, Mary Lynch, were riding to town in their automobile, when it was struck by a train. Both father and mother were killed and several children injured. Both Mr. and Mrs. Lynch had North American Accident Policies for which they had paid only 75c each! Their children received $1,000 in cash from each policy or $2,000 to keep the wolf from the door!

We Want Every Business Farmer Reader To Be Insured!

THE Business Farmer has made is possible for every single reader to carry $1,000 Accident Insurance for the trifling sum of 75c per year!

This is the total cost of the insurance policy here described and it is issued by the well-known North American Accident Insurance Company of Chicago.

There are no other costs if you are a paid-in-advance subscriber to The Business Farmer and you can secure a policy for every member of the family providing one member is a subscriber, at the same cost, 75c for each policy.

This is YOUR opportunity to do what you have been putting off so long.

There is no red tape—no medical examination—just sign the Application Blank in the corner of this page and send it in with the required amount—Seventy-Five Cents (75c) for each policy.

Just one requirement—ONE MEMBER OF YOUR FAMILY MUST BE A PAID-UP SUBSCRIBER TO JULY, 1924, or longer—and you must enclose the address label from this or any recent copy of The Business Farmer to prove it.

If your subscription is not paid-up to July, 1924, or longer, add SIXTY CENTS for a renewal to July, 1924, and send 75c for each policy desired.

OLD AS WELL AS NEW SUBSCRIBERS MAY SECURE THIS POLICY!

Any or all members of a family from 16 to 70 years of age may secure this policy, providing they live at one address, at which one member of the family is a paid-up subscriber to The Michigan Business Farmer.

What the Policy Gives You

It is only because The Business Farmer has contracted for thousands of these policies that we are able to offer them at this low price. It is a genuine travel accident policy that gives you the very protection you need. It may pay you or your family hundreds of dollars, it costs but 75c for a whole year's protection. Under the terms and conditions outlined in this policy it pays for death or injury of the insured sustained by the wrecking or disablement of any public or private vehicle while riding as a free or fare paying passenger.

FOR THE LOSS OF LIFE	$1,000.00
FOR THE LOSS OF BOTH HANDS	1,000.00
FOR THE LOSS OF BOTH FEET	1,000.00
FOR THE SIGHT OF BOTH EYES	1,000.00
FOR THE LOSS OF ONE HAND AND ONE FOOT	1,000.00
FOR THE LOSS OF ONE HAND AND SIGHT OF ONE EYE	1,000.00
FOR THE LOSS OF ONE FOOT AND SIGHT OF ONE EYE	1,000.00
FOR THE LOSS OF EITHER HAND	500.00
FOR THE LOSS OF EITHER FOOT	500.00
FOR THE LOSS OF EITHER EYE	500.00
DISABILITY, 13 WEEKS OR LESS	$10.00 Per Week
LOSS OF LIFE, BY BEING STRUCK, KONCKED DOWN OR RUN OVER ON PUBLIC HIGHWAY BY VEHICLE	$250.00
EMERGENCY BENEFIT	100.00

$10.00 a week for 13 weeks for injuries received while riding in any kind of vehicle.

$100.00 for relief of policy holders if injured or taken sick away frmo home.

$250.00 for death of pedestrian unred moving vehicle.

READ WHAT THIS POLICY GIVES YOU AND THEN ACT! DELAY IS DANGEROUS!

ORDER AND REGISTRATION FORM

The Michigan Business Farmer, Date..............................1923
Insurance Department, Mt. Clemens, Mich.

I hereby apply for a $1,000.00 TRAVEL ACCIDENT INSURANCE POLICY of the North American Accident Insurance Company, for which I enclose Seventy-five cents (75c) in check, money-order or registered letter.

☐ I also enclose my address label from a recent issue of The Business Farmer to prove that my subscription is paid-up for one year.

☐ I enclose SIXTY CENTS (60c) in addition ($1.35 in all) and my old address label, for which you are to mark my subscription paid in advance One Full Year.

SIGNED.. Age..................

State.. Occupation....................................

☞ In consideration of my subscription I may also wish to secure.............. additional $1,000.00 Travel Accident Policies for other members of my immediate family, send necessary Order and Registration forms with my policy.

A Better Self-feed Than Ever—Saves a Man

THROWS AND BLOWS

Throw the bundles from the wagon—one, two, even three at a time. The 1923 Papec will take care of them. *It saves a man* at the feed table, yet handles more corn than ever.

The Angle-steel Link Belt gives a positive feed that can be depended on, even with heavy corn.

"No more heaving and pushing — no more 'riding the bundles' with the Papec — use your extra man to throw bundles from the wagon — you won't need him at the feed table."

The 1923
PAPEC
Ensilage Cutter

Nowhere else can you find such a wonderful Ensilage Cutter value as in the 1923 Papec. Nowhere else can you get the simple, *guaranteed* construction that means freedom from repairs, delays and pipe clogging on any silo.

If you need a Cutter, there's nothing to be gained by delay. It will pay you to see your dealer at once and reserve a Papec at present low prices, to fit your tractor or farm engine. Better do it today.

Our 1923 catalog fully explains and illustrates the latest labor-saving Papec. Write for your copy.

HOLSTEINS

FASCINATION FARM, VASSAR, MICHIGAN. Holsteins, registered fully accredited 32½ lb sire. Write your want.

HEREFORDS

HEREFORDS

Young Cows with calves by side consisting of blood from America's foremost herds at prices that enable them under Earliripe Hereford Beef Plan to pay for themselves within a year to 18 mos. Bulls including prize winners at the larger shows at practical prices. Herds headed by Straight Edge 1169786, one of two sons of Perfection Fairfax out of a daughter of the famous Disturber.

T. F. B. SOTHAM & SONS
(Herefords since 1839) Saint Clair, Mich.

STEERS FOR SALE

70 Herefords 700 lbs. 86 Herefords 550 lbs.
80 Herefords 600 lbs. 48 Herefords 500 lbs.

Each bunch even in size, dark reds, good grass flesh. Also know of other bunches. If in the market for real quality, well marked Hereford steers one load or more your choice. Write stating number and weights preferred. Some pastures getting short.

V. BALDWIN, Eldon, Wapello Co., Iowa

We Have Bred Herefords Since 1860

Herd established by Gov. H. H. Crapo. We have a few choice yearling bulls for sale at farmers prices. You are invited to visit our farm.
CRAPO FARM, Swartz Creek, Michigan.

GUERNSEYS

FOR SALE—BRYCE FARMS OFFER TO THE highest bidder the Herd Bull Rupert of Thorn Hill No. 50133 advanced registered Guernseys. Photo and pedigree furnished.
GIDEON T. BRYCE, Romeo, Michigan.

FOR SALE—REGISTERED GUERNSEY HEIFERS at reasonable prices, also choice bull calves of May Rose breeding.
H. W. WIGMAN, Lansing, Mich., Box 52.

MISSAUKEE GUERNSEYS. A NEW CROP OF calves coming soon. No females for sale. Order that new bull calf A. R. Sire and Dam.
A. M. SMITH, Lake City, Michigan.

GUERNSEYS—Registered Bull Calves, Cheap, also grades. Best of breeding for production and size. George Damken, North Manchester, Indiana.

ANGUS

WE HAVE SOME FINE YOUNG ANGUS BULLS from International Grand Champion Stock at reasonable prices. E. H. KERR & CO., Addison, Mich.

SHORTHORNS

Maple Ridge Farm Offers For Sale

Shorthorn cows and heifers at a bargain. Representatives of the Oxford, Pere, Young Mary and Venus (Ruby Pheonix). Bred for general usefulness and all T. B. tested. An inspection of the herd is invited.
J. E. TANSWELL, Mason, Michigan.

RAISE SHORTHORNS WITHOUT HORNS Like Kelley does. U. S. Accredited Herd No. 28945. For description and price write,
L. C. KELLY & SON, Plymouth, Michigan.

JERSEYS

REG. JERSEYS, POGIS 99th OF H. F. AND Majesty breeding. Young stock for sale. Herd fully accredited by State and Federal Government. Write or visit for prices and description.
GUY C. WILBUR, BELDING, Mich.

AYRSHIRES

FOR SALE—REGISTERED AYRSHIRE bulls and bull calves, heifers and heifer calves. Also some choice cows.
FINDLAY BROS., R 5, Vassar, Mich.

SWINE

O. I. C.

O. I. C.'S. 1 GILT 13 MONTHS OLD, WEIGHT 380, due June 3rd. 10 last fall gilts due Aug. and Sept. 1 last fall boar, spring pigs not akin. Record free. Citz. phone. ½ mile west of depot.
OTTO B. SCHULZE, Nashville, Mich.

HAMPSHIRES

HAMPSHIRES: A FEW BRED GILTS LEFT. Place your order now for your Boar pig at a bargain. Pairs not akin. 10th year.
JOHN W SNYDER, St. Johns, R. 4, Mich.

DUROCS

HILL CREST DUROCS, PERRINTON, MICH. We are breeding twenty sows and eighteen gilts to a son of GREAT ORION SENSATION. Yearling, spring and fall boars. NEWTON & BLANK, Farm 4 miles straight south of Middleton, Gratiot Co., Mich.

PEACH HILL FARM offers choice weanling Duroc pigs, either sex. Priced very reasonable. Write us.
INWOOD BROS., Romeo, Mich.

SHEEP

FOR SALE 180 HEAD EWES AND LAMBS for immediate sale.
WM. COX, Williamston, Michigan.

PET STOCK

FOR SALE THOROUGHBRED WHITE COLLIE PUPPIES.
CHAS. KEPNER, Carson City, Michigan.

The Man Who Talked at Random

HE sat in the window-corner of the Pullman's smoking-compartment and breathed flatly as he uttered his large opinions. It grew late, as so often it does; and he put the quietus on a discussion with the ponderous statement:

"I don't read advertisements. They have no effect on me at all. I'd never miss them if they stopped printing 'em."

Then he glanced at his advertised watch and sought his lower berth.

In the morning the ad-skeptic contorted himself out of his advertised pajamas into his advertised underwear, drew on his advertised socks, adjusted them with his advertised garters, got into his advertised suit, laced his advertised shoes and added himself to the congestion in the wash-room.

There he shaved with an advertised razor, using advertised shaving soap; brushed his teeth with an advertised toothbrush and advertised dental cream, washed with advertised soap, and brushed his hair with an advertised brush. Fastened his advertised collar on an advertised button, he neatly knotted his advertised tie, gave his advertised suspenders a tug or two and finished dressing.

Let us leave him there, this man who never reads advertisements!

Everything worth using is advertised. Everything that isn't, rarely is.

Read the advertisements for value's sake

DAIRY and LIVESTOCK

INTEREST IN COW TESTING GAINING RAPIDLY

IN a report to the Dairy Extension Department, M. A. C., from the fifty-four cow testing associations operating in Michigan under date of July 10th, 1923, many interesting facts are to be learned. Comparing the number of associations operating in Michigan under date of July 10th, 1922, with those operating under date of July 10th, 1923, there is a growth of 300 per cent—from eighteen associations to fifty-four; likewise in the total number of cows under test in these fifty-four associations, 12,584 compared to 3,690 cows indicates that a big advance has been made for better dairy conditions in Michigan. For the month of June, 1923, seventy-five unprofitable cows were sold out of the fifty-four cow testing associations and thirteen purebred sires were purchased by association members.

The highest monthly association average on ten cows was made by Lapeer County; Mr. P. F. Peabody, cow tester. This association, with 472 cows, had a monthly average of 27.8 pounds of fat and 773 pounds of milk. Hillsdale County and Genesee No. 3, both comparatively new associations, came in second and third place with a ten high cow average of 67.5 and 67.2 pounds of fat respectively.

FIVE HUNDRED FARMERS GIVE OPINIONS ON STOCK FEEDING

PRODUCING or otherwise obtaining their feed economically is the most troublesome feeding problem of farmers who keep livestock. This was brought out emphatically through a questionaire sent out by the United States Department of Agriculture which was answered by nearly 500 farmers scattered over the entire country. The replies showed that general economy of rations, the cost of grain, and the cost of protin represent about 52 per cent of the difficulties in feeding.

These men classed balancing of rations next in importance. Other problems, such as labor, increasing production, difficulties in wintering stock, short pastures, and variety and palatability of feeds apparently were thought of only in connection with the principal difficulties. That these opinions are worth considering is borne out by the fact that all of the men questioned were progressive farmers and breeders and the average period of their experience was 20 years.

Adopt Balanced Ration

During the two decades these stock raisers have been working to get ahead, many changes have taken place in the ways of feeding animals. The outstanding progressive step taken has been the wide adoption of the balanced ration. Other improvements in the order given by most of the five hundred farmers are more liberal feeding, feeding more legumes, better water supply, providing minerals, feeding according to production, feeding more protein, and more regular feeding. At the same time they list the common errors in feeding which are responsible for poor results, poor combinations of feeds being the one most frequently mentioned, followed by underfeeding as the next most effective reducer of profits. Following these in regular order, based on the number of times mentioned in the answers, come lack of protein, lack of water, lack of legumes, sudden changes of feed, poor housing, parasites, lack of salt, waste of feed, poor equipment, and over feeding. Practically all of these troubles are easily preventable.

Almost all of these 500 farmers had raised at one time or another scrubs, grades, and purebreds, and almost to a man they joined in a paean of praise of the purebred. Only 1 per cent of them reported that they had failed with improved stock. Most replies contained specific estimates showing the superiority of well-bred over random-bred animals, and when averaged it was brought out that these men consider that purebreds make about 40 per cent better returns on feed used than common stock. It is interesting to note here that another questionaire sent out by the department a year ago and answered by several hundred farmers showed that in their opinion purebreds have a general utility value a little more than 40 per cent greater than common stock.

Many Use Self-Feeders

The report prepared by the department on the results of this feeding investigation contains many more interesting sidelights on feeding ad corroborates a number of tendencies that good observers must have suspected. For instance, of 400 who answered questions regarding the use of self-feeders, 41.5 per cent had used this method of feeding, having about three-fifths yet to take up this economy. At present the self-feeder seems to be used mostly in hog raising districts and for poultry. In the middle west more than half the farmers reporting used it. The general sentiment seems to be that this piece of equipment is especially suited to hogs and chickens, but a few farmers used it for feeding calves and sheep.

Neary all of those who replied made comment on the feeding of silage and practically 50 per cent of them use this feed. In the northeastern states where dairying is very generally followed, two-thirds of the farmers in the list have silos. Although most of the silage is fed to dairy cows, the list of animals to which it is fed, according to the questionaire, included also steers, breeding ewes, and brood sows. A few men reported feeding it in limited quantities to horses, hogs, and lambs.

It is worth while to note that more than 22 per cent of these farmers who answered the government questions credited farm papers as the principal source of their knowledge of feeding problems. Other important sources mentioned were: Experience on home farm, general observation, bulletins, and books and records.

HOLSTEIN MEN PLANNING BIG PICNIC

THE Michigan Holstein-Friesian Association are working together on plans for a Grand Round-up and Picnic of Holstein farm of D. D. Aitken, just west of farm of D. D. aitken, just west of the city of Flint, Michigan, on Saturday, August 11, 1923.

Mr. Aitken was president of the Holstein-Friesian Association of America for seven years, from June 3, 1914, to June 1, 1921, and has done more for the Holstein industry than any other man, and it is proposed to hold a great meeting in his honor.

Coming as it does as the last day in a series of tours through twenty-four Southern Michigan Holstein counties, it is expected that this will be the greatest gathering of Holstein breeders and dairymen that Michigan has ever seen. A cordial invitation is extended to all who are interested in dairying and Holstein cattle breeding to attend this great round-up.

The forenoon will be spent in inspecting the herd, which has produced many noted animals, including a number of world's record holders. For the afternoon program, Editor A. J. Glover, of Hoard's Dairymen, will be the principal speaker and will have a real message for the breeder and dairymen. Arrangements have been made with the extension Service for a pair of models of True Type Holsteins which the True Type Committee has been working on for the past year. These models, the work of the Japanese sculptor Gozo Kawamura, have never been exhibited before except at the animal meeting of the Holstein-Friesian Association of America held at Cleveland last June, and the breeders will be greatly interested in them. It is hoped that Judge "Bill" Moscrip, chairman of the True Type Committee, may be in attendance to explain and demonstrate the models.

Another feature of the program will be a demonstration of the work of the cow testing associations. Genesee County, in which the Aitken farm is located, has seven cow testing associations, the record number for any county in the United States and only one other county has this number. Other features are being arranged for the program, and Mr. James G. Hays, who is a very versatile master of ceremonies, promises that there will be something doing all the time.

A large tent with tables and chairs will be provided for the basket lunch at noon and for the afternoon program, so that every one may be taken care of regardless of the weather.

ACID PHOSPHATE AND LIME STONE FOR HOGS

Have read a great deal about bone meal, acid phosphate and lime stone as mineral feeds for hogs and would like to know if these are the same as what we buy for fertilizer?—L. Y., St. Johns, Mich.

—The acid phosphate and limestone which you read about as minerals for hogs are the same as you buy for fertilizer. 16 per cent acid phosphate and finely ground agricultural lime may both be used as hog minerals.

In purchasing bone meal as a mineral for animals, it is usually desired to get a special steamed bone meal or a precipitated bone flour, as the ordinary bone meal which is often used for fertilizer quite often develops a very unpleasant odor and becomes objectionable to the animals. —Geo. A. Brown, Professor of Animal Husbandry, M. A. C.

MAKING CHURCH THE BIGGEST THING IN FARM COMMUNITY

(Continued from Page 4)

the individual. In a farming community where all are interested in the same business a church should co-operate with the school along educational lines, with the farm bureau to promote the efficiency of the farming enterprise, and it has the great opportunity to build up a sane, wholesome social life.

"Parties, plays, athletic sports and moving pictures make life attractive to young people. Through the church channels talented speakers, singers and entertainers may be brought before our rural audiences A musician from a near-by town may be secured to conduct an orchestra. This contact with city and town leaders bring country and city life closer together. The church in a rural community is of supreme importance—combating isolation, monotony and selfishness and upholding love, friendliness, culture, efficiency, as well as interest in world affairs."

The boys and girls who will shortly assume places of leadership in the work of Ontario parish are now conducting a sow and litter project of 25 entries; seven members of this project are girls. If the present plans carry, a two days' show and sale will be held next fall. The members of the club borrow the money in a regular businesslike way from the Men's club.

Directs Athletics

A Saturday afternoon play time was maintained last summer; the older men, the young men and the boys of Scout age each had their baseball teams.

The young people's service not only makes a distinct contribution to the religious life of its individual members but it contributes much toward a wholesome social life in the community. Practically all of the young people are reached by this organization, which holds regular monthly parties and special class in between.

You may be sure that the pastor of this rural church is an exceedingly busy man. Nevertheless, he finds time to lend a helping hand in the conduct of other organizations. He is, for instance, the representative of his township on the executive committee of the farm bureau; he is prominent in boys' and girls' conferences, not only in this but in other states.

Minister's View of Work

Rev. Mr. Van Buskirk sums up his viewpoint toward the work of a rural chuch in the following statement:

"There are thousands of communities in which there are as great, or even greater, possibilities than there are in Ontario parish. What has been done here can be duplicated in every county, if not in every township of the nation.

"What is the secret? Vision, cooperation and hard work. Ontario parish believes in itself, but it is not unaware of its shortcomings. It believes in the practical application of the teachings of Jesus to everyday life. It has planned and is carrying out a program of activty which will eventually make it possible for every boy and girl to live at his or her best and to develop four-square symmetrical manhood and womanhood.

"There is no mollycoddling nor any time-worn adult conception of youth in the program. It is a red-blooded, square-shouldered, two-fisted conception of life that is set forth. The life of Jesus is put at the center. To follow Him means that one must show by word, action and heroic endeavor that he is in earnest about living his life at its best. Any community willing so to see and plan and work to make the will of God dominent in every life can solve its problem."

THE LOGIC OF THE HEART

(Continued from Page 17)

long-suffering and mercy. So, teachers and heralds continue to be sent out to proclaim the message of goodwill and brotherhood.

Now, on a close reading of our text and context, we hear St. Paul praying that this church might have a heart enlightenment of God's revelation in Christ; that is that each one might know "the hope of his calling" and his "riches in the saints." To be sure, the Christian's calling is a life of social service; a life-vocation in a "grand pursuit" of Christ. To love, to follow, to cherish Christ, is to have one's heart wrapped up in him. And the hope of such a calling is a deliverance from evil and a safe refuge in the fellowship of our Heavenly Father.

The apostle asserts that such spirits as these constitute God's rich inheritance. However unprofitable, we are to be counted through his rule of measurement which is moral. God puts a premium on character—not upon farms, homes, or intellect. He is concerned about the character and destiny of men. "Hast thou considered my servant Job? There is none like him, perfect and upright." Only such as these can reciprocate the love of God.

But this is the outgrowth of the resurrection power, writes the apostle Paul. Jesus came back to beautify character and work his idealism in a sinful world. This verity has altered the whole course of many natures, changing night into day, [illegible]h into life, and earth into heaven.

The infidel's lecture had closed. He inquired whether any would contest his argument. An old lady in old-fashioned bonnet and homely apparel, in her bent and tottering manner, made her way to the platform. Putting down her basket and umbrella, she said, I paid my money to come in here tonight to hear something better than Jesus Christ. Now, you have cheated me out of my money. I have been thirty years a widow. I reared ten children and they are respectable. I know what poverty and heartaches are. But Jesus has sustained me all along. Now, if you can not tell me anything, better you have cheated me out of my money." The lecturer was not used to grappling with such heart experiences and he merely said to the audience that the old woman was so happy in her delusion he did not wish to try to change her. This is logic invincible. This is the testing and proving the love of God and having it shed abroad in our heart.

THE GUARDIAN OF THE ACCOLADE

(Continued from Page 7.)

belonging in my family that broke up the arrangement. He came down to the depot and vetoed the whole proceeding. He means all right, and—well, I reckon he is right. Somehow, he had found out what I had along—though I hid it in the bank vault and sneaked it out at midnight. I reckon he has noticed that I've been indulging a little more than a gentleman should, and he laid for me with some reaching arguments.

"I'm going to quit drinking," Mr. Robert concluded. "I've come to the conclusion that a man can't keep it up and be quite what he'd like to be—pure and fearless and without reproach'—that's the way Bushrod quoted it."

"Well, I'll have to admit," said the judge, thoughtfully, as they climbed into the wagon, "that the old darky's argument can't conscientiously be overruled."

"Still," said Mr. Robert, with a ghost of a sigh, "there was two quarts of the finest old silk-velvet Bourbon in that satchel you ever wet your lips with."

More and better Wheat

For forty years farmers have proven that Royster Fertilizer grows more bushels of wheat per acre, makes plumper kernels, and more straw. Ask your County Agent, or the Royster Farm Service Department, what analysis to use on your land, and then insist upon Royster's to guarantee yourself the highest quality materials and manufacture. The name "Royster" on a bag is like "sterling" on silver.

Experiments in Indiana by Perdue University in ten counties resulted in an increase of 11.6 bushels of wheat per acre, showing a profit of nearly 200 per cent. on the money invested in fertilizer. Fertilizer differs like seed potatoes differ. Insist upon Royster's to get the utmost satisfaction. F. S. Royster Guano Company, Toledo, Ohio.

AGENTS WANTED IN OPEN TERRITORY

ROYSTER

Easier than Whitewash

Carbola
Paints and Disinfects
Dries White

CARBOLA
The Disinfecting White Paint

It takes less than five minutes to mix the Carbola powder with water and have it ready to use as a white paint and powerful disinfectant. *No waiting or straining; no clogging of sprayer.* Does not spoil. Does not peel or flake. Disinfectant is right in the paint powder—one operation instead of two. Gives better results, costs less. Used for years by leading farms.

Your hardware, paint, seed or drug dealer has Carbola, or can get it. If not, order direct. Satisfaction, or money back. 10 lbs. (10 gals.) $1.25 and postage; 20 lbs. (20 gals.) $2.50 delivered; 50 lbs. (50 gals.) $5.00 delivered; 200 lbs. (200 gals.) $18.00 delivered; trial package and booklet 30c.

1923 NOVEMBER 1923
Move these "Squatters" NOW

THEY use your good land and pay no rent —*you* pay the taxes. Get them out *now* —after your crops are harvested and stored or sold—now's the time to make more land ready for bigger crops next year.

Use Dumorite, the new du Pont explosive, for this work. It has approximately the same strength, stick for stick, as 40% dynamite, yet leaves no larger hole in the ground than a 20%. Then, you get 135 to 140 sticks at the same price as 100 sticks of 40%—⅓ more for your dollar. It's non-freezing, too.

Let us send you the free 110-page Farmers' Handbook of Explosives which gives complete information on land-clearing, ditching and tree-planting.

CULLING ACCORDING TO MOULTING TEST

I wish you would tell me whether it is the early moulters that are winter layers and in what month do the best layers moult? They are from one to two years old or more. When and how can the old hens best be picked out? What is the best ration for the summer for chickens out on range? What is a good ration for young chicks? Is it best to mark the old and non-layers with colored leg bands if only one coop can be provided so they will be known, when clean-up time comes? How can hens best be gotten over their broody stage? Half of ours would like to set. How soon will they start laying?—G. J. B., Grand Rapids, Mich.

—In culling according to the moulting test we usually advise the segregation and sale of the slow and early moulters. Hens that undergo a slow body moult in June, July, or early August are usually inferior producers restricting their production to the spring and early summer months entirely. The better type of winter layer moults sometime subsequent to September 15th and moults very rapidly. Ordinarily the feathers drop out at one time and the body appears similar to a pin cushion with the pin feathers growing in every section of the body.

Occasionally a hen will moult and lay at the same time. This type is referred to as the "seasonal moulter." I would really class intermediate between the more intensive produceds that moult later in the fall and the early and undesirable moulters.

This is the proper season of culling and the less productive individuals usually show a course heavy head and are inclined to deposit internal fat which can readily be detected by the thick meaty condition of the egg sack or the abdominal region. These birds usually have yellow legs which is a distinct aid in segregating the poor layers.

In breaking up broody hens which are quite prevalent at this particular season, the most satisfactory method is to confine the bird in a slat or wire bottom coop for a period of three days. The coop should be located in a shaded and cool place and the bird fed regularly during the three days of confinement.

By breaking the hen immediately after she has developed this maternal instinct they can usually be brought back into production in from twelve to fifteen days. If however, the hens are neglected and remain in the nests several days, the ovary takes on a dormant condition and it may require a month before the hen is back into production.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

SYMPTOMS ARE GENERAL

Our chickens droop around for a week or so, some have looseness of the bowels, their combs get dark, their legs are weak, they sit around, won't eat. Have tried a good many remedies but still they are getting sick and dying.—L. A. S., Newport, Mich.

—The symptoms which you describe are very general and do not give us sufficient information to make an accurate diagnosis. I am of the opinion that the trouble is largely nutritional. **The fact that** the comb turned dark indicates a form of liver trouble which can usually be corrected by furnishing an abundance of green food and greater variation in the ration. We ordinarily recommend the use of Epsom Salts as the first treatment for fowls that are out of condition. The Epsom Salts can be given to the matured stock at the rate of one pound to 100 hens and to the younger stock at the rate of one quarter-pound to one-half pound, depending upon the age and maturity of the chicks. If the young stock are raised in buildings poorly ventilated or are overcrowded during the hot summer months similar conditions are liable to occur, the entire flock develops a run down condition as indicated by leg weakness, lack of appetite, emication and slow growth. These chicks are very liable to develop colds and never do make serviceable or profitable stock. A large number of people neglect green food during the summer months for growing chicks and this is certainly the greatest necessity if the flock is to be retained in a healthy and growing condition.—E. C. Foreman, Associate Professor of Poultry Husbandry, M. A. C.

CHANGING TIMES

By JOHN T. BARTLETT

IT IS EASY TO FIND OUT

IF you don't know, don't guess. Find out! These are days in which it is easy to find out.

A fruit grower and shipper received an attractive postcard price schedule from J. Smith & Co. He didn't know J. Smith & Co. Was the house reliable? Did it really pay the quoted prices, or was it one of those crooked enterprises which sometimes enter the produce field to fleece shippers? Was it prompt pay? The grower-shipper didn't have to guess in this situation. No shipper has to guess. All he need do is call up his bank and ask it to obtain for him a quick report on J. Smith & Co. It is easy in these days to find out.

High school and college students of today are skilled in "finding out." They have been taught how to use the resources of good libraries. Outside of books, however,—and books are mighty valuable—there are many sources of information which every farmer should use as he has need. These include:

His bank, for business information, dealing with credit, collections, business outlook, etc. Each local bank has correspondent banks throughout the country. It will obtain an expert impartial report on any person in business anywhere, and if you are a regular customer will probably charge you nothing for the service.

Your county agent, for expert advice on farming operations. When you are interested in operations not covered by the agent's general training and experience, get in touch with the government extension service expert. The Federal department at Washington has many experts, too, glad to help you.

If you don't know, don't guess; don't experiment: Find out! Nowadays it is easy to find out.

VANISHING APPLE STICKS

EVEN after the advent of automobiles—so short a time is it since the new status of the cider apple—was a cider apple's longest journey in most localities a couple of miles to a mill. Cider apples were of negligible value—they sold by the dumpcart-full, and most of the value was put there by the human labor invested in collecting. Great sport among farm boys was had with apple-sticks—lithe, pointed sticks which with a vigorous whirl and a quick snap would hurl an impaled apple a great distance.

On some farms, as many cider apples were utilized the apple stick way as the cider press way!

Now, in most years, apple sticks are taboo; soon, they always will be taboo. The cider apple has achieved a new status. Some parts of the country ship them in the fall by the scores of carloads, to points hundreds of miles away. The old-time waterpower cider mill has largely vanished.

In its place have come, for individual farmers, small home cider presses. These, and the big central plants to which, for conversion into cider, apples are now shipped hundreds of miles.

The price has gone up. Cider apple prices bear a sensitive relation to market prices, naturally. A glut in market apples will hit cider apples. 75c a hundred is not the highest prices for cider apples, in the history of the last few years.

The Agricultural and Business Situation

Revised Monthly by the Department of Research of the American Farm Bureau Federation.

Low prices of wheat are now giving major concern to agricultural and business interests. The average price at Chicago for No. 2 Red Winter wheat for the years 1909-14 was $1.04. Last year the average was $1.23. During this July it has gone as low as 99 cents and is now quoted around $1.01.

WHEAT PROVIDES TEN PER CENT OF INCOME.

Wheat for the last five years has made up from 9 to 12 per cent of farm sales of all crops, animal products and live stock. Wheat sales by farmers for the 1922 crop year amounted to 725 million dollars. Each of the following groups brought in more income in the 1922 crop year than wheat: Cattle, 1,000 million dollars; hogs, 900; dairy products, 1,150; and cotton, 1,270. Fruits and nuts, vegetables and poultry each had an income value a little more than half as much as wheat.

Sales of corn run from 35 to 45 per cent as much as wheat. Oats, barley and rye, together, bring slightly less income than corn.

The collapse of the wheat market is particularly disastrous in Kansas and North Dakota, which produce more than 25 per cent of the country's crop, both volume and value. Wheat sales comprise from one-fourth to one-third of all farm sales in Kansas and from 40 to 50 per cent in North Dakota.

Cattle prices are a little better than a year ago. Hogs are decidedly lower. Cotton is stronger. Corn is around 15 per cent higher and oats 12 per cent. Dairy prices are considerably stronger and poultry products are holding about even.

TOTAL FARM INCOME WILL NOT BE LESS.

For the country as a whole and for products in general the present situation is not discouraging compared with last year, but for those sections in the near West and Northwest, which rely more on wheat, the outlook is disheartening. Preliminary estimates by this Department indicate that for the coming crop year gross income from farm sales will be about 100 to 200 million dollars more than the previous year.

Unfavorable wheat statistics have been unloosed in a deluge, almost obliterating more encouraging developments and carrying the price lower than seems necessary.

According to present official forecasts, exporting countries have 75 to 100 million bushels more carry-over now than last year, but will produce 60 million bushels less new crop. This includes Russia. From this is figured a surplus over last year of 40 million bushels. Add to this Broomhall's estimate of 60 million bushels smaller requirements in Europe, and the excess is only 100 million bushels, which might easily be taken care of by expanding consumption in exporting countries and adding a little more to next year's carry-over. These facts do not appear to justify the extremely low price now prevailing.

PRODUCERS CAN CORRECT UNBALANCED MARKET.

One major reason that demand for wheat is not now properly sustained is the changed method of purchasing for export. Before the war purchases for foreign account were made in large volume at harvest or immediately thereafter. Due to the present financial conditions abroad and the uncertainty concerning prices of foreign drafts, foreign buying is now on a hand-to-mouth basis. Gradual feeding into the market by producers will do more than anything else to correct the immediate unbalanced market.

For the future nothing short of a readjustment of acreage downward seems able to insure sufficient rebound in price to make wheat growing profitable to the majority of American producers.

Wool	250	235	174

4. Relative Purchasing Power of Farm Products:
(U. S. Bureau of Agricultural Economics)

The quantity of various commodities which a given amount of each farm product would purchase at prices prevailing in 1913 is put equal to 100. The figures given represent the percentage of this quantity which the same amount of farm products would purchase in May, 1922. Prices at the farm are used for agricultural products, and wholesale prices at central markets for other commodities.

	All Commodities	Cloths, etc.	Fuel, etc.	Metals, etc.	Building Mtls.	House Furn'gs
Cotton	133	103	109	136	103	111

"Your monthly review of agricultural and business conditions is worth its weight in gold to any farmer!"—J. P. A.

MARKET FLASHES

Unfavorable crop report from Canada causes wheat to become firm and prices advance. Corn dull and lower at Chicago but firm in Detroit. Oats easy. Rye in demand. Beans lifeless at Detroit and down 10c. Butter and eggs firm. Berries steady. New potatoes higher. Poultry quiet. Cattle from active to dull. Sheep trade slow. Hogs slow to lower.

(Note: The above summarized information was received **AFTER** the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Sale of Army Horses

MOST of the time the demand for horses is far from large, with prices much lower than in recent years, and inferior kinds are hard to sell around $25 to $50. Horses are so low priced, choice kinds excepted, that most farmers have ceased breeding any, even for their own requirements, finding it cheaper to buy. About 375 horses were sold in the Chicago auctions last week, including 300 army horses from Camp Custer, fairly good prices being paid. The army horses were light weight chunks, weighing from 1200 to 1400 pounds, and were not heavey enough to suit most eastern buyers. Most of the horses were purchased by Michigan and Wisconsin farmers, for $75 to $125, while good heavy chunks weighing up to 1600 pounds were valued at around $200, with a choicer kind salable at $225 or more.

Eat Baked Beans Weekly

The suggestion made by the Michigan Business Farmer that once every week the families of this country enjoy a feast of good, old-fashioned baked pork and beans is a good one; and every Michigan family should do its part, the farmers setting the example. A good sized bean pot costs very little and is handy for the purpose. Have a good sized piece of salt pork in the middle of the beans, and many people like a little sweetening. Parboil the beans first, and cook them all day slowly, taking care that the water does not all evaporate; and serve them with Boston brown bread. Canned beans are good in their way, but not enough pork is used, and they are not nearly as good as home baked beans.

Bean Market Outlook

Michigan beans have been selling around the $6 mark, and they are getting scarce in some sections. Fields of beans in Michigan are looking well, and Michigan's government crop reporter estimates the acreage at approximately 585,000 acres, an increase of 110,000 acres over last year.

The Bean and Pea Journal says: "Acreage figures indicate more beans than ever to be sold this fall and winter. There has been fully a 25 per cent acreage increase in Michigan, and large increases in Colorado, New Mexico, Idaho, and Montana. California will show acreages fully up to normal and so will New York. So the final yields will be larger, provided weather conditions are what they should be. Latest reports indicate favorable weather in all producing states. A trip around Michigan shows beans looking fine, the fields seem larger than ever, and they're growing beans 'way to the south of Michigan and even northern Indiana—sections which have either never before grown beans, or haven't for many years. The crop has proven such a money maker for most bean growers that farmers in adjacent sections have got the fever now."

The Wheat Outlook

Too much wheat in the world for the trade requirements and promise of too generous harvests in this and other countries have been the principal weakening factors on both sides of the Atlantic for weeks. For the first time in many years, it is claimed that France will not be obliged to import wheat for August, as its crop of grain is much larger than was expected. The recent rally in prices was taken advantage of by many farmers to sell part of their new wheat, this being especially the case in the southwest, where prices were lowest—around 75 to 80 cents a bushel. At the same time the lowered prices for flour served to bring about larger buying and a rally in values. Statistics on wheat are not favorable for better prices. The world's crop has been estimated recently at 3,210,000,000 bushels, or 119,000,000 bushels more than last year; and Broomhall has reduced his estimate on import requirements to 592,000,000 bushels. Before the war dollar wheat looked like a good price, but since the boosting of railroad freight rates by the government this means very small returns for farmers. There were late sales on the Chicago Board of Trade of July wheat at 96¾ cents, comparing with $1.11½ a year ago; July oats at 41½ cents, comparing with 32½ cents last year; and July rye at 63¼ cents, comparing with 79½ cents a year ago.

High Prices for Corn

The advance in corn prices has been in sharp contrast to the fall in prices for wheat, and although a fall in values is likely to result from the large crop now growing, the chances are that fair prices will be derived from converting it into meats. For a period of five years before the war farm prices for Iowa corn averaged 55½ cents a bushel. In June, 1921, it was off to 44 cents, while recently it was around 75 cents, while cash sales of No. 2 yellow corn have been made on the Chicago Board of Trade at 90 cents. Stocks of corn are meager in the extreme, and the new crop will come on a market swept clean of old corn. It is stated that in southwest Iowa corn prices on the farm are better than wheat prices, pound for pound. This may result in heavy feeding of wheat to live stock unless wheat prices improve. July corn sales on Chicago Board of Trade at 86½ cents, comparing with 64½ cents a year ago; and December corn at 64 cents, comparing with 59½ cents last year.

Prime Cattle Still Higher

The spread in cattle prices is widening, with lower values for the many offerings of cattle fed on grass, while the choicest weighty steers offered on the Chicago market have advanced from $11.60 to $11.70 per 100 pounds, the top being within 15 cents of the highest price paid since 1922 and 20 cents higher than a week earlier. There are not many beef steers selling below $8, and there has been a very good showing of the choicer steers sold at $11 to $11.50. Good steers have been selling at $10 and upward, with the better class of yearlings at $10 to $11 and sales down to $6 to $7.75 for common to fair yearlings. A year ago $10.80 paid for the best steers; two years ago they brought $10; eight years ago $10.40, and twelve years ago $7.50. So far as choice beef cattle are concerned, there is a very firm undertone, and predictions are heard that they will advance to $12, and perhaps to $13, later on. Butcher stock has been selling freely at $3.75 to $8.25 for cows and at $4 to $9.50 for heifers, while sales are made of canner cows at $2.50 to $3.60 and bulls at $3.50 to $7.50. There was a good calf trade at $5 to $11.75, while stockers and feeders were slow and lower, selling at $3.25 to $8.25, mainly at $5 to $7. Dairy cows sold at $40 to $90. Limited sales are made of inferior little steers as low as $4 to $5.50. Because of too large receipts of grass and short fed cattle, they are 50 cents to $1 lower than a week ago.

Hog Buyers Discriminate

Many of the hogs now moving to market make a poor showing in quality, and numerous lots of half fed out swine are shipped that should be held on the farm two months longer and fed out on clover. An Indiana farmer who is the owner of two hundred acres, says that with good clover pasture he believes there is a good profit in feeding hogs, provided they are kept in a healthy condition. He lives in a farming district where farmers diversify their farming, and keep dairy cows, poultry, a few sheep, as well as hogs and cattle. Experienced stockmen believe that shotes should be kept on the farm and grown economically providing plenty of forage and a medium ration of grain. Well grown shotes may be expected to pay a good price for their board. Such extremely large supplies of hogs as have come on the market recently could hardly fail to bring about declines at times in prices, but on the whole the Chicago market has been much better for sellers than could be expected, the local and shipping demand being very animated. The consumption of fresh and cured hog products is the largest ever known, and good exports are made. Recent sales were made of hogs at an extreme range of $5.75 to $7.85, comparing with $5.60 to $7.70 a week earlier with $7.60 to $10.60 a week ago. At this time in 1915 hogs sold at $5.90 to $7.67½. Light hogs sell highest, the best of these going 30 cents above the best heavy butchers. Combined receipts of hogs in twenty markets for the year to late date amount to 24,765,000 head, comparing with 19,225,000 for the same time in 1922.

Western Lamb Crop of 1923

The lamb crop saved in the western range states during the lambing season this year is estimated by the Department of Agriculture as 77 per cent of the ewes, being based upon reports from state representatives of the department in all the states whose information was derived from special investigation and from reports direct from producers. Because of lack of comparable data, no exact comparison can be made with last year, but in most of these states all conditions were more favorable than last year. Ewes entered the winter in strong condition, winter feed was ample, and winter weather not severe. Weather conditions during lambing generally were highly favorable, with only a few storms of short duration. While grass was somewhat late in starting, ample moisture produced abundant spring and summer range. Losses of lambs were small. The poorest condition and the smallest lamb crop was in Arizona, where conditions after lambing reduced considerably an early promising crop. In Texas and New Mexico drouth conditions of last autumn were reflected in the failure of an unusually large number of ewes to breed, but favorable spring conditions resulted in a large percentage of lambs dropped being saved. In the inter-mountain and Pacific states conditions were generally very favorable, and the number of lambs saved was large except in Utah and Nevada, where local conditions somewhat lowered the percentage as compared to the other states in this area. In the Rocky Mountain states the lamb crop saved was above the average, and the lambs have made excellent growth.

Lambs Sell Much Lower

Owing largely to bad eastern markets, Chicago lamb prices broke last week to the lowest since September, 1922, being $3.40 under the high time of three weeks earlier. They sold at $7 to $12.85, the top being 65 cents lower than a week earlier. Feeder lambs were salable at $12 to $12.50 and breeding ewes at $5.50 to $9.50. Sheep were very scarce.

WHEAT

The wheat market seems to be in a bad way and dealers in general are taking a gloomy outlook of its future trend for the next several months. Dealers state that in looking over the foreign situation they fail to see anything to help the American market. There is demoralization in all directions and Germany looks like an early collapse, all suggesting inability to purchase grain from this country. Markets in general are weak and a feeling of discouragement prevails among the traders. All dealers are anxious to see prices go higher it is reported but most of them are of the opinion that there will be no advance in the near future and doubt if there will be any for several months. One grain of comfort to farmers of the U. S. is the reports from the spring wheat states and Canada. Rust is causing considerable damage and in the Canadian fields it is said to be on the increase. We doubt very much if this bears much weight in the trend of the market as the rust scare is an annual event and unless it continues to increase the market will not pay much attention to the reports. The demand is confined almost entirely to millers. Export business is at a standstill. The Detroit market declined a total of 5c last week and finished the week with an easy tone. Receipts are expected to be larger this week.

Prices

Detroit—Cash No. 1 red, $1.02; No. 2 white, No. 2 red and No. 2 mixed, $1.01; No. 3, 98c.

Chicago—Cash No. 1 red, 98c; No. 2, 96¾@97½c.

Prices one year ago—Detroit, Cash No. 2 red, $1.10; No. 2 mixed and No. 2 white, $1.08.

CORN

In spite of the trend of other grains, corn made several advances during the past two weeks. July corn made new high levels but September corn is easy and lower as dealers believe that the present level of prices is too high compared to other grains and that there will be a decline soon. Local supplies are small. Rains over the corn belt during the past few weeks have improved the crop considerably.

Prices

Detroit—Cash No. 2 white, 48c; No. 3, 46½c; No. 4, 45c.

Chicago—Cash No. 1 mixed, 89½@90c; No. 1 white, 90½c; No. 2, 88½c.

Prices one year ago—Detroit, Cash No. 2 yellow, 72c; No. 3, 71c; No. 4, 70c.

OATS

There is very little to report on the oat market. This grain was affected by the action of wheat during the past fortnight. However, prices gained slightly at Detroit during this period. The market is quiet and steady.

Prices

Detroit—Cash No. 2 white, 48c; No. 3, 46½c; No. 4, 45c.

Chicago—Cash No. 2 white, 41½@44½c; No. 3, 39@41¾c; No. 4, 39c.

Prices one year ago—Detroit, No. 2 white, 39c; No. 3, 37c; No. 4, 33@35c.

RYE

There was a fair demand for rye last week but there was not much business done owing to lack of offerings. The market is quiet.

Prices

Detroit—Cash No. 2, 69c.

Chicago—Cash No. 2, 64½@65c.

Prices one year ago—Detroit, Cash No. 2, 83c.

BEANS

The beans continue in the saddle in the Michigan bean market and prices declined during the last two weeks in this state. At Chicago and several other points there are no changes compared with two weeks ago.

Prices

Detroit—C. H. P., $4.90 per cwt.

Chicago—C. H. P., $5.85@6.25 per cwt.

Prices one year ago—Detroit, C. H. P., $8.60 per cwt.

POTATOES

Potatoes continue steady at Detroit. At Chicago trading in the market increased during the past two weeks until demand met receipts and the market took on a steady tone. Prices at Detroit are at the same level they were two weeks ago while at Chicago there were several declines the forepart of the past fortnight and these losses have not been regained. There is a moderate supply of old potatoes on the Detroit market but of new stock there is more than enough to satisfy the demand. The market is strong at this point.

Prices

Detroit — Michigan, $1.00@1.17 per cwt.

Chicago—Kansas and Missouri Cobblers, $2.00@2.15; Early Ohio, $1.75@2.00 per cwt.

Prices one year ago—Detroit, Michigan, $1.90 per cwt.

HAY

The demand continues good in all markets for old hay that is of the supper qualities but these are in very small receipt, in fact it is very rare to find any one car grading strictly one grade. Most cars are a mixture of several grades and show that the mows are getting cleaned up for the new crop. New hay is arriving in appreciable quantities but a great deal has been improperly cured and this unsound hay tends to accumulate, especially in the west.

Prices

Detroit—No. 1 timothy, $18.50@19; standard, $17.50@18; No. 2 timothy, $16@17; light clover mixed, $17.50@18; No. 1 clover, $15@16.

Chicago—No. 1 timothy, $23@24; No. 2, $19@22; light clover mixed, $19@22; No. 1 clover, $17@19.

New York—No. 1 timothy, $27@28; standard, $12@17; No. 2 timothy, $23@27; light clover mixed, $27@28.

Prices one year ago—Detroit, standard timothy and light clover mixed, $20@21; No. 2 timothy, $19@20; No. 1 clover, $15@16.

WOOL

Wool sellers continue confident of better demand and see slow but sure improvement in the wool market, although there is very little wool being offered and little changing hands. Inquiry has increased, especially in the east. The market in general is steady to firm.

Quotations on midwestern or so-called "native" wools in large lots—such prices as are obtained by the farmers' pools—are as follows (f. o. b. Chicago): Fine and medium staple, 56@57c; ½ blood staple, 54@55c; ½ blood clothing, 51@52c; ⅜ blood staple, 55@56c; ¼ blood 52@53c; low ¼ blood, 47@48c; braid, 40@41c. Western ("territory") wools sell, Chicago basis, at about these same prices for corresponding grades. Individual lots, and small or mixed lots, of midwestern wools are quoted by dealers at 3c to 10c lower than these price levels, f. o. b. Chicago.

PRITCHARD'S
WEATHER
FORECAST
INTERPRETED BY THE STARS

Week of August 5

DURING the early part of the week of August 5 residents of Michigan may expect local thunder storms but during last half of week storminess will subside to a minimum in this state.

The lack of prominent or decisive storms during the summer months are the general rule rather than the exception and in this respect we believe this week will be normal.

Week of August 12

We look for just an ordinary summer week at this time—plenty of sunshine and scattered thunder showers. The very early part of the week and again at its close will probably be the most active period from a weather standpoint.

During middle days of the week the weather in Michigan is expected to be fair with the exception of the local heat thunder storms that so quickly arise at this time of year.

Cool About Labor Day

Temperatures will probably show a slight or temporary moderation during early days of next week but a cooler spell is to be expected in this state about 23d or 24th. Still another cool spell is to be expected about Labor day or a day or so later.

At this time there is really some danger of a bad frost for sections of the northern part of the state. It need not necessarily cause much loss, however, if proper precautions are taken. If the sky is clear, the wind calm and the night temperature falls to 42 degrees or below at this time prepare for frost.

MISCELLANEOUS MARKET QUOTATIONS

Detroit, Tuesday, July 31st.

BLACKBERRIES — $2@2.50 per 15-quart case.

CHERRIES—Michigan sour, 16-quart cases, $2.25@2.50; 24-quart cases, $3.50@4; sweet cherries, $2.75@3 per 16-quart case.

HUCKLEBERRIES — $7@8 per bu.

MELONS—Watermelons, 60@90c each; Arizona cantaloupes, $5.25@5.75 per standard crate; pink meats, $2.50@3 per flat; honeydew, $3.50@4; Arkansas, $4.50@5 per standard crate.

RASPBERRIES — Red, $3@3.50 per 24-pint case, $7@7.25 per 24-quart case and $9@9.50 per bu; black, $7.50@8 per bu. and $5.50@6 per 24-quart case.

APPLES—New, $2.50@3 per bu.

HONEY—Comb, 23@25c per lb.

CABBAGE—Home grown, $1.15@1.25 per bu.

GREEN CORN—40@50c per doz.

POPCORN—Little Buster, 7½@8c per lb.

LIVE POULTRY—Broilers, fancy rocks, 2 lbs. up, 38c; medium broilers, 35@36c; leghorn broilers, ½ pounds and up, 28@30c; small leghorns, 25@26c; stags, 14c; hens, 25c; leghorns, 18@20c; roosters, 14c; geese, 12c; ducks, 25@26c; spring ducks, 5 lbs. and up, 26@27c per lb.

DRESSED CALVES—Best country dressed, 14@15c per lb.; ordinary grades, 12@13c; city dressed, 16@17c per lb.

REPORTS SHOW CROPS LOOKING GOOD

TUSCOLA—Crops looking better, have had two good rains and the rye and wheat is in the shock with some hay to cut yet. Beans and potatoes don't grow as they should for there are too many cold nights. Corn is fair. Big time at Caro Farmers Picnic held July 25th. Next big week will be Caro fair held August 24th.—Robt. B. Chambers.

MONROE—General condition of crops good, weather fine, had a bad storm a week ago. Hay and wheat all harvested, oats ripe, but mostly badly lodger and will be hard to cut. Help is very scarce, wages high, some hay will not be cut, no help. Pastures are good, stock looking good.—Geo. L. Sype.

OGEMAW—Haying about finished and 80 per cent of crop. Rye is good. Sugar beets poor but corn is doing fine. Weather is rainy.—Jas. Anderson.

GRAND TRAVERSE—Have had nice rain, crops all look fine, seems to be lots of hay.—Chas. Button.

CALHOUN—We have been a little short of rain in this section but corn and potatoes are looking good, oats are looking fine, hay was a short crop but got it in in good shape.—G. E. Beardsley.

ST. CLAIR—Wheat all cut; not much threshing, yet it is thought the yield will be good. Lots of hay to cut yet. Help scarce. Oats will soon be ready to cut, they are turning fast. Corn is doing fine. Sugar Beets are looking good. Beans are looking fine and promise a good yield.—Isaac Justin.

WEXFORD—Hay all cut; just a fair crop, better hay on new seeding. Wheat all cut, somewhat short. Oats looking good but need rain. Grasshoppers pretty thick. Corn looking good considering late planting.—J. H. Campbell.

BRANCH—We are having fine weather for harvesting and threshing. Nights a little cool for corn to make good. Good showers, had a good rain Friday night. —W. W. C.

A Review of the Corn-Hog Situation

FROM November 1, 1922, to July 1, 1923, more hogs were marketed than in any like period in history—30 per cent above the corresponding period for 1909-13. This unusually heavy marketing reflected the large number of pigs farrowed in the spring of 1922.

The special government hog report of June 1 indicates that in the spring of 1923 there was one per cent more spring pigs saved in the entire United States than there were in 1922; while in the corn belt there were 6 per cent more spring pigs saved. Furthermore, the report indicates that the farmers have bred sufficient sows to increase materially their number of fall pigs over the very large fall pig crop of a year ago. However, recent developments may cause farmers to market during July and August a considerable number of sows bred for fall little.

The corn crops of the past three years have been unusually heavy and the price has been very low. To utilize the large surplus of cheap corn, hog production has been greatly expanded. This increase in hog production has now cleaned up the unusual surplus with the result that the stocks of 1922 corn on farms at present are about the pre-war average and corn prices have recovered from their extremely low point.

In view of probable continued heavy hog production and barring either an unusual cholera outbreak or a marked improvement in the corn crop prospects during late July and August, a corn shortage may develop by the summer of 1924.

The history of the past fifty years indicates that there is a rough general tendency toward overproduction and underproduction of hogs in cycles of about two years from the high point to the low point and two years from the low to the high. From the fall of 1920 until the fall of 1922 hog prices were high in terms of corn. This high corn-hog ratio stimulated heavy breeding with the result that hog prices fell until now they are 25 below their 50-year ratio with corn. From the spring of 1922 to the midsummer of 1923 the corn-hog ratio declined from approximately 18 to 8 bushels. In spite of this sharp decline during the past year heavy breeding has continued with the prospect that the unfavorable corn-hog ratio of the past six months will last into 1924.

Our export trade takes approximately 10% of our total production of pork products. During the first five months of 1923 the European nations have taken a decidedly larger percentage of our pork products at a higher price than would have seemed probable last January. England and Germany still remain our principal customers, with relatively large quantities going to Belgium and the Netherlands. Should Great Britain keep up the rate of bacon, ham and shoulder imports she maintained during the first five months of 1923, our exports to her during the year would be slightly in excess of 1922. Her imports of lard, however, have decreased. There has been a lessening in her demand the last few weeks that throws doubt as to what her totals for the year will be. Since her general import trade has been very "spotty," the present inactivity may prove unimportant. On the other hand, German to a large degree, and Belgium, the Netherlands and Cuba to a lesser degree, have taken greater volume of lard than any time during the post-war years. During the first five months of 1923 a total of 823 million pounds of pork products moved out of the United states, which is approximately two one-half times the average of the corresponding months of 1909-13, and one-fourth greater than the average of the war period, 1914-1918.

Good Domestic Demand for Pork

At this time the figures on total cold storage holding of July 1 are not available. On June 1, there were in public cold storage warehouses and in packing establishments, 906 million pounds of pork as compared to 636 million pounds June 1, 1922 (a year notable for its light stocks) and also as compared to an average of 879 million pounds for the five years 1918-1922 inclusive. That there was a reasonable reduction in these stocks by July 1 is evidenced by the fact that holdings in seven principal western cities declined from 372 to 355 million pounds, or 4.8 per cent. Since in spite of a 30 per cent increase in hog marketings, the total stocks of the country were only 3 per cent above the last five year average on June 1, there seems to be nothing seriously alarming in the pork storage situation.

Lard is even more encouraging. On June 1 the stocks on hand were 85 million pounds, while the total on June 1, 1922, was 124 million pounds and the five-year average, 1918-22 inclusive, was 129 million pounds. In the face of the large number of hogs as compared to the corn crop and the probability that this will result in thin hogs, the lard outlook is quite favorable.

Based on Federal inspected slaughter for the first five months of 1923 the excess of consumption over the same period in 1922 is apparently 28 per cent. From the per capita standpoint our population has already eaten 5.2 pounds more than in the same months of 1922, and if this advantage is even reasonably maintained we may expect the annual per capita figure to approach 85 pounds.

This heavy consumption may be expected without a further serious decline in prices, since the active employment of labor has supported the pork market far beyond what might have expected on the basis of the heavy hog production, and there is no suggestion of a serious reduction of employment conditions before the last of 1922 pig crop is marketed.

While the foregoing situation indicates that the last of the 1922 hog crop will be readily absorbed by the present market due to the favorable industrial conditions and full employment of labor, the selling of this year's pig crop at a price on a level with the crop of 1922 is more problematical, and will depend on the continuance of the very heavy rate of hog production of the past year does not seem to be warranted to the corn situation. — American Farm Bureau Federation.

MILK PRICE PAID PRODUCER INCREASED AUGUST FIRST!

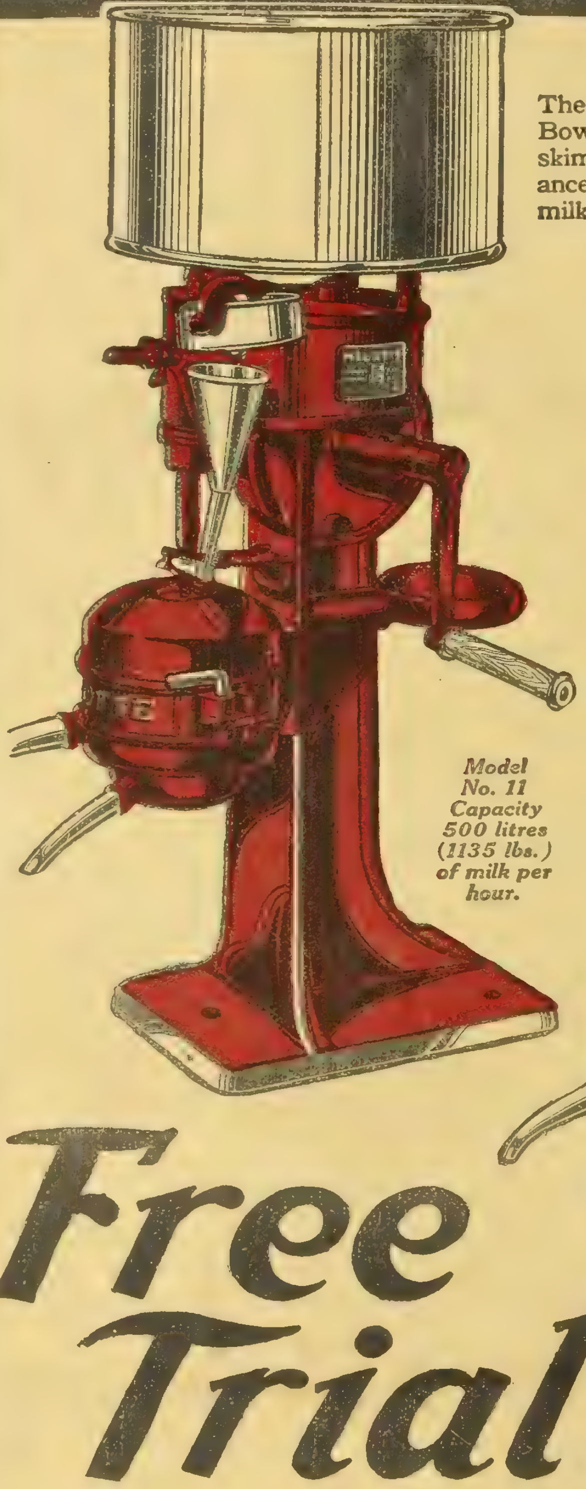
Detroit, July 31—Michigan Milk Producers Association and representatives of creameries in the Detroit milk area to-day agreed on an increased price paid producers for August and September, $3.30 per hundred, with no price set on surplus milk. Previous price was $3 per hundred and $1.64 on surplus milk. Detroit creameries are today announcing retail prices as follows: Milk, pints 9c, quarts 15c; Jersey Milk, quarts, 17c; Cream, half-pints, 17c; Butter-milk, quarts, 11c. This represents a raise of 1c per quart to consumers. The producers won their fight because of dry pasturage, increased cost of milkers, because of labor leaving the farms and the necessity of buying feed.

Prof. J. T. Horner, of M. A. C., Dr. Friday's former assistant, acted as arbritrator, assisted by Mr. Earl Hemenway, of the college.

Belgium Melotte
Imported Separator

Self-Balancing Bowl

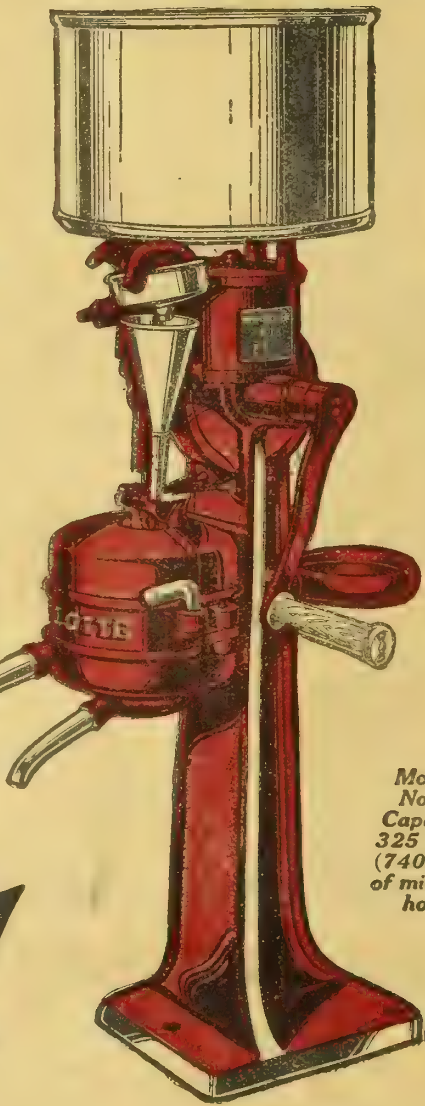
The Belgium Melotte is the only single-bearing-bowl separator ever made. This patent Bowl hangs from one frictionless ball bearing and spins like a top. It is *self-balancing*. It skims as perfectly after 15 years of use as when new. Positively cannot ever get out of balance—cannot vibrate and thus cause cross currents which waste cream by remixing with milk. Send coupon below today. Get the Free Book that tells about this great Melotte.



Model No. 11 Capacity 500 litres (1135 lbs.) of milk per hour.

$7.50 After Trial

We will send an imported Belgium Melotte Cream Separator direct to your farm on 30 days' absolutely Free Trial. Use it just as if it were your own machine. Put it to every possible test. Compare it with any or all others. The Melotte is easy to keep clean and sanitary because it has only one-half the tinware of other separators. Turns so easily that bowl spins 25 minutes after you stop cranking unless brake is applied. No other separator has or needs a brake. After you have tried it for 30 days and you know it is the separator you want to buy, pay $7.50 down and balance in small monthly payments.



Model No. 7 Capacity 325 litres (740 lbs.) of milk per hour

Free Trial

Your choice of any of these three models. NO MONEY DOWN—FREE TRIAL—SMALL MONTHLY PAYMENTS—DUTY FREE. This wonderful Belgium Melotte Separator has been picked by a jury of thousands of farmers—picked by dairy experts throughout the world to be the "king" of all separators ever manufactured. It has broken all records for Efficiency of Skimming, Ease of Turning, Convenience of Operation and Durability. Send coupon below for Big Free Book.

The Melotte Separator, *H. B. Babson, U. S. Mgr.*
2843 West 19th Street, Dept. C-330, Chicago, Ill.
2445 Prince Street, Berkeley, Calif.

Without cost to me or obligation in any way, please send me the Melotte catalog which tells the full story of this wonderful separator and M. Jules Melotte, its inventor and hundreds of letters from American farmers.

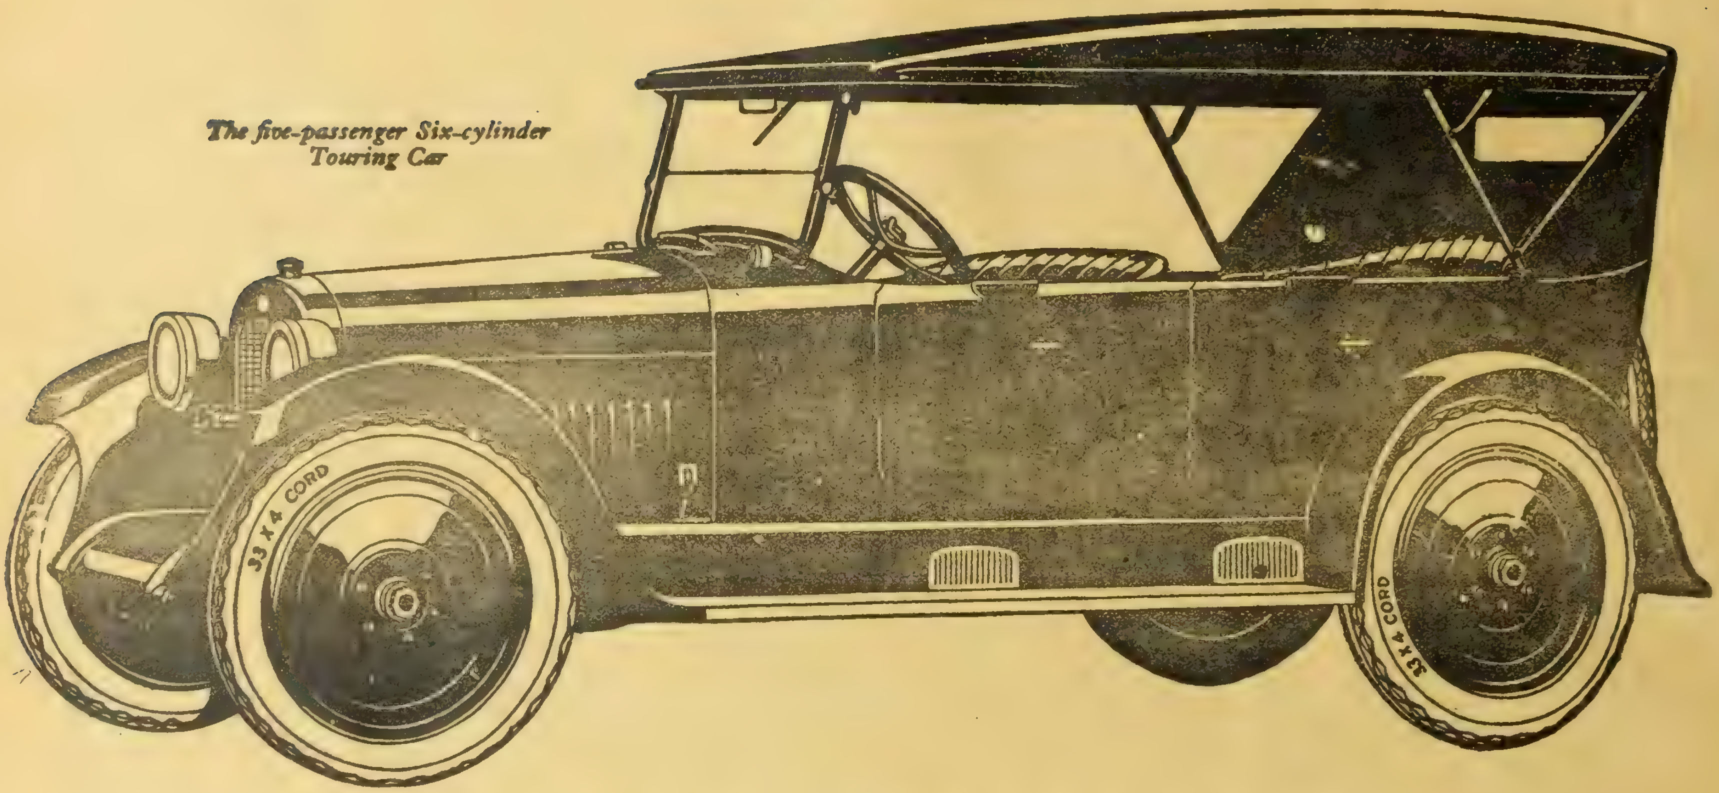
NASH

The five-passenger Six-cylinder Touring Car



ANNOUNCING

A Wonderful Group of New Fours and Sixes

Never before in a long history of fine achievement has Nash resourcefulness and creative originality revealed itself with such downright decisiveness as in this *complete new line of open and enclosed models.*

They offer in point of appearance a dignity and beauty of body line that is of arresting and distinctive individuality.

They provide a performance so brilliant and so remarkable as to engage your immediate and unqualified admiration.

And from the seriously practical investment viewpoint they can truthfully be said to set a new and far higher standard of motor car value.

All that Nash engineering stands for, all that Nash factory practice represents in the way of accuracy and excellence, is embodied in these new cars in advanced and distinguished degree.

The new Six group includes the *Roadster*, five-passenger *Touring*, seven-passenger *Touring*, *Sport* model, *Victoria*, five-passenger *Sedan*, Four-door *Coupé*, and *Sedan* for seven.

And the new Four line embraces the *Roadster*, the five-passenger *Touring*, the *Sport* car, the *Carriole*, and the *Sedan*. (1[illegible]

Farm Bureau Head Explains Plan to Store Wheat

Former Secretary of U. S. Department of Agriculture and President Bradfute of Farm Bureau Say Effect of Dollar Wheat Greatly Exaggerated

"THE Farm Bureau proposal that farmers withhold 200,000,000 bushels of wheat from the market is an emergency measure seeking immediate relief of the present market situation," according to O. E. Bradfute, president of the American Farm Bureau Federation. "This does not mean indefinate storage," continued Mr. Bradfute.

"We are urging farmers to hold their wheat for orderly distribution over the entire consumptive period instead of dumping it on the present low market.

"In doing this the American Farm Bureau Federation is counseling sound business policy. Storage will have a tendency to relieve the present situation and if a considerable portion of grain remains in the farmer's hand as a daily reminder of unprofitable surplus, plans for next season's planting will more likely be curtailed. Adjustment of acreage in line with world supply and demand is the permanent solution and our proposal is aimed toward that objective."

Mr. Bradfute continued: "A flood of unfavorable statistics has taken speculative support from the market and financial conditions abroad prevent the heavy customary purchases for foreign account during the harvest season. Farmers must meet this situation by feeding the market gradually and it has been our hope that all the machinery created by the last Congress would be geared with all possible speed, to and in this endeavor.

"The Secretary of Agriculture is empowered to designate suitable warehouses which may be licensed and bonded and which may issue receipts to be used as collateral in obtaining loans in those cases in which the individual farmer finds credit necessary.

"It is our suggestion that a warehouse association be organized in each community or county and act in its corporate capacity as the official warehouseman under the federal law, leasing such storage houses as may be available at the country shipping points and such farm granaries as may be adequately constructed for designation as licensed houses. We believe this plan thoroughly feasible of administration in a way that will involve only the soundest business practice. We do not ask the Secretary of Agriculture to license unsafe granaries or the banks to extend loans not thoroughly protected. We do believe that Congress contemplated the fullest use of all facilities to obviate the very difficulties in which we now find ourselves and expected prompt action in making the warehouse and intermediate credit acts effective. This the American Farm Bureau Federation is asking and is offering its fullest co-operation in helping to achieve this result.

Undue Pessimistic Hysteria

"In face of official statistics which show only forty million bushels greater surplus in exporting countries this year than last and only sixty million bushels less requirements in importing countries the price has been carried twenty-five cents lower than the average for 1922. This additional surplus might easily be taken care of by expanding consumption in exporting countries and adding a little more to next year's carryover. The excessively low price, we feel, cannot be justified by the facts and has come partly as a result of undue pessimism and hysteria. The prospective buyer is pressive his advantage to the full by staying out of the market.

"We think that the present emergency can be wonderfully aided by the procedure we have outlined. However, each individual farmer must understand that he is using his own judgement in offering for or withholding from immediate sale. We cannot guarantee higher prices. But, as a matter of consistent policy we have advised from the beginning of our organization more even distribution of marketing by farmers over the consumptive period. Now that the machinery of orderly marketing has been made ready insofar as laws can prepare it, we want it put into motion through the administration of the laws.

"While the present price of wheat, far below the cost of production, is a calamity to certain sections of our country which rely quite largely on their one income, we are glad to note that the prices of some products are as good or better than last year. Cotton is higher; dairy prices are better; poultry products are holding even; cattle prices are running about the same; oats are stronger; corn is decidedly higher but pork, in which form corn is most largely sold, is decidedly lower.

"From careful estimates, made by our Department of Research, of sales of farm products by farmers it was found that wheat furnished from nine to twelve per cent of total income from crops, livestock and animal products. For the crop year 1922 income from wheat was estimated at 725 million dollars; cattle brought in 1,000 million dollars; hogs 900; dairy products 1,100; and cotton 1,270. Fruits and nuts, vegetables and poultry each had an income value a little over half as much as wheat. Sales of corn run from 35 to 45 per cent as much as wheat. Preliminary estimates by our Research Department indicate that for the coming crop year gross income from total farm sales of crops, livestock and animal products will be about 100 to 200 million dollars more than the previous year."

EFFECT OF LOW WHEAT PRICE EXAGGERATED—MEREDITH

THE general effect of the drop in wheat prices to below $1 a bushel has been exaggerated in the minds of many people, both as regards its effect on farmers generally and upon business other than farming, declared E. T. Meredith, Secretary of Agriculture during President Wilson's Administration, in a statement to The Associated Press. He said:

"Those that grow wheat exclusively, or nearly so, and consequently are dependent upon the return from their wheat crop almost entirely for their income, have had their incomes cut by the recent decline in wheat prices; the seriousness of the situation, so for as they are concerned, is a matter of interest and importance to every other interest of the Nation, Labor and business being concerned as well as the farmer. Certainly steps should immediately be taken to prevent such a situation being again forced upon a group of people who are producing one of our staple products.

"The entire income American farmers receive from wheat, however, represents but 10 per cent of the total income of the farmers as a group. Then that commodity which represents 10 per cent of the total income is only 10 per cent lower in price than it was a year ago. It appears, then, that so far the price of wheat alone is concerned, the present price of corn is as much higher than the price for that grain a year ago as wheat is lower, and inasmuch as there are more than three times as many bushels of corn produced as there are of wheat, this very increase in the price of corn greatly exceeds the shrinkage in wheat. Whether corn will maintain its high price I do not know, but if it does, those who are both corn and wheat growers—which is a very large number—are, at least, in no worse condition than they were a year ago, and many of them are in a much better situation.

"It is interesting to note that a 10 per cent drop in wheat is only equal to but 8¼ per cent of the wealth produced each year by our dairy cows, and that the American hen produces more new wealth than the total wheat crop alone.

"I firmly believe that a practical method can be devised and put into operation, whereby wheat growers and other farmers can produce their crops with an assurance of receiving at least a certain price per unit of their production, as is the situation with those who manufacture certain products, so that those who cannot produce at that price may know it in advance rather than afterward.

In other words, the law of supply and demand, which means supply, productive possibilities, and consumptive demand, shall be interpreted to the farmers in advance, rather than obliging them to operate in the dark, as is now the case. It is a passing demand of national importance."

Michigan Bean Interests Backing Advertising Plan

Elevator Man Commend Business Farmer On Stand and Pledge Loyalty

I HAVE read with very much interest your editorial headed "Come On Loosen Up" in Aug. 4th issue of your paper. You are to be complimented on the stand you are taking and the frank and clear manner in which you present this to the farmers.

I attended the advertising meeting in Flint when Mr. Clendenin explained before the shippers present the possibilities of a Bean advertising campaign. When the call came for signing of pledges to subscribe Michigan's quota, I am glad to say that I signed the first pledge that I know of being signed in Michigan and was the first one to advance to the desk to sign. I am told that New York state have pledged their quota. Reports come from California that are very favorable that their quota will be pledged and also favorable reports from Colorado. Michigan would only assume one-third of the total advertising cost, while she produces about one-half the Beans which are now known over the country as the best prepared, best cookers and best flavored of all domestic beans and if Michigan can't get her share of the country's bean business with national advertising, it will be our own fault, and unless Michigan takes hold and assumes her one-third, the entire advertising campaign will be dropped as all others await Michigan's action to put it over and the whole campaign will depend on Michigan.

In our opinion if there ever was a year that advertising might be of benefit to all of the Michigan bean interests, it would be this year with the present splendid crop prospects. There are not many elevators in Michigan whose advertising cost on the basis of 9-10 of a cent per bag, would be over $300.00 for one year. We have no way of knowing, of course, that the advertising will obtain the results expected nor that it would be a cure-all for the condition that the Michigan bean market has been in, but its cost to each elevator throughout the state would not be of an amount that would work any serious hardship on any one elevator and is surely worth a trial. On the other hand, should it stimulate the demand that would be expected from advertising, all elevators would benefit in a reasonable increase in market prices that should more than make up the advertising cost as compared with no advertising and the growers would receive a better price than is now evident they are going to receive based on some of the quotations at which new crop beans are being offered for October shipment.

It is my opinion that some of the opposition to the advertising might develop that those who are indifferent and uninterested in the advertising have quite a comfortable lot new crop futures sold that at present appear to show them a handsome profit and particularly if the crop comes through without any damage and they, of course, could not be interested in any advertising campaign that might have any influence toward advancing prices to the farmers for their beans that speculative elevators have sold short and for which the farmer will get no benefit if the market goes down to where the short sellers want it and you can bet your life they will pound it down as hard as they can.

We know of an instance where an elevator manager last winter drove through the country soliciting beans from farmers to be placed in storage in their elevator and offered the extra inducement for hauling when the roads were good that they would store them free of charge, no storage, no insurance and no shrinkage—the elevator assumed all that. You can appreciate that if they secured a large quantity of beans which they evidently did and then sold those farmers stored beans short, they would not be interested in an advertising campaign that might advance prices, particulary to those farmers who still hold storage slips. It may develop later that the opposition to advertising may lie in those two factors — speculators short selling farmers new crop beans and speculation in farmers stored beans.

Those two factors might be worthy of thorough investigation and an effort to get at the bottom of the real reason for the indifference and opposition to the advertising might disclose that the very ones who are blocking the whole campaign may be the shorts and we

(Continued on Page 23)

Hillsdale Farmers Cash In On T. B. Eradication

Two Consignments from Hillsdale County First in U. S. For Which Premium Was Paid Because Hogs Were Bred and Fed in Tuberculin Tested Accredited County

THERE are at least two farmers in Michigan who have had it fully proven to them that it pays to have their live stock tested for tuberculosis; that it pays well to live in a tuberculin tested county. These farmers, Charles Bowditch of Osseo and Andrew Reynolds of Hillsdale, are looked upon with envy by their neighbors in Hillsdale county. These two farmers each sold a carload of hogs and collected a premium of 10 cents per hundredweight on top of the selling price. And this was because the county has been recognized by the United States Department of Agriculture as being practically free from bovine tuberculosis.

Each man had a load of hogs on the Buffalo market Monday, July 30, for which they received the premium which the packers of that and other markets have agreed to pay for carloads of hogs from counties that are designated by the government as being free from animal tuberculosis.

News of the county's recognition by the government as a tuberculin tested accredited county brought to its farmers through the official order from Washington created great interest, especially in view of the fact that the county is the first one in the corn belt proper to be so recognized. Thirteen other counties were recognized but the others were in northern Michigan, southern Indiana, Tennessee and North Carolina.

When the word reached here that Hillsdale county had been recognized it was late in the week and several local folks got busy right away to make up a shipment for the Buffalo market.

Committee Gets Busy

The men who assisted in one way or another in this enterprise were F. E. Haynes, president Hillsdale Live Stock Breeders' association; Charles Kimball, chairman of the county board of supervisors; A. Z. Nichols, president county farm bureau; Col. E. H. Kerr, master of a local grange and a war veteran; G. B. Smith, secretary local Federal Farm Loan association, and Jabin Strong, Red Polled breeder. H. R. Smith, live stock commissioner of the National Live Stock Exchange at Chicago, was also present to assist in getting up the shipment of hogs and seeing it through to market. Mr. Smith had taken a very active part in starting the tuberculosis eradication program in the county two years previously, which resulted in placing it in the healthy list.

Here is a picture of the Hampshires taken just before loading at Osseo. The men on the fence are, left to right: F. E. Haynes, president Hillsdale County Live Stock Breeders' association; Chas T. Kimball, chairman county board of supervisors, who signed the certificate authorizing the payment of the premium; H. R. Smith, commissioner National Live Stock Exchange and a native of the county; Fred Bowditch, son of owner of hogs; Jabin Strong, Red Polled breeder; A. Z. Nichols, president County Farm Bureau; G. B. Smith, secretary Farm Loan association and E. H. Kerr, grange official. The insert is a fine likeness of Mr. Chas. Bowditch.

Mr. Bowditch was the only man who had a carload of hogs in the county which was anywhere near ready to market, as the hogs had been shipped out pretty closely this spring. He had expected to keep his for a while yet, as they were under 200 pounds, but being a public spirited man and wanting to see his county the first to cash in on its new distinction he agreed to ship his carload of hogs. The hogs were Hampshires, being the culls from his herd of purebreds. He also breeds Shorthorn cattle and has always been in the forefront of live stock improvement plans in the county.

The hogs were loaded in due time and landed at Buffalo in good shape. The Hampshires were sold at $8.25 per hundredweight, which was the top of the market. A few other hogs sold at the same price. The 39 head averaged 195 pounds and were a very smooth, attractive lot. They were bought by the Dold Packing company, whose buyer did not know that the hogs were to receive a premium. The premium was paid in a separate check to Mr. Bowditch later.

This is the plan which is to be followed in paying the premium on all such shipments, according to a statement by Commissioner Smith of the National Live Stock Exchange, who was first to suggest that the packers pay the premium, and who witnessed the sale in Buffalo.

The other shipment from Hillsdale county to command a premium was made up of Poland Chinas and Duroc-Jerseys. They were bought by the Klinck Packing company, a little below the top price, and were considered a good sale, as they were somewhat uneven.

This load was also sold without the packer buyer knowing that they had a right to a premium. For the sale of these and also the Hampshires the certificates were presented by the commission company to the packers which was their authority to to pay the premium. The certificate presented covering the carload sold by Mr. Bowditch read as follows:

"Hillsdale, Mich., July 28, 1923
"To Whom It May Concern:

"This is to certify that Hillsdale county, Michigan, has been officially designated by the United States Department of Agriculture and State of Michigan as a modified accredited area, all cattle having been tuberculin tested according to regulations prescribed and that this consignment of hogs thirty-nine (39) in number of the Hampshire breed, weight 7600 pounds, was bred and fed by Chas. Bowditch and Son in Jefferson Township, P. O. Osseo, Hillsdale County, Michigan, who are entitled to receive the premium of ten cents per hundred pounds live weight above selling price.

"Chas. T. Kimball, Chairman, Board of Supervisors, Hillsdale County."

This certificate for Mr. Reynolds' premium read the same with the exception of names used.

In this step just taken by the United States Department of Agriculture more has been done to increase interest in the testing of herds for tuberculosis than at any time heretofore and every farmer who raises live stock to any extent will be anxious to have his own county fall in line so that he can get a premium of his shipments.

Will Michigan's 1924 Wheat Acreage Show Increase Over This Year's?

By H. R. SMALLEY

(Special to The Business Farmer.)

WHEAT is now grown on one acre out of every ten in Michigan or in other words just about 10 per cent of the total crop acreage is seeded to wheat and this means practically one million acres. The total crop produced is not sufficient to feed the population of the state—now approaching four million. In fact, with average yields the acreage could be increased from 40 to 50 percent without producing more than enough to supply the state with home-grown flour. Better than this, however, would be to sow the same acreage and increase the acre yield by 40 to 50 per cent. At any rate, Michigan farmers are certainly justified in growing a million acres of wheat, which is only slightly in excess of the pre-war figure and only two thirds as much as was grown in the state 30 years ago.

It will be of some interest to Michigan farmers to know whether or not other states are getting back to normal in wheat production. Some wheat is grown in 42 states and the crop now being harvested is 11 million acres or 24 percent in excess of the average pre-war acreage. Minnesota and South Dakota have reduced by more than three million acres and 11 other states are growing less wheat than in the years from 1909-1913.

In 29 states, however, the wheat acreage shows an increase over the pre-war figure, but the big increases are found in seven states—Kansas, Montana, Oklahoma, Illinois, Colorado, Missouri and Texas. The combined increases in these seven states amount to almost 12,000,000 acres or more than the total increase for the whole United States over the pre-war acreage. These are the states that are entirely out of line as far as wheat production is concerned and it seems reasonable to assume that these states will be most likely to make further reductions, although it is not possible to make any accurate prediction as to how extensive these reductions will be.

The large increase in spring wheat acreage in Montana will probably be maintained for some time. This crop—once important in Wisconsin and now leaving Minnesota—has been gradually moving West and North for many years, and the recent increased acreage in Montana may be regarded as a normal and expected development. The tendency toward a more diversified and safer type of farming will undoubtedly result in a reduction of the winter wheat acreage in Kansas and in parts of Oklahoma, Texas and Colorado. On the other hand, the increase in wheat production in Illinois and Missouri is leading in the direction of a better balanced cropping system and little, if any, reduction in acreage can be expected in these states.

One half or this field was fertilized when planted to wheat while the other half was not. This arrangement has been carried on for several years and the unfertilized half of the field has averaged, during the last nine years, 12.4 bushels of wheat per acre. The half that was fertilized, part of which is shown above, has averaged 25.2 bushels per acre during the same period.

From the standpoint of financial returns, wheat is perhaps the most important small grain grown in Michigan. More than two million acres are seeded to oats, rye and barley each year, but these crops are grown principally for feed. Moreover, wheat just naturally fits into the crop rotation on many Michigan farms. The labor required in its production is well distributed with respect to corn, oats, rye, barley, and hay. Preparation of the soil in late summer after harvest, seeding in the early fall before the corn is ripe; cutting just after rye and ahead of oats and barley and after hay making and corn cultivation are about done, are big advantages in favor of wheat. Of course, these facts are not new to any farmer but they are often overlooked by the advocates of radical changes in the established cropping system and so well known to the farmer that he almost forgets to mention them.

Then wheat is an excellent "nurse" crop for clover. It shades the ground less completely than oats and is cut earlier. Young clover, therefore, is able to get a good start when seeded in wheat, provided that sufficient plantfood and lime are present in the soil.

When all its advantages are properly considered, it seems probable that the Michigan wheat acreage is more likely to increase somewhat than to decrease.

Wheat Production has Progressed

Michigan farmers have learned much about wheat production in recent years. New and much improved varieties—notable Red Rock—

(Continued on Page 19)

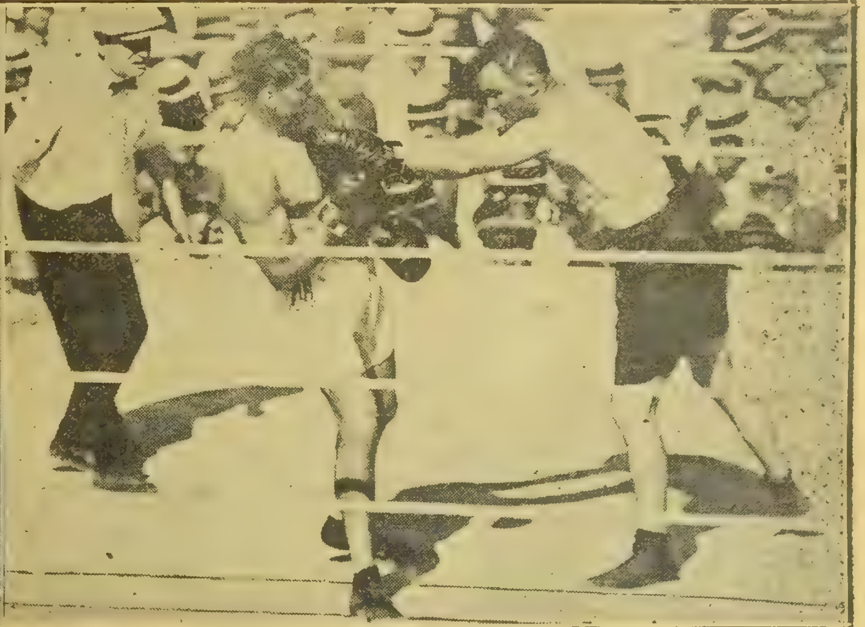
PICTURES FROM FAR AND NEAR

THE LATE PRESIDENT IN ALASKA—Was presented with a gigantic salmon, typical of the industry which flourishes in that territory. Note the president's interest in the fisherman's remarks regarding it. Warren G. Harding was the first President of the United States to visit Alaska during his term of office.

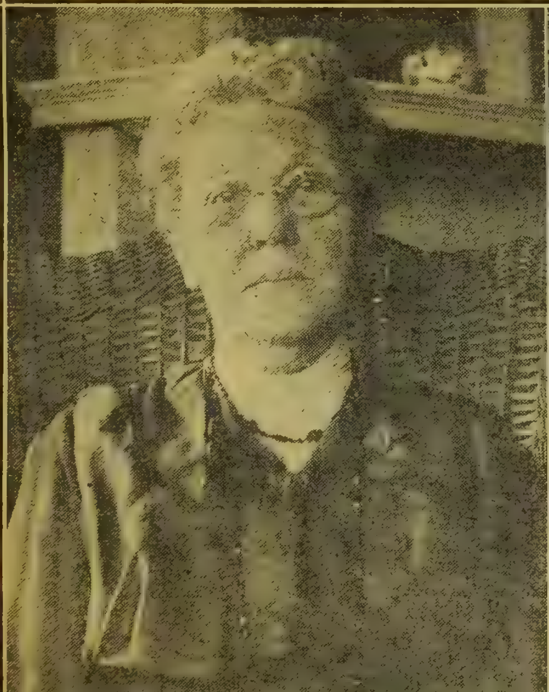
THE LAST PICTURE OF PRESIDENT AND MRS. HARDING—Taken in Salt Lake City, on the presidents way west, when he was acclaimed on every hand. That he was a tired man, who would have welcomed rest more than plaudits is plainly written in his face in this picture, while Mrs. Harding shows rapid recuperation. The lady to the left is Mrs. Stapley, the first woman born in the state of Utah, August 9th, 1847.

THE PRESIDENT BELIEVED IN POWER FARMING—And proved it by running this tractor pulling a combined harvester and thresher, through the wheat fields which he inspected near Hutchinson, Kansas. The President expressed great interest in the wheat problem.

"LIZZIE" KING BUYS OLD WAYSIDE IÑN—Henry Ford has bought the famous Wayside Inn, at South Sudbury, Mass., and will preserve it as a historical museum. The furnishings and settings which have been familiar to travelers for 200 years will be kept as long as they can be made to hold together. Hallowed by the names of Washington, Longfellow, Webster and Lafayette, the peaceful old hostelry will slumber serenely for generations to come.

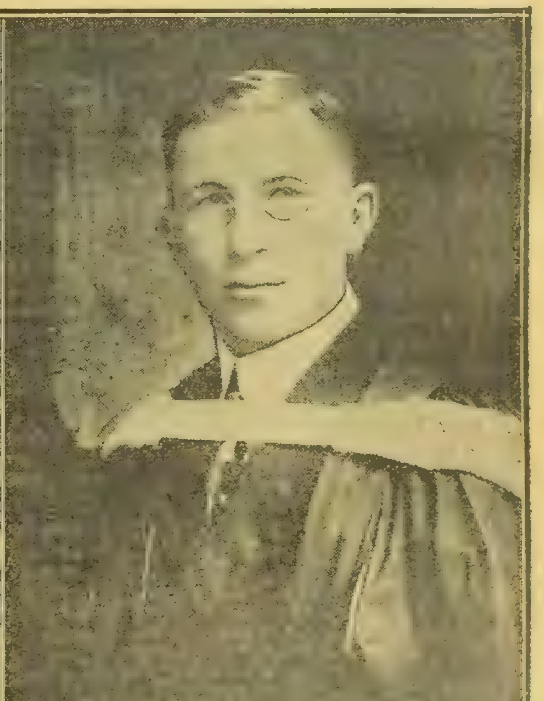


THE DEMPSEY-GIBBONS BOUT—Gibbons steps out. Here the valiant St. Paul battler is seen landing a terrific left swing high on Dempsey's body in the eleventh round of their battle at Shelby. This is one of the three rounds in which the contender was credited with having an advantage over the champion. That Dempsey felt the blow is evident from the expression on his face as he was shoved back on his heel. Jimmy Dougherty, the referee can be seen in the foreground.



FIRST WOMAN TELEPHONE OPERATOR IN THE WORLD—Miss Emma M. Nutt of Chelsea, Mass., who is said to be the first woman telephone operator in the world. She started her work in 1878, receiving a very low wage, with a 50 cent raise at the end of six months and 50 cents a year raise—some years. She worked from 8 in the morning until 6 at night, and every other Sunday. The switchboard she operated was a crude affair and looked like a sewing machine. It was not until 1880 that the present style of board was developed.

OIL KING BESTOWS LARGESSE—John D. Rockefeller, who on his eighty-fourth birthday, dispensed nickles, this year instead of dimes, to the little boys in the neighborhood. Here is Robert Irving Hunter, two years old, receiving a nice new nickle from the oil king of the world, as the two leave the vestibule of the little Community Church near the Rockefeller home in the Pocanito Hills, New York. Newspaper men say John D. is "camera shy" and in this case he would not pose unless the camera man attended the services in the church.



FATHER OF DIABETES CURE—Dr. Frederick Grant Banting is discoverer of a cure for diabetes. He has found that the pancreas, if not functioning properly, allows diabetes to set in. His new cure consists of taking a serum from the tissues of fresh pancreases, called Insulin, and as a remedy, it has been an instantaneous success. Dr. Banting has been allowed $7500 a year for the rest of his life by the Canadian Parliament in order to allow him to continue. his research work.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

AN ANALYSIS OF MEDICINE

I am writing to ask if there is a way to analyze a small amount of medicine and get the ingredients and the amount of each it would take to make a larger amount, say a pint. If so where could I send a sample to? I have or had a very valuable prescription to use on a sweeny. It takes nearly a pint and I only have a little, not enough to cure a sweeny. In some way I have lost the prescription.—Mrs. B., Rhodes, Mich.

—May I say that it is possible to make an analysis and determine the ingredients of a mixture, and if sufficient time and sample is at hand, a quantitative determination may be made for duplicating any desired quantity.

On the other hand, in compounding such preparations oftentimes there are many medicinal plants or drugs used which, so far as we know, we have no methods for their quantitative determination and in such cases it is almost impossible to exactly duplicate a given prescription; and, if a given medicament has been used and found to be effective in treatment, it is necessary to duplicate exactly, otherwise the desired results will not be obtained.

It seems as though a veterinarian of ability could prescribe a satisfactory treatment for sweeny.—W. C. Geagley, State Analyst.

MAY COLLECT NOTE

Have been a reader for years of your paper and should like to know how I can get out of paying a note which I have signed for several years for a neighbor? He renews it every three months. His place is up for mortgage sale and of course I have no hold on any real estate or any chattles, only a plain note. I expect when he has to move I will be compelled to pay it up.—F. E. S., Rhodes, Mich.

—If the holder of the note is not able to collect the amount from the maker, he could hold the endorsers liable, and, after giving proper notice, could collect the amount from them.—Asst. Legal Editor.

LIABLE FOR PAYMENT OF LATE HUSBAND'S DEBTS

Am writing you for advice. Now if a husband took shares in a stock company and gave his note for same and before note came due he died leaving all money and mortgage in point with his wife, can they make the wife pay the note? He has no property. Please answer me if possible. Enclosed you will find a stamp for same. Please do not publish my name or town and oblidge. Thanking you in advance.—F. S., Tuscola County, Mich.

—Property devised or bequeathed to any devisees or legatees of the testator is liable to the payment of his debts, after allowance is made by the probate judge for the maintenance of the widow and children during settlement of the estate. If your husband had no other property and bequeathed all his money and his interest in the joint mortgage to you, the money and mortgage interest so bequeathed would be liable to the payment of his debts, including the note. However, your original interest in the mortgage which you held jointly could not be taken for the payment of the debts. You do not say what disposition was made of his shares of stock. If they were disposed of by the will, they would be charged with the payment of the debts, along with the other bequests.—Asst. Legal Editor.

WRITE TO PUBLISHER

What steps would I have to take to correct a double subscription to a paper to have them hold over one remittance for next year? I paid subscription for paper and a little later a daughter living in another part of state sent $1.00 for same paper to be sent to me at my address not knowing I had already sent for one year. I have written asking them to stop one and hold remittance for next year but they still send me the two papers. There being no other one by my name at Evart known they are sending both subscriptions to me and I wish I might stop one.—H. W., Evart, Mich.

—When you subscribed for the paper, you entered into contract with the publisher which would bind both parties, and you would have no remedy at law to have your money refunded or to have it applied on some other year than the year for which you subecribed. However, if you write the publisher, stating just what you want, I see no reason why they should not be willing to grant your request.—Asst. Legal Editor.

FIRE AND TORNADO INSURANCE POLICY

Insurance agents writing policies for old line companies are offering us farmers a combined policy covering fire, lightning and cyclone. One of the mutual agents tells me that such a policy cannot be issued, that it is against the Michigan Laws. Can you give me any information that we farmers may depend upon.—A Subscriber, Clare County, Mich.

—This condition was recently reported to the State Insurance Department and their answer was: "Michigan Standard Policy Law makes no provision for the issuance of combined fire and tornado policies. This law is specific. The entire wording of the contract being included, and such other provisions as may be included in the contract are therein specified.

"We have been informed that some business is being written as a combined policy, but no specific insurance has been brought to our attention. When ever an inquiry concerning the matter has come up we have invariably informed the inquirer that it could not be done."

It would seem that the information given by the department of insurance is conclusive, and it would seem the better plan not to insure under the proposed combined policy until such time as such action has been approved by the State Insurance Commissioner, and in the meantime it will be well to hold the policy which you now have in force.

WOULD BE AN INFRINGEMENT

Please inform me if a patented article can be reproduced for ones individual use?—L. R. C., Alma, Michigan.

The unauthorized making or reproducing of a patented article by any person for his own practical use would be an infringement of the patent.—Asst. Legal Editor.

WANTS TO GET MONEY THAT WAS WILLED MOTHER

My mother's grandfather made a will about 50 years ago and willed the four children $5 each so they couldn't break the will. They lived in Pennsylvania at the time. When mother was 8 years old she stayed with her grandfather and grandmother until mother's father and aunt came to Michigan then she came with them. The grandmother has been dead about 15 years and my mother has been dead 6 pears but she never got the money willed her. Would like to know if anything could be done to get it.—Mrs. J. R., Edmore, Mich.

—I would suggest that you write the probate court of the county in which your grandfather died to ascertain if his will has been probated and what became of the property. If it has not been probated, you would have to find the will and proceed to have it probated, and if the property can be found, you might be able to recover it.—Asst. Legal Editor.

PLANTING BUTTERNUTS AND WALNUTS

Could you please tell me what time of year to plant butternuts or black walnuts for seedling trees and how thick to plant them?—Miss E. R., Bay City, Michigan.

—Butternuts and black walnuts can either be planted in the fall or stratified in moist sand until spring. Fall planting is to be recommended save in such cases where rodents are troublesome. If the trees are to be grown in nursery bens and later transplanted eight per running foot. If planted directly in field place seed spots six feet apart. This spacing will give the greatest timber yield.—Paul A. Herbert, Instructor in Forestry, M. A. C.

SHARE OF PROPERTY TO HALF SISTER

Where the only heirs to an estate are two sisters and one half sister what then by law would go to the half sister? This property did not descend from either parent. I am a subscriber and read the M. B. F. and will greatly appreciate any information you will give me on this question.—J. M. P., Alma, Mich.

—Compiled Laws of Michigan 1915, Sec. 11799, provides that the kindred of half blood shall inherit equally with those of whole blood in the same degree, unless the inheritance comes to the intestate by descent, devise or gift of some one of his ancestors, in which case all those who are not of the blood of such ancestor shall be excluded from such inheritance.—Asst. Legal Editor.

DR. FRIDAY AND THE DETROIT MILK SITUATION

In an article published in several local papers recently—in fact an "open letter"—it was stated that, during the controversy between the milk producers and distributors at Detroit, Dr. Friday, then president of M. A. C., "threatened to investigate and find out if the farmers could not produce the milk cheaper." The letter also asks "why did he not try to find out whether the distributor could also cut out his profit? Can you tell in your column if Dr. Friday did not by request of both parties, make a thorough investigation of the situation and publish the results obtained? Also did Dr. Friday make the above threat?—G. N. J., Laingsburg, Mich.

—Dr. Friday sat in conference with both distributors and producers of milk in the Detroit area at the time the whole milk question was receiving chief attention last spring. The producers at that time were receiving a low price per hundred pounds for their milk. This price was about $2.60 a hundred when Mr. Friday entered the negotations, and had been as low as $2.25 earlier in the year.

As a result of an agreement reached by the distributors and producers, largely on Mr. Friday's recommendation, the price paid producers for their milk, delivered at Detroit, was raised to $3.00 a hundred pounds, and it has remained there since.

Certain adjustments of the retail price of milk were made at this time by the distributors. Lack of exact information on cost factors entering into distribution made it very difficult to determine the exact price at which distributors could retail milk with the wholesale price at $3.00 a hundred pounds. Mr. Friday found that numerous factors, among them the independent distributor and the retail grocery milk depot, had to be taken into consideration in figuring distribution costs.

Mr. J. T. Horner, a member of the M. A. C. economics department, spent considerable time in gathering data in the Detroit area for the purpose of helping to determine distribution cost. On May 1st, Mr. E. L. Hemenway, formerly of the M. A. C. economics staff, started on full time investigation of distributing cost factors in the Detroit area. Results of this work are, of course, not yet definate.

I know of no occasion upon which Mr. Friday "threatened" to see if the farmers could not produce milk more cheaply. I believe that Mr. Friday promised both distributors and producers to make a thorough study of all factors entering into production and distribution, in order that the most just and equitable basis for both wholesale and retail prices might be arrived at.

The fact that the price paid farmers for their milk was raised to $3.00 a hundred pounds, and that it has remained there since, would seem to indicate that Mr. Friday's negotiations did not discriminate in any way against the producer. He may possibly have said at some time that the most economical production of milk possible would be a necessary factor in future and permanent settlement of the whole milk question. The future will undoubtedly throw more light upon the whole question, and make possible a solution of what is admittedly a perplexing economic problem. Investigation has apparently shown that there are two sides to the question, and that the distributors are not making the tremendous profits accredited to them, under the present system of distribution, at least.—J. B. Hasselman, Supervisor of Publications, M. A. C.

RAT-TAILED MAGGOT

What is the name of things that look much like a cut worm but have a long tail, about as long as the body? They are found in damp places. I found them last summer in a small house built around a well and other damp places.—M. W. N., Cheboygan, Mich.

—This description leaves little doubt that the insect in question is known as a rat-tailed maggot, otherwise the larvae of a fly belonging to the Syrphidae and bearing the name Eristalis. This maggot breathes through the long slender tail and when they burrow in decaying vegetable or animal matter they leave the tail sticking out at the surface so that they get a supply of air at all times, unless they go down too deeply for their natural air tube to reach to the surface. The adult fly looks very much like a honey bee and flies with a droning sound, very much like the buzz of a bee. They are therefore called drone flies. They are entirely harmless at all times.—B. H. Pettit, Professor of Entomology, M. A. C.

Uncle Rube Spinach Says:

"FLOWERS IN OUR HOMES"

YOU know I read in a recent issue of M. B. F. a headin' jest like this one an' I was int'rested the minnit I saw it. I've always been a believer of such things an' jest natcherly I started to read the little article—"started" is right! First thing I read wuz this—"try puttin' a piece of blottin' paper"—I got no further 'an that 'cause, don't you see, the flowers wuz bein' blotted out 'fore they had a chance to even start.

Sure I b'lieve in flowers in the house but not in to much blottin' paper. An' now dear folks what is flowers anyway?

Well now, it kinda seems to me 'at jest 'bout the finest flowers 'at can ever be had or found in any home would be the lastin' flowers, not the kind that requires blottin' paper or tables or pots nor pans, but the most beautiful of all flowers—kindness, love, good cheer, pleasant smiles and pleasant words—even a kiss, yes many of 'em—now an' them an' even more often. All these things are jest lovely flowers an' could easily grow in any home. An' they're the kind of flowers I'd like to see everybody raisin' in their homes, no blottin' paper needed—nothin' out of the ordinary—jest love an' good fellowship—the love every man should have fer his wife—the love every woman should have fer the man who had picked her out of the many he has known, to be the one to put flowers into his home and into his life.

Yes, good friends, its flowers to a man to be met after a hard day's work by a pleasant an' a smilin,' cheerful woman. It's flowers for a wife when the husban'—the supposed head of the house, notices how hard the dear wife has tried to make his home pleasant an' tells her he realizes what she is doin' for him. Yes, there are flowers and flowers—but the nicest an' best, the kind at gets right hold of us, 'at grips the heart strings of summer, night or day—we've got 'em with us, no blottin' paper's needed to set 'em onto—they show in the dark as well as in the light an' are everlastin,' always beautiful an' lovely an' will do more to keep a house in order 'an any other kind of flower I ever heard of. Cordially yours,

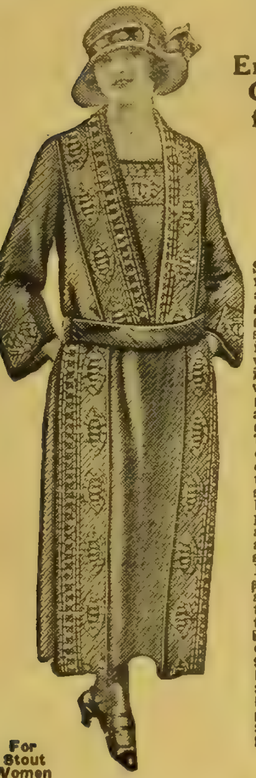
UNCLE RUBE.

Brand New Fall Merchandise at Lowest Prices in America

Send No Money

These prices for brand new fall styles will positively amaze you—They are so low! But wait until you have seen the actual merchandise. Just make your selection now and order at our risk. Don't send one cent now. We cheerfully send your choice of these bargains for examination and approval right at home.

Just letter or postcard brings any of these astounding bargains. Merely give name and number of each article you want. Also state size and write your name and address plainly. Pay nothing till goods arrive. Then only the bargain price and postage. If not satisfied, you may return the goods and we refund your money.



For Stout Women

Michigan State Fair

Nation's Greatest Show

August 31 to September 9

The promotion of agriculture, which means certain increase in profits for the farmer, is the big idea back of the Michigan State Fair.

This great exposition is the clearing house of agricultural knowledge. Here the state and federal governments, agricultural institutions, practical farmers display their latest discoveries.

The great yearly growth of the fair during its 74 years of life is powerful testimony to its value as an educational institution.

$50,000 Free Shows!

This year will see probably the greatest program of entertainment ever witnessed.

A $50,000 free attraction scheduled is one of the "eye-openers."

Auto races and horse races. The world's greatest trotter, Peter Manning.

Two stupendous fireworks spectacles, "The Burning of Smryna" and "India." Educational and inspiring!

Half a dozen groups of the most skilled and daring acrobats.

Balloonists will race from the clouds in parachutes. Every dive a thrill.

Three famous bands and many other big acts.

Many Other Features!

Police dogs running down "criminals" will be one of the startling features of the all-breed dog show.

A great Better Babies Contest, in which every baby will be given a thorough medical examination.

The lecturers at the art exhibit will tell you how to make your home and yard beautiful. There you will see how artists work from living models in their studios.

Twenty-two great shows on the "Midway." Clean, attractive and packed full of fun.

And scores of other activities any one of which is worth coming many miles to see.

At DETROIT

August 31 to September 9

What the Neighbors Say

THE FARMER PROBLEM AND ITS SOLUTION

INTERFERENCES with the welfare of the farmer reacts on the people as a whole. Our great need today is real representative government, and the all important problem is to restore such a government to the people and see that it is perpetuated in this fair land of ours.

The voters are becoming more and more aware of this. Recent opportunities at the polls furnish reliable evidence of this.

They need more and more to take personal charge of their own interests, and they have made up their minds to do so. They know now that the markets in which they sell and buy, are controlled by private monopoly. They know also that this control of the markets was brought about by monopoly and is maintained by this power over our government, congress and the courts.

No wonder that the servants of private monopoly are being defeated at the polls one after another. The voters are learning more and more to spot the traitors to the cause of a free and representative people.

The fine beginning the voters are making speaks well for the future. They know that in proportion as they rid the halls of congress from the evil influences of lobbyists sent there by private wealth, and free the government from the control of the combined power of organized private monopoly, can they free their markets and their homes from this sinister power of economic despotism.

Here, brother farmer, we have found the underlying cause of all our economic troubles, that have been seeking to engulf us more and more. Here we must seek the only solution possible. We have no choice. We must act promptly. We must do it wisely and nobly. The great interests of a free government are in the balance. We must prove equal to our opportunities and not shrink our responsibilities.

Our homes, our markets, our beloved country look to us for a real and lasting solution of this great problem of the farmers and the people in general.—A. J. Raftshoe, Leelanau County, Mich.

AMERICA'S PROHIBITION AN EXAMPLE

DEAR EDITOR: Your letter in answer to mine just received. Am very glad to know that in the past you worked for prohibition, but after reading your letter several times I am unable to tell just where you are at now. You had a fine chance to show just where you stood when you printed the Lambertson aritcle. Are you just waiting now and only shooting so as to hit? You have not been slow in the past to try and correct people who have gone wrong and what you would say would have a thousand times as much influence as a Lambertson.

We have the Lambertsons here, though not by that name. I can go out and argue with them, but it is a waste of time. They seem to lose sight of everything but dollars. The moral side of the question can go hang.

The bootlegging in this section is largely among the foreign emmigrants. Shall we give up and let a few whiskeyites ruin this country just because the law does not work perfectly in every place? I say "No." A chronic waiter might say Christianity does no good, but we know better.

Now, Mr. Editor, I firmly believe the good Lord has set this nation for an example for all the world and if we fail on prohibition we will be looked upon as a dead failure by other nations. God will surely punish the nation that will not work for him and he does not do things by halves.

Perhaps I have written too long for your patience, so will say goodbys, from your hayseed friend, Merritt Muscott, Gratiot County, Mich.

—The letter referred to by friend Muscott in his reply above, read as follows:

Dear Mr. Muscott: Thank you for your letter of the 24th. If you are living in a section of Michigan where the prohibition problem is not a serious one at the present moment, you are indeed fortunate.

We published the letter from Mr. Lambertson because it was an honest conviction of his views, and we will be equally glad to publish a letter from you defending prohibition or conditions as they exist in the state at the present time.

Only the ostrich sticks its head in the sand when a storm approaches. There is no use trying to avoid the issue. Prohibition is a vital question, at least the kind of prohibition which has brought about the disregard of the law and bootlegging which is prevalent and becoming more so every day.

The Business Farmer fought hard for prohibition. It was the only farm paper in this part of the country that took a stand on this question. We did not comment on Mr. Lambertson's views because we want good readers like yourself to answer him.

The Business Farmer has always stood for laying the cards on the table, face up. We have never avoided an issue by going around the corner, and we don't propose to start now.

Thanking you for writing me as you did, and assuring you that I would appreciate a reply from you to Mr. Lambertson for use in an early issue, I am, believe me.—The Editor.

STICK TO THE FARM

THE time has come to speak a word to brother farmers. The time has come to show what kind of stuff farmers are made of. Our revolutionary fathers were farmers and they taught the British autocrats a lesson and if they will do so they can teach our own autocrats a lesson by standing together. Just let us quit buying, let us patch and wear old clothing and machinery, and, if need be, let us wear the skins of calves which bring fifty cents green and which we pay fifteen dollars for made into shoes. Let us quit buying flour and with a handmill grind out wheat and make the best and healthiest food man ever ate. It would also save thousands of doctor bills. We can sell such flour direct as soon as farmers catch the vision and begin to assert their rights. Farm help will be easier to get. Farmers are the potential aristocrats and can draw more respect wearing cowskin caps than middlemeddlers wearing sealskins. Those who are deserting farms are making a mistake. Stay by the land and educate your children with the best books. We can fill the legislators with our own sons and daughters and ask them to put a stop to unfair legislation. Hurrah for the farmer! he holds the reins and can guide the team.—J. S. Hughes, Ottawa County, Mich.

DO NOT CONDEMN LAWMAKERS TOO MUCH

I WAS much interested in article, "Gas Tax Unjust," by Ralph R. Jones. I beg leave to suggest a few thoughts for same page.

Gov. Blaine of Wisconsin has recently withheld his approval of a gas tax bill on the grounds that the constitution of Wisconsin makes no provision for the collection of a sales tax. This reminds us that our governor stated his opinion of the probable defect in our own constitution. This again reminds us of article 2 sec. 10 of the national constitution that states shall not leve imports except under certain restrictions, perhaps noted by our governor. And the gas tax of Indiana, I understand, is now before the courts. Therefore is it not the part of wisdom for the farmers to examine our basic laws more carefully before we clamor before and condemn too much, lawmakers?—E. Richardson, Huron County, Mich.

Tom and Bill were late for school and were called to account for it. "What made you late, Bill?" asked the teacher.

"Please sir, I was dreaming I was going to California, and I thought the schoolbell was at the steamboat I was going on," exclaimed Bill.

"You did, eh!" said the teacher. "And now, sir" turning to the second boy, "what have you to say for yourself?"

"Please, sir, I—I was just waiting to see Tom off."—Onward.

THE EDUCATION OF WAR

A SERMON BY REV. DAVID F. WARNER

TEXT: "And he will judge between the nations, and will decide concerning many peoples;. . and they shall beat their swords into plowshares and their spears into pruning hooks; nation shall not lift up sword against nation, neither shall they learn war anymore." Isaah 2:4.

ALL men who have pointed the way upward and onward have been idealists. Isaih was no exception to this human dreaming; for according to our text, he visions a warless world that has its fulfilment in some Utopian future. Perhaps it was the ideal of the age, for Micah has the same picture. At least, it is to be the ideal of the Christian dispensation. "The meek shall inherit the earth" in this age says the Galilean prophet; and we shall learn war no more.

The World War has aroused us to greater thought and activity along lines that make for meekness and peace among men. Sudden crises bring use to ourselves. More than ever are we now reminded that great and bloody wars are possible; and more than ever would we endeavor to avert the complications that impend disaster for us. We are reminded of past neglect. Our thought is being sobered, our vision sharpened, and our conscience aroused—the conscience of the nation. And just now while we are at peace, yet in peril, shall we not take a common sense look at what constitutes the elements of a people's honor and character. This is, in part, a moral reflex of the recent war.

War emphasizes our duty to future citizens—those to whom shall be transmitted the responsibility of maintaining the honor and integrity of the state. Militarism in our teaching, means militarism in our nation's conscience and life. This has been a great general cause of wars and the consequent submerging of righteousness in national life. The ultimate strength of a nation is not in the exhibition of great military power, encouraged by military schools and training camps; but in the sum total of its character kept healthy in its boys and girls, and promoted in Christians schools, churches and homes. The Bible recognizes this thought in the words, "Righteousness exalteth a Nation." This implies that this condition must come thru the individual, since a nation is but an aggregation of individuals, politically organized. We note that Abraham's faithfulness in the teaching of his household was made the ground of his becoming a great and mighty nation.

The media thru which character is secured and maintained are the state, the church, and the home. The state, to fulfil its righteous mission must provide a condition under which churches and schools may operate unhindered in teaching the elements of civic righteousness. I am pained to remember the little city of A,—4,000 people—where several hundred children had no school privileges because of the lack of housing room. But there was room for seventeen drinking places, besides tobacco shops, pool-rooms, and cheap movies. What a travesty on the good (?) government of one of our great states!

Then, in exalting righteousness, the church shares with others her message of peace, reaching a third or more of our population. But, first of all, the home should be a teacher of obedience and "the way of the Lord." Young people are subject to seductions to enter a life, the issue of which they do not understand. Young men are well-night carried away by the mouthings of some militaristic demagogue. Right here the discipline of a Christian home would say, "Count the cost," "Aim higher."

Should we say then, that war, is educative and good because it arouses the public conscience to higher ground, on the one hand, and developes many good qualities of manhood on the other? No, NEVER, because a battleless and bloodless substitute for war activities is to be found in the highest and noblest achievements of man; and a far superior educative agency than that of war is to be found in the home, the school, and the church. For both it has moral and significant counter-forces, and to propagate these is the responsibility of a Christian civilization.

We have, in the industries, a moral force of very great value in the making of strong men. War is claimed to be a great leveler. Those of unequal rank fight side by side on equality. We are told that this develops sterling qualities of manhood, such as obedience, promptness, unity, and endurance; but at what a frightful cost in health, purity and life; and what of the stronger and more spiritual qualities? What of tenderness, sympathy, and brotherly love? Instead of inducing our young men to seek soldier life for their training, let us call them to turning swords into plowshares and guns into pruning hooks, even to the farms, mines, and other industries that lie at the basis of our integrity as a nation. These will develope manhood minus the debauchery and bloodshed of soldier life. Besides, we thus, are conserving the agents of production — feeding instead of starving the hungry, and mainating many happy homes.

But war, also, has its moral counterpart in social Christian service. War is said to be a call to state service. And during the recent war all classes responded with seeming heartiness and alacrity. A thousand times better would it be to fight wrong doing and social injustice everywhere. The making of this world better for God's creation is a moral warfare, not carnal (Rom. 8:-9), and our weapon is the "sword of the spirit," not the carnal sword. Then, too, moral courage is much rarer and higher than physical courage.

This moral warfare comprehends individual and collective responsibility. The Christian must teach and live the "life that is Christ" wherever his labor extends. The church also must match, in faith and works, her responsibility in this fight. A non-spiritual commercialism and nationalism in invading the world. Let the militant church march fully armored (Ephesians 6:10-18) to the attack. And finally, we shall rid the world of "wars and rumors of wars."

"Peace hath her victories no less renowned than war." And this is the victory, "the mountain of Jehovah's house shall be established on the top of the mountains, and shall be exalted above the hills; and all nations shall flow unto it.—And he will judge between the nations, and will decide concerning many peoples; and they shall beat their swords into plowshares and their spears into pruning hooks; nation shall not lift up sword against nation, neither shall they learn war anymore."

ST. CLAIR FARM BUREAU HOLDS SECOND ANNUAL PICNIC

THE second annual picnic of the St. Clair County Farm Bureau will be held in the County Park at Goodells on Friday, August 17th. A program of interest to every farmer in the Thumb District in Michigan has been arranged for the day.

The Executive Committee of the St. Clair County Farm Bureau was indeed fortunate in securing Mr. Walton Peteet, Director in Marketing of the American Farm Bureau Federation for the main address of the day.

A special interest to St. Clair County people will be the appearance of Mr. C. L. Brody, Secretary-Manager of the Michigan State Farm Bureau, and former County Agricultural Agent for St. Clair County.

An added feature of the program will be an address by Mr. Johnson MacAdams of Sarnia, Ontario, representing the Onternational Plowing Contest, to be held in Lampton County, Ontario, this coming October. An effort is being put forth to interest Michigan farmers in this contest.

Band concerts, base ball games, bathing, etc., will round out the day's program.

County Agent, C. M. Kidman says that present indications point to a much larger crowd than attended last year's picnic.

$525

Every day we hear owners say that the Overland is "the most automobile in the world for the money."

And no wonder! Consider these Overland features:

Triplex springs (Patented) providing 130-inch springbase—all-steel touring body with hard-baked enamel finish—the strongest rear axle, we believe, in the Overland price class—powerful, reliable engine that gives 20 miles and more to the gallon of gasoline. Ask your Willys-Overland dealer for further information.

NEW YORK CENTRAL LINES
NEW YORK CENTRAL LINES

A mark of good service

The familiar mark of the New York Central Lines is to be seen on 264,000 freight cars carrying the products of American industry.

Thousands of new cars, fresh from the builders, go into service each year bearing this mark. In the past three years New York Central orders for new freight cars have totalled $93,600,000. For new locomotives $34,000,000 has been expended.

Two years ago, when hundreds of thousands of freight cars on American railroads were standing idle for lack of business, New York Central, with confidence in the future, placed one of the largest orders for cars in railroad history.

When the tide of business turned, and a car surplus was transformed into a car shortage, New York Central had the equipment to move the crops, the coal and the products of industry along its 12,000 miles of lines.

The mark of the New York Central Lines on a new freight car is not only a mark of good transportation service—it is evidence of the fact that back of it is a railroad organization that is building today for the needs of the country tomorrow.

BEFORE YOU BUY A WINDMILL

Carefully consider the following facts: *A year's supply of oil is sent with every Aermotor*

The Auto-oiled Aermotor is the Genuiue Self-oiling Windmill, with every moving part fully and constantly oiled.

The Auto-oiled Aermotor has behind it 8 years of wonderful success. It is not an experiment. The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet. Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

Aermotor Towers are Towers of Strength

You do not have to try an experiment to get a windmill which will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine. Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production. The Auto-oiled Aermotor is so thoroughly oiled that it runs in the lightest breeze. It gives more service for the money invested than any other piece of machinery on the farm. The Aermotor is made by a responsible company which has been specializing in steel windmills for more than 30 years.

The Afternoon Miracle

About a Mexican Bad Man, an American Ranger and a Girl.

A Complete Short Story by O. HENRY America's Greatest Short Story Writer

Copyrighted, 1920, by Doubleday, Page & Co.; published by special arrangement with the Wheeler Syndicate, Inc.

AT the United States end of an international river bridge, four armed rangers sweltered in a little 'dobe hut keeping a fairly faithful espionage upon the lagging passengers from the Mexican side.

Bud Dawson, proprietor of the Top Notch Saloon, had, on the evening previous, violently ejected from his premises one Leandro Garcia, for alleged violation of the Top Notch code of behavior. Garcia had mentioned twenty-four hours as a limit, by which time he would call and collect a plentiful indemnity for personal satisfaction.

This Mexican, although a tremendous braggart, was thoroughly courageous, and each side of the river respected him for one of these attributes. He and a following of similar bravoes were addicted to the pastime of retrieving towns from stagnation.

The day designated by Garcia for retribution was to be further signalized on the American side by a cattlemen's convention, a bull fight, and an old settler's barbecue and a picnic. Knowing the avenger to be a man of his word, and believing in prudent to court peace while three such gently social relaxations were in progress, Captain McNulty, of the ranger company stationed there, detailed his lieutenant and three men for duty at the end of the bridge. Their instructions were to prevent the invasion of Garcia, either alone or attended by his gang.

Travel was slight that sultry afternoon, and the rangers swore gently, and mopped their brows in their convenient but close quarters. For an hour no one had crossed save an old woman enveloped in a brown wrapper and a black mantilla, driving before her a burro loaded with kindling wood tied in small bundles for peddling. Then three shots were fired down the street, the sound coming clear and snappy through the still air.

The four rangers quickened from sprawling, symbolic figures of indolence to alert life, but only one rose to his feet. Three turned their eyes beseechingly but hopelessly upon the fourth, who had gotten nimbly up and was buckling his cartridge-belt around him. The three knew that Lieutenant Bob Buckley, in command, would allow no man of them the privilege of investigating a row when he himself might go.

The agile, broad-chested lieutenant, without a change of expression in his smooth, yellow-brown, melancholy face, shot the belt strap through the guard of the buckle, hefted his sixes in their holsters as a belle gives the finishing touches to her toilette, caught up his Winchester, and dived for the door. There he paused long enough to caution his comrades to maintain their watch upon the bridge, and then plunged into the broiling highway.

The three relapsed into resinged inertia and plaintive comment.

"I've heard of fellows," grumbled Broncho Leathers, "what was wedded to danger, but if Bob ain't committed bigamy with trouble, I'm a son of a gun."

"Peculiarness of Bob is," inserted the Nueces Kid, "he ain't had proper trainin'. He never learned how to get skeered. Now, a man ought to be skeered enough when he tackles a fuss to hanker after readin' his name on the list side of survivors, anyway."

"Buckley," commented Ranger No. 3, who was a misguided Eastern man, burdened with an education, "scraps in such a solemn manner that I have been led to doubt its spontaniety. I'm not quite onto his system, but he fights, like Tybalt, by the book of arithmetic."

"I never heard," mentioned Broncho, "about any of Dibble's ways of mixin' scrappin' and cipherin'."

"Triggernometry?" suggested the Nueces infant.

"That's rather better than I hoped from you," nodded the Easterner, approvingly. "The other meaning is that Buckley never goes into a fight without giving away weight. He seems to dread taking the slightest advantage. That's quiet close to foolhardiness when you are dealing with horse-thieves and fence-cutters who would ambush you any night, and shoot you in the back if they could. Buckley's too ful of sand. He'll play Horatius and hold the bridge once too often some day."

"I'm on there," drawled the Kid; "I mind that bridge gang in the reader. Me, I go instructed for the other chap—Spurious Somebody—the one that fought and pulled his freight, to fight 'em on some other date."

"Anyway," summed up Broncho, "Bob's about the gamest man I ever see along the Rio Bravo. Great Sam Houston! If she gets any hotter she'll sizzle!" Broncho whacked at a scorpion with his four-pound Stetson felt, and three watchers relapsed into comfortless silence.

How well Bob Buckley had kept his secret, since these men, for two years his side comrades in countless border raids and dangers, thus spake of him, not knowing that he was the most arrant physical coward in all that Rio Bravo country! Neither his friends nor his enemies had suspected him of aught else than the finest courage. It was purely a physical cowardice, and only by an extreme, grim effort of will had he forced his craven body to do the bravest deeds. Scourging himself always, as a monk whips his besetting sin, Buckley threw himself with apparent recklessness into every danger, with the hope of some day ridding himself of the despised affliction. But each successive test brought no relief, and the ranger's face, by nature adapted to cheerfulness and good-humor, became set to the guise of gloomy melancholy. Thus, while the frontier admired his deeds, and his prowess was celebrated in print and by word of mouth in many camp-fires in the valley of the Bravo, his heart was sick within him. Only himself knew of the horrible tightening of the chest, the dry mouth, the weakening of the spine, the agony of the strung nerves—the never-failing symptoms of his shameful malady.

One mere boy in his company was wont to enter a fray with a leg perched flippantly about the horn of his saddle, a cigarette hanging from his lips, which emitted smoke and original slogans of clever invention. Buckley would have given a year's pay to attain that devil-may-care method. Once the debonair youth said to him: "Buck, you go into a scrap like it was a funeral. Not," he added, with a complimentary wave of his tin cup, "but what it generally is."

Buckley's conscience was of the New England order with Western adjustments, and he continued to get his rebellious body into as many difficulties as possible; wherefore, on that sultry afternoon he chose to drive his own protesting limbs to investigation of that sudden alarm that had startled the peace and dignity of the State.

Two squares down the street stood the Top Notch Saloon. Here Buckley came upon signs of recent upheaval. A few curious spectators pressed about its front entrance, grinding beneath their heels the fragments of a plate-glass window. Inside, Buckley found Bud Dawson utterly ignoring a bullet wound in his shoulder while he feelingly wept at having to explain why he failed to drop the "blamed masquerooter," who shot him. At the entrance of the ranger Bud turned appealingly to him for confirmation of the devastation he might have dealt.

"You know, Buck, I'd 'a' plum got him, first rattle, if I'd thought a minute. Come in a masque-rootin', playin' female till he got the drop, and turned loose. I never reacher for a gun, thinkin' it was sure Chihuahua Betty, or Mrs. Atwater, or anyhow one of the Mayfield girls comin' a-gunnin' which they might, liable as not. I never thought of that blamed Garcia until—"

"Garcia!" snapped Buckley. "How did he get over here?"

Bud's bartender took the ranger by the arm and led him to the side door. There stood a patient grey burro cropping grass along the gutter, with a load of kindling wood tied across its back. On the ground lay a black shawl and a voluminous brown dress.

"Maspuerootin' in them things," called Bud, still resisting attempted ministrations to his wounds. "Thought he was a lady till he give a yell and winged me."

"He went down the side street," said the bartender. "He was alone, and he'll hide out till night when his gang comes over. You ought to find him in that Mexican lay-out below the depot. He's got a girl down there—Pancha Sales."

"How was he armed?" asked Buckley.

"Two pearl-handled sixes, and a knife."

"Keep this for me, Billy," said the ranger, handing over his Winchester. Quixotic, perhaps, but it was Bob Buckley's way. Another man—and a braver one—might have raised a posse to accompany him. It was Buckley's rule to discard all preliminary advantage.

The Mexican had left behind him a wake of closed doors and an empty street, but now people were beginning to emerge from their places of refuge with assumed unsconsciousness of anything having happened. Many citizens who knew the ranger pointed out to him with alacrity the course of Garcia's retreat.

As Buckley swung along upon the trail he felt the beginning of the suffocating constriction about his throat, the cold sweat under the brim of his hat, the old, shameful, dreaded sinking of his heart as it went down, down, down in his bosom.

* * * * *

The morning train of the Mexican Central had that day been three hours late, thus failing to connect with the I & G. N. on the other side of the river. Passengers for Los Estados Unidos grumblingly sought entertainment in the little swaggering mongrel town of two nations, for, until the morrow, no other train would come to rescue them. Grumblingly, because two days later would begin the great fair and races in San Antone. Consider that at that time San Antone was the hub of the wheel of Fortune, and the names of its spokes were Cattle, Wool, Faro, Running Horses, and Ozone. In those times cattlemen played crackloo on the sidewalks with double eagles, and gentlemen backed their conception of the fortuitous card with stacks limited in height only by the interference of gravity. Wherefore, thither journeyed the sowers and the reapers—they who stampeded the dollars, and they who rounded them up. Especially did the caterers to the amusement of the people hasten to San Antone. Two greatest shows on earth were already there, and dozens of smallest ones were on the way.

On a side track near the mean little 'dobe depot stood a private car, left there by the Mexican train that morning and doomed by an ineffectual schedule to ignobly await, amid squalid surroundings, connection with the next day's regular.

The car had been once a common day-coach, but those who had sat in it and cringed to the conductor's hat-band slips would never have recognized it in its transformation. Paint and gilding and certain domestic touches had liberated it from any suspicion of public servitude. The whitest of lace curtains judiciously screened its windows. From its fore end drooped in the torrid air the flag of Mexico. From its rear projected the Stars and Stripes and a busy stovepipe, the latter reinforcing in its suggestion of culinary comforts the general suggestion of privacy and ease. The bachelor's eye, regarding its gorgeous sides, found interest to culminate in a single name in gold and blue letters extending almost its entire length—a single name, the audacious privilege of royalty and genius. Doubly, then, was the arrogant nomenclature here justified; for the name was that of "Alvarita, Queen of the Serpent Tribe." This, her car, was back from a triumphant tour of the principal Mexican cities, and now headed for San Antonio, where, according to promissory advertisment, she would exhibit her "Marvellous Dominion and Fearless Control over Deadly and Venomous Serpents. Handling them with ease as they Coil and Hiss to the Terror of Thousands of Tongue-tied Tremblers!"

One hundred in the shade kept the vicinity somewhat depeopled. This quarter of the town was a ragged edge; its denizens the bubbling forth of five nations; its architecture tent, jacal, and 'dobe; its distractions the hurdy-gurdy and the informal contribution to the sudden stranger's store of experience. Beyond this dishonorable fringe upon the old town's jewel rose a dense mass of trees, surrounding and filling a little hollow. Through this bickerer a small stream that perished down the sheer and disconcerting side of the great canon of the Rio Bravo del Norte.

In this sordid spot was condemned to remain for certain hours the impotent transport of the Queen of the Serpent Tribe.

The front door of the car was open. Its forward end was curtained off into a small reception-room. Here the admiring and propitiatory reporters were wont to sit and transpose the music of Senorita Alvarita's talk into the more florid key of the press. A picture of Abraham Lincoln hung against a wall; one of a cluster of school-girls grouped upon stone was in another place; a third was Easter lillies in a blood-red frame. A neat carpet was under foot. A pitcher, sweating cold drops, and a glass stood upon a fragile stand. In a willow rocker reading a newspaper, sat Alvarita.

Spanish you would say; Andalusian, or, better still, Basque; that compound, like a diamond, of darkness and fire. Hair, the shade of purple grapes viewed at midnight. Eyes, long, dusky, and disquieting with their untroubled directness of gaze. Face, haughty and bold, touched with a pretty insolence that gave it life. To hasten the conviction of her charm, but glance at the stacks of handbills in the corner, green, and yellow, and white. Upon them you see an incompetent presentment of the senorita in her professional garb and pose. Irresistable, in black lace and yellow ribbons, she faces you; a blue racer is spiralled upon each bare arm; coiled twice about waist and once about her neck, his horrid head close to hers, you perceive Kuku, the great eleven-foot Asian python.

A hand drew aside the curtain that partitioned the car, and a middle-aged, faded woman holding a knife and a half-peeled potato looked in and said:

"Alviry, are you right busy?"

"I'm reading the home paper, ma. What do you think! that pale tow-headed Matilda Price got the most votes in the 'News' for the prettiest girl in Gallipo—lees."

Shuh! She wouldn't of done it if you'd been home, Alviry. Lord knows, I hope we'll be there before fall's over. I'm tired gallopin' round the world playin' we are dagoes, and givin' snake shows. But that ain't what I wanted to say. That there biggest snake's gone again. I've looked all over the car and can't find him. He must have been gone an hour. I remember hearin' somethin' along the floor, but I thought it was you."

"Oh, blame that old rascal!" exclaimed the Queen throwing down her paper. "This is the third time he's got away. George never will fasten down the lid to his box properly. I do believe he's afraid of Kuku. Now I've got to go hunt him."

"Better hurry; somebody might hurt him."

The Queen's teeth showed in a gleaming, contemptuous smile. "No danger. When they see Kuku outside they simply scoot away and buy bromides. There's a crick over there between here and the river. That old scamp'd swap his skin any time for a drink of running water. I guess I'll find him there, all right."

A few minutes later Alvarita stepped upon the forward platform, ready for her quest. Her handsome black skirt was shaped to the most recent proclamation of fashion. Her spotless shirt-waist gladdened the eye in that desert of sunshine, a swelling oasis, cool and fresh. A man's split-straw hat sat firmly upon her coiled abundant hair. Beneath her serene, round imprudent chin a man's four-in-hand tie was jauntily knotted about a man's high, stiff collar. A parasol she carried of white silk, and its fringe was lace, yellowly genuine.

I will grant Gallipolis as to her costume, but firmly to Seville or Valladolid I am held by her eyes; castanets, balconies, mantillas, serenades, ambuscales, escapades—all these their dark depths guaranteed.

"Ain't you afraid to go out alone, Alviry?" queried the Queen-mother anxiously. "There's so many rough people about. Mebbe you'd better—"

"I never saw anything I was afraid of yet, ma. 'Specially people. And men in particular. Don't you fret. I'll trot along back as soon as I find that runaway scamp."

The dust lay thick upon the bare ground near the tracks. Alvarita's eye soon discovered the serrated trail of the escaped python. It led across the depot grounds and away down a smaller street in the direction of a little canon, as predicted by her. A stillness and lack of excitement in the neighborhood encouraged the hope that, as yet, the inhabitants were unaware that so formidable a guest traversed their highways. The heat had driven them indoors, whence outdrifted occasional shrill laughs, or the depressing whine of a maltreated concertina. In the shade a few Mexican children, like vivified stolid idols in clay, stared from their play, vision-struck and silent, as Alvarita came and went. Here and there a woman peeped from a door and stood dumb, reduced to silence by the spect of the white silk parasol.

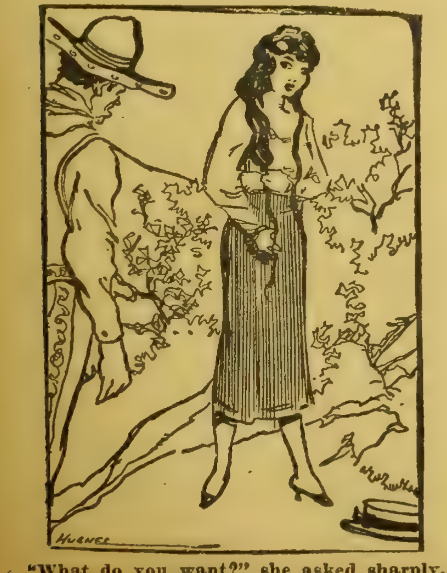
A hundred yards and the limits of the town were passed, scattered chaparral succeeding, and then a noble grove, overflowing the bijou canon. Through this a small bright stream meandered. Park-like it was, with a kind of cockney ruralness further indorsed by the waste papers and rifled tins of picknickers. Up this stream and down it, among its pseudo-sylvan glades and depressions, wandered the bright and unruffled Alvarita. Once she saw evidence of the recreant reptile's progress in his distinctive trail across a spread of fine sand in the arroyo. The living water was bound to lure him; he could not be far away.

So sure was she of his immediate proximity that she perched herself to idle for a time in the curve of a great creeper that looped down from a giant water-elm. To reach this she climbed from the pathway a little distance up the side of a steep and rugged incline. Around her chaparral grew thick and high. A late-blooming ratama tree dispensed from its yellow petals a sweet and persistent odor. Adown the ravine rustled a sedative wind, melancholy with the taste of sodden, fallen leaves.

Alvarita removed her hat, and undoing the oppressive convolutions of her hair, began to slowly arrange it in two long dusky plaits.

From the obscure depths of a thick clump of ever-green shrubs five feet away, two jewel-bright eyes were steadfastly regarding her. Coiled there lay Kuku, the great python; Kuku, the magnificent, he of the plated muzzle, the grooved lips, the eleven-foot stretch of elegantly and brilliantly mottled skin. The great python was viewing his mistress without a sound or motion to disclose his presence. Perhaps the splendid truant forefelt his capture, but, screened by the foliage, thought to prolong the delight of his escapade. What pleasure it was, after the hot and dusty car, to lie thus, smelling the running water, and feeling the agreeable roughness of the earth and stones

(Continued on Page 19.)



"What do you want?" she asked sharply.

"The Farm Paper of Service"

FORBES ON WHEAT

"A GREAT many people are talking and writing, for example, as if the only product of America's farms were wheat.

"The truth is that wheat constitutes quite a small percentage of the total value of American agricultural products. Wheat normally isn't half as valuable as our corn crop. Hay and forage are three times as valuable as the total wheat crop. Cotton nowadays represents as many millions of dollars in market value as wheat.

"When you take into the reckoning other crops, such as oats, potatoes, tobacco, wool and barley, you find that wheat represents about 5 per cent of the total value of farm crops, not 50 per cent, as one might assume from the present agitation.

"The prices farmers are receiving for several, if not most of the more important crops, are reasonably satisfactory.

"This brief statement will help to explain why mail order houses and other concerns catering to our farming population are reporting notable increases in their sales.

"Pessimism being fashionable at the moment, the disposition is to attract attention to the hole in the doughnut, not to the doughnut itself."—B. C. Forbes, Aug. 4th., 1923.

A SAD WARNING TO AMERICA

THERE are several hundred thousand words in the English language, yet there are in the breasts of Americans today, sentiments which cannot find words for their interpretation.

Within the span of a decade, we of the present generation have watched two presidents, crucified on the cross of political and governmental leadership, which we have built up.

When Warren Harding went into the White House to take over the complex reins of office from a man who had withered under the eight years strain, he was a hardy, rugged Ohioan in the prime of health. A series of his photographs from the day he was inaugurated to those taken on the ill-fated trip to Alaska (see picture page in this issue) tell a dramatic story of what the present job of being president of these United States really means.

Therefore the wholly unexpected death of President Harding has a double meaning to every thinking American. We feel with our deep grief a certain sense of responsibility for what happened. It is, as if we, individually had watched a friend sinking into the quick-sands and had lifted no finger to thwart its grasp.

The presidency of the United States, as it is understood to-day, is in our humble opinion, physically impossible for any one man to handle. No other country in the world asks so much of its leader. France and England, for example depend on figure-heads to attend the flag-raisings, make pleasing speeches and entertain foreign visitors, while somewhere in seclusion from these public demands, their prime-ministers work out the nations problems.

Calvin Coolidge, who steps into the arena, is not a big, hearty, full-faced man, who radiates health as did his lamented predecessor. He is a short, wiry, pinched-faced man who speaks with a rasping voice, but makes his decisions quickly and finally. His health must be guarded as a national asset.

In the name of humanity and for the good of these United States we pray that our future presidents, may be so relieved of their tremendous responsibility that never again will we have to witness the collapse of our honored chief under the strain of it.

PICK YOUR OWN BEANS

NO less an authority than Benjamin Gerks, of Rochester, is responsible for the statement in this issue that the farmers ought to handpick their own beans.

The writer of this page has for many years harbored the idea that the winter months could be well employed by the bean growers of Michigan and their families in the handpicking of their own beans, providing they were equipped with the same machinery which the local elevator has.

The hand bean picking machine is not an expensive outfit and in fact is one that could be easily made by any farmer who is ordinarily handy with tools. If some reader of The Business Farmer can give us a simple plan for building a hand bean picking machine that has proven satisfactory over a period of years, we will pay $5 for the suggestion and the working plan. But we must know that it is practical and efficient.

There is, of course, the double advantage of handpicking beans on the farm. The culls are saved and may be fed to stock with profit. This subject opens up a line of thought which we would like to have our readers who have had practical experience with it discuss freely in these columns.

THE LABOR-FARMER FALLACY

IN a recent statement, Henry A. Wallace, of Des Moines, cracks the nut and gives us all the milk in the cocoanut at one swallow, when he says: "The one reason why farm product prices average only 30 to 40 per cent above pre-war, whereas wages are twice the pre-war, is that there is a surplus of farm products to be sold on the European market, whereas Labor, because of immigration restrictions and tariffs, is sheltered from Europe. The farmer is on the international market, while Labor is off the international market."

That is why we contend that farmers and laborers cannot mix or fight for equal privileges on the same ground. Their interests are opposed when it comes to an economic condition such as we find existing at the present time.

We are not pessimistic, because although the agricultural conditions have been slowly recovering, while labor has taken a quick recovery, largely due to the conditions which Mr. Wallace mentions above, it is no less true that the return of prosperity to agricultural America will be much more stable and on a more lasting foundation.

The farmers not so many years ago were unharassed by financial matters and their larders were well filled with food products when bread lines and soup kitchens were being operated in the centers of population in this country.

The farmer's business is returning to a normal and satisfactory basis. Prices are going to be higher this fall than they have been in several previous years. The farmer is going to get a share of the higher prices which the city laboring man has been receiving, and the city laboring man is going to have to take less money because there is going to be more labor on the market than the market will absorb. This does not mean that we are in any fear of a depression. The best posted financial prophets of America can foresee nothing but a continuous wave of better times, and our observation of the farming situation bears out this same contention.

HOWLING DOWN LAND VALUES

WE sometimes wonder if the professional politicians and the gloom-howlers for the farmers realize that:

There are two sources of profit in any business. One is the daily operation of the business which means carrying on the buying and selling of labor and material at a profit. The other is the accumulated value of a property which makes it more valuable as a business as it is improved and becomes organized as a going property.

This is no less true of the farming business than of any other. What do you think would happen to automobile stock if a whole bunch of clamoring pessimists should tomorrow morning begin to point out that there was a great overproduction of automobiles, that foreign competition was coming into the American market, that the foreigner would no longer pay the price of the American car because of his depreciated currency, and that the companies themselves because of these facts were nearly bankrupt?

Why, you know what would happen as well as I do. Automobile stocks would go down to nothing. There would be a crash that would be heard around the financial world. The ultimate result of it probably would be that the consumption of automobiles would be decreased and automobile plants shut down and laboring men by the thousands thrown out of employment.

The value of farm property in the United States is disparaged with every pessimistic remark that is passed on from one farmer to another, and by every piece of sob-stuff which appears from the press of the scandal-monger or from the lips of a political demagogue.

The only hopeful sign in all of this is that like rats that leave a floundering ship, the ninkapoos in the farming business are being driven back to the congested cities where they belong, and this is going to cut production down to a point where the sturdy American business farmers, whom we are proud to label as such and to associate with, are staying by our farms and will, with the aid of labor saving machinery, produce enough food products for the great market at their doors, if they can be assured of a fair profit.

IT'S UP TO YOU, MR. BEAN BUYER!

THE national advertising campaign for beans is being held back by the reticence of some Michigan bean jobbers who hold a dollar so close to their eyes that they cannot see past it. The sooner this type of bean buyer is eliminated in Michigan the better for the grower and the better for the jobber.

In California where the citrus, prune, nut, and other growers have organized to advertise and sell their products cooperatively, the associations are organized by the growers themselves and operated by them.

The present bean plan differs from this in that the advertising and the cooperative selling effort is carried on by the bean buyers. Whether or not this will prove a satiisfactory means to the growers is yet to be proven, and that is up to the jobbers themselves.

The Business Farmer would like to go on record right now with the bean jobbers of Michigan, California, Colorado and New York State, that if they are not big enough to see the light and go through with the present campaign in a manner that will be satisfactory to the growers they can look for a national bean growers association which will eventually eliminate the present jobbers and bean buyers.

This is an age of efficiency in business, and if the present jobbers and buyers can prove that they are the most efficient means of handling this business; that they are alive to present day situation and willing to carry on the necessary propaganda to keep this product before the 110,000,000 food buyers in America alone, they can hold the job. If they fall short of these requirements or are controlled by a few weak-kneed and jelly-spined individuals who don't belong in any business that requires more brains than making change, they might as well get ready to retire gracefully before they get kicked out.

We have for years watched with interest the growth and success of the western growers of fruit and other products in their advertising campaigns. We see their names on warehouses in our principal markets and on the doors of city office buildings where their goods are being pushed for sale. We contend that the navy bean offers the best possible product to be advertised to the consuming public because it is the cheapest form of vegetable food on the market today and should be included in the every day diet of the workingman's table, and as a delicacy which would be relished in the best homes in the land at least once a week. Advertising is the great American panacea for most business ills. Advertising will take any legitimate product and multiply its sales over and over. Advertising never has and never will make a permanent success of a proposition which is not fundamentally honest and economically worthy.

It's up to the bean buyers and bean jobbers of Michigan, and we repeat that we will follow their individual actions in connection with this present campaign and see that the farmers of Michigan are properly informed of their individual action in regard to it.

INDUSTRIAL ACTIVITY MEANS PROSPERITY

SPEAKING in New York recently, Frederick J. H. Kracke, U. S. Appraiser, said that the United States Treasury will collect this fiscal year over a half billion dollars in customs duties, which is the largest sum ever collected by the Federal Government.

We will import close to $3,000,000,000 worth of raw materials in twelve months, which means that we will have spent three billions in foreign countries, and this Mr. Kracke says, is the greatest act of economic reconstruction performed by any one country since the armistice.

Our nation wide demand for raw materials and finished goods has been so great that foreign manufacturers and producers have been able to share with the people of this country the period of industrial and commercial prosperity.

PUBLISHER'S DESK

MAKING PICTURE ENLARGEMENTS

SEVERAL letters recently tell us that the picture enlargement sharks are again in Michigan, and we want to warn our readers against them.

These grafters come to your door and ask if you have a particularly good photograph of a child or relative that you would like to preserve. When you show it to them they are enthusiastic over its possibilities and show you an enlarged picture in a frame which they agree to deliver to you for a fixed amount, the particular instance we have in mind being $4.25.

You are asked to sign an agreement, which, while it does not bind you to accept a picture in a frame, it does obligate you to pay for the enlargement. When the delivery man brings the frame and picture you are asked to pay a fancy price for the picture frame, sometimes as high as $15.00. Some of our readers who have refused to accept the picture in the frame at this price have bought it as low as $3.00.

It is a sharper's game, and we warn our readers against dealing with this kind of an agent. You will save money by showing him the door and going to a reliable photographer in your own town and asking him for a price on a suitable enlargement.

If any of our readers have had recent experiences further than we have mentioned or if these agents are practicing any other schemes we would like to hear about them.

THE AMERICAN MUSIC AND NILE ART COMPANIES

Last week I asked for information from our readers regarding the American Music Publishing Company and the Nile Art Company, both of whom offered home employment on receipt of a certain down payment from the prospective employee.

I said then that I did not know anything about these companies but that I am sure from the number of inquiries we have received that some of our readers ought to be able to give us the information. Well, they have, and I am reprinting a few letters here, which I hope may save our own readers some money.

I WAS just reading the Publisher's Desk in the Michigan Business Farmer and as I saw your inquiry regarding the American Music Publishing Co., 1658 Broadway N. Y., and as I was one that sent in two dollars to get their working outfit. I was very disappointed when I received it. In the first letter I got from them they wanted me to send two dollars for the working outfit. They said they would give 10c for all copies I mailed and an additional 5c to cover mailing expenses. They also told me they would send me a list of names and places where I was to send them. But when I got the working outfit there was no list. I had to make the list myself. I have enclosed the last letter with instructions and after reading it I think you will agree with me and tell those that have made inquiries to keep their two dollars.—S. R.

SAW your article in the M. B. F. concerning the American Music Co., N. Y. Some time ago I sent them the two dollars and in return received their working outfit which consisted of about 20 pieces of music and about 25 circulars, with instructions to mail the circulars and for every piece of music that was ordered from those mailed circulars I was to get about 10 cents. Well, I mailed the circulars and did not receive an answer from any of them. They will not take back the music if you can not sell it.—A. R.

HELP ME SHOW 'EM UP

WHEN you run across a fake or somebody hands you a gold brick, don't be afraid to write the Publisher about it. I am even going to make the exception and say that you need not sign your name, although if you do I will promise not to use it if you ask me not to. No one likes to admit when they are stung but it ought to give you some satisfaction to know that you can warn most of the good farmers in Michigan.

The Week's Editorial

SIGN STARTS NO RUSH TO FARMS

THERE is a dusty sign that hangs conspicuously but hopelessly in the front window of the State Department of Labor's free employment bureau in Detroit.

It reads:

"Wanted farmers!"

It is more than an offer to work, however, to the hundreds of young men who pass it each day to ask for an automobile assembling job, a place at a core-maker's bench or a chance to operate some whirring, screeching, automatic lathe.

It is a far cry from hundreds of deserted farm-houses that are surrounded by fields of tall, rank weeds and half cultivated crops, ripening and blistering and raining grain for lack of men to man a reaper.

Last March every agricultural county in the State was asking for men. Forty-one thousand farmer boys, according to statistics compiled by the U. S. Department of Agriculture, had left Michigan during the preceeding year to become residents of cities and those that remained were too few to do the Spring plowing. Moreover, it was known that many of the 41,000 were in Detroit and out of work.

Consequently the "Wanted Farmers!" sign was stenciled and hung in the local employment office window. It seemed a bit incongruous, looking out on a busy street in downtown Detroit, but there were some Department of Labor employes who predicted that it would exert a sort of lunarian magic and turn the city-flooding tide into a farmward ebb.

Boys would see it and forsake the adopted machine shop with its noises and its grease for a native meadow with its buttercups and crystal brook.

Goodbye to the drop forge and a welcome to the harrow?

Wooded lanes instead of pavements?

Quail instead of factory whistles?

Farm-house cream instead of cafeteria coffee?

Well not by any means! Since that day last March when the little sign first went up, jaunty and fresh, there have been only four men in the State's employment office who could milk a cow. At least, only four who would.

To be sure several score have spoken about the sign, intimating that perhaps they would like to become farmers. But they were not of the 41,000. They were city boys, out of work and discouraged, who did not know oats from rye.

"The farmer boys who have come here," says the employment secretary at 461 Larned west, "seem to cling to the city no matter how roughly the city treats them. They come back here day after day, asking for a job in an automobile factory and when we say no, 'No, not to-day, but we can send you upstate to a farm,' they leave insulted."

Moreover the Detroit representatives of the adventuring 41,000 are invariably reticent when asked about life on the farms.

"Oh, I worked in Grand Rapids last," is the usual answer when a newcomer is questioned about his agricultural experience.

Or Petoskey, Saginaw, or Flint—

And not until cross-examined closely, the employment secretary says, will it be disclosed that the stay in the smaller city was merely a sort of apprenticeship in city life, served not far—by automobile or interurban—from the boyhood home where the speaker weeded onions, trapped muskrats, attended a little red, brick school and was in truth a barefoot boy.

Wheat needs a quick start

Liberal use of Royster's Fertilizer insures the quick start that winter wheat needs. It makes the wheat sturdy and vigorous to resist the rigors of winter. It increases the yield and ripens the crop early. Feed your wheat this plant food and learn the difference between fertilizer made to be rich in plant food and fertilizer made from cheap materials to sell at a price without regard to quality.

We are proud of the Royster reputation for successful crops, and anxious that farmers should always use it correctly. Take pains to use the analysis best adapted to your land, and for the protection of your fertilizer investment, insist that it be made by Royster. For advice, or help, write Farm Service Department, F. S. Royster Guano Company, Toledo, Ohio.

LABOR DAY ON THE FARM

DEAR FOLKS:—It is hard not to think that everyday is not a labor day. We all must work in order to be happy. It is the way of this old world of ours; but I was wondering if when our Labor Day comes, it would not be a good thing to plan a picnic for the family and get away from the house. Seeing new and different scenery is a great medicine for tired, overworked nerves. If this sounds like more work than getting a meal at home, the effort is not worth it To me it is a pleasure to get together some wholesome food and picnic along a stream or lake. Getting out of the house is a relief sometimes.

Remember our page is for you and me to use for our personal wants and I answer all my letters personally. No one sees them but me. I hope you all will make use of this privilege, and write.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

IN AUGUST

ALL the long August afternoon,
The little drowsy stream
Whispers a melancholy tune,
As if it dreamed of June,
And whispered in its dream.

The thistise show beyond the brook
Dust on their down and bloom,
And out of many a weed-grown nook
The aster flowers look
With eyes of tender gloom.

The silent orchard aisles are sweet
With smell of ripening fruit,
Through the sere grass, in shy retreat
Flutter, at coming feet,
The robins strange and mute.

There is no wind to stir the leaves,
The harsh leaves overhead;
Only the querulous cricket grieves;
And shrilling locust weaves
A song of summer dead.
—William Dean Howells.

"GOING TO THE STATE FAIR?"

DEAR FOLKS—Last week I called upon Mr. Dickinson and Mrs. Eisenbrey, manager and secretary of our State Fair, to find out what the fair had for my women readers.

There are so many attractions that are so educational and useful for every one of us.

The better baby contest is worth the trip and the folks in charge say: "There is a great underlying idea to this contest; it is the State's effort to do everything in its power to see that future citizens of Michigan are strong and healthful."

Naturally the selection of the better babies and the awarding of prizes will hold great interest for all parents, but the really big thing in this department of the fair is the careful, scientific examination which each baby receives.

Then they have a women's rest room, equipped with all modern conveniences.

The nursery is a blessing for the family that comes to the fair. Do not fail to use this department and check the baby You will be able to enjoy the Fair and I feel sure the baby would enjoy either playing in the hill of sand or sleeping rather than go around with Mother or Father and this department is handled by competent women who have had special training in caring for children.

The sewing exhibit in the woman's building is one of the most facinating rooms. Every woman reader will find a good suggestion to take home. I can hardly keep my fingers off the beautiful articles on display.

There, too, is the baking and canning exhibit.

The State Fair is one year's work being displayed and to me I feel every farm woman and husband owes it to themselves to come down and see our work well done.

Send your name to Mr. Dickinson and receive their "Premium List" and read about the advantages the Fair holds for you.

FRESH, CANNED, AND DRIED GREEN CORN

THE half-ripe ears of corn make a very favorite vegetable in this country. The so-called sweet varieties, which contain more sugar and less starch than those grown primarily for making meal or hominy, are especially prized for this purpose because of their better flavor and more delicate texture, but the other varieties are sometimes used in this way.

Green corn, like many other vegetables, is at its best when freshly gathered. Corn on the cob is not very convenient to serve or eat, and this method of cooking it would doubtless have been abandoned long ago if cutting the kernels from the cob before cooking did not materially modify the flavor. The most convenient way of cooking corn on the cob is ordinarily by boiling, but in old-fashioned fireplaces roasting was a favorite method. This still survives as a common household practice in some localities and also in camp-fire cookery.

The season of fresh corn is more nearly limited to the season of maturity in a given region than that of almost any other common vegetable, for it can not be stored for any considerable time in good condition, even with modern appliances, and corn grown in warm climates and shipped long distances to our winter markets is very expensive and rather uncertain as to its quality. Corn, however, may be readily canned either at home or on a commercial scale, and when this is properly done the corn retains many of its desirable qualities. It is not surprising, therefore, to find that canned corn is one of the most popular canned vegetables.

Canned corn is used not only by itself but is also made into a variety of soups, fritters, puddings, and other dishes.

Corn and Its Uses as Food

The preservation of green corn by drying has long been practiced in the household and dried corn is to a limited extent prepared commercially. The ears of corn are first scalded for about 5 minutes, then cooled and the kernels cut from the cob. Unless the corn is very young and tender the resulting dried corn will be much more satisfactory if only the tips of the kernels are removed by the first cut and the remaining pulp scraped out with a dull knife, leaving the most of the hulls behind on the cob. Even in the case of young corn the cutting should not be so close as to include the base of the kernel.

The corn may be dried by any convenient method. Where a large quantity is being prepared it may be spread upon a table covered with muslin. Of course it must be protected from flies. The corn should be well stirred from time to time until thoroughly dry.

When wanted for use the dry corn should be rinsed quickly in cold water and put to soak for several hours in a small amount of water in which it is to be cooked. The cooking should be done slowly and water added as needed. Cooked dried corn may be used in any of the ways in which canned corn is served. Dried corn has a sweet, nutty flavor, and is especially liked for making cream of corn soup or in succotash.

Corn is sometimes combined with other vegetables. Succotash, a mixture of unripe corn and beans, is a dish borrowed, name and all, from the American Indians and has been a favorite since colonial times. To vary their winter diet, the colonists often cooked dry ripe corn and beans together, but such a dish does not possess the palatability of that made from green corn. Corn with tomatoes is another mixture which many persons like and which is quite commonly served. Small, immature ears of unripe corn are sometimes used in mixed pickles, particularly in Europe, and relishes are also made in the United States from green corn, both as a domestic article and commercially.

PREPARING THE LITTLE TOT FOR SCHOOL

YOU have heard the story, perhaps, of the little boy who cried when informed that he was to start in school in September. "I don't want to go to school," he wailed, "'cause—'cause I don't know anything!"

There are many teachers who will tell you that that is the very kind of child they want to greet the morning school opens—the child who doesn't know anything," meaning, of course, the child who has not been taught "readin,' 'ritin' and 'rithmetic" at home. Modern methods of teaching differ so from the old-time methods that many children have to "unlearn" all they have been taught along those lines at home—and the "unlearning," according to most teachers, is nine times harder than the learning.

Children go to school to be taught by a teacher who has been trained in the best, most approved, most up-to-date methods. Leave the reading and writing and arithmetic to her, but send your child to school prepared to take his place as a pupil under her and to realize why he is there.

Before school starts, impress upon him the fact that he is going to school so he can learn how to read stories out of books, how to write letters to Grandma and how to count the eggs Biddy lays each week. Talk kindly of the teacher who is to help him learn these things. See that his mind is not poisoned against her by the things other older children tell him. Give him to understand that the teacher will be his friend, that he will like her and that she will like him if he is good and tries to do what she wants him to.

Be rather more particular than usual to see that toys are picked up, clothes hung up, face and hands washed clean and little feet made to walk quietly. Such preparation will fit your child for school excellently. It is for greater importance than the mastery of the alphabet.

Mothers Problems

THE VALUE OF CHORES

THE city boy who has no chores to to do is a boy to be pitied, not envied. He is being cheated out of something that every boyhood needs. He is sowing the seeds of idleness and laziness and downright shiftlessness if time hangs heavy on his hands. He is growing up without having the habit of work forced upon him.

Such is the big benefit derived from chores—chores that come as regularly as the sun rises and sets. Other work may be extracted from a boy, but it is generally more or less of a painful job; but chores, once they are fully established, give the boy that most-valued of habits—the habit of work.

I know a farm mother who complained that she never had a drop of water in the house, a stick of kindling or a hod of coal unless she brought them in herself. Yet she had boys big enough to keep her supplied with all three. "I know," she said, when the wasted boy power was suggested, "but I'd rather do the work myself than to keep continually after the boys to do it for me."

A mother does feel that way when she has to be constantly "after" the children to get work done, but she shouldn't let the feeling carry her off her feet. She should face the facts and decide on some better course than constant nagging. Invariably that course lies along the path of chores.

Ten cents a week to form a good habit is buying such a habit cheap; yet ten cents, or even a nickel, paid every Saturday night, is sufficient incentive for most boys to perform certain duties day after day. Even though the boys work about with Dad, helping him with his morning and evening chores, they should devote a certain period to doing chores for Mother. A reservoir full of water each evening, a wood-box piled high with well-prepared wood and hods of coal will send Mother off to a glorious start in the morning. And once those duties have become chores, they will have become habits —and the kind of habits that do a boy a world of good later on in life.

Personal Column

TO A FLAPPER

If she should want a simple thing,
A simple foolish thing,
Like a powdered nose, or silken hose,
Or skirts abbreviated,
If she should want to do a thing,
A simple little foolish thing,
Bob off her locks or roll her socks,
If that makes her elated;
If I don't get her point of view,
Because I'm old, and wrinkled too,
I'll take a look back through the years
When I was young and gay;
I'll think just as I used to do,
When sweet sixteen and giddy, too,
And I will say, Yes daughter, dear, you may!

For youth was made for foolish ways
And happy thoughtless giddy days;
It's time to sing and have your fling;
More sober days are waiting;
If I indulge her foolishness,
And give her lots of happiness,
She'll settle down without a frown,
She'll not be hesitating.
With years, responsibility
Will come a sit has come to me,
If she accepts it when it comes,
That's the important thing,
But now I want her to be gay,
And laugh and sing the livelong day!
It's wise to let the flapper have her fling!
—Anne Campbell, Detroit News Poet.

Bobbed Hair Beats Bustles!—To be sure the problem of wearing bobbed hair has reached the girls on the farm. I think it perfectly proper for girls to wear bobbed hair.

It is no worse to wear bobbed hair than to wear bobbed skirts. It is far better to bob the hair than to snarl it then yank and tear at it until it is all broken and uneven.

Years ago the girls had a fad of shingling their hair and there was not much fuss about it as there is these days over the bobbed hair.

When I was a girl we wore hoopskirts and bustles. How we girls would practice "sitting down" without our hoopskirts flopping up in front.

How ridiculous we looked with those big bustles, the bigger the better.

But it was the style; and one might as well be out of the world as out of style.

Let the girls bob their hair and wear the short skirts, they look both comfortable and sweet.—A Farmers Wife.

A Young Lady of Twelve Thinks Bobbing Alright—I am only a little over twelve years old, so you must not expect much of an opinion from me. But I will tell you what I think.

If ones hair is thick leave it alone; do not have it bobbed, but, as it does the hair much good by making it much thicker, if it is thin, provided you have your parents consent, have it bobbed.

When one's hair is short it is much easier to comb, brush, wash and keep in order, than if it were long. Then, too, the air and sunshine get in it, and through it, making it more sanitary.

Lots of girls look more becoming with bobbed hair than if it were long.

Years ago, it was just as much the craze to have shingled hair as it is now to have bobbed hair. Many girls had long hair then. But times have changed and it seems that everything has changed with it.

I have long hair, and as it is quite thick, I do not care to have it bobbed. There are two sides to this question as there is to every one. Hoping the best side will come out first, I am your friend. —E. I. C., Fenton, Michigan.

The Runner's Bible

Study to be quiet and to do your own business with your own hands. Thes. 4:11.

Because he thinks he knows best, many a parent not only dictates the way his child's message is to be delivered, but even the message itself. All of which leads to confusion, discouragement, and finally to failure. Instead the parent should ever encourage the good in his child, patiently removing every obstacle in its way, remembering that each one's message comes from God—is devine; and that his child's true self, like his own, is from eternity—two rays of devine light of exactly the same value, but pointing in different directions.

He that troubleth his own house shall inherit the wind. Prov. 11:29.

—if you are well bred!

You will never discuss the family with your friends or acquaintances.

If guests are at your home, make them feel at home by talking about the things that you have in common. Some may be personal but never speak of the other members of the family in a slighting way.

RECIPES

Tomato Ketchup—Skin the tomatoes, and cook them well. Press them thru a sieve, and to each five pints add three pints good cider vinegar. Boil slowly a long while (about two hours), until it begins to thicken; then add one tablespoon of ground cloves, one tablespoon of allspice, one tablespoon of ppeper and three grated nutmeg. Boil until very thick (between six and eight hours) and add two tablespoonfuls fine salt. Bottle, cork and seal it.

Grape Ketchup—Pick over, wash drain and remove stems from grapes. Put in a preserving kettle, add cold water to barely cover, bring to the boiling point and let simmer until fruit is soft; then press thru a sieve, discarding skin and seeds. Put ten pounds of the fruit pulp in a preserving kettle and add five pounds sugar, one tablespoon allspice, two tablespoons cloves and one grated nutmeg. Bring to the boiling point and let simmer until reduced to the consistency of a ketchup. Fill bottle to overflowing, adjust stoppers and seal.

Corn Soup—One can or two cups of corn, one pint boiling water, one pint milk, one slice onion, two tablespoons butter, two tablespoons flour, one teaspoon salt, dash of pepper, dash of paprika. Fry the onion in the butter and stir in the flour. If raw corn is used, place it in boiling water and boil five to ten minutes. Add the milk to the corn and bring to the scalding point. Thicken with the onion and the flour, and butter mixture and add seasoning.

Corn Chowder—One cup fresh corn, one and one-half inch cube salt pork, diced, one onion, sliced, one quart of potatoes, sliced, one cup milk or cream, salt and pepper and eight crackers. Fry the salt pork and add the onion, and cook until the onion is tender. Boil the potatoes five minutes in one quart of boiling water, add the fat, and cook until the potatoes are soft. Add the corn and milk and bring to the scalding point. Add the butter and seasonings. Pour over the crackers and serve hot.

Stuffed Green Peppers—Six green peppers, two and one-fourth cups fresh corn, one-half onion cut up fine, one and one-half cups of meat chopped or ground up fine, one and one-half cups meat stock thickened with two tablespoons flour, one and one-half cups bread crumbs, one-half teaspoon salt and dash of pepper. Remove the tops and seeds from the peppers and parboil in boiling water for two minutes. Remove from the water, drain, and put in a casserole. Stuff the peppers with a mixture of the corn, meat, bread crumbs, thickened stock mixture, and seasoning and bake. The mixture may be varied by using other materials such as rice and tomatoes.

Corn Souffle—One cup fresh corn, one cup white sauce (see following recipe). Three eggs, one-half teaspoon salt, dash pepper. Add the well beaten egg yolks to the sauce and fold in the corn. Fold in the stiffly beaten egg whites and place in a buttered baking dish, set the dish in a pan of hot water, and bake in a moderate oven (350 degrees F.) thirty to forty minutes.

White Sauce for Souffle—One cup milk, three tablespoons flour, one-half tablespoon salt, two tablespoons butter. Melt the butter and stir in the flour and salt. Add the scalded milk and stir until the mixture thickens and the flour is cooked. The white sauce may be made in a double boiler or directly over the flame. If the latter is used, care must be taken that the product is not scorched.

Tomato Sauce for Beans—Will you publish a recipe for tomato sauce, like that which is on canned pork and beans. —Miss M. B.

—Tomato. Sauce (without stock)—One half can tomatoes or one and three-fourths cups of fresh stewed tomatoes, one slice onion, three tablespoons butter, three tablespoons flour, one-fourth teaspoon salt, one-eighth teaspoon pepper. Cook onion with tomatoes fifteen minutes, rub thru strainer, and add to butter and flour (to which seasoning has been added), cook together. If tomatoes are very acid, add a few grains of soda. If tomatoes are to retain their red color it is necessary to brown butter and flour together before adding the tomatoes.

Tomato Sauce with Meat Stock—One-half can tomatoes, one teaspoon sugar, eight peppercorns, bit of bay leaf, one-half teaspoon salt, four tablespoons flour, one cup brown stock. Cook tomatoes twenty minutes with sugar, peppercorns, bay leaf and salt, rub thru a strainer and add stock. Brown the butter, add flour, and when well browned, gradually add to liquid.

These sauces can be added to beans and canned; also they can be prepared with your canned tomatoes any time in the winter.

PICKLING

Pickling is preserving in any salt or acid liquor.

Sweet Pickled Peaches—One-half peck peaches, two pounds brown sugar, one pint vinegar, one ounce stick cinnamon, and cloves. Boil sugar, vinegar and cinnamon twenty minutes. Dip peaches quickly in hot water, then rub off the fur with a towel. Stick each peach with four cloves. Put into syrup and cook until soft, using one-half peaches at a time.

Sweet Pickled Pears—Follow recipe for Sweet Pickled Peaches, using Pears instead of Peaches.

Tomato and Celery Relish—One onion and one large bunch celery and two and one-half cups fresh tomatoes, chopped fine, one tablespoon salt, two tablespoons sugar, two allspice berries and two-thirds cup vinegar.

Mix ingredients, heat gradually to the boiling point, and cook slowly one and one-half hours. Cayanne or mustard may be added if liked more highly seasoned.

Spanish Pickle—One peck of green tomatoes thinly sliced, four onions thinly sliced, one cup salt, half dozen cloves, half dozen allspice berries, one-half cup brown mustard seed, half dozen pepper-cores, one pound brown sugar, four green peppers, finely chopped, and cider vinegar. Sprinkle alternate layers of tomatoe and onions with salt and let stand over night. In the morning drain, and put in a preserving kettle, adding remaining ingredients, using enough vinegar to cover all. Heat gradually to boiling point and boil one-half hour.

A New Discovery in Milling

Better Baking Now Possible.

During the past three months a new process for milling flour has been perfected. It revolutionizes the making of flour.

To the home baker it means better, whiter bread, bread that is better looking, will stay moist longer, that will bake easier, and have better texture and flavor. Today the Lily White leased mill is the *only mill* producing flour milled by this new system.

Lily White

"The Flour the Best Cooks Use"

continues the undisputed leader of quality flours, and now even Lily White has been improved.

It is an established fact that 30% of the efficiency of protein in flour is destroyed when the wheat is crushed or flattened by smooth rolls. Under this new milling method, however, the efficiency of the protein content of the flour is increased 30 per cent. This permits free action of the yeast on 100% of the flour instead of only 70% in making good bread.

For 25 years efforts have been made to perfect this new system. Now, all that we ask is that you try Lily White. Better all around results are positively guaranteed.

AIDS TO GOOD DRESSING

4393-4418. A Smart Suit Style—This style owes its originality to the smart Eton jacket and the equally attractive wray skirt. The vest may be omitted. Sports crepe was used in this instance. Linen, pongee, ratine or twill would also be attractive. The Jacket Pattern 4393, is cut in 4 Sizes: 14, 16, 18 and 20 years. The Skirt 4418 in 7 Sizes 16, 18 and 20 years for Misses, and 31, 33, 35 and 37 inches waist measure for Ladies. To make this suit for an 18 year size will require 4⅛ yard of 40 inch material. To make vest and sleeve facings of contrasting material requires ⅝ yard. The width of the skirt at the foot is about 2 yards.

4412. A New Version of One Piece Dress—Checked gingham and linen are combined in this style. It could be made up in cretonne or chintz with crepe or sateen or in jersey cloth with flannel or suede for trimming. Ratine in plaid and plain, or plain ratine with linen would also be attractive. The Pattern is cut in 4 Sizes: 8, 10, 12 and 14 years. A 10 year size requires 4 yards of 32 inch material.

4449. A New "Wrap" Skirt—This model has the belt at slightly raised waistline. It is excellent for a sports or separate skirt, and will develop well in all sports materials, and in serge, broad cloth, linen and other wash fabrics. The Pattern is cut in 6 Sizes: 25, 27, 29, 31, 33, and 35 inches waist measure. A 29 inch size requires 2⅝ yards of 54 inch material. The width at the foot is 1⅞ yard.

4394. A Jaunty Top Garment—For cool days, for sports wear, and for all jacket materials, this is a very desirable model. The sleeve has a very unique shaping. The collar is a new and stylish feature. This Pattern is cut in 6 sizes: 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size requires 2¾ yards of 40 inch material.

Own This Modern Light-Draft Spreader

IF THE MAN without a spreader knew how he could increase the crop returns from every ton of manure by using a McCormick-Deering Manure Spreader, he would change his method mighty soon. It isn't a matter of what the other fellow is doing—it is a plain dollars and cents proposition. If you waste your time at uneven spreading you lose profits that should belong to you.

The McCormick-Deering spreader performs two important operations. First, it shreds the manure—tears it to pieces as it passes through the two steel beaters and the spiral wide-spread device; second, it spreads evenly and uniformly, in any quantitv desired.

Among the features of the McCormick-Deering spreader are: An auto-steer which permits the spreader to be turned in close quarters, and which eliminates neck weight; adjustment for six feed speeds; and the all-steel frame with all appliances bolted to it direct.

Ask the McCormick-Deering Dealer to point out these features.

The Children's Hour

Dear Uncle Ned:—This is the first time that I have written to the corner. I have been a silent reader for over a year. I am 17 years old. My birthday is May the 7th. If I have a twin, please write me. I suppose my letter will go in the waste paper basket. My parents are both dead and so are my sisters and brothers. I am living with my father's mother and his oldest brother. We had a cyclone down here last Saturday. It did lots of damage. It killed two horses for one of our neighbors. Well I guess it is about time for me to close. Your niece,—Bessie Brown, Frontier, Michigan. P. S.—Have some of the boys and girls write to me for I get lonesome.

—The boys and girls who are members of the Children's Hour are always glad to write letters to any member who are sick or lonesome and I am sure you may expect to receive letters within the next two or three weeks. How about it boys and girls?

Dear Uncle Ned:—I have been reading the Children's Hour for some time, so thought I would like to join your merry circle. You seem to be having so much fun and such a good time reading each others letters. Well I will tell you something about myself and where I live. I am 19 years old the 24th day of June. Am five feet, seven inches tall, and live on a farm located eleven miles from Traverse City. We have a sixty-acre farm. It fronts on Grand Traverse Bay. There are a lot of large pine trees along the shore and quite a wide beach. Just a dandy good place to go swimming on the hot summer days when it is about 90 degrees in the shade. The road runs between the house and shore, so we have a beautiful view both winter and summer. There are a lot of trees around the house, so we are well protected in the winter and shaded in the summer. We have about two hundred sweet cherry trees and between five and six hundred sour cherry trees, a few peaches and apples. On the rest of the farm we raise corn, oats, and beans, and sometimes potatoes when they are so cheap they won't break the city folks to buy them. We have four head of cattle, two horses, 12 sheep, six hogs, and about 100 chickens. So you see we have plenty of work to keep us busy. Well I think I have said enough for this time, so will close hoping to become your nephew soon. Hope the rest of the girls and boys will write to me.—Selden C. Fowler, R. 1, Box 79, Traverse City, Michigan.

—From your description I would say it is very beautiful around your place and, as you seem to be a lover of nature, I am sure you appreciate how fortunate you are. I would like to own such a home and live there all the rest of my life.

Dear Uncle Ned:—May I join your merry circle? I have never written before but always read the Children's Hour. One reason I never did write was because I could not find your address. There hasn't been anyone who has written you from Clarkston, I guess. I think I am the first one to write but I have waited long enough, don't you think so, Uncle Ned? My father has taken the M. B. F. for several years. I suppose I must begin to describe myself, but I am not going to tell you my age, you may think I am too old to join the merry circle. My age is between 13 and 16 years. Whoever guesses my right age will receive a letter from me. I have light hair, dark eyes and light complexion. I am 5 feet tall. I will be in the 10th grade next year. I live on a farm of 305 acres. We have nine horses. I milk three cows every night. I like to work out doors in the hay and oats and other crops. It is like a circus, don't you think so? I have two sisters and one brother. I wish some of the boys and girls would write as I would try and answer all letters received. I like to write letters. I think a drawing contest is just the thing to have. Of course, I am not any drawer but would try. You never can do anything until you try, try again.—Miss Helen Bird, R. 3, Clarkston, Mich.

—You surely did wait long enough before writing. I thought every one who read the Children's Hour knew my address. It is: Uncle Ned, The Children's Hour, Michigan Business Farmer, Mt. Clemens, Michigan.

Hello, Uncle Ned:—How are you these days? May I join your merry circle? I wrote before but I guess it went in the waste paper basket. I am 13 years old and in the 8th grade. My birthday is June 2nd. I have a little pet kitten. It is black and white. We also have a black one. I live on a 120 acre farm. We have 2 horses, 3 cows, a heifer, 2 calves and 1 pig. Her name is Peggy. I have 3 brothers and 2 sisters. I live about 1½ miles from a small lake. It isn't very safe though. A boy got drowned 3 weeks ago. I have been living on a farm over two years now. I lived in the city the rest of the time. I like to live there pretty well too. The answer of Gladys Harris' riddle is a newspaper. I will close with a riddle: When is a cow not a cow?—Anna Trevan, R. 2, Mancelona, Michigan.

Dear Uncle Ned:—May I join your merry circle? We take the M. B. F. and enjoy it very much, especially the Children's Hour. I am sixteen years old, five feet, two inches tall, and I have dark hair and eyes. I am in the tenth and eleventh grade at school. We live in the country. Hoping to hear from the boys and girls soon, I remain, I hope, one of the many cousins.—Julia Bindon, Silverwood, Michigan. P. S.—I will answer all letters written to me.

Dear Uncle Ned:—Have just been reading the letters in the M. B. F. which we received today and thought I would write you a few lines and tell you about the place where I live. It is a very small place in winter, but in summer it is quite large. Resorters from all around come here. It is located about thirty miles from Straits of Mackinaw and is on Little Traverse Bay, in Lake Michigan. Right across the Bay is Petosky, which is also a resort. Roaring Brook, Wequetonsing, and the other Indian names are little resort towns and are really a part of Harbor Springs, but of course are closed in the winter. The resorters start coming in May and go about the last of October. They say the shore drives and places connected with Harbor Springs are some of the prettiest places in America. The shore drive from Harbor Springs to "Old Trail Tavern" is one of the most beautiful drives in America. Old Trail Tavern is a large log house and also tthere are many resort cottages, most of them covered with white birch bark. They certainly are pretty. They serve chicken dinners at Old Trail Tavern, and it is very lovely out there. Some friends own a cottage there and we go and have great times, going bathing, etc. It is right on the shore. The shore drive is on the bluff overlooking the lake. Well I must close as I see this letter already starting toward the honorable waste basket. I wrote before and described myself and I am now corresponding with a girl who is sixteen and her birthday is on the fifteenth of April, the same as mine. As ever, your niece,—Elsie L. Mahlers, R. 1, Harbor Springs, Mich.

—There is a road between Mt. Clemens and Detroit known as the Lake Shore drive and it too is a very beautiful drive. There are houses along this drive that cost over a million dollars to build so you can imagine that they and the ground about them would be well worth going quite a distance to see. Most of the houses cost much less but nearly all of them are built by rich people.

Dear Uncle Ned:—It has been such a long time since I have written to you so thought I would write. I did not see my letter in print, but wanted to join the merry circle if you will let me. I went flowering last Sunday and while I was back in the woods I found two large mushrooms, and I brought them up to the house and my folks wanted some so we all went back in the woods and picked more, enough for supper. My age is between 10 and 18. The one who guesses it will receive a letter from me. I am fond of writing, so would like to receive lots of letters. Well I will close with a riddle: Round as an apple, busy as a bee, prettiest little thing you ever did see. Answer "A watch." Your want to be niece,—Reva Skinkle, Sunfield, Michigan, R. 1.

Dear Uncle Ned:—It is very warm here but it is the kind of weather that we need to make the corn grow. We have our haying all done and our wheat is all cut and shocked. We expect to have threshers next week. Say, Uncle Ned, when you were a boy did you like to watch the big engine and the separator working? The oats will soon be ready to cut. I had 46 young ducks and I sold 14. It soon will be time for school to start again. I will be a "freshie". Goodbye everybody until the next time.—Myrtle L. Luce, Flushing, Michigan.

—Yes, when I was a boy I used to stand in awe and watch the threshing machine. The threshing machine at that time was somewhat different than the ones you see throughout the country now.

Dear Uncle Ned:—Here is another cousin trying to squeeze between the others. I have never written before so I thought I would try it. I always read the Children's Hour and I think it is very interesting to read letters from the different cities and countries. We live on a small farm of 60 acres, one mile from a village and about three miles from a city (Calumet). Well I guess now I shall describe myself. I am a farmer girl of 16 years of age. I have dark brown hair and eyes. Fair complexion and am 5 feet, four and one-half inches tall, and weigh 130 pounds. Do you think I am heavy and tall for my age, Uncle Ned? I will be 17 years old on the 10th of March. Have I a twin? Well I guess now I shall close. Will write more the next time. Hoping some of the boys and girls will write to me. I surely will answer every one. Your niece,—Amelia Riederich, Hubbell, Mich., Box 74.

Current Agricultural News

MICHIGAN FRUIT GROWERS SIGN UP 2,000 CARS

MORE than 2,000 cars of tree fruits, grapes and small fruits are under sales service contracts with the Michigan Fruit Growers, Inc., as the result of a meeting of local associations recently held at Bangor when associations at South Haven, Paw Paw, Stevensville, Sodus, St. Joseph and Lawrence signed up with the Michigan Fruit Growers and the national Federated Fruit and Vegetable Growers Inc., on behalf of their membership. Many other western Michigan fruit locals are ready to sign up with the state-wide co-operative fruit marketing service.

The Michigan Fruit Growers, Inc., represents the co-operation of western Michigan fruit associations for a central sales office where by they can improve their net returns for members by eliminating competition between themselves, standardizing their goods and packs, build a valuable reputation for their fruit, advertise it and benefit by the enormius volume they could control by working together.

The Michigan Fruit Growers is entirely grower-owned and controled. The Michigan State Farm Bureau has given a great deal of help in its organization, which has been on the plan offered by the markets department of the Agricultural College. Mr. Tennant has been counselling the Fruit Growers in their organization work.

When organized the Michigan Fruit Growers will be a commodity exchange affiliated with the State Farm Bureau, like the Potato, Livestock, Elevator, and Milk Producers Exchanges.

Marketing fruit means reaching the markets of the nation and for this purpose the Michigan Fruit Growers locals have at their command the Federated Fruit and Vegetable Growers, organized by the American Bureau. This organization took over one of the best, going national fruit marketing institutions in America and has tried and proved machinery selling fruit every day. Just recently it marketed 25 carloads of cherries for the Hart Marketing Association at Shelby and did very well by them.

Members of the Grand Rapids Growers Association, a powerful organization, have voted to join the Michigan Fruit Growers, Inc. Associations already signed up are St. Joseph, Mich., Fruit Growers Association; Lincoln Fruit Growers Association; Sodus Fruit Growers Association; Paw Paw Co-operative Association; Bangor Fruit Exchange; South Haven Fruit Exchange; Lawrence Co-operative Company. In all 16 associations are members of the Fruit Growers and will sign their marketing contracts.

GAS TAX IN INDIANA

THE state gasoline tax which went into effect June 1 brought $317,954.04 into the state treasury the first month it was effective. The tax returns for June may have been somewhat smaller than they will be in the future as there is a possibility that consumers may have had supplies on hand when the law began to operate. The cost of collecting the June installment of the tax was $375 or about one-tenth of 1 per cent of the amount collected. One of the chief objections to the law when it was being considered was that a large part of the tax would be consumed in its collection. The revenue produced by the tax goes into the state highway fund.—Indiana Farmers Guide.

ALSIKE YIELD IS LESS BUT QUALITY BETTER

WITH clover hulling nicely under way, prospects are that Michigan's alsike seed production will be about 75 to 80% of last year's total, according to Mr. Nicolson, manager of the State Farm Bureau Seed Department, who recently spent several days making a personal investigation of the clover seed situation in the alsike producing sections of the state.

Mr. Nicolson found that the quality of the seed produced this year was better than last, due somewhat to economic conditions which rendered it unprofitable to harvest the lower grades of seed. The operation of the Farm Bureau Seed Department has impressed the farmers with the fact that quality seed now brings the best price. The old system of uniform price, which penalized the grower of good seed and pensioned the producer of poor seed, is being displaced in Michigan by a more just system wherein each farmer's lot of seed sells upon its individual merit.

FROM HERE AND THERE IN MICHIGAN

Lake Odessa—New building for American Legion proposed.

Flint—Dixie highway near city to be resurfaced. City ranks fourth in state in home construction.

Detroit—$4,963,800 building permits issued in June. Western Union Company rebuilding lines between this point and Grand Rapids. Construction of new $14,000,000 29-story hotel on Cadillac hotel site under way.

Lansing—East Lansing road to be widened. New bridge planned for M. A. C. campus to connect staduim with armory, $50,000 available.

Bessemer—Local American Legion contemplates building new club house. Skud Goldman & Company erecting new store building.

Richville—New $12,000 St. Micheals Evangelical Lutheran parish school completed.

Saginaw—Eagles' home to be improved and enlarged. New school house on Wadsworth road under construction. New addition to Washington avenue Presbyterian church under construction. Copper Coal Company, organized with $500,000 capital to sink shafts in several townships and open three mines.

St. Louis—Contract for paving from this point to Breckenridge to be let. New coal vein discovered on Dell Bush farm near town.

Ionia — New additions being made to dining hall at refarmatory.

Gratiot—Road work between Tittabawassee bridges completed.

Grand Haven — Extensive improvements made at First Reformed church. 376-ft. car ferry to operate between this city and Milwaukee.

Mt. Pleasant—Berry and fruit crop in this county exceptionally large.

Greenville—Brass foundry, formerly of Grand Rapids, to establish business here.

Grand Rapids—New sewer system to be constructed, $5,000,000 bonds to be issued. Western Union Telegraph Company plans direct wire between this city and New York. Butter production in state for 1922 totaled 87,161,633 lbs.

Cadillac — Michigan State Telephone Company completes new automatic system at cost of $3,000,000.

Cheboygan—New fish plant being constructed on river front. New waterworks system proposed.

Lakeview — Has new pumping plant assuring city adequate fire protection. $15,000 garage under construction.

Hancock—To have fireproof store building.

Owosso — City's newest industry, The Owosso Garment factory, growing rapidly, capacity to be doubled.

Indian River — Bridge across Indian river to be replaced with modern concrete structure.

East Lake—Operations to be resumed at Manistee oil well, new pipe for drilling installed.

Mason—Storm drains being laid in West Ash street. Milk production in Michigan in 1922 aggregated 3,495,627,169 lbs. an increase of 391,929,078 lbs. over 1912.

Frankfort—To have new local telephone exchange.

Al Falfy looked up from the morning paper.

"It says here of a man," he said to his wife, "who's be'n married thirty years an' spends every evenin' at home."

"He oughta be an example to you, Al Falfy," declaimed his wife. "He's the right kind of a husband. He's got love."

"Love nothing," snorted Al. "It says here he's got paralysis."

The Lehon Co.

Delays Never Pay!

Just another way of saying, "A stitch in time saves nine."

THE small job soon grows into the big job, while the roof with a little leak may not be long in destroying the interior of the home which it was intended to protect.

Sit down and figure it out for yourself. Every day the job is put off adds something to the cost of doing it later on. Old fence poles may rot away letting stock into a field of growing grain where the trampling of the animals for one night would ruin the entire crop. The drafty hog house may cause the loss of a valuable sow for the want of insulation.

MICHIGAN BUSINESS FARMER
"The Farm Paper of Service"

The Genius of Man Has Created Marvels in Farm Machinery

Two continuous miles of farm and dairy machinery will be displayed at the 1923 National Dairy Exposition. This great exhibit will contain new and improved cream separators, milking machines, barn, equipment, churns, and a thousand and one other articles to lighten labor and increase profits of the dairy farm. Here in a few days the ambitious dairy farmer will be able to learn more about labor saving machinery than he could learn in a lifetime in any other way. An unusual opportunity to combine business with pleasure.

Other Things You Will Want To See

TUSCOLA DUROC BREEDERS TOUR TWO COUNTIES

ON Monday, July 30th, the Tuscola County Duroc Breeders Ass'n. held a very interesting tour through Genessee and Oakland Counties visiting the farm of Heines and Son, Davison, Mich., where they saw some of the finest Durocs in the state. From there they went to Moffats Grove and enjoyed their noonday lunch and then to Schaffer Bros., and inspected the new hog house. Mr. V. A. Freeman of the extension department then gave the members a talk on Durocs and used Schaffer Bros. new herd boar as a model for the correct type breeders should use. The party then left for Rush Bros., Romeo, to inspect their herd and also the Inwood Bros. herd. Everybody in the party was more than pleased with the tour and believed the day well spent. Mr. Fred J. Schaffer, sec'y. of the Mich. Duroc, Jersey Breeders' Ass'n., also attended the tour.

VETERINARY DEPARTMENT

FEED NOT CAUSING TROUBLE

My pigs were about two months old when I weaned them. Began feeding ground wheat and sweet milk. After two feeds of this the pigs began to act as if their backs were weak and their hind legs give way under them when they walk. One pig died and was opened and we found some light colored spots on the liver and some purple spots on the large intestine. All the pigs eat well.—J. C. W., Clarksville, Mich.

—I do not think the ground wheat and sweet milk is causing the trouble in these pigs. I would suggest that you send one of the sick pigs to the Animal Pathology Department at the College, East Lansing, for autopsy and diagnosis.—John P. Hutton, Assoc. Prof. of Med. & Surg., M. A. C.

HAVE VETERINARIAN EXAMINE CALF

Calf is two months old and it has always been hard to get it to drink milk and when given dry or green feed it will eat fairly well but after it has laid down and starts chewing its cud there is a dropping or slobber comes from its mouth which when collected on the floor of its stall looks like the scours and has an offensive odor. Have given castor oil and epsom salts H. B. J., Wolverine, Mich.

From the description given of this case, it sounds very much like the calf might be suffering from a diverticulum of the esophagus, a rupture of the muscular walls of the esophagus, allowing a stretching of the mucous membrane through the opening and the collection of food in it. I would suggest that you have your veterinarian make a thorough examination of this calf. If diverticulum of the esophagus be the trouble, very little can be done in the way of treatment.—John P. Hutton, Assoc. Prof. of Med. and Surg. M. A. C.

SUGGESTS CHANGE OF FEED

Will you kindly publish a reason for cattle insisting on eating pieces of board and old bones? What is the cause and also what can be done to cure them of it? What food value apparently must be supplied?—O. W. S., East Jordan, Michigan.

—The cause of this preverted appetite is not understood. I would suggest a change of feed. See that the cattle are kept in stables that are clean and well ventilated. Appo morphine in doses of two to three grains given three times daily for three days in succession has given good results in some outbreaks, Keeping cattle out of doors in well drained pasture and keeping cattle from eating food which is spoiled, will tend to avert the disease. You might try feeding to these affected animals one ounce of Artificial Carlsbad Salts night and morning and continue for several weeks.—John P. Hutton, Assoc. Prof. of Med. and Surg., M. A. C.

CANNOT STOP LOSS OF MILK

Our cow loses her milk every night. When we bring her from the pasture the milk just runs out. Will you please tell us what to do with her?—Mrs. I. K., Bad Axe, Mich.

—I will say that there is nothing that we know of that you can do to remedy a condition of this kind.—John P. Hutton, Assoc. Prof. of Med. and Surg., M. A. C.

How I Outwitted the Crow

THE crows outwitted me for some time but I believe I have succeeded in matching them. At a reasonable estimate they have destroyed and eaten 400 bushels of corn in the last 10 years on one of our farms. They pick open the ends of the upright ears so the water gets in and they rot. This farm adjoins timber on the Missouri Rver where the crows nest and roost and go out by the hundreds into the cornfields. The crow is a very smart bird. One of our neighbors years ago hired a boy of 15 to come to his home to shoot crows, agreeing to pay him 50 cents for each crow and for the ammunition he used. After two weeks he reported having shot two crows and went home with one dollar besides getting his board.

I have taken my shotgun and gone to our cornfields about a quarter of a mile away and when I got about half way, the pickets that were always on guard on the fence posts that surround the field, would give the alarm and up would rise a cloud of crows out of the cornfield. Later I conceived the idea that the way to catch the crows was to place steel rat traps on top of the fence posts where the guards were in the habit of taking their positions. I fastened the traps to the posts so the crows would not fly off with them.

Uses Traps on Posts

Well I remember the first crow I caught. The traps had not been out more than an hour until I heard the crows squalling and I could see at least 300 crows circling about that post. It in one way reminded me of a swarm of bees. I killed the crow; tied him by one leg to the end of a pole and stood the pole in the middle of a 40-acre cornfield near the timber. The top of the pole was three feet above the corn. I watched to see the results next morning and early out came a flock of about two hundred. When they came to see the dead crow they circled around it a few times then went back to the timber. They kept coming out in such flocks until about 11 o'clock when they began to move out in flocks to the southwest and the next morning there were not more than 50 crows to be seen in that locality. It was about time for them to migrate so this fright gave them an excuse to move.

Since then when the corn gets to be roasting ears, I get out my traps and keep them out until I get my fields well picketed with dead crows on poles

Crows Carry Disease

I want to tell you something more about crows. It is clamed that crows, other birds, also dogs and other animals carry cholera from one hog feed lot to another and in that way spread the disease very rapidly in a vicinity. I have no doubt but that the farmers of this country have lost millions of dollars through birds and animals conveying the disease from one farmer's feed yard to his neighbor's.

When I see crows picketed on posts about my feed yard I get out my traps and get a few and put them on poles one by one and when the crows come and see their dead relatives they make a few hawk-hawks, go up in the air and move on.—Dakota Farmer.

WILL MICHIGAN'S 1924 WHEAT ACREAGE SHOW INCREASE?

(Continued from Page 4)

have been developed by the Expriment Station and given a wide distribution over the state. The importance of early plowing, and of thorough preparation of the plowed land before seeding are now appreciated as never before. Michigan wheat growers also know how to outwit the Hessian Fly by means of delayed seeding and the majority at least have learned the value of proper fertilization. Without fertilizer wheat would soon become a crop of much less importance in Michigan. Fertilizer gives the young wheat a good start in the fall in spite of delayed seeding to avoid the Fly. In fact, fertilizer really makes late seeding possible. It prevents winter-killing to a large extent, encourages "stooling," and gives the wheat a boost in the spring that sends it along to maturity several days ahead of unfertilized wheat. The yield is unusually increased from 5 to 20 bushels per acre and the quality improved accordingly.

Prof. McCool of the Agricultural College reports an experiment which was conducted near Coldwater, in which fertilizer increased the yield by 10 bushels per acre and raised the grade from No. 3 to No. 1. In a similar test near Vicksburg the yield was increased by 16 bushels per acre and the grade raised from No. 3 to No. 1. In addition to the direct benefits to the wheat crop there is an indirect benefit to the clover seeded in the wheat which is usually sufficient to pay the entire cost of fertilizing.

For specific information on wheat production — fertilizers, varieties, etc.—consult the County Agent or write to the Michigan Agricultural College at East Lansing.

THE AFTERNOON MIRACLE

(Continued from Page 11)

against his body! Soon, very soon the Queen would find him, and he, powerless as a worm in her audacious hands, would be returned to the dark chest in the narrow house that run on wheels.

Alvarita heard a sudden crunching of the gravel below her. Turning her head she saw a big, swarthy Mexican, with a daring and evil expression, contemplating her with an ominous, dull eye.

"What do you want?" she asked as sharply as five hairpins between her lips would permit, continuing to plait her hair, and looking him over with placid contempt. The Mexican continued to gaze at her, and showed his teeth in a white, jagged smile.

"I no hurt-y you, Senorita," he said.

"You bet you won't," answered the Queen shaking back one finished, massive plait. "But don't you think you'd better move on?"

"Not hurt-y you—no. But maybeso take one beso—one li'l kees, you call him."

The man smiled again, and set his foot to ascend the slope. Alvarita leaned swiftly and picked up a stone the size of a cocoanut.

"Vamoose, quick," she ordered peremptorily, "you coon!"

The red of insult burned through the Mexican's dark skin.

"Hidalgo, Yo!" he shot between his fangs. "I am not neg-r-o! Diablo bonita, for that you shall pay me."

He made two quick upward steps this time, but the stone, hurled by no weak arm, struck him square in the chest. He staggered back to the foot-way, swerved half around, and met another sight that drove all thoughts of the girl from his head. She turned her eyes to see what had diverted his interest. A man with red-brown, curling hair and a meloncholy, sunburned, smooth-shaven face was coming up the path, twenty yards away. Around the Mexican's waist was buckled a pistol belt with two empty holsters. He had laid aside his sixes—possibly in the jacal of the fair Pancha—and had forgotten them when the passing of the fairer Alvarita had enticed him to her trail. His hands now flew instinctively to the holsters, but finding the weapons gone, he spread his fingers outward with the eloquent, abjuring, deprecating Latin gesture, and stood like a rock. Seeing his plight, the newcomer unbuckled his own belt containing two revolvers, threw it upon the ground, and continued to advance.

"Splendid!" murmured Alvarita, with flashing eyes.

As Bob Buckley, according to the mad code of bravery that his sensitive conscience imposed upon his cowardly nerves, abandoned his guns and closed in upon his enemy, the old, inevitable nausea of abject fear wrung him. His breath whistled through his constricted air passages. His feet seemed like lumps of lead. His mouth was dry as dust. His heart, congested with blood, hurt his ribs as it thumped against them. The hot June day turned to moist November. And still he advanced, spurred by a mandatory pride that strained its uttermost against the weakling flesh.

The distance between the two men slowly lessened. The Mexican stood, immovable, waiting. When scarce five yards separated them a little shower of loosened gravel rattled down from above the ranger's feet. He glanced upward with instinctive caution. A pair of dark eyes, brilliantly soft, and fierly tender, encountered and held his own. The most fearful heart and the boldest one in all the Rio Brave country exchanged a silent and inscrutable communication. Alvarita, still seated within her vine, leaned forward above the breast-high chaparral. One hand was laid across her bosom. One great dark braid curved forward over her shoulder. Her lips were parted; her face was lit with what seemed but wonder—great and absolute wonder. Her eyes lingered upon Buckley's. Let no one ask or presume to tell through what subtle medium the miracle was performed. As by a lightning flash two clouds will accomplish counterpoise and compensation of electric surcharge, so on that eyeglance the man received his complement of manhood, and the maid conceded what enriched her womanly grace by its loss.

The Mexican, suddenly stirring, ventilated his attitude of apathetic waiting by conjuring swiftly from his boot-leg a long knife. Buckley cast aside his hat, and laughed once aloud, like a happy school-boy at a frolic. Then, empty-handed, he sprang nimbly, and Garcia met him without default.

So soon was the engagement ended that disappointment imposed upon the ranger's warlike ectasy. Instead of dealing the traditional downward stroke, the Mexican lunged straight with his knife. Buckley took the precarious chance, and caught his wrist, fair and firm. Then he delivered the good Saxon knock-out-blow—always so pathetically disastrous to the fistless Latin races—and Garcia was down and out, with his head under a clump of prickly pears. The ranger looked up again to the Queen of the Serpents.

Alvarita scrambled down to the path.

"I'm mighty glad I happened along when I did," said the stranger.

"He—he frightened me so!" cooed Alvarita.

They did not hear the long, low hiss of the python under the shrubs. Wildest of the beasts, no doubt he was expressing the humiliation he felt at having so long dwelt in subjection to this trembling and coloring mistress of his whom he had deemed so strong and potent and fearsome.

Then came galloping to the spot the civic authorities; and to them the ranger awarded the prostrate disturber of the peace, whom they bore away limply across the saddle of one of their mounts. But Buckley and Alvarita lingered.

Slowly, slowly they walked. The ranger regained his belt of weapons. With a fine timidity she begged the indulgence of fingering the great .045's with little "Ohs" and "Ahs" of newborn, delicious shyness.

The canoncito was growing dusky. Beyond its terminus in the river bluff they could see the waning glory of sunset.

A scream—a piercing scream of fright from Alvarita. Back she cowered, and the ready, protecting arm of Buckley formed her refuge. What terror so dire as to thus beset the close of the reign of the never-before-daunted Queen?

Across the path there crawled a caterpillar—a horrid, fuzzy, two-inch caterpillar! Truly, Kuku, thou wert avenged. Thus abdicated the Queen of the Serpent Tribe—viva la reina!

Gave Him a Hoarse Voice

"Say, Frank, you knew I was in the army, didn't you?"

"Yes, I did George."

"Well, do you know we had horse meat?"

"How did you know it was horse meat?"

"Well, one day we were all eating at the table, some one said, 'Whoa', and a piece of that meat stopped right in the middle of my throat."—Boys' Life.

Fed on Milkmaker— Breaks County Test Record

THIS cow belongs to Mr. and Mrs. Gordon T. Warren of Dimondale, Mich. Last winter they were feeding their own grains and attempting to balance them with cottonseed meal. Having a few cows on test and looking for the best feed, they started feeding Milkmaker, with a result that the cow shown above broke the Eaton County Cow Testing Association record by **producing 93.53 lbs. of butterfat in 30 days.** The whole herd increased its production. Mr. Warren says:

> "Soon after feeding Milkmaker we discovered we were getting better results and saving money. If we had fed it throughout the entire test period last winter, I am convinced our records would have been better. We plan to depend entirely on Milkmaker next winter."

What Milkmaker Is

Michigan Milkmaker is a 24% protein, public formula dairy feed made by the Michigan State Farm Bureau. It is the best dairy ration for Michigan. Every one of the 10 milk-making ingredients is listed on every bag, pound for pound. You know exactly what you are buying. Not an ounce of filler in Michigan Milkmaker.

Cows fed Milkmaker give more milk and are healthier and stronger animals,—and your feed costs are lower.

How to Feed Milkmaker Next Winter at Summer Prices

You can contract now your winter feed requirements of Milkmaker through the Farm Bureau, for delivery in equal monthly shipments from September through March at **summer feed prices.** The price to you is guaranteed. Last February many wise buyers were feeding Milkmaker at September low prices and saving from $10 to $12 per ton. Last year Michigan farmers fed more than 8,000 tons of Milkmaker.

Pay for Milkmaker as You Get It

Under this plan the Farm Bureau buys Milkmaker ingredients in huge volume at summer low prices, mixes them at the best mill in the country and delivers Milkmaker fresh to you every month as you want it. You pay for the feed as it is delivered. This plan enables you to buy your winter feed at the lowest prices; it relieves you of a big cash outlay, storage expense, and insures fresh feed.

Your local co-operative association will contract your Milkmaker requirements, same as last year. See your local manager at once and arrange for your supply. If you have no co-operative association, write our Purchasing Department for information on how to co-operate with your neighbors in buying carlots of Milkmaker for car-door delivery. Write for our booklet on Milkmaker and feeding suggestions.

The time for this offer is limited. Later Milkmaker must be bought at prevailing market prices. Order now.

— pails x 3 gals —
x 8 lbs = ?
Anybody can do this sum

WHEN the July drought came along, one Iowa farmer tells us he had this little job day after day. He pumped two pailfuls (3-gallon pails) at a time, lugged them 100 feet, and trudged back to do it over again—and over and over and over again, till he had pumped and toted 250 gallons of water a day. What was his time worth?

It takes a HERCULES to get rid of the answer

That farmer lifted a ton and carried it a mile and a quarter. But a Hercules Engine would have done it all for about five cents—and done many another chore besides!

You haven't any clear idea at all what heavy work a Hercules Engine will do on your farm for a few cents a day. And it just about runs itself.

But you COULD get an idea, if you will just read the new book about the right power-plant for the farm—for any farm—for YOUR farm in particular. The book costs you nothing but asking for it. Where shall we mail it to reach you quickly?

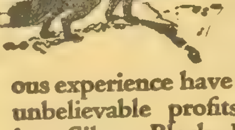
Fortunes in Fur Farming



Many without previous experience have made unbelievable profits raising Silver Black Foxes. Yet the industry is just in its infancy. Its possibilities are unlimited. Demand for Silver Black Fox fur increases steadily. Single pelts bring as high as $1000, and pure bred pedigreed Silver Black Foxes will litter two to seven every year. We have started others on the road to success and financial independence—we can start you too, no matter where you live. Remember the first and vital step is pure, quality stock. You owe it to yourself to investigate. Write for complete information and booklet, "Profits in Fur Farming". No obligation.

The Hunted Woman

By James Oliver Curwood

Michigan's Own and America's Formost Author of the Great Northwest

(Copyright by James Oliver Curwood

(Continued from August 4th issue.)

SHEER amazement made Aldous hold his fire in that first moment. Marie had said that two men were after MacDonald. He had heard three shots nearly a mile away, and she was still sobbing that DeBar was dead. That accounted for three. He had expected to see only Quade, and FitzHugh, and one other behind the tepee. And there were six! He counted them as they came swiftly out from the shelter of the rocks to the level of the plain. He was about to fire when he thought of Joanne and Marie. They were still behind him, crouching upon the ground. To fire from where he stood would draw a fusillade of bullets in their direction, and with another warning cry to Joanne, he sped twenty paces to one side so that they would not be within range. Not until then did the attacking party see him.

At a hundred and fifty yards he had no time to pick out Quade or Mortimer FitzHugh. He fired first at a group of three, and one of the three crumpled down as though his skull had been crushed from above. A rifle spat back at him and the bullet sang like a ripping cloth over his head. He dropped to his knees before he fired again, and a bullet clove the air where he had stood. The crack of rifles did not hurry him. He knew that the six had cartridges, and only six, and he aimed deliberately. At his second shot the man he had fired at ran forward three or four steps, and then pitched flat on his face. For a flash Aldous thought that it was Mortimer FitzHugh. Then along his gun barrel, he saw FitzHugh—and pulled the trigger. It was a miss.

Two men had dropped upon their knees and were aiming more carefully. He swung his sight to the foremost, and drove a bullet straight through his chest. The next moment something seemed to have fallen upon him with crushing weight. A red sea rose before his eyes. In it he was submerged; the roar if it filled his ears; it blinded him; and in the suffocating embrace of it he tried to cry out. He fought himself out of it, his eyes cleared and he could see again. His rifle was no longer in his hands, and he was standing. Twenty feet away men were rushing upon him. His brain recovered itself with the swiftness of lightning. A bullet had stunned him, but he was not badly hurt. He jerked out his automatic, but before he could raise it, or even fire from his hip, the first of his assailants was upon him with a force that drove it from his hand. They went down together, and as they struggled on the bare rock Aldous caught for a fraction of a second a scene that burned itself like fire in his brain. He saw Mortimer FitzHugh with a revolver in his hand. He had stopped; he was staring like one looking upon the ghost of the dead, and as he stared there rose above the rumbling roar of the chasm a wild and terrible shriek from Joanne.

Aldous saw no more then. He was not fighting for his life, but for her, and he fought with the mad ferocity of a tiger, as he struck, and choked, and beat the head of his assailant on the rock, he heard shriek after shriek come from Joanne's lips; and then for a flash he saw them again, and Joanne was struggling in the arms of Quade!

He struggled to his knees, and the man he was fighting struggled to his knees; and then they came to their feet, locked in a death-grip on the edge of the chasm. From Quade's clutch he saw Joanne staring at Mortimer FitzHugh; then her eyes shot to him, and with another shriek she fought to free herself.

For thirty seconds of that terrible drama Mortimer FitzHugh stood as if hewn out of rock. Then he sprang toward the fighters.

In the arms of John Aldous was the strength of ten men. He twisted the head of his antagonist under his arm; he braced his feet—in another moment he would have flung him bodily into the roaring maelstrom below. Even as his muscles gathered themselves for the final effort he knew that all was lost. Mortimer FitzHugh's face leered over his shoulder, his demonias intention was in his eyes before he acted. With a cry of hatred and of triumph he shoved them both over the edge, and as Aldous plunged to the depths below, still holding to his enemy, he heard a last piercing scream from Joanne.

As the rock slid away from under his feet his first thought was that the end had come, and that no living creature could live in the roaring maelstrom of rock and flood into which he was plunging. But quicker than that he dashed thru space his mind worked. Instinctively, without time for reasoning, he gripped at the fact that his one chance lay in the close embrace of his enemy. He hung to him. It seemed that they turned over and over a hundred times in that distance of fifty feet. Then a mass of twisting foam broke under him, and up out of it shot the head of one of the roaring monsters of rock that he and Joanne had looked upon. They struck it fairly, and Aldous was uppermost. He felt the terrific impact of the other's body. The foam boiled upward again, and they slipped off into the flood.

Still Aldous held to his enemy. He could feel that he was limp; he no longer felt the touch of the hands that had choked him, or the embrace of the arms that had struggled with him. He believed that his antagonist was dead. The fifty-foot fall, with the rock splitting his back, had killed him. For a moment Aldous still clung to him as they sank together under the surface, torn and twisted by the whirling eddies and whirlpools. It seemed to him that they would never cease going down, that they were sinking a vast distance.

Dully he felt the beat of the rocks. Then it flashed upon him that the dead man was sinking like a weighter thing. He freed himself. Fiercely he struggled to bring himself to the surface. It seemed an eternity before he rose to the top. He opened his mouth and drew a great gulp of air into his lungs. The next instant a great rock reared like a living thing in his face; he plunged against it, was beaten over it, and again he was going down—down—in that deadly clutch of maelstrom and undertow. Again he fought, and again he came to the surface. He saw a black, slippery wall gliding past with the speed of an express train. And now it seemed as though a thousand clubs were beating him. Ahead of him were rocks—nothing but rocks.

He shot through them like a piece of driftwood. The roaring in his ears grew less, and he felt the touch of something under his feet. Sunlight burst upon him. He caught at a rock, and hung to it. His eyes cleared a little. He was within ten feet of a shore covered with sand and gravel. The water was smooth and running with a musical ripple. Waist-deep he waded through it to the shore, and fell down upon his knees, with his face buried in his arms. He had been ten minutes in the death-grip of the chasm. It was another ten minutes before he staggered to his feet and looked about him.

His face was beaten until he was almost blind. His shirt had been torn from his shoulders and his flesh was bleeding. He advanced a few steps. He raised one arm and then the other. He limped. One arm hurt him when he moved it, but the bone was sound. He was terribly mauled, but he knew that no bones were broken, and a gasp of thankfulness fell from his lips. All this time his mind had been suffering even more than his body. Not for an instant, even as he fought for life between the chasm walls, and as he lay half unconscious on the rock, had he forgotten Joanne. His one thought was of her now. He had no weapon, but as he stumbled in the direction of the camp in the little plain he picked up a club that lay in his path.

That MacDonald was dead, Aldous was certain. There would be four against him—Quade and Mortimer FitzHugh and the two men who had gone to the mountain. His brain cleared swiftly as a part of his strength returned, and it occurred to him that if he lost no time he might come upon Joanne and her captors before the two men came from killing old Donald. He tried to run. Not until then did he fully realize the condition he was in. Twice in the first hundred yards his legs doubled under him and he fell among the rocks. He grew steadily stronger, though each time he tried to run or spring a distance of a few feet his legs doubled under him like that. It took him twenty minutes to get back to the end of the plain, and when he got there it was empty. There was no sign of Quade or FitzHugh, or of Joanne and Marie; and there was no one coming from the direction of the mountain.

He tried to run again, and he found that over the level floor of the valley he could make faster time than among the rocks. He went where he had dropped his rifle. It was gone. He searched for his automatic. That, too, was gone. There was one weapon left—a long skinning-knife in one of the panniers near the tepee. As he went for this, he passed two of the men whom he had shot. Quade and FitzHugh had taken their weapons, and had turned them over to see if they were alive or dead. They were dead. He secured the knife, and behind the tepee he passed the third body, its face as still and white as the others. He shuddered as he recognized it. It was slim Baker. His rifle was gone.

More swiftly now he made his way into the break out of which the assailants had come a short time before. The thought came to him that he had been right, and that MacDonald, in spite of all his years in the mountains, had been fatally wrong. Their enemies had come down from the north, and this break led to their hiding-place. Through it Joanne must have been taken by her captors. As he made his way over the rocks, gaining a little more strength with each step, his mind tried to picture the situation that had now arisen between Quade and Mortimer FitzHugh. How would Quade, who was mad for possession of Joanne, accept FitzHugh's claim of ownership? Would he believe his [illegible]. Would he even believe Joanne if, to save herself from him, she told him FitzHugh was her husband? Even if he believed them, would he give her up? Would Quade allow Mortimer FitzHugh to stand between him and the object for which he was willing to sacrifice everything?

As Aldous asked himself these questions his blood ran hot and cold by turns. And the answer to them drew a deep breath of fear and of anguish from him as he tried again to run among the rocks. There could be but one answer: Quade would fight. He would fight like a madman, and if this fight had happened and FitzHugh had been killed Joanne had already gone utterly and helplessly into his power. He believed that FitzHugh had not revealed to Quade his relationship to Joanne while they were on the plain, and the thought still more terrible came to him that he might not reveal it at all, that he might repudiate Joanne even as she begged upon her knees for him to save her. What a revenge it would be to see her helpless and broken in the arms of Quade! And then, both being beasts——

He could think no farther. The sweat broke out on his face as he bobbled faster over a level space. The sound of the water between the chasm walls was now a thunder in his ears. He could not have heard a rifle-shot or a scream a hundred yards away. The trail he was following had continually grown narrower. It seemed to end a little ahead of him, and the fear that he had come the wrong way after all filled him with dread. He came to the face ef tho mountain wall, and then, to his left, he saw a crack that was no wider than a man's body. In it there was sand, and the sand beaten by footprints! He wormed his way through, and a moment later stood at the edge of the chasm. Fif'y feet above him a natural bridge rock spanned the huge cleft through which the stream was rushing. He crossed this, exposing himself openly to a shot if it was guarded. But it was not guarded. This fact convinced him that MacDonald had been killed, and that his enemies believed he was dead. If MacDonald had escaped, and they had feared a possible pursuit, some one would have watched the bridge.

The trail was easy to follow now. Sand and grassy earth had replaced rock and shale; he could make out the imprints of feet—many of them—and they led in the direction of a piece of timber that apparently edged a valley running to the east and west. The rumble of the torrent in the chasm grew fainter as he advanced. A couple of hundred yards farther on the trail swung to the left again; it took him around the end of a huge rock, and as he appeared from behind this, his knife clutched in his band, he dropped suddenly flat on his face. and his heart rose like a lump in his throat. Scarcely fifty yards above him was the camp of enemies! There were two tepees and piles of saddles and panniers and blankets about them, but a soul that could he see. And then, suddenly, there rose a voice bellowing with rage, and he recognized it as Quade's. It came from beyond the tepee, and he rose quickly from where he had thrown himself and ran forward, with the tepee between him and those on the other side. Close to the canvas he dropped on his knees and crawled out behind a pile of saddles and panniers. From here he could see.

So near that he could almost have touched them were Joanne and Marie, seated on the ground, with their backs toward him. Their hands were tied behind them. Their feet were bound with pannier ropes. A dozen paces beyond them were Quade and Mortimer FitzHugh.

The two men were facing each other, a yard apart. Mortimer FitzHugh's face was white, a deadly white, and he was smiling. His right hand rested carelessly in his hunting-coat pocket. There was a sneering challenge on his lips; in his eyes was a look that Aldous knew meant death if Quade moved. And Quade was like a great red beast ready to spring. His eyes seemed bulging out on his cheeks; his great hands were knotted; his shoulders were hunched forward, and his mottled face was ablaze with passion. He was alone with Quade and Mortimer FitzHugh.

Then FitzHugh spoke, very quietly, a little laughingly; but his voice trembled, and Aldous knew what the hand was doing in the hunting-coat pocket.

"You're excited, Billy," he said. I'm not a liar, as you've very impolitely told me. And I'm not playing you dirt, and I haven't fallen in love with the lady myself, as you seem to think. But she belongs to me, body and soul. If you don't believe me—why, ask the lady herself, Billy!"

As he spoke, he turned his sneering eyes for the fraction of a second toward Joanne. The movement was fatal. Quade was upon him. The hand in the coat pocket flung itself upward, there followed a muffled report, but the bullet flew wide. In all his life Aldous had never heard a sound like the roar that came from Quade's throat then. He saw Mortimer FitzHugh's hand appear with a pistol in it, and then the pistol was gone. He did not see where it went to. He gripped his knife and waited, his heart beating what seemed like smothered explosions as he watched for the opportunity which he knew would soon come. He expected to see FitzHugh go down under Quade's huge bulk. Instead of that, a

August a fist shot upward and Quade's back as if broken from his [illegible] sprang a step backward, and in the movement his heel caught the edge of a pack-saddle. He stumbled, almost fell, and before he could recover himself Quade was at him again. This time there was something in the red brute's hand. It rose and fell once—and Mortimer FitzHugh reeled backward with a moaning cry, swayed for a second or two on his feet, and fell to the ground. Quade turned. In his hand was a bloody knife. Madness and passion and the triumphant joy of a demon were in his face as he glared at his helpless prey. As Aldous crouched lower his shoulder touched one of the saddles. It slipped from the pile, one of the panniers followed it, and Quade saw him. There was no reason for concealment, and as Quade stood paralyzed for a moment Aldous sprang forth into the space between him and Joanne. He heard the cry that broke strangely from her lips but he did not turn his head. He advanced upon Quade, his head lowered, the long skinning-knife gleaming in his hand.

John Aldous knew that words would avail nothing in these last few minutes between him and Quade. The latter had already hunched himself forward, the red knife in his hand poised at his waistline. He was terrible. His huge bulk, his red face and bull neck, his eyes popping from behind their fleshy lids, and the dripping blade in the shapeless hulk of his hand gave him the appearance as he stood there of some monstrous gargoyle instead of a thing of flesh and blood. And Aldous was terrible to look at, but in a way that wrung a moaning cry from Joanne. His face was livid from the beat of the rocks; it was crusted with blood; his eyes were partly closed, and what remained of his shirt was drenched with blood that still ran from the deep cuts in his arms and shoulders. But it was he who advanced, and Quade who stood and waited.

Aldous knew little or nothing of knife-fighting; and he realized, also, that there was a strange weakness in his arms and body caused by his battle with the maelstroms in the chasm. But he wrestled a great deal with the Indians of the north, who fought as their half-wolf sledge dogs fought, and he employed their methods now. Slowly and deliberately he began to circle around Quade, so that Quade became the pivot of that circle, and as he circled he drew nearer and nearer to his enemy; but never in a frontal advance. He edged inward, with his knife-arm on the outside. His deadly deliberateness and the steady glare of his eyes discomfited Quade, who suddenly took a step backward.

It was always when the Indian made this step that his opponent darted in; and Aldous, with this in mind, sprang to the attack. Their knives clashed in midair. As they met, hilt to hilt, Aldous threw his whole weight against Quade, darted sidewise, and with a terrific lunge brought the blade of his knife down between Quade's shoulders. A straight blade would have gone from back to chest through muscle and sinew, but the knife which Aldous held scarcely pierced the other's clothes.

Not until then did he realize the tremendous odds against him. The curved blade of his skinning-knife would not penetrate! His one hope was to cut with it. He flung out his arms before Quade had fully recovered, and blind luck carried the keen edge of the knife across his enemy's pouchy cheek. The blood came out in a spurt, and with a terrible cry Quade leaped back toward the pile of saddles and panniers. Before Aldous could follow his advantage the other had dropped his knife and had snatched up a four-foot length of a tepee pole. For a moment he hesitated while the blood ran in a hot flood down his thick neck Then with a bellow of rage he rushed upon Aldous

(Continued September 1.)

CHANGING TIMES

By JOHN T. BARTLETT

THE FALLACY OF CHEAP LAND

DON'T be sad—when you go to buy a farm in your section—that good land costs real money. Be glad!

Anyone can react, humanly, to the lure of a cheap price. It is easy to see the "bargain" there. What requires keen, business judgement is the ability to see a bargain in land that is high in price. The men that do nowadays, are often the farmers who prosper most.

I have just had, in mountain sections of Colorado, visited by automobile, a text and a whole sermon in the fallacy of cheap land, and human frailty before the lure of it. In mountain valleys, there are, scattered here and there, patches of varying area of excellent agricultural land. Available, free, under a homestead act, the land-hungry rushed in to occupy it. Some of it made economic farming units. Some did not.

Before the land hunger of a nation, the good free land was exhausted. After many families had eagerly occupied land they could not possibly make a decent living on, owing to distance from town or other difficulties, the government classified land, and refused to permit homesteading where there was not economic opportunity for it.

Scattered about in many corners of the Rockies now are abandoned homesteads, the log cabins rotting, which became the property of the homesteader FREE. The land cost the settler nothing, yet he could not make a living. And on similar such land, because it would be FREE, people constantly are clamoring to go, storming the government offices writing letters. In all literature, so advertisers say there is no word that pulls like FREE. FREE land to most people is as loco to livestock.

"Bargain" land in the older farming communities has something of the same appeal, and inherently it is usually just as treacherous.

We buy land for what we can make out of it. And farm real profits, you'll notice if you will observe, have a way of lurking in land which costs real money.

"A GREAT PLACE TO GROW UP"

I MEET three kinds of people as regards the farm. One kind has always lived on the farm, still does. Another kind came to the farm after life in the city. Still another kind now lives in the city, after living for years on the farm. Some of these are dissatisfied where they are, and some are satisfied. But all the thoughtful parents, I find, are agreed in this: The farm is a great place for boys and girls to grow up.

A big city bank president remarked to me last week, actually with wistfulness in his voice, "The farm is a great place for children to grow up. I wish mine were growing up on one!"

He knew of the desirable farm things that his own children were missing—and of undesirable city things which they were getting.

The farm is a mighty good place for growing children—especially if we take pains to make it just as good as we can make it.

And it is true whether you plan to have your boy grow up a farmer or to enter a town business or profession. Many of the country's most successful and wealthy business men were farm boys. There is a reason. There is no place like the farm, where Father and Mother are constantly trading in fluctuating markets, to teach youngsters from the bottom up the fundamental principles of trade. They are bound to pick up a lot, hit or miss. They'll pick up much more if you'll take pains to talk to them at opportune moments on the subject.

The farm is a great place for our boys and girls to grow up. And while we're about it, let's make it better still!

THE EXPERIENCE POOL

Bring your everyday problems in and get the experience of other farmers. Questions addressed to this department are published here and answered by you, our readers, who are graduates of the School of Hard Knocks and who have their diplomas from the College of Experience. If you don't want our editor's advice or an expert's advice, but just plain, everyday business farmers' advice, send in your question here. We will publish one each week. If you can answer the other fellow's question, please do so, he may answer one of yours some day! Address Experience Pool, care The Business Farmer, Mt. Clemens, Mich.

"SLIME IN SEPARATOR"

I READ this article in M. B. F. July 21st issue and as I have an easier way I'm sending it along. I have to use hard water but I never use soap or any kind of soap powder on milk dishes. I use one tablespoon of common baking soda in the warm wash water sufficient to wash separator clean, and never bother to rinse it before washing. I have no trouble whatever with slime forming on dish cloth or in wash water. It is best for rinsing the strainers. It also keeps them white and soft, using a small wash board just large enough to use in the milk pail if you can buy one. I would like to get one about ¾ size. If some of the readers can give me information at to where I can purchase that size I will be very grateful.—Mrs. L. S., Pierson, Mich.

FIRE EXTINGUISHERS FREE

For All New Gleaner Fire Insurance Members

Insure your farm buildings and personal property with the Gleaner Fire Insurance Company, Detroit. This company is operated on the plan of paying assessments in advance. All members must pay three months in advance, but if they prefer they may pay, six, nine or twelve months. That is optional with the members. The highest rate we ever assessed in the Rodded Class was $3.30 per $1,000 and the lowest $1, and only six assessments were made in seven years. The advance rate as established, which may be paid every three months is at the rate of 82 cents; six months rate $1.63; nine months rate $2.45; one year $3.26 for each $1,000 insurance carried. Any member can pay as far in advance as he prefers. We hope eventually to decrease this rate.

In placing the business on the advance assessment basis we get rid of those who insure their property and then sneak out leaving their assessments for others to pay. All the "deadwood" is eliminated. We shall have less losses because the fellows who insure and then don't pay their assessments ob the company insuring them. We have cleaned house and have made room for the honest farmer who wants full blanket policy protection at the lowest possible cost; who wants to be associated only with those who are insured for an honest purpose and pay their honest obligations.

The Gleaner Fire Insurance Company insures personal property anywhere or in any building on the farm described in the application and livestock anywhere in the State. Losses are paid just as soon as adjusted in the full amount agreed upon by the insured and adjuster. We have no interest to pay on borrowed money. Assessments being paid in advance keeps plenty of money on hand to meet all losses and expenses promptly.

We have built a reserve fund of over $9,000 from the membership fees paid the company by new members. Other mutual companies insuring farm risks give all this to the officers and agents of the company. This money is in the Savings Department of the National Bank of Commerce, Detroit, drawing interest. It is growing and when it reaches the amount of one yearly assessments, thereafter all money received from new members will go toward lessening the assessments of the members.

The financial condition of the company is the best since it was organized. All losses paid and plenty of money to meet all obligations as they occur. Our losses are much lower than during years previous which means that assessments will eventually be lower.

Our plan of going on the cash in advance basis has been commended by the State Insurance Department, and the laws governing the company was submitted to them for suggestion before adopting by the Board of Directors. We should be pleased to have any prospective member to make ull inquiry as to our standing in every respect before joining if he so desires.

The cost of joining our company is small. The policy and membership fee, also each member pay a small amount into the reserve fund, the amount being based upon the amount of insurance taken. Now that we have over $9,000 laid away at interest, in our reserve fund, it would be unfair to let new members come in and share this splendid reserve fund start without also contributing something to the fund. But remember that new members have only one-fourth of a years advance assessment to pay. This plan is original with us. It sometimes comes mighty hard to pay for a full year at one time. Anyone can always pay his assessments when it is split up in four payments. It is easy to pay our way.

We insure buildings for three-fourths of the value as they stand today, with due allowance for depreciation and use since built. We do not insure old buildings for enough to replace them new. We are always glad to carry full value on all personal property. Only farmers with a good standing in their community as to honesty and integrity may become members. We have two classes, rodded and unrodded. Only one policy fee is charged where the property is insured in both classes.

We want every insurance risk we are carrying protected against the ravages of fire in every possible manner. Farmers are outside the reach of fire departments. When a fire starts in or about any farm building, unless it is checked immediately, such headway is gained that the building and contents is soon reduced to a heap of smouldering ashes. No help at hand to save the buildings.

Thousands of buildings are equipped with lightning rods to save their destruction from lightning. Few buildings have fire extinguishers. They are fully as essential as lightning rods. We want our members to own them that our losses may be reduced and assessments be lessened. We can say unhesitatingly that fully fifty per cent of the fires for which we pay thousands of dollars to settle, might have been prevented had a good fire extinguisher been near by. All fires are small when they start. No farm should be without a few dependable extinguishers placed conveniently about the buildings so that they may be quickly put into service in case of fire.

After a long and thorough investigation of the different makes and the prices charged we have finally decided on the "Safety-First" extinguisher using dry powdered chemical. It is the simplest and most reliable extinguisher we have seen. It can be used by women and children, and is positively guaranteed to put out fire. It does not deteriorate but retains its strength forever. Is not affected by the weather. Does not destroy fabrics and is perfectly harmless to persons. No acids, no gas or chemicals. Will extinguish gasoline, oil, naphtha and other fires instantaneously.

The "Safety-First" extinguisher is 2x22 inches and weighs three pounds. Hang anywhere in the house or barn. The top has a ring attached. The ring hangs on a nail or hook. When wanted for use, simply pull the extinguisher down and the top hangs to the ring and nail or hook and is thus automatically opened and ready for instantaneous use. The extinguisher is metal and can be refilled.

The price of this extinguisher is $3.00. We will send every new member joining this company one of these extinguishers absolutely free of charge for every $2,000 insurance taken out. If you take out $4,000 you get two extinguishers, and $6,000, three, and so on. The Gleaner Fire Insurance Company is interested only in furnishing its members with these extinguishers for the sole purpose of better protection of its risks and not for profit. We want to cut down losses and save the buildings of our members. It will mean a tremendous saving to our company. It will lessen our losses and your assessments greatly.

Join our company now. It is in the best condition financially and otherwise that it has ever been. It is getting better every day in every way. If you are interested, fill out the enclosed coupon and mail to us and we will have our nearest agent call on you and more fully explain the advantages of our fire insurance protection.

JAMES SLOCUM, Secretary:

MARKET FLASHES

MARKET SUMMARY

Wheat and oats gain on opening day of week. Corn declines 1c. Oats unchanged. Beans advance. Potatoes easy. Demand good for butter and eggs and market firm. Berries firm and scarce. Poultry easy. Dressed calves in demand. All lines of live stock active on opening of current week and prices advance.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

From the Farmer Standpoint

CONDITIONS vary widely in farming sections, the most unsatisfactory reports coming from districts where wheat is the principal crop grown, although prices for hogs have undergone a mighty fall, due to overproduction. There does not appear to be much probability that the farmers will materially lower their numbers of sows bred although some reductions may be expected, and there is danger of another year of large production, with promise of a fine, large crop of corn and fodder in most of the corn states. There is reason to believe that less acreage will be devoted to wheat owing to the fall in prices to a level that leaves no profit, but most farmers will doubtless devote a fair number of acres to this grain. In most parts of the country crops are doing finely, favored by the weather, and, making due allowance for the damage to crops in some sections, the outcome looks promising. It cannot be too often repeated that diversified farming is the way to avoid disastrous years, the one crop farmers being always in danger of suffering severe losses. In several states farmers have good reason for regretting that they bought tracts of land at greatly inflated war prices, such land having declined materially in value, while taxes have increased. Dairy industries are doing well, and large lines of prime creamery butter have been sold at good prices and placed in cold storage for later consumption at high quotations. The government reports a great falling off in honey production, the yield up to a month ago having been little more than half of that of a year ago for the same time. The poultry industry is growing in importance, and it is bringing in lots of money, the consumption of chickens and eggs being greater than ever before. Grapes are in the largest demand by far ever known, and California growers of wine grapes report sales at $50 to $90 a ton. Michigan farmers are producing large quantities of fruits and berries, and there is a ready market in Chicago.

A message from Topeka, Kansas, says: "Middle west retailers handling the line of Hart Schaffner & Marx are accepting wheat elevator receipts at $1 a bushel in exchange for merchandise here. The arrangement is reported to be popular. Barter is limited to 100 bushels to a grower.

Commission Rates Lower

Reductions in live stock commission rates at the Chicago, Omaha, Kansas City and St. Paul markets, estimated to mean a saving approximately of $750,000 annually to live stock producers and shippers, is announced by arbitrators of the packers and stockyards administration of the Department of Agriculture. The new rates on cattle for Kansas City, Omaha, and St. Paul represent a reduction of from $1 to $2 a car and from 10 to 15 cents a head and for Chicago from $1 to $3 a car and 15 cents a head. The reduction on calf rates at the four markets ranges from $1 to $4 a car and from 5 to 10 cents a head, and on hogs from $1 to $4 a car and 13 to 15 cents a head. The sheep rates at Kansas City and St. Paul are made the same as those now obtaining at Omaha and Chicago, which are unchanged.

The Wheat Outlook

It seems to be generally admitted that further extension of credits will fail of improving the European market for American wheat, and until things undergo a change for the better over there our farmers must depend mainly upon the home demand. Speculation has become far smaller than it was before federal legislation was enacted controlling such trading, and the market most of the time has been more bearish than bullish. Our population is growing steadily through births and immigration, and in time this is bound to tell in increasing home consumption of wheat and other farm crops. Meanwhile buying by foreigners except in England is expected to be mainly for current requirements. Considerable wheat is being fed to hogs in severable states, its cheapness being the reason. Marketing the new crop of wheat goes on actively, and the visable supply is growing at a rapid pace. During a recent week there was an increase of 7,884,000 bushels in the wheat stocks in sight in the United States, running the supply up to 36,693,000 bushels, comparing with 22,433,000 bushels a year ago. Fair amounts of wheat and flour are being exported, and considerable quantities of oats are going out of the country, but corn exports have almost ceased as the supply of old corn is about exhausted. Rye is so low priced that it is being exported extensively to Germany and Scandinavian countries. In parts of the country farmers are planning on raising a better grade of wheat, one that will grade higher and yield more grain to the acre. The government crop report for August makes a fine showing for corn, and the combined crops of all grains are estimated at 5,358,000,000 bushels comparing with 5,243,000,000 bushels harvested last year. The wheat crop is given as 793,000,000 bushels, being 69,000,000 bushels less than last year. The rye crop is the smallest in five years, while the barley crop is larger, and the oats crop is 115,000,000 bushels larger than last year. The corn crop is estimated at 2,982,000,000 bushels, comparing with last year's crop of 2,891,000,000 bushels. Business in alfalfa meal is much larger than a year ago, sales extending to all over the country.

Boom in Cattle Prices

Although the receipts of cattle in western markets of late have been fairly large, the local and shipping demands have been so unusually large for well finished beef cattle that prices have undergone a rather unexpected boom quite recently, landing prime beeves carrying plenty of weight at the highest prices paid since December, 1922. Barring war time period, prices have been unusually high, with choice to prime steers selling at $11 to $12.45 and the best yearlings at $12.15, while steers grading as good sold at $10.25 and upward and medium grade steers at $9 to $10.20. A common to fair class of steers sold at $6.50 to $8.95, and inferior little steers brought $4.50 to $6.40, the bulk of the steers bringing $9 to $12. Advances in prices did not include the multitude of grassy lots, these selling slowly. Butcher stock shared in the advance, cows and heifers going at $3.40 to $10.65, with canners and cutters selling at $2 to $3.35 and bulls at $3 to $7.50. Calves of the better class advanced sharply, common to prime lots bringing $5 to $12.75. Stockers and feeders averaged 25 cents higher, although buying was not at all brisk, common to choice lots going at $3.50 to $7.65. Fair numbers of northern range cattle sold at $6 to $8.25, the commoner lots selling as feeders. Some good feeders brought $7, and range cows and heifers sold at $3.50 to $5.25.

Good Demand for Hogs

While recent Chicago receipts of hogs ran far ahead of a year ago, they fell far below those for the previous week, and this checked weakness in prices, as there was a good demand. The choicer lots showed greatest firmness, as they were the most wanted by local packers and eastern shippers, and there was a wide range in prices, the best prices being paid for light hogs, with the best heavy butchers selling 30 cents below them. Chicago receipts average around 240 pounds in weight, and many heavy old sows sell around bottom prices. The consumption of fresh and cured hog meats was never larger, and lard is particularly active, with large recent exports to Germany and Holland. Recent Chicago receipts of hogs were much smaller than a week earlier, while far larger than a year ago. Good local and outside buying made a little higher prices, with late sales at $5.75 to $8, comparing with $7 to $10.50 a year ago. Combined receipts in twenty markets for the year to late date amount to 25,248,000 hogs, comparing with 20,278,000 a year ago. At this time in 1915 hogs sold at $5.75 to $7.75. If your hogs are doing well, make them good before selling, provided you have feed.

Breeding Ewes Wanted

There is a big call in the Chicago market for feeding lambs, with nowhere near enough to go around, and sharp advances in prices have taken place, country buyers paying about as high figures for the best feeders as were paid for prime killers. The demand for breeding ewes is greatly increased, and prices are soaring because of their scarcity. Heavy lambs are selling at a sharp discount, some of them weighing over 100 pounds. Lamb and sheep receipts last week were unusually small, but late sales of lambs were made at $11 to $12.75, the top comparing with $13 not long back. Feeding lambs sold at $12 to $12.75 and breeding ewes at $6 to $11.

WHEAT

Wheat prices continue to remain around to dollar mark, but in the majority of cases it is above instead of below as two weeks ago. Most markets show a gain of around 2 cents. Wall Street is becoming alarmed over the fact that wheat is selling for a dollar and below and a careful study of the situation is being made. Wall Street knows that the farmers as a whole have not made any money since 1919; that many of them lived on the surplus accumulated during the war period when their products found a ready market at a good price; that when this surplus was gone many of them secured loans from their banks, and in many states these loans have not been paid; that conditions indicate that the wheat farmer will not get enough out of his crop this year to pay his debts. Of course all of this would not apply in all states where wheat is raised because the banks in several states, Michigan included, state that farmers have paid their notes as they came due and in only a few cases have they been asked to renew notes. The price turned upward slightly toward the end of last week owing to reports of considerable damage to grain standing in the shock in one of the largest wheat producing states in the Union. Whether the damage is enough to affect the market to any extent remains to be seen. The domestic cash wheat situation is strong at present. Millers are the most active bidders for the current run of wheat because of its quality. Country offerings to arrive are light and decreasing almost daily. Export trade is slow.

Prices

Detroit—Cash No. 1 red, $1.06; No. 2 red, No. 2 white and No. 2 mixed, $1.05; No. 3 red, $1.02.

Chicago—Cash No. 2 red, $1.00¾@1.02½; No. 2 hard, $1.00¾@1.04½.

New York—Cash No. 2 red winter, $1.17; No. 2 hard winter, $1.15.

Prices one year ago—Detroit, Cash No. 2 red, $1.06; No. 2 white and No. 2 mixed, $1.04.

CORN

There is little interest shown in corn. Some buying is reported but there were enough sellers to offset any strength that appeared in the market. Country offerings to arrive have been nil. Crop news is favorable in general but some damage is reported to have resulted from recent heavy rainfall.

Prices

Detroit—Cash No. 2 yellow, 93c; No. 3, 92c; No. 4, 90c.

Chicago—Cash No. 2 mixed, 87½@88c; No. 2 yellow, 88¼@88½c.

New York—Cash No. 2 yellow and No. 2 white, $1.05¾; No. 2 mixed, $1.04¾.

Prices one year ago—Detroit, Cash No. 2 yellow, 70c; No. 3, 69c; No. 4, 68c.

OATS

Oats have followed the trend of other grains and there has been little change in prices at some points while at others prices are the same as they were two weeks ago. Domestic shipping demand has been fair at Chicago and country offerings to arrive nil. Liberal receipts are expected this week which will have a bearish influence on the trend of the market.

Prices

Detroit—Cash No. 2 white, 48c; No. 3, 46½c; No. 4, 45c.

Chicago—Cash No. 2 white, 37¼@38½c; No. 3, 36¼@37½c.

New York—Cash No. 2 white, 52c.

Prices one year ago—Detroit, Cash No. 2 white, 35c; No. 3, 33c.

RYE

The demand for rye increased during the two weeks ending August 11th and prices advanced for the first time in some weeks and advances held in each case. Gains at Detroit last week amounted to 2 cents.

Prices

Detroit—Cash No. 2, 71½c.

Chicago—Cash No. 2, 65@66c.

Prices one year ago—Detroit, Cash No. 2, 75c.

BEANS

Michigan beans occupy an unusually strong position in the Nation's crop this year, according to the August report issued by Verne H. Church, Agricultural Statistician and L. Whitney Watkins, Commissioner of Agriculture. Our state is credited with 45 per cent of the total crop of 15,270,000 bushels, or 6,825,000 bushels. California is second with 4,359,000; Colorado is third with 1,486,000; New York is fourth with 1,479,000; Idaho is fifth with 607,000; New Mexico is sixth with 313,000; and Wisconsin is seventh with 143,000 bushels.

The greater part of California's crop and a large portion in other western states is made up of varieties other than the white pea bean, and it is probable that about 65 per cent of the entire production of this variety will come from Michigan this year. With orderly marketing and moderate prices the competition from foreign beans will be largely eliminated and a strong domestic consumption created. Such a condition should warrant fair prices throughout the marketing season.

The average price paid on July 15, for the country as a whole, was $3.67. New York farmers received an average price on that date of $4.40 per bushel; Michigan farmers, $3.65; Wisconsin farmers, $4.55; Colorado farmers, $4.60; California farmers, $3.30; Idaho farmers, $4.-30; and New Mexico farmers, $5.40.

Prices

Detroit—C. H. P., $5.00 per cwt.

Chicago—C. H. P., $5.10@5.50 per cwt.

Prices one year ago—Detroit, C. H. P., $8.75 per cwt.

POTATOES

The discouraging price conditions that farmers experienced last year in connection with their potato crop are not likely to be duplicated this year. A crop of 451,185,000 bushels was produced in the United States in 1922, and if it had all been moved there would have been no spring market at any price. High freight rates and car shortage in some sections prevented large quantities being shipped, particularly from the Western states where the largest increase in production took place. The existence of the large crop being known, many Michigan farmers began feeding their potatoes to live stock which also benefited the market situation. These conditions enabled the eastern market to be cleaned up fairly well in the spring and produced a marked advance in price, something that was scarcely expected and which only lasted until the consuming markets were again filled with a large supply.

The outlook is quite different this year. The severe losses sustained by growers in the western states caused them to reduce the acreage planted and Michigan and Wisconsin growers made a moderate reduction in their acreages. While the crop depends upon future moisture conditions, the present prospect is for a production of 379,558,000 bushels which does not exceed the country's normal consumption.

The Michigan crop is placed at 29,297,000 bushels as compared with 37,842,000 grown last year, according to the August report issued by L. Whitney Watkins, Commissioner of Agriculture and Verne H. Church, Agricultural Statistician for Michigan. The figures for the other leading potato states are as follows: Maine, 26,045,000; New York, 30,365,000; Wisconsin, 27,-211,000; Minnesota, 37,510,000; North Dakota, 12,621,000; Montana, 4,754,000; Colorado, 16,671,000; Idaho, 12,081,000 bushels.

Prices

Detroit—Michigan, $1.30 @ 1.35 per cwt.

Chicago—Kansas & Missouri, $2 @2.20 per cwt.; Early Ohio, $1.50 @1.65 per cwt.

Prices one year ago—Detroit, Michigan, $1.65 per cwt.

HAY

Markets show a decidedly firmer tone due to lighter receipts. The supply of good merchantable hay is below requirements in most markets and prices are steady and firm. Trading is fairly steady with good grades purchased immediately on arrival. Lower grades move slowly except where better sorts are in scant supply.

Prices

Detroit—No. 1 timothy, $19.50@20; standard, $18.50@19; No. 2 timothy, $17.50@18; No. 3, $13@15; Light clover mixed, $18.50@19; No. 1 clover mixed, $17@18; No. 1 clover, $15@16.

Chicago—No. 1 timothy, $25@26; No. 2, $21@24; No. 3, $15@18; No. 1 light timothy & clover mixed, $21@24; No. 1 clover, $18@20.

New York—No. 1 timothy, $29@30; No. 2, $27@28; No. 3, $24@25; No. 1 light clover mixed, $28; No. 2, $26@27.

Prices one year ago—Detroit, Standard timothy, $20@21; No. 2 timothy, $19@20; light mixed, $20@21; No. 1 clover, $14@15.

PRITCHARD'S
WEATHER
FORECAST
INTERPRETED BY THE STARS

Week of August 19

EARLY days of this week will be fair with moderate temperatures during the day but cool nights and mornings.

About Monday or Tuesday temperatures will be rising decidedly in Michigan. The barometer will be low and as a result light showers and high winds will be in evidence.

About the middle of the week temperatures will take a sudden drop in this state with a possibility of light frosts in northern lower peninsula of Michigan. Last half of this week will average bright, fair and settled weather.

Week of August 26

First half of this week will be warm with scattered showers and thunder storms but increasing to heavy amounts in large local sections. Coupled with these rain storms will be high and destructive winds.

After the middle of this week an area of high barometric pressure will move over the state inducing a sudden change to cooler. This condition most always causes several days of unseasonably cool, fair weather in Michigan, especially during the nights and mornings.

Next Six Months Cool

Going over the weather conditions for the coming six months in a general manner, we believe, that from now until early part of next year, at least, the weather will average cool to cold with the temperature in Michigan during this period ranging below normal. This does not mean there will be no warm weather during this period but that the cool or cold weather will out-weigh the former when normals for this period are taken into consideration.

MICHIGAN BEAN INTERESTS BACK ADVERTISING PLAN

(Continued from Page 3)

as well as the bean growers of Michigan will be very much interested in the promise you make in the last paragraph of your article to print the names of those who have not signed as well as the names of those who have and if there is anything you want us to do by assisting you to secure any data or information that will be of assistance to you, please feel free to call on us.—Art Goulet, Mgr., Orr Bean and Grain Company, Midland, Mich.

BUISCH COMMENDS M. B. F.

AS one of the committee representing the Michigan interests in the proposed national advertising campaign to help and increase the consumption of domestic grown beans, I want to compliment you on the thoroughness and direct manner in which you expressed the sentiment of the majority in your recent editorial.

Your suggestion to print the names of contributors in your paper is a very good one. Personally I can think of no good reason why a Michigan dealer should refuse to sign the agreement because as a matter of fact, the cost comes out of the consumer and the dealer acts only as an agent handling the funds and at the same time benefits by increased business. — Christian Buisch, Lansing, Mich.

CROP REPORTS

GENESEE—Farmers are busy threshing oats and barley. Oats are turning out quite good. The second cutting of alfalfa has not been very heavy. Corn is looking good at this time. There is an extremely large acreage of beans planted this year but the crop is only looking fair to good on the average farm. —Clarence Schwanebeck.

MONTCALM—Farmers are nearly done with the oat harvest now and some threshing is being done. We have cool nights but very hot days. Getting very hot now. There has been several deaths, some fires, and plenty of places for amusement such as picnics, shows, barbecues, home-comings, chautauquas, and family reunions. Something for each day but farmer too busy to attend.—Geo. B. Wilson.

CALHOUN—Weather is dry, but crops are looking good. It looks very much like rain today.—G. E. Beardsley.

GENERAL

W. H. S. WOOD, HOWELL, MICHIGAN, one time superintendent of Michigan State Reform School, 8 years postmaster, Howell, and who has talked on the platform with Bryan, Ferris and Pattengill is open after August 12th to give addresses to clubs, societies, etc. Mr. Wood ran for office 16 times, was elected 8 times and never asked a man to vote for him or gave away an election cigar.

10X30 STAVE SILO FOR SALE. SAGINAW make, new, never erected, complete with roof. When I sold my farm the purchaser declined to buy my new silo and I will sell at a great sacrifice. R. N. LONG, RFD No. 1, Holly, Mich.

WANTED TO HEAR FROM PARTY HAVING 5 to 20 cows for sale, preferably Holsteins. W. CALDWELL & SON, Springport, Mich.

TOBACCO

HOMESPUN TOBACCO, 5 LBS. CHEWING $1.75; 10 lbs. $3.00. 5 lbs. smoking $1.25; 10 lbs. $2.00. Pipe and recipe free. COOPERATIVE FARMERS, Paducah, Ky.

Larro
THE READY RATION
FOR DAIRY COWS
Larro
THE LARROWE MILLING CO.
DETROIT, MICH. U.S.A.

Cows dried off now for freshening should be fed a daily ration of at least four to six pounds of Larro.

Look for the feeding instructions in every sack.

Just Like a Million Other Bags of Larro

Every sackful of Larro is exactly the same. The Larro you feed today is just like the Larro you'll feed a year from now — just like the Larro in a million other sacks.

Larro results are as uniform as Larro quality. And like Larro quality, the results are guaranteed. Larro satisfies you or you get your money back.

There are no fillers in Larro. Weed seeds, oat hulls, oat clippings and all other fillers are absolutely barred.

Each Larro ingredient is separately processed and standardized before mixing. Every pound of finished Larro passes over electro-magnets, safeguarding the cow against the danger of nails and wire in feed.

Larro is made by specialists whose sole work is to make this one brand of dairy feed. Its results and uniformity are being constantly checked at the Larro Research Farm.

Feed Larro and make a greater profit from your cows. For many years Larro has been the year-round ration for thousands of feeders. Let us tell you what they say.

Remember--

Sugar Beets are sold by their weight

You can make considerably more money by harvesting beets so that they are not left exposed to the frost, and are protected so that the sun cannot dry them out. Remember, you sell beets by weight. You get extra tons of beets from the same field by using

JOHN DEERE

No. 20 Riding Beet Lifter

Lifting blades shaped so that they do not injure the beets, but loosen and lift them, leaving them upright in the ground, where they are easily and quickly handled for topping. The John Deere Beet Lifter gets all the beets, even in crooked rows, because a push of the foot causes it to dodge quickly. No beets are left in the field by your hired help because too hard to pick up. This machine is also very easy to handle, and very easy on horses, because it has only one lever and two wheels, no tongue truck is needed.

FREE BOOKLET describes this lifter. Write today, address John Deere, Moline, Illinois, and ask for Booklet IC-133

JOHN DEERE
THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

It's NATURAL for a hog to wallow
Provide a wallow and add
DR. HESS DIP and DISINFECTANT
then—

1. Your hogs will be free from lice.
2. They will have clean, healthy skins.
3. Disease germs will be destroyed.
4. Foul odors will be kept down.

If you do not have a wallow, use the sprinkling can freely. Sprinkle the animals — the sleeping quarters and pens.

Sprinkle the cow barns to keep them healthful and clean-smelling—

The poultry-house to kill the mites and lice.

Use it about the house—in the closets, sinks and drains. Excellent for the sickroom.

Standardized Guaranteed

DR. HESS & CLARK, Ashland, Ohio

TAKE THE D. & C. WATERWAY trip to Buffalo. Restful, economical, all conveniences.

If Your Tractor Could Speak

IT would tell you why, at times, it seems to hesitate, drag and fail to deliver that steady, even flow of rhythmic power which is so necessary to heavy pulling. It would tell you that a tractor can run smoothly only when the frictional parts are amply protected by a cushion of good lubricating oil, thus permitting free, easy, noiseless action.

It would tell you that the wrong oil almost invariably causes excessive carbon, loss of power, transmission troubles, fouled spark plugs, and overheating. The right oil for your tractor—the grade of Polarine indicated in the chart—means minimized repairs, fewer renewals of parts, greater flexibility, and more power.

N. B. For recommendations of grades of Polarine to use in automobiles and trucks consult chart at any Standard Oil Co. (Indiana) station.

Use Polarine

THE PERFECT MOTOR OIL

Made in Five Grades

for all makes of tractors, at all motor speeds and temperatures. It meets every tractor lubricating need. Polarine is made in five grades. The one specified in the chart is the correct grade for your tractor and will insure perfect lubrication. Polarine is of the right viscosity to maintain a perfect film under the extreme of working conditions. This means assured compression and maximum power.

Polarine lubricates thoroughly every frictional surface and will not break down. It seals your pistons against loss of power.

The essence of true economy is to drain your crank case very frequently and fill up with the correct grade of Polarine. Your tractor will give you better service and it will last longer.

Michigan Fairs' Annual, 1923

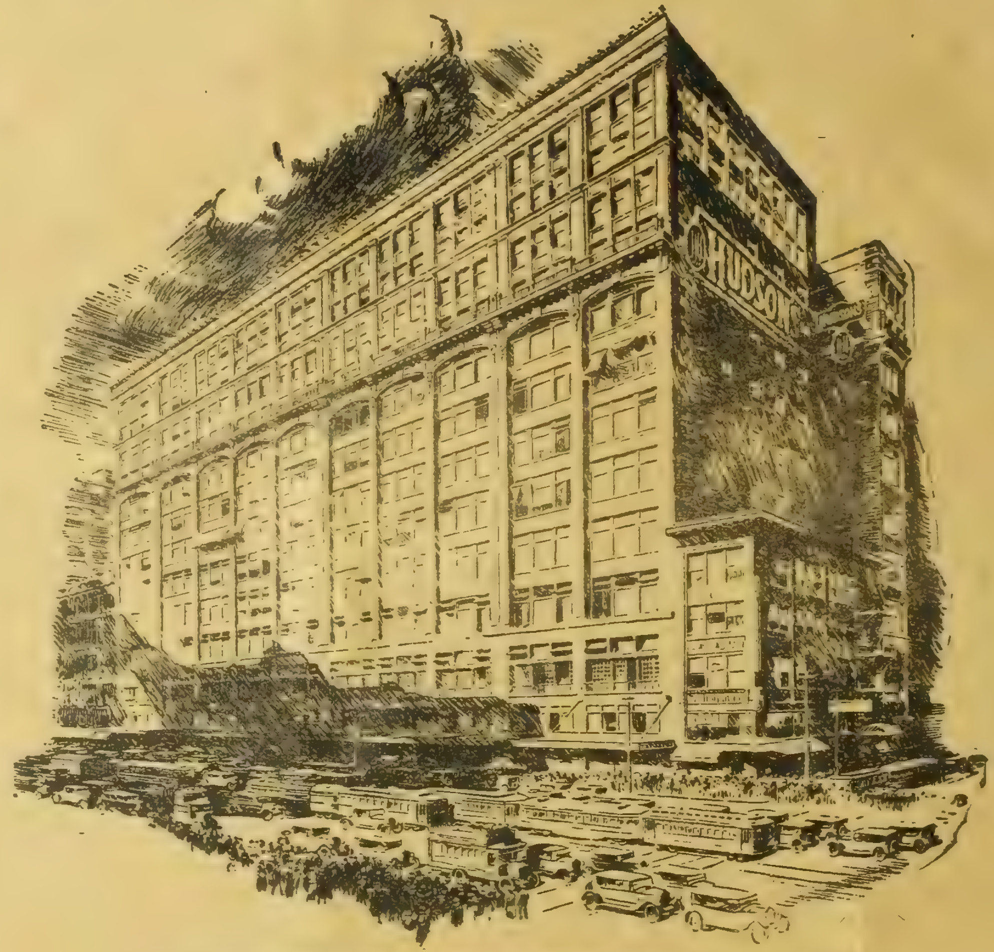
The Michigan State Fair—August 31st to September 9th

The 100th Anniversary Year of the writing of John Howard Payne's immortal song—"Home, Sweet Home"

Hudson's 42nd Anniversary Sale

Begins on Tuesday, September 4th

This great sale has been planned to enable you to purchase everything needed for the home as well as new Fall and Winter Clothing and all wearables for Men, Women and Children. Each day will be a memorable one for the remarkable opportunities presented. Every item carefully selected to measure up to *Hudson Quality.* Plan now to visit the State Fair and shop at Hudsons.



The Newly Enlarged Store Showing the Woodward Avenue Front

42 Years of Service

This sale celebrates our 42 years of service to the people of Detroit and vicinity—and we have brought together under the one roof, merchandise from practically all over the world, offering economies that will make it well worth your while to share in this event.

Visitors to the State Fair

will find every convenience of this great establishment at their service—plan to meet your friends here.

Those Who Will Stay at Home

may also share in the savings to be made in this 42nd Anniversary Sale, by having the Personal Service Bureau shop for them. Give a careful and accurate description of the merchandise you desire and we will shop for you.

The Sale Will Continue Until September 22nd

Seventeen days of remarkable offerings—*read the daily newspaper advertisements* and take advantage of the savings which this Anniversary Sale offers.

THE J. L. HUDSON COMPANY

WOODWARD, GRATIOT, FARMER STS. DETROIT, MICHIGAN

SATURDAY
September 1st,
1923
VOL. XI, NO. 1

Being absolutely independent our columns are open for the discussion of any subject pertaining to the farming business.

"Hew to the line, let the chips fall where they may!"

BUSINESS FARMER

"The Only Farm Magazine Owned and Edited in Michigan"

Published Bi-Weekly
Mt. Clemens, Mich.
TWO YEARS $1

Entered as second-class matter, August 22, 1917, at the post-office at Mt. Clemens, Mich., under act of March 3rd, 1879.

Michigan Tax Rate for 1923 to Be Cut 75 Cents

Lowered Administative Expenses and Increased Valuation Given as Reasons for Welcome Relief —Northern Counties Given Larger Share of Melon Because of Impoverished Conditions— Wayne County Now Pays 40% of State Tax

STATE Tax Commissioner George Lord has just announced that the state tax for 1923 will be about $1,300,000 less than it was in 1922 and the state tax rate will be around 75 cents per $1,000 valuation lower.

There are two factors responsible for the prospective cut in the tax rate. One, according to Mr. Lord, is that state expenses have been so reduced that the total amount to be raised will probably not exceed $16,000,000. The state tax last year was $17,300,000. The other is the increase in the state valuation for tax purposes, fixed by the State Board of Equalization late yesterday.

The billion and one-half dollar increase in valuation would naturally lower the rate, even if the amount to be raised were the same as last year. The decrease of $1,300,000 in the amount to be raised further cuts the rate.

The 1922 state tax rate was approximately $3.08 per thousand. The prospective new tax rate is about $2.32 per thousand.

Record Valuation Jump

The Board of Equalization increased the valuation of the state for tax purposes $1,540,000,000 over the 1922 equalized valuation of $5,000,000,000. The new equalized valuation of $6,540,000,000 is a reduction of $5,065,000 from the State Tax Commission's recommended valuation for this year.

The increase in the value of the state's taxable property is the largest jump ever decided upon by a board of equalization for a single year. The advance was largely attributed to the fact that the 1923 legislature enacted laws limiting the mill tax appropriations for the University of Michigan and the Michigan Agricultural College to $3,000,000 and $1,000,000 a year, respectively. Heretofore the mill tax appropriations have increased in proportion to the valuation.

The $1,500,000,000 increase will have little effect on the proportion of the state tax to be paid by any county. The increase is spread horizontally, except in the case of 10 northern counties. They are given reductions. The effect of the increase will be to raise whatever the amount of the state tax amounts to on a larger valuation, which means lower rates. The total amount to be paid out by any individual or county is not altered.

Wayne Slightly Increased

The $5,065,000 reduction from the State Tax Commission's recommended valuation was arrived at by cutting $50,000 from Crawford, $109,000 from Delta, $50,000 from Huron, $50,000 from Iosco, $50,000 from Lake, $95,000 from Luce, $50,000 from Manistee, $150,000 from Newaygo, 50,000 from Roscommon, and $94,000 from Schoolcraft. These counties, in the opinion of the board, were the hardest hit agricultural and mining counties and were entitled to a reduction. The remainder of the $5,065,000 cut will be spread equally over all the counties and will not affect the proportions of the state tax to be paid.

Under the new equalization Wayne will have a valuation of approximately $2,666,500,000, and will pay about 40.74 percent of the state's tax, as compared with $2,032,796,000 and 40.66 per cent last year, an increase of $633,704; Kent will have a valuation of $330,193,000 and pay 5.04 per cent of the state tax, as compared with $251,938,000 and 5.04 per cent last year; Jackson, $131,847,000, and 2.01 per cent as compared with $100,645,000 and 2.01; Saginaw, $144,600,000 and 2.20 as compared with $111,584,000 and 2.23.

Rural Districts Get Benefit

The reduction in the levy on the rural districts and the raise to the industrial centers is all the more noteworthy because of the tremendous effort which was made by Detroit representatives to show that city levies should be reduced or at least kept down to present levels. The decision of the board is a splendid tribute to the supervisors and others who so ably represented the rural districts.

It is well to recall that in the hearings recently held before the State Board of Equalization to determine the State's equalized value and to re-apportion the tax levy among the several counties of the state, Michigan farmers and the Michigan State Farm Bureau were ably represented by Melville B. McPherson, of Lowell, member of the Board of Directors of the State Farm Bureau, and an acknowledged authority on taxation matters.

Mr. McPherson presented evidence to prove what is commonly known to be true, namely that in Michigan today rural property is valued relatively higher than is city property. He declared before the Tax Board that Wayne county should remain at its recommended value for 1923 while the rest of the state should be reduced an average of 10.87 per cent.

McPherson declared that farm property is either assessed too high or the utilities of the state and city property are assessed too low and he gave figures to show that while the tax commission had increased the general property valuation of the state 78 per cent since 1916, mining properties from 1915 to 1922 were increased only 25 per cent, and for the same period the railroads and other corporations paying the primary school interest fund specific tax were increased only 19 per cent.

Mr. McPherson said real estate and corporate property in Detroit

(Continued on Page 23)

Thirty-Six States Tax Gas to Maintain Good Roads

IT may be that the farmers of Michigan were not such moss-backed reactionaries as they were pictured by the city papers when they ask for a gasoline tax last spring. The fact that a majority of the states have now gone on record or are collecting a gasoline tax to maintain their good roads, means that now Michigan will have to follow the crowd, instead of being one of the leaders.

One prominent state official, in an address before a farmers picnic in Michigan last week, went on record as favoring a gasoline tax of 3 cents per gallon and a flat rate of $2 for the automobile license fee.

The farm bureau and other farm organizations are keeping up the agitation and the fact that the state highway fund is now almost a memory, means that some method of bringing in the necessary funds to keep up the elaborate, but apparently necessary good-roads program, must be adopted and at once.

The gasoline tax, claim its sponsors, is the only direct method of taxing the automobile and truck for their destruction of the paved roadways. The light car, burning less gasoline, pays only its proportionate share as against the heavy truck that burns a gallon to the mile. The bus lines, all using heavy motors will also come in for their just dues.

The president of one of the largest truck lines in Michigan is on record as favoring a gasoline tax as high as ten cents a gallon, if necessary, to keep up the paved roads and he says it will be economy for his company. This is applicable as well to every individual owner of automobile or truck, as a road in bad condition can do more damage in a dozen miles of hard-going than the gasoline tax would amount to in a year.

Forty-One Millions From Gas Tax

State gasoline taxes in the United States this year are expected to bring in $41,607,835 additional revenue, according to a compilation made by Dow, Jones & Company. Eighteen states imposed the tax in 1922, and thirty-six states will be taxing gasoline with a levy of from 1 cent to 3 cents a gallon before December 31.

The revenue raised by the gasoline tax in 1922 was $11,923,442, of which $6,474,178 was applicable to state road work.

Last year 12,239,144 automobiles were registered, giving a revenue of $152,047,823, of which $117,093,116 was used for road construction and repair. More than 2,000,000 new cars were produced in the first six months this year, and their registration and licensing will increase highway revenue.

2,607,000,000 Gallons Taxed

Estimated total gasoline consumption in 1922 in the states which passed gasoline tax laws was 2,607,000,000 gallons out of a total domestic consumption of 5,366,000,000 gallons in that year, according to the information. Estimated yield of gasoline taxed in 1924, levied in thirty-six states out of forty-eight, is $41,607,890, based on 1922 registration of 12,239,114 cars and trucks and an annual consumption for each vehicle of 424 gallons, the average estimated by the National Automobile Chamber of Commerce. Estimation is 1,000 gollons for each truck and 358 gallons for each passenger car, but 10,793,930 passenger cars greatly outnumbered trucks, thereby lowering the combined average. Cars and trucks now in use number about 13,500,000, according to latest estimates. With the license tax only, owners of cars pay no tax for use of roads outside their own states, but payment for such use can be collected by means of a gasoline tax.

GASOLINE TAX YIELD BY STATES

The states which have adopted a gasoline sales tax, the estimated annual consumption, the rate imposed and the estimated yield of the tax is as follows:

STATE	Estimated Consumption	Tax a gal.	Estimated yield
Alabama	38,182,048	2c	$ 763,641

Jackson County Holstein Breeders Have Big Day

Over Seventy-Five Members of Jackson County Holstein Breeders Association Attend Second Annual Tour and All Report a Good Time

Arthur J. Perrine, is second from left; W. R. Harper, vice president of the State Holstein Association, is third from left; E. J. Noon, owner of the champion cow of Jackson county for milk and butter-fat, is ninth from left, and Corey J, Spencer, president of Jackson County Holstein Association is tenth from left.

TUESDAY, July 31st, was the big day of the year for the Holstein breeders of Jackson county. It was the day of the second annual tour of the Jackson County Holstein Breeders Association and members were out in full force before the close of the day. However, the tour started from the courthouse in Jackson at 8 o'clock with only a few cars in line but before it arrived at its first destination the number had multiplied threefold. The man at the head of the tour was Corey J. Spencer, president of the county association. Well known men who accompanied it were: U. R. Harper, vice president of the state association; James Wells, M. A. C. Dairy Extension Department; C. M. Long, of the National Holstein Breeders Association, and R. E. Decker, county agricultural agent. Herds were inspected on eight different farms and a fine picnic dinner was served at one.

The first stop was made at Walnut Grove Stock Farm, owned by W. W. Wyckoff and located in Napoleon township. Here the members inspected a fine herd of 45 purebreds, perhaps unlike any other herd in Michigan; every animal in the herd is a descendant of one cow that is now 18 years old and just recently gave birth to a fine calf. All cattle in the herd have A. R. O. records.

From the Wyckoff place, the breeders went to the farm of M. L. Noon & Sons, Michigan Center. Mr. Noon is vice-president of the Michigan State Farm Bureau. He has a herd of eighteen cows which had high record in the Rives Cow Association for the year ending May 15, 1923. Mr. Noon has some heifers which show promise of developing into fine cattle to fill the ranks of his herd.

After viewing the herd, the party repaired to the apple orchard where the effects of fertilizer upon apple trees was viewed. Mr. Noon had put amonia phosphate fertilizer upon several strips of ground in the 16-acre apple orchard, and where the fertilizer had been laid, and where it had been omitted, the difference was plainly marked. While in the orchard, Decker and Noon gave several talks on the value of fertilizer, and Noon stated that before long there might be an announcement made that would revolutionize fertilization. "Then all college men in America and Europe will take off their hats to a Jackson county man," he said.

The Prison farm, north of the city, was the third stop on the route. There were thirty-five head of pure-bred Holstein cattle in the prison barns, brought from Livingston and Shiawassee counties last fall. The bull, the head of the herd, is a fine 4-year-old gotten from the state farm at Ionia, and his dams have a record of 24 pounds of butterfat a week. The prison has three dairies with 150 cattle and nearly all are Holsteins, according to Geo. Bretherton, farm supertendent.

Dinner at Layton's Corners

Inspection of the herds already mentioned occupied the entire morning and the tourists drove to Mr. Bretherton's place at Layton's Corners for a picnic dinner. After the seventy-five people present had satisfied their hunger with great quantities of farm cooking, Mr. Spencer introduced Mr. Decker as toastmaster. Mr. Decker in his opening speech made the statement that "best satisfied farmers are dairymen" and it was echoed and expanded by every succeeding speeker. W. R. Harper, state vice-president, was introduced as the first speaker. Mr. Harper explained that in order to make the breeders' association more democratic the membership dues had been changed from a per capita tax on females in the herd to a flat rate of two dollars a breeder. He said that due to depression after the war and lack of a reliable help, many

(Continued on Page 19)

This is by far the best bull seen on the tour at the Michigan State Prison farm. It was recently purchased by Warden H. H. Hulbert from H. W. Horton Jr., director of Animal Industry, State Department of Agriculture, at Lansing, Michigan.

C. M. Long of the Holstein association talking it over with James Wells and R. E. Decker.

Inez Piertertje on farm of W. W. Wyckoff at age of eighteen years and still milking. The entire herd of W. W. Wyckoff descended from this cow. 53 are now in the barn, and he has sold 47 head. This is an example of what a farmer can do if he persistently sticks.

Why Should We Go Out of Our Country to Buy Sugar?

By C. H. ALLEN

THE writer of this article, Mr. C. H. Allen, is the president of a farmer-owned sugar company at Defiance, Ohio, and has spent considerable time studying the sugar market and conditions governing it. This article is the result of his work. Most of you will remember the article on the sugar market by Mr. Simon G. Palmer, sugar statistician, that appeared in a recent issue of the Business Farmer. You will find that both of these market experts have arrived at the same conclusion, and that is to produce our own sugar and not depend on Cuba. What is your idea?

THE recent sensational increase in the price of sugar has caused a howl of indignation to go up all over the country.

Accusations of profiteering have been hurled right and left; the tariff has been blamed; investigations have been ordered; "Some one should go to jail," say some people. Learned (?) editorials have been written by writers whose only knowledge of the subject is that sugar is a white powder they put in their coffees in the morning to sweeten it.

There has been such a confused mass of stuff put out that the majority of people are mystified and wonder what the real facts are.

We in the United States last year consumed 5,700,000 tons of sugar. This is nearly a million tons more than we had ever consumed before in the same time.

From its large production and its peculiar connection with our tariff laws, which will be explained further along in this article, Cuba controls at certain times of the year the entire supply coming into this country.

Sugar used in the United States was grown in the following places:

Hawaii, 520,000 tons; Porto Rico, 350,000 tons; United States (cane and beet), 1,310,000 tons; Philippine Islands, 240,000 tons; miscellaneous countries, 40,000 tons; Cuba, 3,240,000 tons; total, 5,700,000 tons.

This consumption includes some sugar, both beet and cane, grown in 1921 and carried over to 1922.

In February of this year, in accordance with its usual custom, the Department of Commerce made an estimate of the sugar available for consumption in 1923. This estimate showed a "carry over" of 477,000 tons from 1923 to 1924. As the "carry over" of Cuban sugar alone from 1921 to 1922 was 1,600,000 tons this is a decided decrease in the future visible supply. Remembering with anything but pleasure their painful position when sugar was scarce, buyers immediately jumped in and the "war was on." Prices soared.

The bulletin of the Department of Commerce was confessedly merely an estimate; it could not have been anything else. It was compiled from the best information they could get.

The Department of Agriculture now comes out with another estimate. Still later one is given out by the Secretary of Agriculture of the Republic of Cuba. These all give different figures. Practically every sugar dealer makes his own estimates, and it is the opinions formed by these estimates that make a difference in the views people hold of what the price should be.

Geographically our sugar supply comes from two sources:

First: From the United States and its dependencies; beets in the United States; cane from Hawaii, Porto Rico, Philippine Islands, and Louisiana and Texas in the United States.

Second: From the Republic of Cuba; all cane.

Most of our sugar comes from Cuba.

All sugar made from cane must go through a refining process to make it thoroughly white. Refining does not "make" sugar, it merely washes the dirt and molasses away from it. A sugar refinery is a laundry for sugar.

The refineries that handle the sugar extracted from cane coming from Cuba for American consumption are, for convenience and profit, built along the sea coast.

The beet sugar grown in the United States does not go through this refining process. Each beet sugar factory granulates and washes its own sugar, making it ready for the table.

It is important to understand this difference as because of it a very bitter competition is maintained between the beet sugar farmer and factories extracting the sugar from the beets on one side, and the sugar refineries refining Cuban cane sugar on the other. The same thing is true between the cane sugar farmers of Louisiana and the Cuban cane sugar farmers represented by the refining companies.

It has been acknowledged by every one if it were not for the tariff there would be no American sugar industry, neither the cane nor the beet could exist without protection against the cheaply grown cane of the tropics. The amount of this tariff should be, or whether there should be any at all, has been warmly contested and is a continual bone of contension, much to the detriment of the home grown production.

(Continued on Page 21)

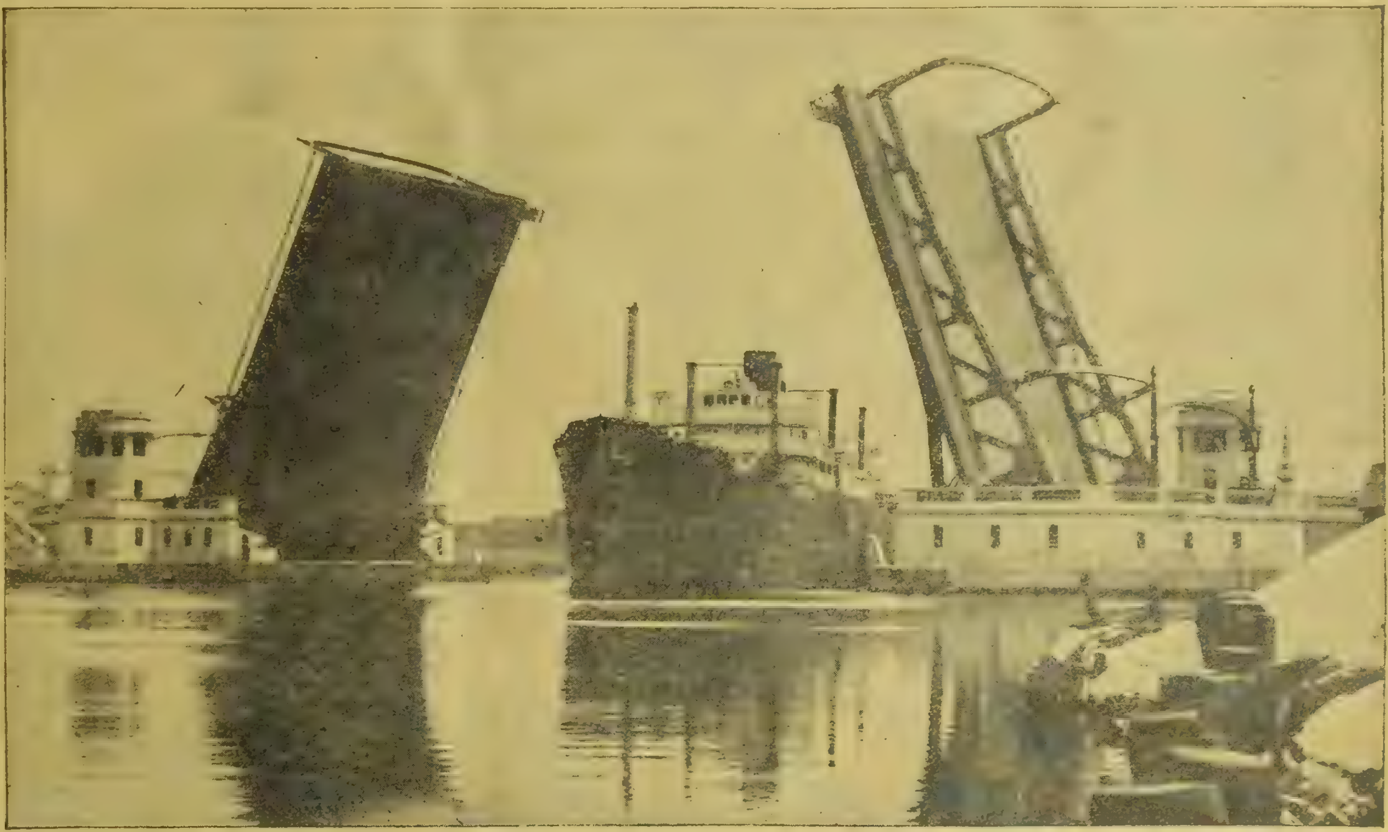
PICTURES FROM FAR AND NEAR

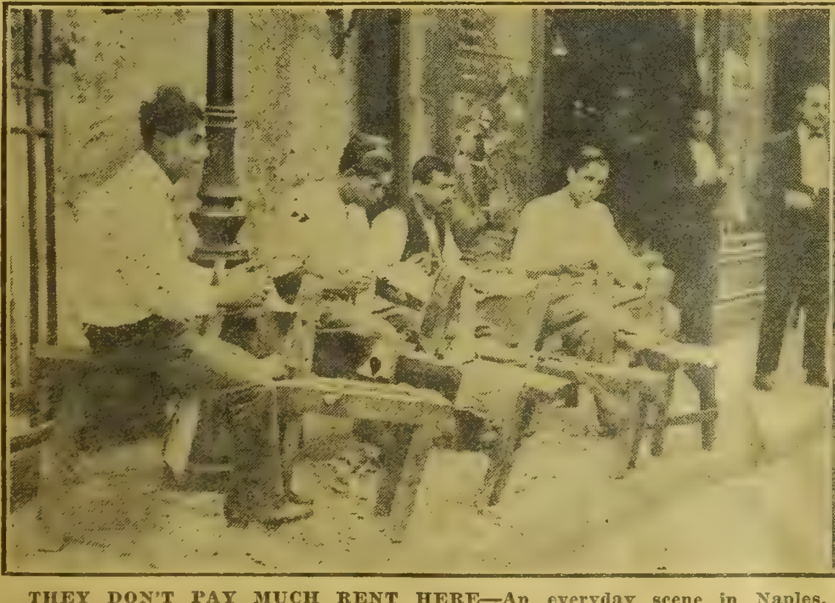
OUR NEW PRESIDENT—Calvin Coolidge, who took the oath as President of the United States at the farm home of his father near Plymouth, Vermont, where he was spending a short vacation. President Coolidge was sworn in by his father who is a notary public. The elder Mr. Coolidge had the honor of being the only man ever to swear his son in as President of the United States. President Coolidge is expected to do big things.

TWO SONS OF PRESIDENT COOLIDGE—John and Calvin Jr., the two sons of the 30th president of the United States. One of the boys is attending the Citizens' Training Camp while the other with several boy friends is spending his vacation working for a farmer picking tobacco. The latter boy, working from daylight to dusk for $3 per day, asked his parents if he might remain as he enjoyed the work.

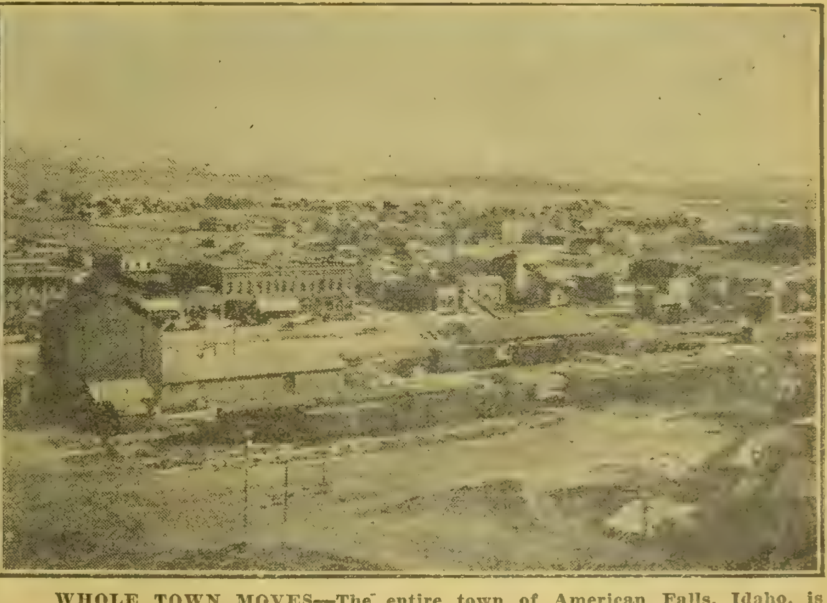
NEW "FIRST LADY" OF THE LAND—Mrs. Calvin Coolidge, wife of the newly sworn president. President and Mrs. Coolidge left the farm at Plymouth, Vermont, belonging to the President's father, as soon as they received news of Harding's death. President Coolidge and his family have lived for years in an apartment that rented for $30 per month so it will be quite a change for Mrs. Coolidge to take charge of the White House.

FIRST STEAMER TO GO TO FORD TURNING BASIN—The U. S. Merchant Marine steamer "Oneida" was the first to make the trip up the new River Rouge development from the Detroit River to the Ford Turning Basin. The new channel is crossed by six modern bridges, all being the bascule type, like the one shown to the right. This channel has been created in conjunction with the River Rouge from the Ford Motor Company's properties through the Detroit River, a distance of about 3½ miles, it is 21 feet deep throughout, is 300 feet wide at water level and 200 feet wide in the channel bed. The point of greatest interest in connection with this new channel is that seven or more miles of water front have been created and made available for port development, and it will quickly become the center of extensive industrial enterprises. This whole project is a direct result of Henry Ford's decision to locate one of his large manufacturing plants on the River Rouge. Because of the nature of the land adjacent to the Rouge it was feasible to dump the material dredged into the land adjoining the channel and thus fill it up for better industrial uses. The government has paid only $610,000 for the work done, while Ford has paid between four and five million dollars. (Photo loaned by courtesy "The Detroiter.")





THEY DON'T PAY MUCH RENT HERE—An everyday scene in Naples, Italy, is this one. Here the natives prefer to do their work out-of-doors in spite of the heat of the glaring sun. Here we have a quartet of shoe manufacturers at work. They do their work this way so that those who pass can see how the shoes are made.



WHOLE TOWN MOVES—The entire town of American Falls, Idaho, is to move to a new site. The present site will be inundated together with 83,000 surrounding acres to make way for the gigantic American Falls reservoir to be constructed by the government which will be the 4th largest in the world, with a capacity of 1,500,000 acre-feet of water.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

CANNOT FORCE MAN TO REMOVE BRUSH

I would like to get information in regards to a bush on the line fence. I have been fighting poison ivy and brush for the last ten years. I keep my side clean the full length. Can I enforce them to clean up their side? What steps shall I take? I have bees near this fence and how many feet does the law require them to be away from the line fence?—A. K., Ann Arbor, Mich.

—Nothing in the statute provides for compelling an adjoining property owner to keep his side of the line fence free from brush or shrubbery. There is nothing in the statute which limits the distance that bees shall be kept from the line of an adjoining property owner.—H. H. Partlow, State Highway Dept.

BEST TO EMPLOY ATTORNEY

Will you please tell me through your valuable paper how I may enter the patent office at Washington, D. C., without an attorney?—J. E., Fife Lake, Mich.

—If you are seeking a patent on some invention, it is well to employ a regular patent attorney to make application for you, although it is not necessary. The U. S. Patent Office, at Washington, D. C., will send you information on the procedure in applying for a patent.—Asst. Legal Editor.

RETAIN OUT OF PURCHASE PRICE

Three years ago we bought a registered Durham bull. We had about twenty stockholders at that time, we elected our officers which was put in for a term of three years. Two years ago I was hired by the board of trustees to keep the bull that year. One year ago I was rehired to keep the bull for the year 1922, for $150. This year at the annual meeting the company voted to sell the bull. The board of trustees sold the bull to me for $90.50. I collected some money for outside cows that did not belong to the company. This leaves me a balance due of $25.00. To whom will I look for my pay and how will I go about to collect my money? The bull is in my possession yet. Will I have the right to sell same? Who is held responsible for damages done by bull at present time, as the company has not signed any papers over to me?—J. O'M., Blanchard, Mich.

—If you have not paid for the bull, you may retain the $25.00 out of the purchase price. If, however, they owe you $25.00 more than the $90.50 which you owe them, then the only recourse would be to sue the company for the balance. You may sell the bull if necessary to collect what is due you, even if the papers haven't been signed over to you, as you have a lien on it for your services. So long as it is in your possession and under your care, you are liable for damages done by it.—Asst. Legal Editor.

BORDEAUX MIXTURE

I would like to know about Bordeaux mixture, where it can be purchased, if it is very effective, etc. Thank you.—B. K., Remus, Mich.

—Bordeaux mixture is a combination of copper sulphate commonly called "blue stone," with equal parts of lime diluted with water. The home made mixture is prepared by dissolving the copper and lime separately diluting the solutions and pouring them together in the diluted form which makes a combination that spread and sticks fast with what is known as the "bordeaux film." Nearly any hardware or drug store or implement dealer handles the spray in some form.

The effective use of bordeaux in the protection of plants from insect and foliage diseases depends upon the thoroughness with which the material is applied to effectively cover the whole plant.—J. W. Weston, Extension Specialist, M. A. C.

SPARKS FROM ENGINE DESTROY CROP

The railroad runs through my farm and sparks from the engine set fire to my clover seed. Can I collect damage?—B. H., Howell, Mich.

—Your recovery against the railroad company would depend on the question of negligence. If the company could prove that they exercised the proper amount of care, used spark arresters on their engine as required by the statute, etc., and that they were guilty of no negligence, you could not recover. If they could not prove these things, they would be liable to you for damages.—Asst. Legal Editor.

DUTIES OF ADMINISTRATOR

Does an administrator have to give a copy of what is paid out and what is paid in of the estate to the heirs, to show where the money goes?—A. G., Fife Lake, Mich.

—It is the duty of the administrator to render to the probate court an account of all money and other property collected and disbursed by him. If he does not do this, it is the duty of the probate judge to order such an account, upon the petition of the heirs.—Asst. Legal Editor.

SCHOOL OFFICERS NOT TAXPAYERS

Has a school board where none of them are taxpayers, their names not on the tax roll, a legal right to raise a school tax?—A. W., Van Buren County.

—The law provides that if an officer ceases to be a taxpayer the office becomes vacant immediately and if the same is not filled within twenty days the township board fills such vacancy. It also requires that a person to be qualified to hold office shall have property assessed for school taxes and shall have his name on the tax roll of the township where the district is located. The law does not provide, however, that the office becomes vacant immediately if such person's name is not upon the assessment roll. If officers have qualified and entered upon the duties of office under such circumstances it would be necessary that a court declare an office vacant before it would be vacant. A question of this kind is difficult to answer because there may be facts that are not disclosed that would somewhat vary the answer to be given.—W. L. Coffey, Dept. of Public Instruction.

PROCEED TO COLLECT WHAT IS DUE YOU

Could you please give me your advice on this problem? We have been living on the farm we are on for two years, and it consists of nearly 200 acres of cultivated land. The land company gets half of the profits and the other half goes to tenants. There has been an unmarried man in partnership with us, and everything has been done in his name, as he claims there was no lease drawn up on the farm in 1921. After harvest he came up and settled with us, and we just came out even. I doubted his honesty then, but could not convince my husband of his dishonesty as the crops were not as good as they might have been, but in 1922 our crops were pretty good, and we would have made some money but as all checks and everything came in his name and he went away after he got all the money and we have not seen him since. Other people have, and he told them he did not owe us anything as we did not get anything at all this year. We haven't the money to get the law to help in any way. We may not be able to get our share, but don't you think my husband can draw so much a day, say $5.00 a day for himself and team during all the time he worked in 1922? This man says he has no money, but was seen putting money in one of the banks in Detroit. What would you do about it?—Mrs. T. Q., Owendale, Michigan.

—You say the other tenant settled with you in 1921. If this settlement was made on the basis of a partnership relation between you, and if you cultivated the farm in 1922 on the same basis as the previous year, I am of the opinion your partner could be required to settle with you the same as in 1921. If you are not able to reach an amicable settlement with your partner, I would advise you to retain a lawyer and proceed to collect what is due you.—Asst. Legal Editor.

COULD NOT BE COMPELLED TO PAY OVER 7%

I bought some farm machinery on one year's time. I gave a note. The face of the note amounted to $145 drawing 7 per cent interest from maturity. When the note came due I could not pay it so had it renewed for three months, they charged me $4 interest. Now the way I figure the interest at 7 per cent it amounts to $2.54 for three months.—N. C., Muir, Michigan.

—The interest on $145.00 for three months at 7 per cent would be $2.54 and the holder of the note could not compel you to pay more than this amount.—Asst. Legal Editor.

DID NOT PAY FOR LABOR

A works for B and B hasn't paid A for his labor. Can A go and work a few days again for B and file a labor claim on logs for the new account and old account?—I. G. C., Kenton, Mich.

—Compiled Laws of 1915, Sec. 14846 provides that the statement of a labor lien for services on logs, timber, etc., shall be filed within 30 days after the work is completed. If you have failed to do this on the old account, your lien is lost. Filing a labor claim on the new account would not cover that old account so as to create a lien on it also.—Asst. Legal Editor.

CAN WIFE SUE FOR NOTES?

Have read some interesting information in the M. B. F., and would like a little myself. My brother had some money, he told me to let it out. I let it out. He was sickly and he had me make the notes payable to himself or myself. He married and died about a month after. His wife is going to sue me for the notes. Can she do it? These notes were fixed this way, as he had made his home with me off and on for eight years.—O. F.M., Riverdale, Mich.

—If your brother authorized you to make the note payable to yourself in consideration for the services you had rendered him, intending that you should receive the money from the holder, I am of the opinion his wife would have no right of action against you to recover the amount of the note.—Asst. Legal Editor.

FENCE ALONG R. R.

A railroad company last January let job to take down their fence and build a new one. The man has taken down the old fence and now won't build the new fence. I have been after them to build the fence all spring. They say "yes, we will build," but nothing has been done yet. The field next to the railroad is my pasture and I wish to turn my cattle out and there is no fence. Is there any way to make them build it or can I build it and make them pay for it.—P. C. C., Arcadia, Mich.

—Railroad companies are required by law to maintain fences along their right-of-ways. When any company fails to comply with this law, complaint may be made to the Michigan Railroad Commission at Lansing, Mich.—Asst. Legal Editor.

A HIRES BARN OF B

A hires a barn of B to feed sheep in. Sheep are confined in barn. A furnishes all feed and bedding. Does the manure belong to A or B? Please answer and oblidge.—C. S. B., Coruna, Mich.

—The manure would belong to A.—Asst. Legal Editor.

Uncle Rube Spinach Says:

JEST 'N ANSWER

I'VE been gettin' letters lately askin' me why I didn't do this and that an' t'other to make things right an' settle a lot of things 'at our senators an' congressmen are supposed to settle—'lected by the people—or mebbe 'pointed by our gov'nor to fill vacancy or somethin'—anyway, they're s'posed to do the business fer us. Jest today I received a letter from a very lovely lady—I know she is jest by the way she writes, know she is one of the kind of women God intended all women to be an' she asks me to try 'n answer Mr. A. A. Lambertson, who wrote an article in M. B. F. recently.

Dear "Sincere Subscriber" there ain't a thing any one can say to any thing like that. The man is simply given expre-tion to his own desores an' anything that you or I could say-'ll not change him in the least.

He sez he's "been practically a teetotaler all his life!" Dear "Sincere Subscriber," don't it seem kinda suspic'ous to you 'at its our "practically teetotalers" that's doin' most of the hollerin' fer 5 per cent beer an' light wines an' such?

An' don't you see its jest such men as that'd put all the ol' things back onto us? No dear subscriber, I wouldn't dast to try to answer Mr.—well, now, what's his name—no matter—he's jest puttin' up the same argument that lots of other beer swillers puts up. They want beer with alcohol into it—they don't want to git drunk, you know. An' alcohol—only jest 5 per cent is not intoxicatin'. Mr. Couzens sez it ain't an' it must be true. But dear lady, the only difference twixt 5 per cent an' 6 per cent is this—one has only to drink a little more of the 5 per cent an' it takes longer an' costs more money.

No, I don't want to answer Mr.—well now, ain't that queer 'at I can't remember his name an' I remember yours so well—no matter 'bout the "voted to make it dry but he made an awful mistake when he did it." Dear friends, if he never makes a worse mistake an' that then he'll never go far wrong, will he?

An' then he sez—"has prohibition done any good" an' he answers his own question an' sez "no, it's done great harm." Mebbe it's cut off his supply—mebbe he didn't want but little but wanted that little bad. An' dear friend, I'll say it'll be bad enough if he gits it—any thing at all.

You know we had 50 or 60 years of high license saloons reg-lated by govr'ment control. Did it reg'late? I ask the world if any liquor law we ever had reg'lated the liquor business, kept men from gettin' drunk, beatin' up their fam'lies, spendin' their wages, stayin' out all night, makin' fools an' beasts of themselves an' commitin' murder, adultry an' everything else 'at could be thought of? After all the years of high license the saloon was finally outlawed jest 'cause the gover'ment could not control 'em. Now we've got prohibition an' its in its infancy jest now. Give it 10 or 15 years—not askin' for 50 or 60—jest give it ten years an' see what comes an' now dear "Sincere Subscriber" while I was glad to get your nice letter an' I sure appreciate the nice things you said, still an' all I'm jest a poor ol' feller 'at can only write things I see or believe to be true. An' so I would not dare to try to answer Mr. "what's-his-name's" letter. You see he is very wise an' a ol' feller what's passed his years of understandin' don't have no kind of a show with such a man an' so—while I'm truly sorry 'at I can't come back still an' all you'll see how it is an' you'll excuse me, want you dear lady from Caro, Mich.? Cordially yours, UNCLE RUBE.

P. S.—There is one little thing in Mr. Lambertson's letter 'at I take exception to. He sez our young folks are bein' tempted an' are fallin'—I never called a man a liar 'ceptin' when I thought I could handle 'im, but—well I live in a place where temptation is jest as strong as it is in any city. I've lived here five years—I've known the place fer many years, I know 'at when saloons wuz runnin' there wuz streets where it wasn't safe for a decent woman to go after 6 p. m. I also know the same streets today are our busy business streets. There are no boys or girls learning to drink beer. 1st the price prohibits—2nd nobody is offerin' it to 'em 'count of price.

I don't think of any more jest now but some day when I fell right I'll ans'er the gentleman.—Jest UNCLE RUBE.

What the Neighbors Say

PICK BEANS ON FARM

I REGARD a recent article by Mr. Ford, covering the inefficiency of the labor occupation on the farm as timely and applicable to the bean business. It is Mr. Ford's idea to work farmers in his factories upon the days that they cannot work on their farms and it is his idea to use farmers to build machinery that they use on the farm during the period that they are not busy on the farm.

In line with this the farmers can be of great service to the bean industry by picking their beans at home during the winter months, and thereby earn wages for time that would otherwise be unproductive and accordingly increase the income from the farm. There are many other reasons in favor of this—among them are the difficulty to get help in which to orderly market the crop, as the substitution of machinery and corresponding reduction in the quality has not been at all conducive toward increasing the consumption of beans and improving the quality The whole family could join in picking beans with slight expense for equipment.

The difficultly of drawing fair samples from farm stocks is evident to all so that in either event, somebody losses. We have known farm tests of 10% to show only 1½ actual shrink in the elevators and we have seen it the other way.

Labor becomes more and more scarce all the time and it will soon be impossible to get the picking work done on a reasonable basis. The farmer has to pay the price of picking and handling and the shrink so why shouldn't he do the work. The progressive farmers will quickly see the advantage of doing all of the work on the farm necessary to prepare the beans for market. The progressive dealers will also welcome a movement of this kind, because it will prevent their competitors from paying unprofitable prices by not getting the full pick which always ends in passing on to the consumer an inferior product. Now if the farmer wants to put out a strictly high grade CHP article, he does not have to depend upon the country elevators to do it for him. He can do it at a great deal less expense himself than they can do it for him, and by so doing he can improve the efficiency and income of his farm.—Benjamin Gerks.

THE FARM

AGRICULTURE in this day is considered a far greater vocation than it was forty years ago. Great progress is being made and prospects are favorable for young men who are contemplating farming as a profession.

The nation realizes the great need of lending a helping hand to the farmer and we understand better the phrase, "for the farmer is the man that feeds us all."

It behooves the farmer of the twentieth century to be enlightened and scientific; we are living in an age of progress and one of great achievements. We have Agricultural Colleges throughout the land, and opportunities are open to young men who are willing to respond and dare to make great accomplishments. "Experimentation" in many instances has proved successful by men who are scientific farmers, and who have had training in some of our Agricultural schools.

As a rule, farmer's sons drift into the cities. Their main reason for going seems to be that the farm demands too hard work. Modern improvements in machinery are a great asset. Contrast, if you will, the times of today with those of thirty or fifty years ago. What did our fathers have to face? Low prices of produce and inadequate machinery. As we listen to the stories of our parents concerning farming then, we are almost thrilled. Yet, young man and young women on the farms today are dissatisfied. The times are as different as day and night. Consider the good marketing of today and then ask your father what wheat, oats, corn, and butter and eggs sold for forty years ago, or even twenty-five. Then talk about "Hard Times." We realize that we must classify according to conditions during war times. During the late war prices were discouraging to the farmer. Present indications, however, encourage one's heart for a brighter future. The writer himself sold butter and eggs for sixty and seventy cents at times, while working the farm of his father.

Talk about work—we must work wherever we go. The work in the country does not get as monotonous as the work in the city for the fact that on the farm one is apt to undertake four or five different kinds of work in one day whereas, in the city he works at the same thing over and over again. Furthermore, one is strictly independent on the farm and can consider himself as his "Own Boss."

Consider if you will! Suppose the father of a home in the city is confined to his home by illness. From whence does the resource come? On the farm, the wife with either the children or hired man may manage to keep the stone rolling. And in case of death, where can money be better invested than in the farm, where those who survive have something to fall back upon.

The United States Government is very much in sympathy with the farmers of today, for the reason that people are leaving the farms in a steady stream to go to the towns and cities. A survey by the Department of Agriculture shows that nearly 460,000 persons left farms in 1922. The farm labor supply is only about 88 per cent of the demand. Last year at this time the supply was 11 per cent more than the demand.

The automobile is another great advantage to the farmer. Twenty-five years ago, March 24, 1898, the first horseless carriage was sold and was delivered one week later. Then twenty cars were sold during the first year, whereas, today there are more than ten million registered car owners in the United States alone. The bright future there is for farmers to sell their produce by the use of trucks!

On April, this year, there was a shortage of 12 per cent for employment on the farm. The movement from the farm to the city last year is estimated by the Department of Agriculture to have been 2,000,000 persons. As some 880,000 persons indulged in the "Back-to-the-Farm" movement, there was a net shift in farm population of approximately 1,120,000 or 3.6 per cent in our rural agricultural population. The excess of births over deaths reduced the net loss to 460,000. Several causes have combined to bring about this "On-to-the-city" movement. The fear has often been expressed that the movement away from the agricultural districts offers a continuous thread to our food supply, and so to ones national life.

The movement from the farm to the city certainly can not go on forever, although we are reminded that the increased use of farm machinery may be expected to do much toward making up the labor shortage.

Restricted immigration has resulted in a stringency of common labor. Building operations, highway constructions, railway betterments and extensions, and public works demand tens of thousands of "pick-and-shovel" men. Wages by the hours for unskilled labor are nearly double what they were two years ago. Congress at present is considering the influx of unskilled workers into the United States. "Advice is almost as dangerous as prediction," but there are certain cautions which ought to be definitely placed before the farmer. Beyond all question, he would be wise to think twice before he undertakes a program of large production at greatly enhanced costs. Needless to say, this suggestion bears no relationship whatever to the advice that some have in times past govern the farmer to curtail his output in the hope that in this manner, he would be able to force prices up unduly. For him to decline to grow a larger crop than he can at reasonable unit cost, would be but conservative business policy, which under similar conditions is the policy regularly followed by forward looking producers everywhere.

The educational system is a still greater advantage, than it was years ago. The country school as a whole is given as much consideration as the city school. There is a greater opportunity which the country pupils enjoy that the city pupils cannot enjoy, and this is, "nature in her fullest sense." As a rule, temptations are not as great for the country boy and girl. The boys and girls in most homes on the farm, are given something to do as soon as they are able, which tends to keep them out of mischief. Contrast the young boys and girls in the city who drift around the city streets, with those in the country—"An idle brain is the Devil's workshop."

Let us ask the question and be frank with ourselves, from what place do the most of our great men come? Consider our presidents, politicians, preachers.

I contend that we have a right to say that farm life has a tendency to elevate one more for the better than has city life. Statistics show that young men from the farm are better fitted for strenuous work. Young men from the country, however, seem to have more appreciation of life in nature and are more preserving. —John F. Link, Bay County.

BEAN CROP WILL BE LESS THAN EXPECTED

I TAKE notice there is a great howl going up about the over-supply of wheat. Snow, the greatest by far crop statistican on earth, says it is no such thing. The carry-over is but very little larger if any, than usual, no more than enough to be safe. Wait until the speculators and elevator men get a hold of the heft of the crop, then see the price of wheat and flour jump. I take notice the middle men get more hoggish from year to year. In a few more years they will expect the farmers to smile and kindly thank them for taking the goods off of their hands without any remuneration whatever.

See where the price of beans has gone to, all owing to printers' ink, too much publicity. Every man, woman, and child in our state knows or thinks we are going to have a bumper crop of beans. The real facts are, if the whole state is like western Michigan we are not going to have more than one-third the crop we thought we were going to have a month ago. On account of hot, dry weather, the blossoms are blasted and fall off making no pods and even lots of the small pods fall off and what pods there are left on the vine are short and will contain but few beans.

We will have to have rain pretty soon if we get a third of a crop. All the good rain will do now is to fill out what pods there are left. It can't restore pods and blossoms which have fallen off. If we don't get rain pretty soon, all there will be in the line of spuds is just the vines.—A. A. Lambertson, Kent County.

PAMPHLET GIVES HINTS FOR CONQUEST OF T. B.

THE general essentials of modern tuberculosis treatment are summarized for the guidence of consumptives and their families in "Getting The Best Of T. B.," a pamphlet just issued by the Michigan Tuberculosis Association. For the individual advice essential to each case, the booklet refers the patient to his physician.

Rest and more rest is the secret of recovery from tuberculosis, the reader is assured. As first aids to rest come plenty of fresh air and enough nourishing food.

The problem of living comfortably out of doors in cold weather is given considerable attention, and the illustrations show a home made sleeping porch, a cure chair, and other devices which insure the patient's comfort. A brief discussion of the consumptive's diet is included.

The publication will be especially useful as a reference for patients who must take treatment in their own homes, without the benefit of constant medical supervision. Single copies will be sent free upon application to the Michigan Tuberculosis Association, 209 W. Shiawassee St., Lansing, Michigan.

THE GOSPEL OF PERSECUTION

A SERMON BY REV. DAVID F. WARNER

TEXT: "Blessed are they that have been persecuted for righteousness' sake, for theirs is the Kingdom of Heaven." Matthew 5:10.

THE Master was outlining the basic principles of his government. Persecution was inevitable. The apostles understood it so. Peter afterward said, "If ye are reproached for the name of Christ, blessed are ye." Now is the day of salvation, says Scripture. But this is to say too, that now is the day of persecution. The two days concur. Persecution and suffering are incident to Christianity. "They that would live Godly in Christ Jesus must suffer persecution." How long? As long as there are enemies to conquer And this is the testimony of history.

But persecution is not the only, nor the large, present tense of this text. It is but an accompaniment of blessedness. And blessedness is a consequence of an inward characteristic of loyalty to the Heavenly government. Much of "churchianity" places its emphasis upon outward characteristics. But Christ emphasizes the inward.

Jesus spoke for the disciples then living. He gave them fair warning of what they might expect from the world. The disciple's life then was spent "in journeyings, in labor, and in distresses." He always was fronting danger like some doomed criminal. Paul relates, "We are fools for Christ's sake." We are "as men doomed to death." Like their Master, they had no dwelling place or local ties. The Galilean had no place to lay his head. "There is but one price for human freedom—blood." True. But the blood spilled in a moral resistance to a worldly antagonism. Here is where Love meets persecution and suffering and sacrifices her life to atone for hatred. Don't you believe it? Hear that burning word on the Cross, "Father, forgive them, for they know not what they do."

But Jesus proclaims an all-time principle. History has proved it and the future will evidence it wherever sin abounds. "I stood in their dark dungeons with their rusty implements of torture devised by man for the punishement of man, and in the damp cellars where their victims who were found with Bibles, were chained naked to be eaten by armies of hungry rats." so writes Sherwood Eddy from Central Europe. But, says he, "The spirit of John Huss triumphs." Even so, "He that endureth to the end shall be saved." This too, is the last message of the apostle John in the "The Revelation," where we have a pictorial description of conflict and persecution thruout the Christian age; but all of which is to result in a rebirth of the nations and the establishment of the New Jerusalem." So, roll on, O wheels of Time!

To sketch the beattitudes is to see Christian idealism as always antagonistic to worldly standards. They are foreign to the habits and notions of sinful men. When you are a friend to Grace, you are a foreigner to the world. And a foreigner is watched, restricted, and often severely persecuted. Said the soldier on guard in the recent war, "Who are you?" "What is your nationality?" Why all this? Because a German citizen living in the United States then, was, theoretically, an enemy. Politically, he was held to be a standing rebuke to American principles. And a true Christian, a citizen of the Kingdom of Heaven, must be a standing rebute to the world. His conscience will register things worldly as evil; and this provokes antagonism.

As yet, the practice of righteousness makes us unpopular. We may hold religious opinions or make a profession and suffer little. But to practice the idealism of Christ is to invite persecution. Take your religion seriously, Christian friend, and go into Society and test here conventionalities, or into Industry and trust her practices, and at once you become obnoxious. Only the other day, an ex-chief-of-police of an Eastern city, told me of an attempt made by him to get the pastor of a large Methodist church to help him "put across" a law-enforcement program. "Why," said the minister, "if I should advocate, seriously, your program from my pulpit, I would lose my job." And instances might be multiplied. But listen! The indolence, self-righteousness, and inactive conservatism of the church, is part of the relentless force borne down upon those who would be Gospel enthusiasts. But in this day when the destinies of nations are being decided in human blood, is your life-blood, your personal or church interest, too great a price to ask to set up the Society of the Golden Rule.

When religion walks around with concealed weapons, little conflict need be expected. If Christians are not suffering as they ought to, is it because of the leaven of churchliness in the world or the leaven of worldliness in the church? Maybe both. But certainly the churches cannot afford to haul down the Christian flag when the devil fires across the Gospel boat. All honor to the boat that beached herself rather than surrender to the enemy. All glory to the Christian men and women who would keep their banners floating and sent their craft upon the rocks of persecution rather than surrender to the powers of evil.

Persecution, not for your own faults or temperament; not for harsh judgement or intolerance of others; but for "righteousness' sake" makes the Kingdom assured to you. Immediately, you recognize your calling is not of this world. It brightens your hope and increases your vision. Paul and Silas had their backs lashed to blood, but made the prison resound with their praises. Hear the Armenians' sickening moan! "The blood of the martyrs is the seed of the church."

But there is a future Kingdom for all those who receive the Kingdom ideals here. The Kingdom spirit here is the germ pledge of that more perfect reign to come. Polycarp said to his persecutors, "Eighty-six years have I served him and he has done me nothing but good. How then can I revile him, my Savior and King?" He joyfully went to the stake for "righteousness' sake." But burning at the stake or having our names recorded on history's pages, in itself, does not count. There is a large company of just plain folks who have become immortalized on the books of Heaven, but whose names, and mention of whose deeds, have not occured on human pages. They are men and women, who by toil, sacrifice, and kindness, have helped to build the community of Christian good-will.

"They have no place in storied page,
  Nor rest in marble shrine;
They are past and gone with a perished age;
  They died and made no sign.

"They healed sick hearts while their own were broken,
  And dried sad eyes till their's lost sight;
We shall know at last by a certain token
  How they fought and fell in the fight."

To be sung about in this way for "righteousness' sake," is more blessed than to have silver and gold, and vast possessions. Even yet "The way of the world is to praise dead saints and persecute living ones."

PROF. HARRISON HUNT CHOSE M. A. C. ZOOLOGY HEAD

PROF. HARRISON R. HUNT has been named head of the department of zoology and geology at M. A. C., succeeding Prof. Walter B. Barrows, who died in February, 1923, according to the announcement of Robert S. Shaw, acting head of the college. Prof. A. C. Congor, who has served as acting head of the department since the death of Professor Barrows, resigned some time ago to accept a similar position at Ohio Wesleyan university. Professor Hunt comes to M. A. C. from the University of Mississippi, where he has been head of the department of biology for the past four years.

You may as well Profit by the Saving this Book offers You

This Catalogue is free to you. You need merely fill in the coupon below. You, too, may just as well profit by the saving this book offers.

Over Fifty Years' experience in buying and manufacturing has gone into this book —to secure for you and your family the lowest prices and the biggest savings.

Over Forty Million Dollars' worth of merchandise has been bought when prices were lowest, and manufactured especially for this Catalogue.

Our World-wide Search for Bargains

Actually, our buyers have searched every important market of the world to secure for you these bargains. Nothing has been left undone to secure the lowest prices. And in all this work we have never lost sight of quality.

To offer only the kind of goods that is best for you to buy, that will give the longest service, that is our policy. We never sacrifice quality to make a seemingly low price.

"Ward Quality" Means Reliable Goods

When you buy from Montgomery Ward & Co., you get only goods that will stand inspection and use.

That has been our principle for over Fifty Years. To sell only Dependable, Serviceable Goods at the lowest prices possible—and always your money back if you are not satisfied.

Everything for the Home, the Farm and the Family

FOR WOMEN: Our own Fashion Experts, living in New York, have selected for you the best New York Styles, only the best. And we offer these for every member of the family, without the usual "fashion profits." You will be delighted with the big Woman's Section of this new Fall & Winter Catalogue.

FOR THE HOME: Experts in interior decoration have provided a treat for all women interested in beautifying their homes. Everything new in furniture, carpets, and decorations — everything practical and new in household devices, everything needed for the home this book offers at a big saving.

FOR THE FARM: For over Fifty Years, the American Farmer and Montgomery Ward & Co. have helped each other. We have helped and are continuing to help by offering everything for the farm at the lowest prices: Tools, hardware, tires, harness, everything a farmer uses is offered at a saving.

FOR THE MEN: Everything for the man's and boy's personal use. Our bargains in clothing alone make this book invaluable to every man. There is a saving on everything a man uses or wears.

And so we say to you—don't you, at least, miss the advantage this book offers you. You and your family may just as well profit by its saving.

The coupon below brings you this big, complete Fall & Winter Catalogue free.

Telemachus, Friend

Two Close Friends Court the Same Woman

A Complete Short Story by O. HENRY America's Greatest Short Story Writer

Copyrighted, 1920, by Doubleday, Page & Co.; published by special arrangement with the Wheeler Syndicate, Inc.

RETURNING from a hunting trip, I waited at the little town of Los Pinos, in New Mexico, for the south-bound train, which was one hour late. I sat on the porch of the Summit House and discussed the functions of life with Telemachus Hicks, the hotel proprietor.

Perceiving that personalities were not out of order, I asked him what species of beast had long ago twisted and mutilated his left ear. Being a hunter I was concerned in the evils that may befall one in the persuit of game.

"That ear," said Hicks, "is the relic of true friendship."

"An accident?" I persisted.

"No friendship is an accident," said Telemachus; and I was silent.

"The only true case of true friendship I ever knew," went on my host, "was a cordial intent between a Connecticut man and a monkey. The monkey climbed palms in Barranquila and threw down cocoanuts to the man. The man sawed them in two and made dippers, which he sold for two reales each and bought rum. The monkey drank the milk of the nuts. Through each being satisfied with his own share of the graft, they lived like brothers.

"But in the case of human beings, friendship is a transitory art, subject to discontinuance without further notice.

"I had a friend once, of the entitlement of Paisley Fish, that I imagined was sealed to me for an endless space of time. Side by side for seven years we had mined, ranched, sold patent churns, herded sheep, took photographs and other things, built wire fences, and picked prunes. Thinks I, neither homicide nor flattery nor riches nor sophistry nor drink can make trouble between me and Paisley Fish. We was friends in business, and we let our amicable qualities lap over and season our hours of recreation and folly. We certainly had days of Damon and nights of Pythias.

"One summer me and Paisley gallops down into these San Andres mountains for the purpose of a month's surcease and levity, dressed in the natural store habiliments of man. We hit this town of Los Pinos, which certainly was a roof-garden spot of the world, and flowing with condensed milk and honey. It had a street or two, and air, and hens, and a eating-house; and that was enough for us.

"We strikes the town after supper-time, and we concludes to sample whatever efficacy there is in this eating-house down by the railroad tracks. By the time we had set down and pried up our plates with a knife from the red oilcloth, along intrudes Widow Jessup with the hot biscuit and fried liver.

"Now, there was a woman that would have tempted an anchovy to forget his vows. She was not so small as she was large: and a kind of welcome air seemed to mitigate her vicinity. The pink of her face was in hoc signo of a culinary temper and warm disposition and her smile would have brought out the dogwood blossoms in December.

"Widow Jessup talks to us a lot of garrulousiness about the climate and history and Tennyson and prunes and the scarcity of mutton, and finally wants to know where we came from.

" 'Spring Valley,' says I.

" 'Big Spring Valley,' chips in Paisley, out of a lot of potatoes and knucklebone of ham in his mouth.

"That was the first sign I noticed that the old fidus Diogenes business between me and Paisley Fish was ended forever. He knew how I hated a talkative person, and yet he stampedes into the conversation with his amendments of syntax. On the map it was Big Spring Valley; but I had heard Paisley himself call it Spring Valley a thousand times.

"Without saying any more, we went out after supper and set on the railroad track. We had been pardners too long not to know what was going on in each other's mind.

" 'I reckon you understand,' says Paisley, 'that I've made up my mind to accrue that widow woman as part and parcel in and to my hereditaments forever, both domestic, sociable, legal, and otherwise, until death us do part.'

" 'Why, yes,' says I, 'I read it between the lines, though you only spoke one. And I suppose you are aware,' says I, 'that I have a movement on foot that leads up to the widow's changing her name to Hicks, and leaves you writing to the society column to inquire as to whether the best man wears a japonica or seamless socks at the wedding.

" 'There'll be some hiatuses in your program,' says Paisley, chewing up a piece of a railroad tie, 'I'd give in to you,' says he, 'in 'most any respect if it was secular affairs, but this is not so. The smiles of woman,' goes on Paisley, 'is the whirlpool of Spuills and Chalybeates, into which vortex the good ship Friendship is often drawn and dismembered. I'd assault a bear that was annoying you,' says Paisley, 'or I'd indorse your note, or rub the place between your shoulder-blades with opodeldoc the same as ever; but there my sense of etipuette ceases. In this fracas with Mrs. Jessup we play it alone. I've notified you fair.'

"And then I collaborates with myself, and offers the following resolutions and by-laws:

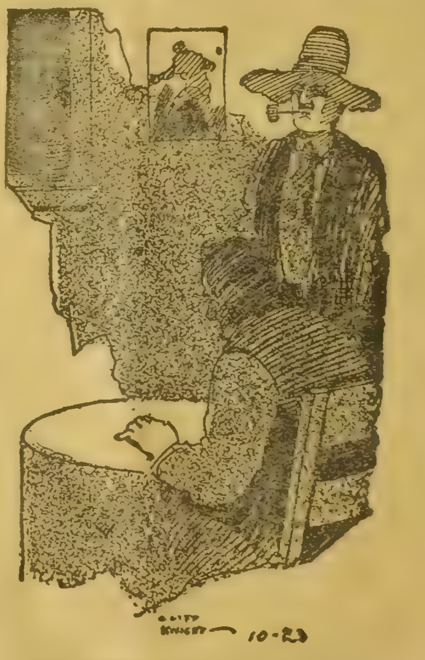
" 'Friendship between man and man,' says I, 'is an ancient historical virtue enacted in the days when men had to protect each other against lizards with eighty-foot tails and flying turtles. And they've kept up the habit to this day, and stand by each other till the bell-boy comes up and tells them the animals are not really there. I've often heard,' I says, 'bout ladies stepping in and breaking up a friendship between men. Why should that be? I'll tell you Paisley, the first sight and hot biscuit of Mrs. Jessup appears to have inserted a oscillation into each of our bosoms. Let the best man of us have her. I'll play you a square game, and won't do any underhanded work. I'll do all of my courting of her in your presence, so you will have an equal opportunity. With that arrangement I don't see why our steamboat of friendship should fall overboard in the medicinal whirlpools you speak of, whichever of us wins out."

" 'Good old hoss!' says Paisley, shaking my hand. 'And I'll do the same,' says he. 'We'll court the lady synonymously, and without any of the prudery and bloodshed usual to such occasions. And we'll be friends still, win or lose.'

"At one side of Mrs. Jessup's eating-house was a bench under some trees where she used to sit in the breeze after the south-bound hed been fed and gone. And there me and Paisley used to congregate after supper and make partial payments on our respects to the lady of our choice. And we was so honorable and circuitous in our calls that if one of us got there first we waited for the other before beginning any gallivantery.

"The first evening that Mrs. Jessup knew about our arrangement I got to the bench before Paisley did. Supper was just over, and Mrs. Jessup was out there with a fresh pink dress on, and almost cool enough to handle.

"I sat down by her and made a few specifications about the moral surface of nature as set forth by the landscape and the contiguous perspective. That evening was surely a case in point. The moon was attending to business in the section of sky where it belonged, and the trees was making shadows on the ground according to science and nature, and there was a kind of conspicuous hullabaloo going on in the bushes between the bull-bats and the orioles and the jack-rabbits and other feathered insects of the forest. And the wind out of the mountains was singing like a jew's-harp in the pile of old tomato-cans by the railroad track.



"We strikes the town after supper-time."

"I felt a kind of sensation in my left side—something like dough rising in a crock by the fire. Mrs. Jessup had moved up closer.

" 'Oh, Mr. Hicks,' says she, 'when one is alone in the world, don't they feel it more aggravated on a beautiful night like this?"

"I rose up off the bench at once.

" 'Excuse me, ma'am,' says I, 'but I'll have to wait till Paisley comes before I can give a audible hearing to leading questions like that.'

"And then I explained to her how we was friends cinctured by years of embarrassment and travel and complicity, and how we had agreed to take no advantage of the other in any of the more mushy walks of life, such as might be fomented by sentiment and proximity. Mrs. Jessup appears to think serious about the matter for a minute, and then she breaks into a species of laughter that makes the wildwood resound.

"In a few minutes Paisley drops around, with oil of bergamot on his hair, and sits on the other side of Mrs. Jessup, and inaugurates a sad tale of adventure in which him and Pieface Lumley has a skinning-match of dead cows in '95 for a silver-mounted saddle in the Santa Rita valley during the nine months' drought.

"Now, from the start of that courtship I had Paisley Fish hobbled and tied to a post. Each one of us had a different system for reaching out for the easy places in the female heart. Paisley's scheme was to petrify 'em with wonderful relations of events that he had either come across personally or in large print. I think he must have got his idea of subjugation from one of Shakespeare's shows I see once called 'Othello.' There is a colored man in it who acquires a duke's daughter by disbursing to her a mixture of the talk turned out by Rider Haggard, Lew Dockstader, and Dr. Parkhurst. But that style of courting don't work well off the stage.

"Now, I give you my own recipe for inveigling a woman into that state of affairs when she can be referred to as 'nee Jones.' Learn how to pick up her hand and hold it, and she's yours. It ain't so easy. Some men grab at it so much like they were going to set a dislocation of the shoulder that you can smell the arnica and hear 'em tearing off bandages. Some take it up like a hot horseshoe, and hold it off at arm's length like a druggist pouring tincture of asafoetida in a bottle. And most of 'em catch hold of it and drag it right out before the lady's eyes like a boy finding a baseball in the grass, without giving her a chance to forget that the hand is growing on the end of her arm. Them ways are all wrong.

"I'll tell you the right way. Did you ever see a man sneaw out in the back yard and pick up a rock and throw at a tomcat that was sitting on a fence looking at him? He pretends he hasn't got a thing in his hand, and that the cat don't see him, and that he don't see the cat. That's the idea. Never drag her hand out where she'll have to take notice of it. Don't let her know that you think she knows you have the least idea she is aware you are holding her hand. That was my rule of tactics; and as far as Paisley's serenade about hostilities and misadventure went, he might as well have been reading to her a time-table of the Sunday trains that stop at Ocean Grove, New Jersey.

"One night when I beat Paisley to the bench by one pipeful, my friendship gets subsized for a minute, and I asks Mrs. Jessup if she didn't think a 'H' was easier to write than a 'J.' In a second her head was mashing the oleander flower in my button-hole, and I leaned over and —but I didn't.

" 'If you don't mind,' says I, standing up. 'we'll wait for Paisley to come before finishing this. I've never done anything dishonorable yet to our friendship, and this won't be quite fair.'

" 'Mr. Hicks,' says Mrs. Jessup, looking at me peculiar in the dark, 'if it wasn't for but one thing, I'd ask you to hike yourself down the gulch and never disresume your visits to my house.'

" 'And what is that, ma'am?" I asks.

" 'You are too good a friend not to make a good husband,' says she.

"In five minutes Paisley was on his side of Mrs. Jessup.

" 'In Silver City, in the summer of '98,' he begins, 'I see Jim Bartholomew chew off a Chinaman's ear in the Blue Light Saloon on account of a cross-barred muslin shirt that—what was that noise?"

"I had resumed matters again with Mrs. Jessup right where we had left off.

" 'Mrs. Jessup,' says I, 'has promised to make it Hicks. And this is another of the same sort.'

"Paisley winds his feet around a leg of the bench and kind of groans.

" 'Lem,' says he, 'we been friends for seven years. Would you mind not kissing Mrs. Jessup quite so loud? I'd do the same for you.'

" 'All right,' says I. 'The other kind will do as well.'

" 'This Chinaman,' goes on Paisley, 'was the one that shot a man named Mullins in the spring of '97, and that was——'

"Paisley interrupted himself again.

" 'Lem,' says he, 'if you was a true friend you wouldn't hug Mrs. Jessup quite so hard. I felt the bench shake all over just then. You know you told me you would give me an even chance as long as there was any.'

" 'Mr. Man,' says Mrs. Jessup, turning around to Paisley, 'of you was to drop in to the celebration of mine and Mr. Hick's silver wedding, twenty-five years from now, do you think you could get it into that Hubbard squash you call your head that you are nix cum rous in the business? I've put up with you a long time because you was Mr. Hicks's friend; but it seems to me that its time for you to wear the willow and trot off down the hill.'

" 'Mrs. Jessup,' says I, without losing my grasp on the situation as fiance, 'Mr. Paisley is my friend, and I offered him a square deal and a equal opportunity as long as there was a chance.'

" 'A chance!' says she. ' Well, he may think he has a chance; but I hope he won't think he's got a cinch, after what he's been next to all the evening.'

"Well a month afterwards me and Mrs. Jessup was married in the Los Pinos Methodist Church; and the whole town closed up to see the performance.

"When we lined up in front, and the preacher was beginning to sing out his rituals and observances, I looks around and misses Paisley. I calls time on the preacher. Paisley ain't here,' says I. We've got to wait for Paisley. A friend once, a friend always—that's Telemachus Hicks,' says I. Mrs. Jessup's eyes snapped some; but the preacher holds up the incantations according to instructions.

"In a few minutes Paisley gallops up the aisle, putting on a cuff as he comes. He explains that the only dry-goods store in town was closed for the wedding, and he couldn't get the kind of a boiled shirt that his taste called for until he had broke open the back window of the store and helped himself. Then he ranges up on the other side of the bride, and the wedding goes on. I always imagined that Paisley calculated as a last chance that the preacher might marry him to the widow by mistake.

"After the proceeding was over we had tea and jerked antelope and canned apricots, and then the populace hiked itself away. Last of all Paisley shook me by the hand and told me I'd actedsquare and on the level with him and he was proud to call me a friend.

"The preacher had a small house on the side of the street that he'd fixed up to rent; and he allowed me and Mrs. Hicks to occupy it until the ten-forty train the next morning, when we was going on a bridal tour to El Paso. His wife had decorated it all up with hollyhocks and poison ivy, and it looked real festal and bowery.

"About ten o'clock that night I sets down in the front door and pulls off my boots a while in the cool breeze, while Mrs. Hicks was fixing around in the room. Right soon the light went out inside; and I sat there a while reverberating over old times and scenes. And then I heard Mrs. Hicks call out, 'Ain't you coming in soon, Lem?'

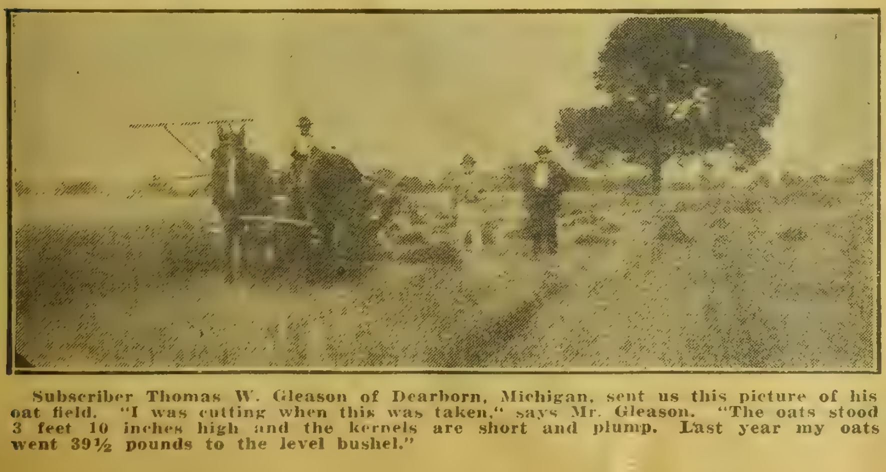
"Well, well," says I, kind of rousing up. "Durn me if I wasn't waiting for old Paisley to——"

"But when I got that far," concluded Telemachus Hicks, "I thought somebody had shot this left ear of mine off with a forty-five. But it turned out to be only a lick from a broomhandle in the hands of Mrs. Hicks."

OUR BOOK REVIEW

(Books reviewed under this heading may be secured through The Michigan Business Farmer, and will be promptly shipped by parcel post on receipt of publisher's price stated.)

"Trodden Gold" by Howard Vincent O'Brien. The book is a splendid study in contrasts as it unfolds the lives of the two sisters, the spiritual and financial progress of their husbands, the ultimate rewards of their efforts and the resulting effect on the whole Ball family. It questions the philosophy of a life that makes the accumulation of riches for their own sake its one aim and reveals the quite tangible advantages in depth and richness of character and fineness of spirit that accrue to him who devotes himself to the betterment of mankind, to bringing new knowledge to the world's science, and to a life of service to his fellow men. ($2.) Little, Brown and Company.



Subscriber Thomas W. Gleason of Dearborn, Michigan, sent us this picture of his oat field. "I was cutting when this was taken," says Mr. Gleason. "The oats stood 3 feet 10 inches high and the kernels are short and plump. Last year my oats went 39½ pounds to the level bushel."

"The Farm Paper of Service"

THE FAIR

THEY brought the best and sleekest of their flocks
The milkiest cow, the squarest-shouldered ox;
The bull, with mimic thunder in his cry.
And lightning in each eager, wicked eye;
The sheep that had the heaviest garments worn,
The cock that crowed the loudest in the morn;
The mule, unconscious hypocrite and knave,
The horse, proud high-born Asiatic slave;
The playful calf, with eyes precocious-bright,
The hog—grim quadrupedal appetite;
The Indian corn-ears, prodigal of yield,
The golden pumpkin, nugget of the field;
The merriest-eyed potatoes, nursed in gloom,
Just resurrected from their cradle-tomb;
Rich apples, mellow-cheeked, sufficient all
To 've tempted Eve to fall—to make them fall;
The grapes, whose picking served strong vines to prune,
The peach—rich alto of the orchard's tune;
The very best the farmers' land had grown,
They brought to this menagerie of their own.

—Will Carleton.

THE 1923 STATE FAIR

THE Michigan State Fair at Detroit opened its gates yesterday and they will not close until the evening of September 9th, so that every citizen of this great state will have an opportunity in viewing its every department in detail.

There are two ways of coming to the State Fair at Detroit and the value of either is measured exactly by the desire which prompts the individual in his decision to come.

The first way is to make a hurried one-day visit to the Fair and try to crowd into it as much amusement as is possible with only a fleeting glance here and there at the exhibits of an educational nature which have taken months to prepare. Then to make a canvass of the midway, renew acquaintances with the ancient freaks and hurry to the grandstand for the afternoon and evening performances, followed by the grand display of fireworks.

The other individual and his family come to the Fair and prepare to stay at least one night, which gives them two full days into which they pack a carefully and well planned examination of the various exhibits, particularly those in which they are specializing in their own daily work.

There is not a single department of the fair from better babies to the display of Michigan wild life which is not worth a careful and thorough examination. There is something for every man, woman and child who comes to the Michigan State Fair. It is today, more than an ordinary fair and must not be compared even with its own exhibitions of five years ago. You, who have visited the fair at Detroit during the past two or three years, will readily grant that this fair has now become a real exposition and that it actually ranks among the three greatest fairs held on the American continent will be no surprise to you.

Provisions have been made for automobile tourists who bring their own camping outfits, and there are accomodations on the grounds for not less than a thousand cars, and running water and toilet facilities have been provided within the grove which will make this an attractive place to stop for one or more nights.

No other fair enjoys the favorable location which this fair does in its proximity to America's fourth city. The Michigan State Fair enjoyed the largest attendance of any fair on the American continent in the year 1922, and there is every indication that the year 1923 will far surpass in attendance any previous year.

It is to be remembered that the State Fair is now entirely owned by the state of Michigan and that all profits from it, together with a liberal appropriation which was made this year, are being invested in making it the finest possible exposition to the agricultural and industry of our state.

Every good business farmer in Michigan owes it to his family to give them an outing at the Michigan State Fair this year, and we hope that the attendance from the country may double that of previous years. We would not give this our full recommendation if we were not sincerely enthusiastic over the present educational and recreational value of the Michigan State Fair at Detroit.

STATE TAX LOWERED

THERE is cheering news coming from Lansing to confirm the belief which we expressed on this page earlier in the season that the state tax rate would be cut this year.

The 1922 state tax rate was approximately $3.08 per thousand. The prospective new rate will be, it is hoped, $2.32 per thousand, a cut of 75 cents per thousand.

Two factors it is claimed are responsible for the lowering of the state tax. First, that the operating expenses of the state have been cut from $17,300,000 to $16,000,000; second, because the increase in state valuation for tax purposes as fixed by the state board of equalization, has increased the valuation of the state over one billion and a half dollars.

There is cheering news to the ten northern counties in the fact that they are getting a larger slice of the melon, but there is a reduction throughout the state of approximately ten percent.

We have contended right along that time alone could efface the post-war conditions and that gradually but surely conditions would readjust themselves and the farmer would find himself on a firmer business foundation than he has been at any time in the history of this country.

One of the things that we knew must happen was that state and national taxes would have to be lowered. At the last election both parties promised that the greatest single purpose they would attempt to attain during their administration would be the lowering of taxes. It would appear from the information which has just come from Lansing that the present administration at least had made a sincere attempt to live up to their pre-election promise.

THE SHORT SIGHTED BEAN JOBBER

WE have it on good authority that there are one or two prominent bean jobbers in Michigan who do not like our statement that we intend to inform the farmers of Michigan as to who are contributing and who are not contributing to the campaign for advertising navy beans to the consumer.

We did not make this statement in the nature of a threat. We made it because we believe the farmers of Michigan are entitled to know who their friends are and we are anxious to find out the names of the reactionary gentlemen who do not see things through modern eyeglasses.

There should be no factions in the bean industry in Michigan. There was a time when the bean jobbers association as a whole were looked upon by the bean growers of Michigan as directly opposed to their interests.

Thanks to the farsightedness of some big men on both sides of this controversey, these days have passed, and all realize now that the Michigan navy bean will find its rightful place in the market and that all interests concerned in its welfare will benefit most by carefully planned and coordinated cooperative work.

We are intensely interested in this plan to advertise beans to the American consumer the same as California associations are advertising prunes, citrus fruit, raisins and other staples with such great success.

We are endeavoring to prove our sincerity by using ample space in THE BUSINESS FARMER to tell the bean growers of Michigan about these plans and thus to encourage the farmer himself to cooperate with the buyer of his beans.

We intend to leave no stone unturned by which it is possible for us to extend any help to this cause which may be within our power.

AMERICA'S SWEET TOOTH

ON another page in this issue Mr. C. H. Allen, who is president of the farmer-owned sugar company at Defiance, Ohio, asks why it is necessary for the United States to go beyond our own border lines to buy sugar, and the reading of this article is well worth the time of every farmer who grows now or may in the future, grow sugar beets.

As is well known the consumption of sugar per capita in the United States is practically double that of any other country in the world. The American demand for sweet things seems to be unsatiable.

To supply this want Uncle Sam has leaned on his foster-child, Cuba, and the sugar barons in that fertile island of paradise which lays hardly a stone's throw from Key West have rolled in the lap of luxury because their cheaply paid labor can compete and force the American sugar beet grower and the Louisiana cane grower out of business.

We have never changed our opinion that the sugar market is a manipulated market to the detriment of both producer and consumer in the United States. That this is a fact seems to be proven by the present price of sugar which is going lower, it seems, in preparation for the time when the ton price of beets, under the Michigan contract is determined.

THE WHEAT PRICE AND FARM PROSPERITY

WHILE half the people have been scaring the other half about wheat prices and the awful outlook for the future prosperity, many of us have overlooked the fact that the price of corn has gradually advanced until on July 31st, it reached a figure which, with the exception of the three years 1917-1919, is the highest on record, at least since 1868.

We have long been accustomed to thinking of one dollar as the standard price of wheat and fifty cents for corn. To-day, while wheat has fallen a few cents below its standard, corn is worth within a few cents of twice its standard, value. Is the present price of wheat, then, the catastrophe we have been told it is, particularly when we remember that for every bushel of wheat raised in this country, we produce over three bushels of corn? In other words for every bushel of wheat which is off a few cents in value, there are three bushels of corn, on each of which farmers will collect nearly twice the standard value.

Then, too, we find that oats and barley are worth, rather more today than they were a year ago. Two years ago cotton brought only eight cents a pound, and corn but 18 cents a bushel in Nebraska and Iowa. Now cotton is worth 25 cents a pound and corn 90 cents a bushel. Tobacco has advanced from five to 35 cents a pound.

According to former Secretary of Agriculture, E. T. Meredith, the value of corn, wheat, oats and barley crops on the farms was approximately $500,000,000 more July 1 of this year than on the same date a year ago.

Apparently, the current price of wheat is not the most important, nor indeed, the only aspect of interest in the present farm situation. Its importance, however, has been exaggerated until it doubtless, overshadows every other factor in the minds of most people. It would seem that those who have been most energetic in the propaganda of discouragement have been those who hope, ardently, to retain their political seats, by the now worn-out method of howling calamity to the farmer.

FROM FARM TO CITY

NO less an authority than Dr. R. M. Olin, health commissioner of the state of Michigan, in a full page article in one of the Detroit dailies points out that the present migration of farmers to the city must result in a curtailment of food products which will force prices up and make farming again the most remunerative and pleasant of man's occupations.

We have been pointing out right along that this condition was bound to exist sooner or later and that the boy or girl who hastened to the city and abandoned the farm of their parents was not necessarily going to make the greatest profit over a ten year period.

Recently a survey was made in Ohio which proved that the actual living expense of a family was some $1,200 per year greater in the city than in the country. That is, that the farmer would have to earn $1,200 more per year in the city simply to make up for the food and living accommodations which he finds on his farm. That is something to think about before you move!

Dr. Olin points out in another part of his article that strange as it may seem, the city is rapidly outdistancing the country as a healthy place in which to live, and that this is largely responsible because of two important factors,—first because of the large number of flies which come from livestock kept too close to the home, causing dysentery and other kindred diseases, and second, because it is hard for the farmer to learn that when the winter season comes with its slack period of manual labor, he must cut down his food requirements.

Because the farmer is accustomed to consume large quantities of food during the busy days of manual labor which his body has been able to assimulate and care for, does not mean he can continue on the same ration when his labors are cut in half. This statement is undoubtedly true, as the record of any farming community will prove that it is the inactive months which take their greatest toll of life and health among country people, particularly among the men as, (Lord help 'em!) the women folks seem to have to work about as hard one time of year as another.

PUBLISHER'S DESK

A NEW ONE

THANKS to a reader from Armada, Michigan, I am able to tell you of a new "Two-dollars-in-advance for employment" scheme which is being worked by the International Exchange Corporation, 8941 Commercial Avenue, Chicago. I have their circular matter before me.

This company, in a letter signed by I. W. Brandwein, president, agrees to send our reader for the $2 she is asked to send them "simply as an evidence of good faith and to protect us from curiosity seekers," "Polish, German, Austrian and Russian money, the pre-war value of an equivalent amount of which was $506,350.00."

This is by far the biggest offer we have ever been able to announce from this page and it is quite possible that this amount of foreign paper money would be worth more than $2 if sold for waste paper and certainly much more if used to paper your house.

But this is not all that Mr. Brandwein promises our reader, because the real point is that if she will copy letters for him and send them to her friends, supposedly suggesting to them that investment in foreign currency and bonds may prove a profitable speculative investment, she will be paid not less than $10 per hundred for copying the letters and it is also possible to earn as high as $100 per hundred letters.

The letter contains a guarantee that if our reader cannot earn from $25 to $75 per week, she may return all the material they have sent her and receive her $2 back, so if it were possible to collect all of the Russian rubles, German marks, and Austrian kronen, which she had received, providing baby had not torn up some of it, friends taken it for souvenirs, or father used it for shaving paper, there would be a fair chance of getting her $2 back.

The Publisher is curious enough to want to see one of the letters which Mr. Brandwein is asking to have copied, so if any of our readers happen to be a "local correspondent" for the International Exchange Corporation and have a copy of this letter, we would appreciate their sending it and we promise not to use their name or initials in any comments we make on it in the future.

OUR FRIEND McRAE

WARREN McRAE of Logansport, Indiana, says we have done him a great injustice in stating that he did not have an office and that he was rooming in a rooming house. That statement came to us in a letter from a reader who stated that the Chief of Police of Logansport had so reported to her, but whether it is true or not has little bearing on the facts in the case.

The facts are that Warren McRae advertised in Michigan newspapers for farms for sale, stating that he had buyers ready and waiting. When the owner of a farm wrote him he sent a printed circular letter stating that to list the farm with his agency would require a down payment of $10 and in this letter and various follow-up letters which we have on file in this office, Mr. McRae stated he was sending buyers to Michigan and gave their names.

Mr. McRae has now published a booklet which apparently contains the listing of several hundred farmers who have paid him a ten dollar fee and he states that he has published one thousand copies of this book. Mr. McRae states that The Business Farmer has done him an injustice, so we here state that if Mr. McRae con prove to us that he has sold a single farm to any prospective buyer whom he listed specifically in one of his circular letters to one of our readers or any other farm owner in Michigan we will so state the facts and thus give him a free advertisement in these columns.

Mr. McRae says we uphold the scheme worked by Mr. Jones, of Olney, Illinois. This is news to us and we suggest Mr. McRae reread our comment on the Jones scheme published in the issue of July 21st. We have never knowingly accepted the advertising of anyone who publishes blind ads asking for farms for sale and then sends out a scheme where advance payments are required, and we will continue to warn our readers to be on the lookout for any advertisement headed "Wanted, Farms" and under no circumstances to make any down payments whatsoever for the sale of a farm until the deal is consumated.

SOLD FOUR IN TWO MONTHS

IN reading the last Business Farmer I noticed your inquiry about the American Music Publishing Co., 1658 Broadway, N. Y. Will say that I answered their advertisement and it reads that they will pay 10c for every circular mailed out. Their equipment consists of 20 copies of music, lots of circulars, envelopes included, and you are to mail these circulars to your music loving friends and pay the postage on them yourself and if your friend buys this music from you, you are to charge 25c a copy for it. And in this way you get your $2.00 back you sent them, but if you can not sell the music you have it on your hands, and money out is the way I look at it. It is about 2 months now and I have sold 4 copies and I expect to lose the other dollar.—P. C. M., Holton, Mich.

ON THE NILE AGAIN

DEAR Mr. Slocum:—I saw inquiries in your paper about Nile Art Co., Ft. Wayne, Indiana, and as I have had some experience with them I thought I would write. I sent them $5.50 for their outfit—it consisted of some small bottles of color like ink, some little pine sticks, a wad of absorbant cotton, four thumb tacks and four designs stamped on unbleached muslin. The idea was to fill in the design with the different colors by smearing it on with absorbant cotton wrapped around sticks. I did this very carefully and sent them to the company. They wrote back that I was doing very nicely for a beginner but that I would have to have perseverance as "Rome wasn't built in a day." In the meantime they would be only too glad to furnish me the unbleached muslin squares at 60c per and the little bottles of coloring at 25c per bottle. I didn't send for any more, needless to say. They could put one off indefinitely by saying their work was unsatisfactory and still be making big money by selling their worthless material.—Mrs. S.

PLEASE SEND LABEL

IF our readers would attach the address label from a recent copy of The Business Farmer when writing for service from any department of this paper it would save time and expense all around. We like to accomodate our friends quickly and we want to be of service to all, but inasmuch as we make no charge for any service rendered by a paid-in-advance subscriber, we must know you are one.

The date on your address label on the front tells the story. If it reads (Sept23) or any date thereafter you are paid in advance, but if it reads (Aug23) or any date before that, you are in arrears and you must send Sixty Cents for one year or a Dollar for Two years.

Our subscription rate is low enough, Goodness knows, and the service we render readers for sixty cents a year, is many times worth sixty dollars!

The Collection Box

The purpose of this department is to protect our subscribers from fraudulent dealings or unfair treatment by persons or concerns at a distance.

In every case we will do our best to make a satisfactory settlement or force action, for which no charge for our services will ever be made, providing:

1.—The claim is made by a paid-up subscriber to The Business Farmer.
2.—The claim is not more than 6 mos. old.
3.—The claim is not local or between people within easy distance of one another. These should be settled at first hand and not attempted by mail.

Address all letters, giving full particulars, amounts, dates, etc., enclosing also your address label from the front cover of any issue to prove that you are a paid-up subscriber.

Harvest early and escape rust

Fertilize your winter wheat with Royster's Fertilizer and harvest your crop ahead of the destructive rust and the deadly drought. Royster's Fertilizer will also give the wheat an early and sturdy start; will increase the yield and the quality, and leave more straw. Royster's motto is "How good?" not "How cheap?" You can bank on its quality.

At the Ohio Experiment Station, wheat on unfertilized land gave a yield of 10.7 bushels per acre while on land treated with complete fertilizer the yield was 24 bushels per acre. Unfertilized, about 49 per cent. of kernels were shrunken, while the fertilized wheat had only 16 per cent. shrunken. For information, write F. S. Royster Guano Company, Toledo, Ohio.

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

WOMEN'S EXCHANGE

DEAR FOLKS—During the last six months since I have had this department, I have received letters asking for help and suggestion to aid the women on the farm to either make money or how she might obtain the things most desired. In taking this matter up with Mr. Slocum, we have schemed out a plan to be used only for and by the woman readers of this page. The new department will be under the heading of "Women's Exchange." I want you to read it thru and know that I want our page to be for each and every one of my women readers. Our cook-book is slowly being constructed and although it takes time for all good things I hope to have a thorough book when completed.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

SCHOOL BEGINS TO-DAY

I'm glad vacation's over, and school is called again!
For thirteen weeks I've counted the sultry days away—
I'm glad vacation's over and school begins to-day.

They say that teachers cannot teach, that scholars cannot learn,
Thro' all the days of summer—the days that fairly burn;
I wonder if they ever ask how mothers get along
With romping boys who find their joys in doing something wrong.

There's John, Joe and Jimmy—their clothes were nearly new
When they come home from school that day, and said the term was through;
Now John, and Joe, and Jimmy, with sun-brown hands and feet,
Come in at night about plight of beggars on the street.

There is no order in the house; I cannot find a thing;
The drawers were tumbled up side down with six hands hunting string;
The chairs are always in a row; the whole house fairly jars
With Jimmy jumping off and on, to run his train of cars.

My bran-new carving knife, I found out in the grass, here Joe
Had used it making arrows for Jimmy's little bow;
And John came home from fishing—came whistling through the gate—
With father's best tobacco box filled up with worms for bait.

The hens have had a frightful time the whole vacation through;
They could not hide a nest away, the best that they could do;
I heard the rooster crow this morn; to me it seemed to say
I'm glad vacation's over and school begins today!"

"All work," they say, "without some play, makes Jack a stupid boy."
Well, that's a good old adage, and gives the urchin joy;
But if the man who wrote it lived now and owned a son,
He'd sit up late and scratch his pate, to write a different one.

There, there, I'm not complaining! Tho' weary of the noise,
I love as only mothers can, my rattling, romping boys;
And I shall watch for four o'clock through every coming day,
When I can see my darlings out in the yard at play.

I've one dear boy now sleeping beneath the summer sod;
He took a long vacation when he went home to God.
When life's rough school is over, I'll meet him, by and by,
Where graves ne'er hide our treasures—where dear ones never die.

—John H. Yates.

AWAY TO SCHOOL

Life on the farm is one struggle after another; this same rule applies to the city and town folks and only solution to this is the trying to better our lives; but how? The following editorial was written in one of the Chicago dailies and I am giving it to you:

A GOOD many boys and girls, along with their parents, are struggling with the problem of whether they are to go away to school this fall. We think there is only one solution. That is to go, unless the financial burden, in addition to that already existing, is too great to bear. Attention is frequently called to the fact that the boys who go away to school these days seldom if ever come back to the farm. In spite of that it is best for them to go. There has been lots of foolishness projected about keeping the boys on the farm. They should never be kept there unless they prefer farm life to anything else. And if they are going to the city to live by all means give them a training that will help them to be successful. City life is hard enough at best. It is drudgery for the man not able to do better than the average, with mighty little accumulated after long years of hard work. Some farm folks are not inclined to believe this, but they have not seen the seamy side of city life.

But there really is a more important consideration than that of dollars and the scale of living. If college education pays, it pays best in the outlook on life it gives. Life is worth living only for what we get out of it, and for what we can contribute to the happiness of others. College training broadens the outlook. Education is merely acquaintance with the experience of others, with the polish that comes from contact with others. The best that college training gives is the ability to enjoy life, and to add to the joy others find in life. And here is where parents come in. The boy or the girl they send to college will never cease to bless them. This is the rule. There are exceptions to it, and so there will be as long as ingratitude is a trait of some human beings. But by and large there is nothing parents can do for their children that will mean more in later years than providing the opportunity to go away to school.

College life is expensive now, altogether too expensive. A lot of unnecessary frills add to the expense, and not a few of them could be eliminated. The selection of the school is important. It should be a school that provides a high standard of training, and real democracy in student life, where a youngster is accepted for what he is rather than for what he wears or has to spend.

Sending boys and girls away to school is no small problem, but there is really little chance for a mistake if they are made up of the right kind of timber.

MAKING MONEY AT HOME

If one is near a town of any size flowers are good money makers. I personally know a girl living outside Detroit and she raises all kinds of cut flowers and makes beautiful bouquets and sells them in the city. She has built up a good trade, keeping some of the Detroit offices supplied with fresh bouquets three times a week. This idea might be of help to some of our readers living near the larger towns.

The following letter came to me and it has a good suggestion for making this extra money in a very pleasant way.

VERY sorry indeed that I cannot help the many farmers' wives by telling them of something definate they can do to make money. I know many of them are needing help in that direction.

If the average woman had been taught to love and know the growing things they could do so much to help themselves when misfortunes befall them. Some day we are going to have an educational system that will fit every boy and girl when they enter manhood or womanhood for the life that will bring health, happiness and efficiency and because our present one does not do that we see human wrecks and unhappy lives all around us.

I have an acre and a half of peonies that help financially very much. So many things one could do if one only knew how.

So many of our home bureau members are asking the same thing for the farm home in the last few years have felt keenly the low prices of all farm products.

Hoping better times are coming for all farmers, their wives and daughters, I am Nora Burt Dunlap, Roray Home, Savoy, Illinois.

Mothers Problems

THERE'S ALWAYS A REASON

HENRY ALBERT was naughty. Yes, there was not denying it. He was as naughty as a little boy could be. He cried over the least little bump; he wouldn't do a thing his mother asked him to do; he threw all his toys on the floor and then lay down and kicked and bellowed. His mother was exasperated. "Henry Albert," she said, jerking him none too gently from the floor, "I wish to goodness I knew what ailed you! Every single day at this time in the afternoon you have one of these cranky spells!"

There was something ailed Henry Albert. Do you know what it was? The child needed a nap. He was only two years old, but he had given up naps some time ago—and he still needed a nap after dinner, even though he did rebell at taking one. Every afternoon he was tired, and that made him irritable. After he had lain on the floor and kicked and howled and whined for an hour, more or less, he began to wake up, and the last of the afternoon he would be a very different boy.

Many time it is lack of sufficient sleep that will cause a child to have periodic naughty spells. Again it is an upset stomach—too much cake and candy and too little milk and vegetables. Proper feeding, with perhaps a good dose of physic, will overcome such spells of naughtiness.

Too much excitement is another cause of naughtiness in little children. Being out late nights, taking long auto rides, going to exciting moving pictures, will tire even an adult after a while; is it unreasonable to expect that they will overtire a child?

A certain amount of naughtiness crops out in any child, but when a naughty disposition seems to be coming to the fore, look for the cause of it. You will be pretty sure to find that the child needs a nap or a dose of physic, followed by a proper diet, or a period of rest and quiet. There is always some reason for such naughty spells. Ferret them out—and see your child's happy nature return!

THE CHILDREN'S PETS

A NEIGHBOR had given seven year old Elizabeth a rabbit. It was just a plain, ordinary rabbit, but it was the first pet of her very own that Elizabeth had ever had. She loved her Bunny!

But Elizabeth's father thought pets foolish things to have around, eating up good food and bringing in no return—in cash, at least. Once the rabbit dug out of his pen and nibbled various vegetables in the garden. Elizabeth's father scolded her and told her she wouldn't have that rabbit if it did any more damage. Of course, it did get out again, one day when Elizabeth was in school. When she came home for dinner, there was—rabbit-pie! Her father had killed her Bunny!

Now there aren't many parents so heartless as to do a thing like that—though I have met some who would!—but there are many who fail to consider a child's rights when animals or birds that have been given to them are concerned.

Boy's Clubs have done a great deal to show fathers that when a boy has been given a calf or a young pig to raise, and he has raised it to salable age the returns from it belong to the boy. But no club yet has shown a father that he has no right to kill a boy's dog without the boy's sanction.

If for some reason a child's pet must be killed, inform the child of the fact. Make him understand why and then make the death as painless as possible, and have it performed in the absence of the child unless he requests to be present. There is enough of hardness and cruelty in this world without inflicting memories of such on a child. Some of the bitterest memories men have had have beed of the "day they killed my dog."

Better to persuade a child to sell or give away a pet he can no longer keep than fill his heart with sorrow and bitterness over the killing of it. After all the pet is the child's own property; what right have you to say what shall be done with it?

Personal Column

One Who Believes in Being Kind.—Am sending in my views on bobbed hair as requested. First, I will say I am a woman who has lived nearly sixty years and looking back over that time I can remember several women who have worn their hair cut short, and all have been noble women, and have done their life's work as well and better than many who have kept their hair long. It seems to me that it makes no difference in our character, whether we wear our hair long or short, but it would certainly give us more time for our other work and be much easier to keep clean and I for one wish all women would adopt the style of short hair. What do you say, sisters? Who will be the first among us older ones? Not so long ago I heard a man and woman talking about bobbed haired girls and they were very loud in their denunciation of girls who wore their hair that way. Well, I looked at the woman's head and it looked unclean and was unbecomingly combed, and the man's hair was sadly in need of a comb and cut, and I thought if they would go home and clean up their own heads they would not have so much time to criticise young girls, so let us older ones be very sure that our own heads look all right and don't judge the young folks by the way they cut or comb their hair. You know we are being judged the same as we judge others and none of us would like to be judged immoral because we did not wear our hair just as someone thought we should. So let us encourage and help our young folks instead of criticising them unkindly. Remember a good name is better than riches and we have to give others a good name if we ourselves wish one. From one who loves and believes in the virtue of our young people.—L. K.

There are Always Two Sides to a Question.—Is it wrong to have bobbed hair? I will tell you what I think. First, What are they doing it for; cleanliness. No, it is for another purpose. Show of course. Oh, how rude for a woman or young lady to cut her hair. We were taught it was a shame for a woman to have short hair. Now they are not only trying to take the place of men, but to appear like one. I do not admire the bobbed hair or the half dresses.

If the only excuse I could give for bobbed hair would be for little girls where there is large families or in sickness. But not any for sleeveless dresses.

I would like to hear what some good living mothers honestly believe. I am trying to bring my family up right. I am the mother of seven girls and I like all the good advice I can get. We like the M. B. F.

From One Who is Willing to Change.—I am sending in a few words concerning bobbed hair. I think it is a wise idea, not only for girls in their teens but for women also, for comfort and time saving. How much more comfortable it would be for all. We all know that things have changed since mother was a girl; some of those old folks think girls and women of today should dress as they did years ago, but we all know things are bound to change and will. It isn't necessary to have puffs made of your hair which was cut off for dress wear, as it is just fine with just the ends curled a little. You can purchase bobbed hair curlers with little expense which answers very nicely, why wear puffs and combs and make it more uncomfortable than before your hair was cut. If you have your hair cut for comfort, why not have it that way. It looks fine when you get used to it and we all soon will. So let us hope we will have comfort. I hope I did not write too much. We sure enjoy the M. B. F.—A Constant Reader.

A Mother's Grateful Thanks.—We wish to thank the M. B. F. readers for the generous response to our call for pieces and work. Also the M. B. F. and Mrs. Taylor for getting our wishes before so many people. I have written most of you personally but in case I have missed anyone please believe it an oversight. Will say to those who sent bedding to be made up will get their work just as soon as this berrying rush is over, and those who want crochet work in exchange for goods my daughter has received, she is working on orders and has just completed one. Many thanks for all the favors which you all have bestowed upon us. We beg to remain yours for the right.—Deaf Girl and Mother.

The Runner's Bible

The Lord's servant must not strive but be gentle toward all, apt to teach, forbearing, in meekness instructing them that oppose themselves; if peradventure God may give them repentance unto the knowledge of the truth.—2 Tim.2:24-25.

Never be drawn into an argument. Your work will not always be with the well-bred (who do not argue). The world deals summarily with the sins of impoliteness, but you must take another course. Nothing but evil ever comes of controversey, for the spirit back of it is never humble, and truth gains access only thru humility.
